There were a few who seemed to know nothing but what was in the first degree. But an overwhelming majority confessed that they knew of this uprising in the night and taking the ammunition, as before stated. The most confessed that they had a monthly mail to the Kansas jayhawkers, and these Kansas jayhawkers had promised to come to their assistance as soon as it rained there, having been a long dry spell. They said one of their clan was at that time in a two-horse wagon to carry and bring the monthly mail, giving out that he was going to St. Louis on business. This man was arrested on his way home. They said some of the men who guarded the ammunition at Sherman belonged to their clan, and they had been down there and got a supply of ammunition. Here I will state that these men had more ammunition and guns in better order than any men in the country, and some of them slept with their guns under their pillows.

But to return. These men when asked what they intended to do if they took the ammunition and failed to take the country and hold it said that they intended to take all they could carry with them and blow the balance up, and retreat anybody to Gen. Blount's division of the Northern Army. One man, after making all the confession about rising in the might, taking the powder, taking the country, and holding it with the might, taking the powder, taking the country and hold if the most of the clan killed about 10 days afterwards, which will come up in its proper place—said to the man, "Since you and some others who are members of this clan have lived near me I have been very kind to you all. What was to become of me and my property, for I did not have your sign, password, and grip. When he had concluded this fearful statement Col. William Young—whom some of the clan killed about 10 days afterwards, which will come up in its proper place—said to the man, "Since you and some others who are members of this clan have lived near m

But these men were sworn to obey their leaders if the uprising had taken place. These men would have been with the clan and the dark designs would have been carried out. Men, women, and children would have been killed, and every man in the crowd would have been committed; if they then left the uprisers they would be killed, and their only chance to escape death would have been to stay with those men. Here I will state about one-fourth of these men claimed to be southern men.

Inasmuch as I have often alluded to uprising in the night, the night Inasmuch as I have often alluded to uprising in the night, the night having passed and no move having been made, I will here give an account of that night. It was at the breaking up of one of those long dry spells which is not uncommon in Texas. I had been sending medicine to a case of sickness several days, and about 12 o'clock the man whose wife was sick came after me, requesting me to go prepared to stay all night, which I did. It had commenced raining, and by the time we got to the man's house, a distance of about 5 miles, it was raining very hard and continued to rain until about 10 o'clock next day. This was the hardest rain I ever saw fall. This man was one of the clan.

We learned in the jury room that this night was the night appointed for the rising, and this great and merciful rain, doubtless sent in great mercy, came to frustrate the wicked and abominable designs. This night passed before there were any arrests made or anything known of the existence of the organization by the great mass of the people, who were totally unprepared for it.

Here the mind will naturally try to conjecture what the consequences would have been if the rising had taken place that night. How many families would have been made desolate. What wailing and lamentation would have gone up that night. How many who lay down that night with a feeling of security would have been roused from their sweet slumbers and, before they were fully apprised of their danger, would have been passed into the long sleep of death from which there is no waking till Gabriel shall give that loud, long, and shrill blast which shall reach the great charnal house of death and rouse the nations underground.

Some may conclude the picture is too highly drawn; but no man

rouse the nations underground.

Some may conclude the picture is too highly drawn; but no man can tell what will take place in the bloodthirsty spirit of war rising to boiling heat. Those men would no doubt have fought a dreadful fight, knowing, as they would have known, that their lives depended on success or a safe retreat. They would have known that no quarters would be given. Some will say that they belong to that clan and they never heard of their horrible intentions. You may not have heard it, for I am satisfied there were a good many of the clan who never heard of all these plans and had no intention of killing women and children, but knew of the intention to get possession of the ammunition, take the country and hold it, and that should mean nothing but fight, which was proven the first night after the first arrest by those armed men wanting to be led to relieve their friends; and, to cap the climax, the members of the clan confessed that they intended to do these things or they would not have told a falsehood which was so much against themselves.

Here I must record a case which occurred when one of the clan was

or they would not have told a falsehood which was so much against themselves.

Here I must record a case which occurred when one of the clan was initiating a man: He took the first oath and the first degree, and called for the second degree. The initiator went on to tell him that he must take an oath to do all he could for the North and all he could against the South; he was to endeavor to reinstate the Constitution and Union and kill any member who should betray them. Somewhere along here the man who was being initiated got so mad that he broke loose from the man who was initiating him and cursed him all over, from the crown of the head to the sole of the foot, and came very near patting it in, and they had a big blowup, and before they parted the initiator told him if he told he would be killed.

While arresting, a squad of men surrounded a house in which there were two men and their wives. The men were supposed to be members of the clan. They ordered a light to be raised in the house, which the inmates refused to do. The squad of men were afraid to go into the house and the men inside refused to come out and surrender. While the squad of men were maneuvering to arrest the men in the house, there being two doors to the house, each of the men on the inside put a feather bed on his back and ran out at the door, and the squad of men shot at them as they ran. I never learned whether they wounded them or not, for both the men made their escape and were not arrested afterwards.

I concluded that I ought to give the whole designs of this clan, as they acknowledged themselves, before giving any of the doings of the jury, that the readers might have the whole thing before them and be more able to form correct conclusions. I suppose no one will now indorse or justify the designs and intentions of these men, as acknowledged by themselves. The only thing to decide is whether or not they ought to have been hung.

In coming to a conclusion in reference to this thing, it would be well to take into consideration that a dread

ought to have been hung.

In coming to a conclusion in reference to this thing, it would be well to take into consideration that a dreadful war was going on, and like all feuds it brought about an excitement well calculated to impair the mind, dethrone reason, and cause men to do things that in after life, when the excitement has passed away, they will greatly regret.

Mr. Speaker, to illustrate plainly the truth of this painful and almost forgotten episode of the Civil War, and how the attack of the gentleman from Massachusetts is resented by these slandered citizens of Gainesville and Cooke County, I will here present for your consideration a letter from the mayor of that city (Mr. J. Z. Keel), which is as follows:

GAINESVILLE, TEX., April 1, 1916.

Hon. John H. Stephens, Washington, D. C.

Hon. John H. Stephens, Washington, D. C.

Dear Sir: I received your telegram in regard to your sending me the Record. If you mean the Congressional Record of Mr. Gallivan's speech, I have that before me. You ask me about the facts. I have looked over that speech and he only picks out what suits him. His statement that these men were hung because they refused to join the Confederate Army is entirely untrue. From Dr. Barrett's book—and thinking you have not that book at band. I am sending you one—notice the plans of these men. Read their confession after they were arrested and tried, most of them, by a civil jury. Gallivan says nothing about their confession. Notice that he says, "The Confederates thought they had such an organization." Why does he not say that two men joined the organization for the purpose of finding out? Notice what Dr. Barrett says, if they had carried out what they had intended to do it would have been one of the bloodlest murders in the country. Notice what Col. Young asked one of these men. Gallivan says: "Col. Young was killed by some one, and after that the rest of the men were taken out and hung." But see what Barrett says: "Col. Young and Dickson was killed by this clan." Gallivan picks out the parts that suits him and distorts the truth. Notice what Barrett says: "If Col. Young had not been killed, this hanging might have stopped." Since Dr. Barrett was a minister of the gospel, he did not beileve in hanging. But in every place he says these men were guilty and confessed to the fact that upon that night it rained was the night upon which they were to murder the women and children of every southern man. I am sending you this book, thinking you have not seen it, though it can be found in the library. Col. Young, col. Borland, the men on that fury, were the best citizens of this country and their children and children's children will rank with any of Gallivan's, A man that will read from a book and distort the facts as he has should not sit in the halls of Congress. I hope you will send

Mr. Speaker, I will next present the affidavit of Mr. B. T. Parr, who has lived in that part of the State near Galnesville for more than 50 years, and who was one of the men guarding the prisoners when they were being tried and heard, and testi-fies to the confession of one of the men when on the gallows, I have known this witness—Parr—personally for 30 years, and I know of no man in that county that stands higher in the public estimation. A statement from Mr. Parr needs no verification among his acquaintances. His letter to me, however, is verified by his oath, and is as follows:

BELLEVUE, TEX., April 1, 1916.

Hon. JOHN H. STEPHENS.

Dear Friend: I see Hon. James A. Gallivan has hopped on you and Texas (also Gainesville, the county seat of Cooke County). I want you to say to him he is talking about something he doesn't know anything about. I was one of the guards to guard the first two men that was hung on that memorable elm tree on the creek then—on the east side of Gainesville then, but now in the heart of Gainesville—and on the scaffold, just before Mr. Fields, with rope around his neck, was allowed to talk before he swung off said he was glad to make a statement.

ment.

Said the citizens of Cooke County would not be doing their duty if they did not hang every man that belonged to the society he belonged to; we all took an oath to kill every man, woman, and child when the society was sufficiently strong, take their property, and cross Red River, and there would be met by a regiment of northern soldiers. I think they were to be Kansans. Anyway, it was to be northern soldiers. Martyrs; yes they would have been martyrs if they had have carried out their design.

Say, Jchn, I don't know whether there is another man living that heard Fields make his statement. Write to Judge Bell at Gainesville. Your friend, as every,

B. T. Parr.

P. S.—I had been acquainted with Fields for some time before this trouble came up. Thought him a nice man. He stated on the gallows that he would have divulged the secret, but the penalty was death and he was afraid. Two men by the name of Chance joined them to see what they were going to do, and when they found out their intent, stayed with them long enough to get the most of their names. It was Nute Chance and an older brother; I don't remember his given name. You may have met with Nute. He lived in Wise County the last time I met him. I think he went west several years since; he belped to catch several horse thieves after the war. His brother went to Arkansas, and I learned he was a preacher. John, this is rather scattering, but you can put it together. I will swear to it before a notary public.

STATE OF TEXAS. County of Clan:

STATE OF TEXAS, County of Clay:

On this day personally appeared before me the undersigned authority, a notary public in and for Clay County, Tex., B. T. Parr, who deposes and says that the statements made by him in the letter herewith attached are true and correct.

Witness my hand at Bellevue, Tex., this, the 1st day of April, 1916, B. T. Parr.

Subscribed and sworn to before me this, the 1st day of April, 1916.
L. B. Moons,
Notary Public, Clay County, Tex.

Mr. Speaker, I next present to this House a letter from Mr. F. W. Knight, highly corroborative of the other evidence above presented by me, showing the traitorous designs of the men hanged. It is as follows: LAKE ARTHUR, N. MEX., April 2, 1916.

Mr. JOHN H. STEPHENS.

Mr. John H. Stephens.

Dear Sir: I see in the Dallas News where you have been attacked in Congress concerning an incident that occurred at Gainesville in IS62. I visited my wife's uncle in Cooke County in 1873. He lived on the side of Red River Bluff, and kept the ferry about 6 or 7 miles north of Gainesville. He told the story to me in this way: Said there was about 750 Kansas Jayhawkers on their way to Cooke and Denton Counties, and expected to kill all of the old men and cenfiscate their property and take the young women. They had allies in Texas that would help them, and arrangements were made, and some of the allies had went so far as to black their door post so as to be recognized when the Jayhawkers got there. One of the Texas allies gave the thing away just three days before the time set for them to make the raid. My wife's uncle, James Dunham, and his right bower, Morg, Redman, were prominent ones in going into an investigation. The crowd took up and tried and convicted, as well as I remember, 49, and hanged them in Gainesville. Mr. Dunham told me that every one of the 49 pleaded guilty to the charge. I was living in Ellis County, Tex., at the time that I visited Cooke County. I moved to Young County, Tex., and stayed there 27 years. I lived near 50 years in Texas after the Civil War * * Respectfully.

F. W. Knight.

Respectfully.

Mr. Speaker, I next quote from a history of this event, written by Cliff D. Cates, of Wise County—now postmaster at Decatur-entitled "Pioneer History of Wise County, Tex." Chapter of this book, page 130, is as follows:

CHAPTER V.

CONSPIRACY OF THE PEACE PARTY.

CONSPIRACY OF THE PEACE PARTY.

Directly opposed to the peaceful trend of the times was the warlike occurrence of the summer of 1862. This was an elaborate conspiracy having for its motive the overthrow of the Confederate authority in this section of the State, and progressively of the remainder of the State, should the designs have proved successful here at the place of their inception.

The name of the organization through which the Confederacy was to be dealt this subtle blow was the Peace Party, and its constituent elements were made up of Union sympathizers and others who, having loyalty for neither side, were dissatisfied with the war.

Where and when the plan of the conspiracy had its birth is not known, and in so far as can be learned there is no knowledge as to with whom the idea originated. The first wind got of it was in Cooke

County, the revelations having come through a citizen who was loyal to the Confederate cause.

It appears that in a region some miles east of Gainesville there dwelt a large colony of northern sympathizers, from among whom success was met in obtaining secret supporters to a plan which in general comprehended the reduction of this part of the State preparatory to the coming of a large Federal force from Kansas, by whom the country would thenceforth be occupied. In detail the plan comprehended the secret organization of forces and the gradual accretion of members against the day when sufficient strength and power would be evolved to enable the order to arise suddenly everywhere, capture the Confederate stores and forces, and by burning property and deprivation of arms and supplies, reduce the people to such a state of subjection as to render them powerless to resist the coming of the Federal Army, which was to complete the designs by marching in and taking general control.

It was in the above-mentioned community that the step was taken that brought the movement to its calamitous termination. This came about as the result of efforts which were made to secure members to the traitorous order, and as a direct result of overtures which were made to Newton Chance, the Confederate loyalist above mentioned, to secure his membership.

Chance gave no reply to the overtures, but as a loyal Confederate took the first opportunity to tell Gen. Hudson at Gainesville what he knew. By that official he was advised to feign an interest in the proceedings and after learning further details to return and report same. Chance did this, and Gen. Hudson, in possession of the exposures, immediately began a crusade against the order which resulted in the trial, conviction, and subsequent hanging of 55 of the conspirators who had been proved guilty of leadership in a movement which was regarded as traitorous, in the highest degree, to the Confederate government.

Mr. Speecker, the writer of this history is a member of one of

government.

Mr. Speaker, the writer of this history is a member of one of the oldest and best known families in that part of Texas. He is a man of unquestioned integrity, and his statement of this matter is entitled to the highest credit and is unimpeachable.

Mr. Speaker, a few days ago Mr. Samuel H. Miller, of Pennsylvania, now a valuable and honored Republican Member of this House, in a speech on this floor, in speaking of the Civil War and the South and of the recent speech of the gentleman from Massachusetts [Mr. Gallivan] against myself and constituents, used the following true, beautiful, and patriotic lan-

Some days ago, in the discussion of a bill reported by the Committee on Claims, a motion was brought before the House to dispense with the proof by the claimant of the loyalty of the owner of goods taken or destroyed during the Civil War at the time such goods were taken. During the discussion the tragedy of the war was recalled, and, as I then and now believe, some uncharitable and unnecessary remarks were made concerning the attitude of the South at the time the war was in progress.

made concerning the attitude of the South at the time the war was in progress.

A few days later a Member on the side of the House to the Speaker's right made some equally unnecessary, mistaken, and uncharitable remarks about the attitude of the people residing at Gainesville, Tex.. in 1862, in the thirteenth district, now represented by a gentleman [Mr. Stephens] whom I am glad and proud to call my friend.

Prior to these occurrences I had formed and ofttimes expressed the hope that the day for raking over the embers of the Civil War had passed. I confess that in the late sixtles and early seventies, when engaged in the heat of a political campaign, I sometimes waved the ensanguined emblem, but I trust that time and age have softened the asperities of youth, and I can truthfully repeat the words of the sainted and immortal Lincoln, "With malice toward none and charity for all," and take by the hand my friends who represent the thirteenth district in Texas [Mr. Stephens], the fifth of Georgia [Mr. Howard, the third of Arkansas [Mr. Tillman] with the same feelings of friend-ship that I do my friend from the second of Illinois [Mr. Mann], of the second of New Hampshire [Mr. Wason], and of the eighth [Mr. Watson], twenty-fourth [Mr. Temple], twenty-ninth [Mr. Porter,], and thirty-second [Mr. Barcheeld] of my own beloved Pennsylvania, and wish them each and all a fair journey through life and at the end a "crossing of the bar" in joy and peace.

Mr. Speaker, these noble sentiments so well expressed by the

Mr. Speaker, these noble sentiments so well expressed by the gentleman from Pennsylvania will, and does, in my judgment, express the true sentiments of the great masses of the people of this country and of the Members of this House.

Mr. Hoar, of Massachusetts, one of her greatest United States Senators, in a speech delivered in the Senate just before his death, uttered the following beautiful sentiments in speaking of the South and the southern people:

the South and the southern people:

Having said what I thought to say on this question, perhaps I may be indulged in adding that although my life, politically and personally, has been a life of almost constant strife with the leaders of the southern people, yet as I grow older I have learned not only to respect and esteem but to love the great qualities which belong to my fellow citizens of the Southern States. They are a noble race. We may well take pattern from them in some of the great virtues which make up the strength, as they make the glory, of free States. Their love of home, their chivalrous respect for women, their courage, their delicate sense of honor, their constancy, which can abide by an opinion or a purpose or an interest of their States through adversity and through prosperity, through the years and through the generations, are things by which the people of the more mercurial North may take a lesson. And there is another thing—covetousness, corruption, the temptation of money, has not yet found any place in our southern politics.

Now, my friends, we can not afford to live, we don't wish to live, and we will not live in a state of estrangement from a people who possess these qualities. They are our kindred, bone of our bone, flesh of our flesh, blood of our blood, and whatever may be the temporary error of any Southern State I for one, if I have a right to speak for Massachusetts, say to her, "Entreat me not to leave thee, nor to return from following after thee. For where thou goest I will go, and where thou stayest I will stay also. And thy people shall be my people, and thy God my God."

Mr. Speaker, we should and do all fully concur in the above noble sentiments of Senator Hoar, breathing, as they do, the happy thoughts of the fatherhood of God and the brotherhood of Neither the South, the great State of Texas, nor the city of Gainesville need any defense at my hand further than to expose the untruthfulness of the charges and point out the malicious purpose of their would-be defamer. I, therefore, submit the evidence that I have fully set forth above to my country-men so that they may judge for themselves whether or not the spite bill, H. R. 14030, should pass the House. The legislative history of this country does not show that any similar bill has ever been introduced in Congress. No other Congressman has ever descended to so low a level as to try to erect in the doorway of a city a monument designed to disgrace its inhabitants in the eyes of the world.

Would not the citizens of any city in the United States be indignant if this defamer of my constituents should dare to introduce a bill to erect a spite monument in their doorway designed to perpetuate the memory of some wrong, either real or imaginary, that some of their citizens at some time may have done to society. What would be the feelings of the Washingtonians if the gentleman from Massachusetts [Mr. Gallivan] should offer a bill to erect a spite monument to the memory of Mrs. Surratt, who was unjustly hanged in this city for the murder of President Lincoln? Would he not be hanged in effigy if he should offer to build a spite monument in Utah to the memory of the victims of the Mountain Meadow massacre of the California immigrants? Would he not be burned in effigy if he should offer to build a spite monument to the memory of the Chinamen that were killed by a mob a few years ago in Wyoming, or to the Italians that were mobbed in New Orleans because they belonged to the outlawed and criminal Mafia organization, or to the women and girls burned at the stake for witchcraft in his own State? We should forgive and forget all of these blots on our national escutcheon.

We would never disgrace our country by offering to build spite monuments if it were not that the swashbuckling demagogue is abroad in our land hunting votes by slandering other people. Why should not these national disturbers of the public peace be relegated to the political oblivion, from which they sprung, by the patriotic voters of this Nation? Why should the people of these reunited States not fully exemplify that splendid sentiment of Gen. Grant, who at the close of the Civil War said,

"Let us have peace "?

Federalized National Guard a Menace to Free Institutions-Staggering Cost of New Army Bill.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 23, 1916.

Mr. RANDALL. Mr. Speaker, I voted against the conference report and against the Army bill, which has now become a law, because I can not support a measure which, traveling under the fictitious title of "preparedness," increases the appropriations for the Army from one hundred millions annually to two hundred and fifty millions annually and is to be a permanent financlal burden upon the people.

As a war measure this law would be ridiculous, for in war

we will need a million men or more. As a peace measure it is an outrage upon the people, because it creates a regular army of 211,000 men and a federalized National Guard with a minimum of 457,000 men, all under pay. Think of it! A perpetual standing army of over 600,000 men! The chairman of the Committee on Military Affairs stated to the House that the increase in appropriations for the Regular Army would be \$50,000,000 and for this federalized National Guard a new financial load of \$100,000,000 annually, or a total for the Army establishment of \$250,000,000, as against \$100,000,000 which it now costs,

The people of the country do not know the iniquities of this Army reorganization bill, and the daily newspaper organs of the War Trust will not tell them.

Do they know that there is actually no limit to the number of men who may be enrolled in this federalized National Guard but that the minimum is 457,000, or 800 for each congressional and senatorial district in the United States? Do they know

that a flock of colonels, captains, and lieutenants are created for every few hundred men and that these officers will all receive salaries during times of peace ranging from \$240 to \$500? Do they know that every man who enlists in the National Guard will receive \$54 per year and a lot of perquisites and privileges

while performing no service?

I wonder if the American people realize what a menace this National Guard will become as a political machine. Already one Member of Congress tells me he has this militia machine under way in his district, and he confidentially tells me that he can organize enough colonels, captains, and lieutenants with their men so that his defeat would be impossible. And the program of this powerful militia organization will be to promote further, not less, expenditures upon this branch of the Army.

The National Guard organization was strong enough, even in its present condition, to come to Washington and turn all the proposed Volunteer Army legislation and most of the Regular Army increase into the aggrandizement of the National

Guard.

The prospect is gloomy that we shall ever be able to unload this octopus. Said a prominent Senator, discussing this:

We have gone wild about this militia business. We have become hysterical about it, and in consequence we are about to pile up an enormous indebtedness or to impose enormous taxation on the people without any compensating benefit that I can see. To my thinking it is a foily amounting to wickedness.

It requires no expansion of the imagination to see men, ambitious for the honors and emoluments of military titles and salaries, at work in every community organizing companies of the National Guard. It will spread over the land like a plague, As if this be not sufficient to promote the military spirit, every one of the 55,000 postmasters are to become enlisting officers, and they are actually to receive \$5 each for every enlistment secured.

Read the words of Senator Borah in his eloquent condemnation of this new menace to free institutions:

For the first time in the history of this Republic or in the history of any country with free institutions, that I know of, you are going to put upon the national pay roll several hundred thousand civilians and leave them in the business and in the politics of the respective States and at the same time give them leave to organize as a military authority and in the respective States to utilize and exercise the power of military organization. We are going to build up a dominant and aggressive military organization in the States, and while they may never be useful in war, judging by past precedents, they will be a source of profound concern to the communities in which they are situated.

The Agricultural Department and the Farmers.

EXTENSION OF REMARKS

HON. FINLY H. GRAY,

OF INDIANA,

In the House of Representatives,

Thursday, May 11, 1916.

Mr. GRAY of Indiana. Mr. Speaker, we are maintaining a great department in the Government to promote farming and agricultural interests of the country, and to support and maintain which we are expending annually many millions of dollars.

We are employing at high salaries an army of skilled experts and trained specialists to carry on the different operations looking to the scientific solution of problems in every branch of agriculture.

Chemists are engaged in the study of soils and the properties of plant foods, and to ascertain the relative food values of different crops, with a view to their increased production and their more advantageous use.

Botanists and kindred scientists are at work to discover the influences of surrounding vegetation on plants as effecting their character, growth, and development, including the study of insects and plant diseases, and embracing broadly and comprehensively the solution of every problem involved in the development of plant industry.

ment of plant industry.

Live-stock experts are conducting experiments in breeding, feeding, and in the care and management of farm animals, looking to the development of the most profitable strains, and embracing investigations relative to animal diseases with a view to

their prevention and eradication.

Other and especially educated and trained men are devising, planning, and experimenting with the care of crops and farm production, their preservation and preparation for the market, the means of transportation, and facilities for their most advantageous sale.

Farm management, domestic science, and every character and phase of farm activity is made the subject of careful study with the view to raising the standard of farm life and the advancement and the development of the agricultural interests of the country.

Great buildings and structures have been erected and numerous elaborate stations have been provided to carry on these

various studies, works, and operations.

In addition to the Agricultural Department of the Government, agricultural schools and colleges, capable of rendering most valuable services to the farmers and agricultural interests, are being maintained by the different States at great cost to the taxpayers.

While these great organizations of the Government and the States with their scientific agencies and efficient instrumentalities are capable of affording to the farmers of the country great and valuable aid in the advancement of farming, yet comparatively few farmers have been able to avail themselves of these great advantages, and the practical benefit derived to the farmers are small in comparison with the value of services which the department is capable of rendering them.

Observing this disparagement between these efficient agencies and the results to the people, I have made a study of the system under which the Agricultural Department and State institutions have been conducted and their relations with the farm operations of the country to ascertain the cause of this failure of

efficient service to the farmers.

From this study I am convinced that this failure is not due to any inefficiency of the Agricultural Department or the State schools and colleges, nor to any want of interest or proper appreciation of the farmers of the country. While it is due in part to the want of coordination and systematic direction of these agricultural agencies, it is more largely due to the want of organized cooperation from the farming public.

The necessity for correlating and bringing together the Agricultural Department of the Government and the State agricultural schools and experimental stations under one general system for a closer relationship with the farmers and the practical operations of the farm is at last becoming realized. The States Relation Service, authorized by Congress May 4, 1915, and the agricultural extension act of May 8, 1914, are measures directed to this end. But these measures are only preliminary. They are only a beginning, the first steps, which must be followed by others until a complete and practical system is evolved. Even if these enactments would bring about the systematic coordination of the Agricultural Department and the State schools and colleges required, they will not establish the closer relationship with the farmers and farm operations necessary to make the information and cooperation of these institutions of practical use to the farmers of the country generally.

The progress and advancement of agriculture calls for more than the organization of a governmental department and the coordination of its agencies. The organized cooperation of the farmers themselves is as necessary and imperative as the coordination and systematic direction of the department and the

State schools.

We have long had an Agricultural Department, but the Agricultural Department has failed to accomplish the full purpose for which created, because it did not have the organized cooperation of the farmers of the country to place it in actual contact with farm problems and projects,

We have long had farmers' organizations and associations, but they have failed to accomplish for the farmers the objects for which they were created because they did not have the cooperation of the Government and their associations were not coordinated with the Agricultural Department to bring science and practice together in the actual trials and tests upon the farm.

There has been no proper facility afforded by which the farmers could reach up to the Agricultural Department to avail themselves of its advantages and no adequate means through which the department could reach down to the farmers and communicate to them the available information acquired through its experimentation and research work or to make practical demonstration of the improved methods to them.

Before the farmers of the country generally will be able to avail themselves of the benefits of the Agricultural Department provision must be made by Federal legislation under which the farmers in every locality where they choose to do so may voluntarily organize, and under which organization such farmers' association will be joined to and coordinated with the Agricultural Department, and through and by means of which the farmers can reach the Agricultural Department to avail themselves of its advantages and the department can reach the

farmers to communicate information and make demonstrations

in practical farm work.

Incidentally, and while organizing to establish relationship with the Agricultural Department and avail themselves of information and improved methods of agriculture, the farmers would be able to avail themselves of an interchange of their own valuable and more practical experiments in actual farming, as well as the social benefits and advantages growing out of such associations.

Teaching the Horrible Science of War in the Public Schools.

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 23, 1916.

Mr. RANDALL. Mr. Speaker, to make a law to provide for military instruction in our public schools, as Congress has done, may be promoting patriotism, but I do not think so. To establish military drill in our schools is to introduce dangerous tendencies which are in direct opposition to the moral and political ideals which our schools are primarily intended to develop.

I have a sincere sympathy for the many conscientious teachers and parents in this country who desire to help our boys and who believe that patriotism should be encouraged at every opportunity. Yet I am sure that military instruction for the boys in our public schools in practical operation is not a moral factor, but the reverse. According to the published statements of many prominent educators, military instruction in public schools does not improve the national health or foster the discipline that is wanted. The most satisfactory discipline for boys is that which is to-day being obtained in many excellent schools without the temptations and moral damage of military associations. The training of children in military ideals, however well intended, is a retrograding step. It tends to lure them from gainful pursuits toward illusive militarism. And militarism strikes at civil freedom and in practice leads to tyranny. Militarism is barbarism.

Militarism and a republican form of government can not exist in the same country. This country was established as a protest against political oppression, and since that time the politically oppressed of every country have had a welcome at our shores. I do not believe that the people of this country—the great masses—are yet ready to reverse the principles upon which the foundation of our country rests and establish a militarism that can only mean the building of a despotism in this country like that which the men with "the spirit of 1776" fought eight long years to put down.

We have watched the terrible war in Europe—the worst the world has ever known—until we have come to regard it as a matter of course. Human life seems to have no value. Men are rushed to their slaughter in numbers untold, and the call is for more men, and now they are even taking the boys away from their mothers to hurl them in that awful maelstrom of carnage.

Much has been said about the wonderful military preparedness of Germany, but Germany has not taught the boys in her schools to kill. Shall we out-Prussia Prussia? Militarism is the same the world over—first ingratiating, next seductive, then remorseless. Give military advocates an Inch and they will take

a mile. You never know how far they will go.

Military instruction in our public schools may appeal to some people. But this thing has been tried, and we have only to go to Australia to see how it works and how it has worked disaster. To learn how military instruction in the schools has worked is to convince one that it is a bad and dangerous thing to undertake here. Wonderful things have been told about the success of compulsory military training of boys of 14 years and upwards in Australia, but these wonderful things have been told by the promoters of a militarism.

A PROVED EVIL IN AUSTRALIA AND NEW ZEALAND.

The training in Australia is claimed by some of its advocates to be different from conscription, but in practical operation it seems to be conscription purely and simply. The defense act of New Zealand of 1909 was made possible by the agitation of the National Defense League and by influences originating in England. The visit of the United States fleet to Australia resulted

in a great wave of military enthusiasm spreading over that land, and one of the developments connected therewith was the demand to arm. The result of a combination of circumstances, seized by the militarists to their own aggrandizement "without any reference to the will of the people," and backed at first by some well-meaning educators, was that the men of those countries put their defenseless boys under military discipline to which the voters would not themselves pretend to submit in times of peace.

Need I say that a similar condition of affairs has inspired some of our people with the same ideas and notions? This is a hysteria which has swept the country, but I am happy in the thought that it is now on the wane, for in the elections held in the last few weeks, while they were only primary elections, it is easy to see how the people—the men who will be called upon to bear the burdens of taxes and blood—feel about this thing.

But going back to see how military training in the public schools of Australia "worked," we find that extraordinary conditions exist. According to figures supplied by Arthur Watts, organizer of the Australian Freedom League, despite the fact that the military officers had power to register boys without their parents' consent, the number of boys liable to prosecution for nonregistration at the end of the first registration period was 7.324.

Official figures as reported in the Melbourne Age of May 31, 1912, showed that to that date the total average attendance for Australia at the statutory parade drills was 59,562, out of a total strength of 88,859 senior cadets—18 years old and under—stated by the military authorities to be in actual training. The percentage of absentees from drills ranged from about 31 to 52 per cent. The Age adds:

It is plain that large numbers of cadets are shirking their legal obligations.

There have been many prosecutions of boys under the system, which in both Australia and New Zealand is known as the defense act. Nonattendance at drill from almost whatever cause necessarily constitutes a basis for prosecution. In the city of Auckland, New Zealand, with about 90,000 population, during the 12 months ending at an early date in 1914, there were, not counting withdrawn cases, a record of 770 prosecutions, There are reported, for instance, as many as 50 defense prosecutions in the police court of the little city of Invercargill, New Zealand, at one time.

According to information which comes from that country, the administration of prosecutions has been very severe in many cases. For that matter, the act in both countries provided alternative service and assumed relief for members of denominations opposed to military service, but no relief for the many others who resisted drill because of religious or other conscientious principles. Here are a few sample prosecutions:

Sydney Crossland, a Quaker lad, was, on account of religious scruples, sentenced to 50 days' detention in Victoria Barracks, Sydney being released before half that time had expired. The minister for defense is reported as saying that immediate action

would be taken to punish the "unruly" cadet.

Victor Yeo, a lad of 14, was, on August 25, 1913, sentenced to one month in Broken Hill Jail. His release was ordered after serving 20 days, but he served the full term, including another imprisonment of 12 days. A good deal of this time he was on a bread-and-water diet, and for 10 days of his second imprisonment he was locked up in a cell for 22 out of 24 hours.

J. and W. Size made a statutory declaration in September, 1913, when in detention in Fort Largs they were placed on a bread-and-water diet in a cell with a stone floor. One night nine boys were in the cell, which was about 9 by 12 feet. They had only one blanket each—it was in the early spring in that country—contrary to the regulations which provide for three blankets. On a second occasion John Size was kept in solitary confinement for 10 days continuously.

Arthur E. Ettridge was prosecuted in Adelaide in September, 1913, for failing to render personal service. His mother and a physician, Dr. D. W. Ray, gave evidence that the boy had been too ill to work. In spite of this the officer pressed the case demanding 10 shillings cost, which was refused.

demanding 10 shillings cost, which was refused.

On December 21, 1913, W. Bennett, of Dulwich Hill, New South Wales, was for a second time charged with preventing his son from drilling. He stated to the court that he had conscientious objections to his boy being compelled against his will to become a soldier, but he was fined. He had already been in jail for refusing to pay a fine in connection with the same matter.

for refusing to pay a fine in connection with the same matter.

John F. Hills, M. A., of Glenelg, South Australia, a well-known educator, has stated that in times of peace "military imprisonment" was inflicted on "over 4,000 Australian boys and youths."

TEACH THE CHILD INDEPENDENCE.

The purpose and the object of the public school is to teach the child to think for himself. When the child is under the drillmaster exactly the reverse is the effect-the child does not dare to think-he must act as the drillmaster tells him.

Dr. Howse, F. R. C. S., a prominent educator of Orange, New South Wales, says that the present system of drilling is distinctly injurious to boys of nervous temperatment. It creates indigestion and distinct physical injury has resulted, He denies the benefit of military drill in view of the number of such

The Age, of February 18, 1914, in an article citing some of the hardships connected with the training camps, tells of how a medical examination revealed numerous cases of acute dilation of the heart, and so forth. Noted American educators have declared that athletics as free sports for growing boys are infinitely preferable to the constrained positions connected with drill and handling a gun.

The New Zealand League in its first annual report, in 1914, when discussing the prosecutions in police courts which were found necessary in connection with the enforcement of military

There are many instances of ludicrous absurdity, many of shameful injustice, and altogether one is impressed with the fact that boys from 14 years upward are compelled to mix with the worst characters off our streets, to hear of filth and crime from which they should be protected, simply because they object to being brutalized by the agents of war or because they happen to be absent from parade.

Those who are opposed to drill from conscientious or other reasons are often called "liars," "unpatriotic," and so forth, and it is insisted that they do not know whereof they speak. Claims as to the presumed success of military discipline do not seem to be justified by the facts. Col. Heard, director of Military training, when explaining to a committee his difficulties connected with the act, is reported to have said:

We are placed in a humiliating position; we are open to all kinds of insults, to all kinds of insubordination; and we are perfectly help-

The Lyttleton Times, in speaking of the scruples invaded by process of the defense act, declares that the objections of parents to their children being forced to assume solemn obligations that they will support the provisions of the act should be re-spected. But the hard facts indicate that after once surrendering to military influences it seems almost impossible to secure religious or civil freedom. They have gone.

The general unpopularity of military training of boys in schools in Australia, is proved by the fact that, according to the carefully collected reports of the Australian Freedom League, in two and one-half years, up to the last day of 1913, there were 22,143 prosecutions of young people from 14 and upward. This was in a population of 4,500,000 persons. The Amalgamated Society of Engineers of New Zealand, when speaking of the defense act, appealed "to all thoughtful citizens to do their utmost to stem this drift into barbarism."

We do not want such conditions to come about in this country. I submit that we should never take the first step in that direction. I am convinced that the moment we begin to direct the minds of our youth in the direction of war, just at that moment we have put the country on the road toward the final establishment of a militarism that will destroy the lib-erty and the patriotism about which we talk so much to-day.

Patriotism is the love of one's home and one's country. Patriotism can not be shot into men with guns, nor can it be drilled into boys on parade grounds under drillmasters whose iron hand deny to the youth both love and liberty. Before New Zealand came under the iron heel of militarism the only person who could inflict a fine upon anyone was a magistrate; but to-day a military officer can impose fines on the boys under his care at his own sweet will, and, what is more serious, can cause the fine to be collected by a policeman out of the boy's wages, if the boy works for wages. That is militarism; that comes of providing for military instruction in public schools; for the military man insists that there must be discipline, and he must have unlimited authority to enforce discipline in such ways as he may deem proper.

AMERICANS NEED NO COMPULSION.

There are no more patriotic people on earth than our citizens. From the foundation of the country to the present hour the United States has never had occasion to be ashamed of the spirit of its citizens when duty called, and they never will. Let the battle drum and the bugle be sounded in the defense of our country to-day, and there will be such a response from our men as will startle the world. The American needs no compulsion to make him patriotic. What we need to do is to safeguard and to consider well the rights of our individual citizens, and in direct ratio as we do this will we cause patriotism to increase and put the honor of our Nation on a higher plane,

Every American citizen considers himself a man, and he resents the idea of having to be bound hand and foot to do a thing which, left to himself, he would do anyway. No great Army advocate need for a moment be afraid that the American people will hesitate when their country needs them in any just cause. So long as our national course is straight ahead according to the ideals upon which our country was founded no one need think that our people will not be ready to answer to their names the very moment they are needed.

I do not believe for a moment that there is an American citizen who is for peace at any price. Those who jest about men who want "peace at any price" are no friends of our country. They make a cheap play upon the prejudices and mad passions of men in order to promote a program for a large armament and a militarism that will endanger the safety of the Republic. Ridicule is a powerful weapon when skillfully used, and I know of no greater bit of ridicule that has been hurled at the people of this country than the accusation that they want "peace at any price." That phrase is an insult to American manhood and to American citizenship.

Let us not transform our public schools into incipient West Points and incubators for militaristic ideas. Let us direct the minds of our youth in the direction of peace and good citizenship, for the better our citizens are the safer is our Republic and the stronger becomes our national honor and prestige. Military instruction in our public schools will not make better citizens. It will not give the boys any conception of the duties of real war. For if the people of the country who are now so enthusiastic for this military program could know what they are actually proposing, I am sure there would be a sudden abatement in this propaganda.

WHAT EMINENT AUTHORITIES SAY.

WHAT EMINENT AUTHORITIES SAY.

For all except a few officers in command, military training develops a blind, untbinking obedience. For the rank and file military training prepares the boys to be mere imitators. Military training prepares the boys to be mere imitators. Military training represses individuality at the very time these qualities should be developed. (Former President Charles W. Eilot.)

Military training in our public schools fosters a spirit of suspicion and distrust of other nations. Acting on the plea of national necessity, a national enemy must be found. This endangers national hatred, a long step toward war. (Dr. Nathan C. Schaeffer, Prof. Reichart, and Dr. John H. Finley.)

The moral danger. The laws of the community and of the State forbid the boy to carry arms. He attends church and hears that he must do unto others as he would others should do to him, and then he joins the cadet corps and is trained with gun and sword in the art of killing his fellow men. Then we wonder why our boys have such hazy ideas on moral questions. (Prof. G. M. Stratton, professor of psychology of the University of California.)

Rural Credits.

EXTENSION OF REMARKS

HON. WILLIAM E. COX. OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. COX. Mr. Speaker, the Nation owes the Banking and Currency Committee a lasting debt of gratitude. During the Sixty-third and Sixty-fourth Congresses it has brought forth two of the greatest constructive measures Congress has passed since the Civil War, measures which have brought the people more relief, comfort, happiness, and prosperity than all the other legisla-tion passed by Congress during the past 50 years. I refer to the Federal reserve act, passed in the Sixty-third Congress, and the present rural-credits bill. The Federal reserve act was the first attempt made by Congress to mobilize the commercial resources of our Nation. Until the passage of this act there was no unity of action, no coordination of purpose among the 7,300 national banks, with a capitalization of \$1,000,000,000, with reserves and assets more than this in amount, with a banking power of \$15,000,000,000, but every bank was a separate unit, each fighting its own battles in times of stress and storm, each running to cover every time a financial flurry swept over the country.

The Federal bank act bound with hooks of steel all these banks into one strong financial system, making it impossible to break the chain unless all our commercial resources should suddenly fail, a thing impossible to conceive.

Until the Sixty-third Congress the American people never had a banking and currency system adapted to the ever growing and expanding needs of our Nation. This is conceded by all. Our system of banking and currency until this act was passed was a sham, a subterfuge, a mere patchwork. It was the outgrowth of the Civil War, designed to enable the Government to sell and dispose of its bonds, to enable it to raise money with which to prosecute the war to a final and peaceful termination. Under the old system of banking the law of elasticity, an essential element in all successful currency systems, was wholly lacking. The only means of increasing the circulating medium was apon Government bonds. This destroyed the necessary element of contraction and expansion. In times of stress, when we needed more currency, it invariably contracted; in times of plenty, when currency was not needed, it invariably inflated; the one condition equally as dangerous to the safety of the Government as the other.

Mr. Speaker, for many years both parties in national platforms had solemnly promised and pledged the people to reform these glaring evils, but neither party was willing to undertake the huge task and give the Nation an up-to-date system of banking peculiarly fitted and adapted to American conditions until the Sixty-third Congress. That measure did not pass without traveling through the fiery furnaces of criticism, both in and out of Congress, in the press, the periodicals, on the stump, the forum, and every other place; but believing in the justness of its cause and the strength of its bill Congress pressed forward, and in December, 1913, it passed the Federal reserve banking law.

It was not perfect. Congress did not claim perfection for it at that time, but it was believed then that it contained the framework on which Congress could in the future build a great financial system peculiarly fitted and adapted to American conditions. The short time it has been in force has demonstrated the wisdom of its authors. It has proven a godsend and blessing to our Nation. Without this system it would have been questionable whether our Nation could have weathered the storm of the European conflict.

Following the outbreak of the European war hundreds of millions of dollars of American securities were dumped upon the American markets, demanding American gold in return for the securities. This threw a tremendous strain upon the Treasury of the United States. To stem the tide, to save the credit of the Nation, to prevent a nation-wide panic, called for a quick mobilization of the financial resources of the Nation, and through the splendid system of banking created by the banking and currency act our Nation passed through the crisis almost without a tremor. Had the present banking system not been in force, in my opinion a panic would have swept over our Nation the like of which would have been wholly unknown in the history of our country.

Mr. Speaker, the Federal reserve act brought some relief to the rural people, not what they wanted, not what they needed, and not what they were entitled to. It permitted national banks to make small loans on real estate on short terms of payment. This measure—the rural-credit system—is the handmaid of the Federal reserve act. It is the second great constructive piece of legislation brought before the House by the Banking and Currency Committee during the present administration.

In my judgment, this measure will go down in the history of our country as the greatest piece of constructive legislation ever conceived in the brain of man or passed by the American Congress. As time goes on it will add more and more to the wealth of the Nation, bring more happiness, light more fires of prosperity, conserve the resources of our Nation, go further to perpetuate our Government, repopulate the country, reclaim the deserted farms, enable poor people and tenant farmers to buy homes, strangle the interest gatherer, make the farmer more independent, learn and teach him to cooperate, rebuild the old country church, repaint and repair the old country schoolhouse, clean off the old country cemetery, build up country community centers, bring about more cooperative systems and centers, a thing so much desired to be done by the rural people, than all the laws ever passed by Congress from the days of Washington, Jefferson, and Hamilton down to the present time. It will do for the American farmer what the Federal reserve act has done for those following commercial pursuits of life. It will enable the farmers to mobilize their credits, to mobilize and combine. All farmers wishing to borrow money at low rates of interest on long-term mortgages can do so, and thereby make a perfect financial fighting machine so strong and powerful that no power can prevail against it. Strange—America ahead and abreast of every nation on the earth in education, arts, literature, science, invention, goaheaditiveness, and get-there-quick, yet we are nearly a century behind most of the European Governments and 50 years behind some of our sister South American Republics on the question of rural credits.

Looking back over the long history of our country, it is hard to conceive the reason of this almost cruel neglect of the interest of the rural people, especially when we consider the fact that

the farmers form the very basis of all our wealth and prosperity. Every conceivable and thinkable business depends for its success upon the success of the farmer. He and he alone produces the food and clothing which feeds and clothes the people of the world. Without him the lawyer, the doctor, the merchant, the banker, the telephones, telegraphs, railroads, express and transportation companies of all kinds, including steam, water, and electricity, no longer would be able to do business, and I repeat, why his interests have not been looked after before is hard to understand; but "sufficient unto the day is the evil thereof."

At last Congress has approached this great question in the present bill under consideration. The measure may not be perfect, it is not claimed to be perfect by its most ardent friends, but it is claimed, and we believe correctly so, that it contains true and correct principles on which Congress can from time to time build until we have an American system of rural credits peculiarly adapted to fit the conditions in America.

The bill provides for the appointment of a strictly nonpartisan Federal farm-loan board by the President, to be composed of three men, no one of whom can be appointed who has any connection with any banking institution, directly or This board must divide continental United States into 12 districts and establish one land bank in each district, with a capitalization of not less than \$750,000, the Secretary of the Treasury being required to subscribe all the stock remaining unsubscribed 90 days after the bill becomes a law. It provides for the formation of Federal farm-loan associations, to be composed of not less than 10 men, each member of these associations to be a borrower of money in amounts not less than \$200 nor more than \$10,000, these loan associations to be governed by themselves by electing a board of directors of ave persons; the Federal land banks to have nine directors, three of them to be appointed by the Federal farm-loan board and six of them to be elected by the Federal farm-loan associations, thereby giving to the farmers control not only of their farmloan associations but the control of the Federal land banks. The Federal farm-loan board is to appoint a registrar, who is to be custodian of all mortgages and all mortgage bonds to be sold by the Federal land banks. Both the Federal farmloan board and the Federal building and loan associations are to appoint land appraisers. Applications for loans must be made through the building and loan associations to the Federal land banks, the land of the borrower to be appraised first by the appraisers of the building and loan association; second, by the appraisers appointed by the Federal farm-loan board. The borrower is permitted to borrow up to 60 per cent of the value of his real estate and up to 20 per cent of the value of the im-provements of his land; mortgage rates of interest not to exceed 6 per cent in any case and to run from 5 to 36 years, the amortization principle contained in each mortgage.

This is what is known as the cooperative plan, where all the mortgages on farm land all over the United States will be tied together to insure the solvency and stability of the bonds to be sold by the Federal farm-loan banks.

The bill further provides for the establishment of joint-stock land banks, organized exactly as State and National banks are organized. Each bank must have an initial capitalization of not less than \$250,000. The interest rate of these banks can not exceed 6 per cent, and mortgages are to run from 5 to 36 years as in the cooperative banks. Both the cooperative land banks and the joint-stock banks are prohibited from doing any business other than a first-mortgage business upon real estate. By providing for these two systems of banking it takes care of every section of the United States. Many farmers may want to join the cooperative land banks through the building and loan associations organized under the bill, and other farmers may not want to join this kind of bank, but may want a loan directly from the joint-stock banks. All stock subscribed to the joint-stock banks must be paid in cash, exactly as stock must be paid for in State and National banks when organized. The organization of these two systems of banks represents the wisdom of the bill. The farmers of the country should be given the opportunity of borrowing money from whichever system that will serve them best. If the cooperative system will serve them best they should be given this opportunity; if they prefer borrowing money on first mortgages from the joint-stock land banks they should be given this opportunity. Beyond question this will compel competition between these two systems of banking, which will eventually be to the farmer's interest, and in the last analysis that system will survive longest and be most successful which serves the farmer best, and that system will serve the farmer best which will be able to loan money to him at the lowest interest and on the easiest terms of payment. In framing this bill two classes of people had to be kept constantly in view, one the farmer, the borrower of money, the other the man with money willing to invest in farm-loan mortgage bonds. It is only through the sale of the bonds that the farm land banks or the joint-stock land banks can secure money to loan to the farmer. It is therefore necessary that every precaution imaginable be safeguarded so as to protect the bonds sol. I by either one of these banks to make it safe and secure, to the end that men or persons with money desiring to invest in them would freely put their money into them as investments. Without the sale of mortgage bonds, so as to raise money to enable the land banks to furnish the farmer with money on their mortgages, the whole structure would fail and fail immediately.

In my judgment the bill safeguards this feature and makes it next to an impossibility for the bonds of any land bank to fail. Every mortgage given upon real estate becomes security for every other mortgage, and the assets of one cooperative bank is guaranteed by the assets of each one of the other 11 cooperative banks, and the bonds issued by each land bank is based upon the mortgages given to each Federal land bank throughout

the United States.

Mr. Speaker, in my judgment this safeguards and makes solvent all the mortgage bonds that will be offered for sale and put on the market, and I believe that people with money seeking investments will readily and quickly invest in them. As the mortgage can not draw interest in excess of 6 per cent, the mortgage bonds will probably draw interest at the rates of from 4 to 5 per cent. These bonds are to be free of taxation, and will therefore furnish attractive investments for men with capital. The resources of a nation begins and ends with the plow. This has proven true throughout all the history of the past and will continue to prove true to the end of time. To-day there is considerable agitation on the question of preparedness in this country, but the greatest preparedness our Nation can possibly make is to prepare the rural people to meet any and all conditions, to meet any and all emergencies which our country may be called upon to meet, either now or in the future.

In studying the history of our country, we have presented to us both a frightful and dangerous spectacle in our Nation, a condition which has crept upon us like a thief in the night, and that condition is the rapid depletion of the rural population

and the overcrowding of the cities.

The 1910 census showed that only 35 persons out of every 100 were living in the country; the other 65 persons out of every 100 were living in the cities, leaving but 35 persons to feed and clothe the 100. The same census shows that 37 per cent of the farms in the country are being cultivated and farmed by tenants. This is an unhealthy condition for this or any other country. It may be due to many things, but the most significant thing is it is due to the shortsightedness of Congress in failing to enact wise legislation which would inure to the interest of the country people. The high rates of interest prevailing in the past and short-term loans made it impossible for tenants or persons without money to buy and pay for a home in the country.

The average rate of interest in our country is approximately 8 per cent. The interest rate in our country and all over the world has continued to increase in the last few years, and bids fair to go higher and higher, and to-day it is almost impossible for a poor man to pay the enormous rates of interest and buy or build a home in the country.

Both land values and interest rates in the last two decades have almost doubled, and as interest continues to increase in value the man without means finds it harder and harder to purchase a home for himself in the country; but with the great reduction of interest rates as proposed in this bill, together with its long-term payments, based upon its amortization rates, many persons will take advantage of it, buy a farm, build a home, and become producers instead of consumers, and raise the essentials of life which people living in cities are compelled to have.

Some conception of what may be accomplished through a low interest rate secured from the operation of the proposed rural-credit system in combination with the amortization principle may be obtained from a consideration of the following calculation: The general average farm-mortgage interest rate has been conservatively estimated at 8 per cent; it has furthermore been estimated that the total amount of mortgages is approximately \$4,000,000,000. Accepting these estimates, the annual interest charge on the farmer equals \$320,000,000, with no reduction of principal. If this indebtedness can be refunded—and it can—under the provisions of the pending bill, at a rate of 5 per cent per annum, and the farmer would pay annually \$300,000,000, the same sum he now is paying for interest alone, the entire debt, interest and principal, would be paid in 22

years and 6 months. This would mean a net saving of at least \$150,000,000 per year. It would mean the payment of the entire mortgage debt by the operation of the system provided in the present bill in 22 years and 6 months without increasing the annual payment over that now made to meet interest charges alone.

All mortgages given under this bill will be based upon the amortization plan; that is to say, the payment of the interest and a small percentage of the principal each year will pay both

interest and principal of the debt.

Mr. Speaker, under the amortization contained in the bill a loan of \$1,000, bearing 6 per cent interest, can be paid off in 16 years by the payment of \$100 annually for 15 years and \$73.10 for the sixteenth year. In other words, for a little less then 10 per cent straight interest not only can the interest and all overhead charges be taken care of, but the principal can be paid off and wiped out as well. Under the plan now followed, the farmer would have paid \$960 interest during the 16 years of the loan, and the principal, \$1,000, would still be due in a lump sum.

A loan of \$1,000, bearing 6 per cent interest and running for the term of 19 years, can be paid off at a little less than 9 per cent straight interest. Under the plan now followed the farmer would have paid \$1,140 interest during the 19 years of the loan and the bill, \$1,000, would still be due in a lump sum. The loan of \$1,000, bearing interest at the rate of 5 per cent, running for 20 years, can be paid off under the proposed bill in 20 annual installments at the rate of \$80.24 each, or just a little more than 8 per cent straight interest.

Under the plan now followed the farmer would have paid \$1,000 interest during the 20 years of the loan, and the principal, \$1,000, would still be due in a lump sum. A loan of \$1,000, bearing interest at the rate of 4 per cent, for 20 years can be paid off in 20 annual installments of \$73.58, or a rate of a

little more than 7 per cent straight interest.

Under the plan now followed the farmer would have paid \$800 interest during the 20 years of the loan and the \$1,000 principal would still be due in a lump sum. A loan of \$1,000 at 4 per cent running for 36 years can be paid off in 36 annual payments of \$52.88, or a rate a little more than 5 per cent straight interest. Under the plan now followed the farmer would have paid \$1,440 interest during the 36 years and the principal would still be due in a lump sum.

The benefit the farmer will derive from this way of meeting his obligations is self-evident. The principal does not all become due at one time, but like the interest is divided up into small annual and semiannual payments, and he is able to meet

them without difficulty under this system.

Mr. Speaker, it is impossible to enumerate all the benefits which, in my judgment, must inevitably flow to the farmer when this bill gets in full operation. It will require some time to work out its details and make it a perfect bill suitable to American conditions. The farmer has felt the heavy hand of the interest gatherer long enough. Old man Interest is a hard taskmaster. He does not bid you good night on going to bed but greets you with good morning on rising. He sits at your table, partakes of three square meals per day. He is a most incessant and inveterate worker, never rests, never sleeps, never takes a leave of absence, not even a sick leave; works seven days out of each week, including the Lord's day; always busy, and fears he will not get his pound of flesh, and get it nearest the heart. But under this bill when it is thoroughly worked out the farmer will get a rest from the incessant work and toil for old man Interest. He will have exacted his last pound of human flesh, Mr. Speaker, in the language of that old-fashioned but beautiful hymn I feel like saying—

This is the day I long have sought, And mourned because I found it not.

The Shipping Bill.

EXTENSION OF REMARKS

HON. WILLIAM A. CULLOP,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. CULLOP. Mr. Speaker, the bill under consideration commands the attention of the entire country because of the universal demand for its enactment. The question involved affects every industry, every merchant, every business man, and the labor as well

as the capital of the country. In the Washington Post of this morning there is an article stating facts sufficient to convince any reasonable man of the necessity for the enactment of this measure in order that relief may be had for the shippers of the country. It is as follows:

THE AMERICAN MERCHANT MARINE AND GOVERNMENTAL CONTROL OF OCEAN

Eight dollars a ton for the railway freight on barley from San Francisco to Galveston may be a fair and reasonable rate; at least it should be with National and State regulation of rates and with official commissions to see that the railway interests are fairly cared for and the public not exploited unfairly.

What the rate would be if it were not for the power given by legislation to the Interstate Commerce Commission and to the various State commissions no business man in the United States would attempt to state.

What the rate would be if it were not for the power given by legislation to the Interstate Commerce Commission and to the various State commissions no business man in the United States would attempt to state.

But with ocean transportation unregulated by either National Government or by States, with the shipping combines of Europe reaching for the last copper of the shippers or the consumers and private capital after 50 years' talk of providing an American merchant marine, either in partnership with foreign combines or in operating agreements with them or controlling few, very few, vessels independent of these combines, we have to-day statements that \$32 a ton is to be charged for transporting barley from Galveston to European ports.

And we have some legislators who still balk at governmental protection of the interests of American farmers, American manufacturers, the masses of the American people, and who are opposed to governmental control of rates in a governmental-owned or governmental-aided merchani marine.

Thirty-two dollars a ton ocean freight to western Europe on barley produced on the lands of the farmers of the United States makes it highly profitable for owners of vessels, for private capital invested in vessels, and, of course, they want no governmental-owned merchant marine, no governmental control of rates, no governmental service for the producers and the shippers of the Republic.

The farmers who produce the barley, working early and late through winter's cold and summer's heat, working in every season throughout the year to produce the grain crop for the market, do not receive per ton for the grain as much as the owners of the vessels which carry it on the two weeks' trip from Galveston to Europe.

And private capital has had 50 years to furnish an American merchant marine, and yet some Members of the Congress oppose the governmental establishment of a marine and are strongly against governmental control of rates on ocean transportation.

It is not many years since governmental control of rai

This clearly shows a condition which burdens the industry and prevents our products from enjoying access to the markets of the world and realizing the profits which otherwise could be realized on them. Instances of this kind could be multiplied. For instance, there is a great demand abroad for our coal. When the European war broke out the ocean rate on coal to France was \$5 per ton, now it is \$32 per ton. It was from 4 to 6 cents per bushel on wheat, it is now 46 cents; it was then from \$1.50 to \$2 per bale for cotton, it is now from \$16 to \$18 per

What is true in the increase of ocean freight rates on these commodities is true on all others, and it has become almost prohibitive, to the great detriment of the producers of this country. A few shipowners have a monopoly of the ocean-transportation facilities, and because they are able to control this important business they have elected to oppress the people and thereby injure our commerce, which has the greatest op-portunity now it has had in the last 50 years.

Whenever any business becomes a private monopoly and is employed to oppress and exploit the people, then the Government should come to their rescue and destroy the monopoly. Business requires it and good Government demands it.

If it had not been for the enormous and unjustifiable increase in ocean freight rates, every product in this country would have sold, since the European war broke out, higher in our markets and the producers who earn and are entitled to the profits would have been paid this difference as an additional price for their products. It has been a constant menace to the prosperity of our export trade and has embarrassed the business interests of our people.

The price at which these products have been sold abroad is the market price to the consumers, and was the price which they would have brought if the ocean freight had not been increased; hence, the producers in this country have been the sufferers and not the foreign consumers.

It was exacted from the American producers—the farmers, manufacturers, miners, and other industries. Imagine what a sum these producers would have realized if this increase in ocean rates had been added to the price for which they sold their products. Consider how much more profitable their business would have been and what an impetus it would have given industry in this country; how much it would have increased the wages of the laboring man. These are some of the practical effects to be considered for the adoption of this measure, and some of the reasons calling for action at this time for the regulation of this monopoly.

But there is another reason why it should be enacted, in order to build for us a merchant marine to haul our products to foreign countries, put back on the seas the American flag, floating from American ships. It was costing our people before the European war broke out \$300,000,000 annually for ocean freights.

It costs much more now,

This enormous amount was paid to foreign ships for transportation by our people. It was sent abroad. Would it not have been better to have paid this great sum to Americans and

have kept this money at home?

Think for a moment what a fleet this great sum would have built and manned. Every year for the last 10 years this great amount has been the annual toll paid foreign ships for ocean transportation. It is sufficient alone to have built and set afloat a great merchant marine which would have been the pride of the American people and increased our prestige as a world power.

If it had been employed for this purpose, we would have kept this money at home and would have had the greatest merchant marine in the world. The American flag would have regained the position it occupied on the seas before the Civil War, when

we had the greatest merchant marine in the world.

We have paid every year for the last 10 years to foreign ships for ocean service six times the amount it is proposed to appropriate in this bill to establish a merchant marine to carry American products to foreign markets and to enable the American producer to have a fair chance in the commerce of the

Private capital has had ample opportunity for 40 years to build a merchant marine, and it has failed to do so, but has invested in foreign ships. It is folly to wait longer on it.

Fifty years ago the shipbuilding industry flourished in this country, was a leading and thriving business, but it has dwindled away until now it is negligible. Pass this measure and this great business will be revived and regain its former prestige and again become one of the great important industries of the country. It will employ capital and labor and add to the wealth of the Nation.

The opponents of this measure object to its passage because it will authorize the Government to engage in business in competition with private citizens, and, as asserted by them, perhaps drive them out of business, because it indorses Government ownership and because of this Government-ownership feature they can not support the measure. In other words, they prefer to tolerate a monopoly which is unreasonably plundering the people, stifling industry, restraining and limiting commerce, denying business the golden opportunity now afforded it, to indorsing a relief measure which contains the Government-ownership feature. They confess the plan proposed is the only plan available for relief. Such an objection will furnish no excuse to millions of people in this country who daily suffer injury from present conditions, and whenever presented it will afford no palliation for the wrongs they endure, the loss sustained, and the cost entailed. They will scorn such an excuse.

Every seaport on the Atlantic coast is overflowing with prodexery seaport on the Atlantic coast is overnowing with prod-ucts awaiting shipment abroad. Want of facilities and pro-hibitive charges prevent the exchange of these products for foreign gold. The price is satisfactory, the demand strong, but the delay in shipment and the excessive cost of transportation injure the farmer, manufacturer, and laborer of this country, and they will hold to a strict accountability those responsible for the delay or defeat of legislation which would relieve existing conditions.

It has also been asserted that to engage in this enterprise will sustain loss to the Government, and for this reason it should not be done. How do they know it will be a losing enterprise? When we passed in this House the maritime insurance law these same objections were raised, the same prophecies of evil were made in opposition to it, but fortunately they did not materialize. It was necessary to pass that measure in order to break down the maritime insurance monopoly, and it performed that function to the satisfaction of the sponsors of that measure and the shippers in this country who were being exploited by it. Great success followed the enactment of that

Look at the result, which is most gratifying: From September 2, 1914, to November 10, 1915, a little over 14 months, policies were written on war risks amounting to \$89,245,000, a total of 1,238 risks, an average of nearly 100 per month. The net premiums received amounted to \$2,127,976 and the net losses paid amounted to \$695,984, leaving a net surplus of \$1,431,992. This was what the Government gained in breaking up a monopoly and relieving the people from its remorseless grasp. It reduced the insurance rates to a reasonable basis, established competition, furnished security to the people for the safety of their property, paid all losses, and cleared in 14 months practically a million and a half dollars. It did not bankrupt the Government; it did not destroy private enterprise or drive private citizens out of business; but it did break down a monopoly and compel it to do business on reasonable terms. Does anyone criticize Congress for the passage of that measure? It was an emergency measure, required at that time for the relief of the shippers of the country, and Congress responded and furnished the relief.

The same emergency exists now for the passage of this measure, and Congress should speedily furnish the relief and enable our people to take advantage of the great opportunities offered, strike down the great ship monopoly, and enable this country to capture the foreign trade knocking at our doors and again establish the greatest merchant marine in the world, regain our former prestige, unfurl the American flag from the masthead of American ships in every seaport in the world. The opportunity is presented, and we should accept it and show other nations our real greatness, our ability to regulate our business affairs, and protect our people from the excessive charges of organized monopoly—demonstrate to the world that this is in fact a Government of the people, by the people, and for the people.

An American Merchant Marine.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL. OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES, Tuesday, May 23, 1916.

Mr. RANDALL, Mr. Speaker, I am astonished that there should be a single vote against the proposition of creating an American merchant marine as presented in the shipping bill which has been passed by this House. No other plan was presented by its opponents. No one pretends, after our 50 years of absence from the sea, that vessels under the American flag will reappear except through subsidies or by Government coopera-The American spirit will not tolerate a subsidized mertion. The American spirit will not tolerate a chant marine, and it is well that it should not.

The enemies of Government cooperation in building up our merchant marine did not dare to offer the subsidy plan in lieu. They simply represent interests which oppose the Government

ownership of anything under the sun.

This country sent fifty millions out to build a railway in the mountains and ice fields of Alaska, where no traffic exists. It built the Panama Canal for the use of privately owned ships, When it is proposed to occupy a field which private interest refuses to fill, it is perplexing to know why private interest throws its influence against an enterprise which is universally approved.

Rural Credits.

EXTENSION OF REMARKS

HON. JAMES W. WISE, OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 24, 1916.

Mr. WISE. Mr. Speaker, I do not intend at this time to make an argument as to the necessity for this bill or the great good that will come from its enactment. I think all who have given any thought or consideration to existing conditions will

admit the necessity for the same, and also the good that will necessarily follow the enactment of a real rural-credits bill, I do not want to be misunderstood in what I shall hereafter say, and therefore emphatically declare that this bill does not meet with my entire approval. It is not the bill that I would like to see passed. It does not go far enough, and does not include all that I would like to see included in its provisions. It does not authorize the Federal Government specifically to indorse the bonds to be issued under its provisions. I am serry it does not. I did all I could in a humble way to secure the adoption of an amendment to this effect, but it did not prevail. I believe it would not have resulted in the Government losing a penny, and would have greatly aided in the sale of bonds at a very low rate of interest, and thereby resulted in a corresponding low rate of interest to the borrower. I was, and am still, opposed to section 16, which authorizes the establishment of private banks, believing that putting them in direct competition with the Federal land banks will work to their injury and be harmful in the years to come,

But all legislation is in a sense a compromise, and we have to take the best we can get and then endeavor to make it a success. and as it goes into operation and the defects are made manifest so amend it from time to time as to bring about the greatest good to the country at large. That is my hope in regard to this legislation, and for these reasons and others I give my support to this bill, believing also that it is the beginning of a policy of aid to the agricultural interests of this country and the recognition, although small, of a class long neglected that will eventu-

ally result in much good to all our people.

But, as stated, it is not my intention to go into the merits of the question as an original proposition but, as this seems about all we will be able to get at this time, to go into some details of the same and see what it really is, and, if possible, to so explain its provisions that those interested may know how to proceed to get the benefits of the law as finally enacted.

Now, what are the provisions of this bill—and I refer to the House bill?

FEDERAL FARM-LOAN BOARD.

First. There is authorized and created a Federal farm-loan board, consisting of three members, to be appointed by the President, established at the seat of government in Washington D. C. Their salaries and expenses are to be paid by the Federal Government and are no expense to the borrower or the banks hereinafter referred to. They serve for three, six, and nine years, respectively. This board has general supervision and control of the entire rural-credits system, as hereinafter explained, and bears the same relation to this system of banks that the Federal Reserve Board bears to the Federal reserve banks. No member of the Federal farm-loan board can be an officer or director of any other institution engaged in banking or in making mortgage loans or selling land mortgages. This board appoints a farmlean registrar for each land-bank district, and also appoints one or more appraisers for each land-bank district. They are all public officials and can have no connection with or interest in any other institution engaged in banking or making or selling land mortgages. It is also authorized to employ such attorneys, experts, etc., as is necessary to conduct the business of the board. and they from time to time cause to be made examinations and report condition of all the land banks created under this act and issue charters for land banks and farm-loan associations.

FEDERAL LAND BANKS,

Second. The Federal farm-loan board divides the United States into 12 separate districts and establishes a Federal land bank in each district for the purpose of making long-term loans on real estate on the amortization plan. The stock in these Federal land banks is to be not less than \$750,000 each. This stock, unless subscribed within 90 days, is to be taken by the Federal Government, which shares in no dividend declared by the banks. No land-bank district shall contain a fractional part of any State. These districts are laid off by the Federal farm-loan board and the banks therein chartered by it. After being chartered by the Federal farm-loan board it becomes a body corporate and has all the powers given under the act, which I will not enumerate now, but which enable it to carry on its business of making long-term loans on real estate, no loan to be less than \$100 nor more than \$10,000. These loans can be made for the following purposes: (a) To provide for the pur-chase of land for agricultural uses; (b) to provide for the pur-chase of equipment and live stock necessary for the proper and reasonable operation of the farm; (c) to provide buildings and for the improvement of farm lands; (d) to liquidate the indebtedness of the owner of the land mortgaged existing at the time of the organization of the farm-loan association. No loan is to exceed 60 per cent of the value of the land mortgaged and 20 per cent of the value of the improvements thereon, and

no loan to be made to any person who is not at the time, or shortly to become, engaged in the cultivation of the farm mortgaged. The Federal land bank is managed by three directors appointed by the Federal farm-loan board until the stock subscriptions from the farm-loan associations amount to \$100,000, then the stockholders of the bank elect six of the directors and three are appointed by the Federal farm-loan board. So, it will be seen that when the subscriptions reach the amount above stated, the borrowers, who own the stock in the bank, will control the same.

NATIONAL FARM-LOAN ASSOCIATIONS.

The next organization provided for is the farm-loan association. This is composed of not less than 10 men who desire to secure loans, and who then organize themselves into what is called a national farm-loan association; and they shall specify, in general terms, the object for which the association is formed and the territory within which its operations are to be carried on. They then sign the articles agreed on and send a copy to the Federal land bank of the district. They elect directors, not less than five, in the same manner as directors of national banks are now elected, and also select a secretary-treasurer. The directors also select a loan committee of three members. All the officers, except the secretary-treasurer, serve without compensation.

These three organizations—the Federal farm-loan board, located in Washington, expenses paid by the Government; the Federal land banks; and the national farm-loan associations—constitute the machinery and all the organizations for putting into operation this system of rural credits.

PROCEDURE TO SECURE LOAN.

It has been asked many times, and seems to be misunderstood, the method by which one may secure a loan, or what would be necessary for a man to do if he desired to take advantage of this act. The procedure would be as follows: Ten men who desire to borrow money would organize a national farm-loan association, as above described, in each community, in any one county, or several counties together; they would then fill out their application blanks, prepared by the Federal farmloan board, which would be sent to the national farm-loan association, and which they would have on hand, making application for loans; the loan committee of the national farm-loan association, which would be composed of three members of the association, and which would be composed of local men who would not be interested in the loan applied for, would take the application, inspect the land, and appraise the same, and approve the loan if it was for not more than 60 per cent of the value of the land and 20 per cent of the value of the improvements thereon.

When this is done the secretary-treasurer of the national farm-loan association would take the application and send it to the Federal land bank; the Federal land bank would turn the same over to its examiner and appraiser, who, in turn, would inspect the land and appraise the same, and if his judgment was in accord with that of the loan committee, he would so report to the Federal land bank, which, in turn, would approve the loan, prepare the papers, and send them back to the secretarytreasurer of the national farm-loan association with the money; who would have the papers all properly executed and recorded, pay the money over to the borrower, and return the mortgage and notes to the Federal land bank. Each applicant for a loan would at the same time subscribe for and take 5 per cent of the amount of his loan with the Federal land bank in stock in the bank, which would be issued to the national farm-loan association, and by it to the borrower, who would receive dividends on his stock in the event any profits were declared by the Federal land bank. After the farm-loan associations were organized all others would apply to it for loans; and if no farmloan associations are organized, applications could be made through any chartered bank.

No loan could bear more than 6 per cent interest, which, with a small amount on his loan at the time the same is made, would be paid annually, and which at the maturity of the loan would not only have paid the interest on the same, but would at the same time have paid off the principal sum and there would be no outstanding debt against the farm.

These Federal land banks, which in the course of time would be owned entirely by borrowers, for no one except a borrower could take stock after they are organized, are authorized from time to time, when they need funds to make loans on real estate, to apply to the Federal farm-loan board, putting up as collateral the mortgages taken from borrowers; and the Federal farm-loan board authorizes the bank to issue bonds on these mortgages for such term of years as it may desire at not more than 5 per cent interest and to sell them in the market on the

best terms possible, and thereby secure funds for the purpose of making other and additional loans. And this can be carried on until bonds have been issued to twenty times the amount of the capital stock and surplus of the Federal land bank.

LIABILITY OF BORROWER AND CORRESPONDING ADVANTAGES.

No borrower can be liable for more than 5 per cent of the amount of his loan in addition to the stock he owns in the Federal land bank. It has been stated by some that farmers desiring to secure loans will not go into this because of the fact that they are required to take 5 per cent of the amount of their loan in stock and are liable for 5 per cent more in the event there should be a loss on account of the bank having made loans that were not good. It will be remembered that anyone who now makes a loan on his farm, even for a period of five years, pays about 10 per cent of the amount of his loan in the way of commissions, attorneys' fees, and other expenses, for which he gets absolutely nothing, and pays a much higher rate of interest than he would have to pay under this system; whereas, if he takes advantage of this act, he is only required to take 5 per cent of the amount of his loan in stock and gets value received for the same in stock of the Federal land bank, which, I consider, will be absolutely good, safe, and sound, for there is no better security for a loan than farm lands, and if they comply with the law and loan only to the extent of 60 per cent of the value of the land and 20 per cent of the value of the improvements, it is not possible there will be any loss, unless the title should not be good, which would be a remote possibility after the title had been examined by competent attorneys. The borrower now has to pay this commission every five years, whereas, under this plan, he would only have to pay it once and the loan could run for 36 years if he so desired, and he would never have to pay any more expenses, and would know every year exactly how much he would have to pay, not exceeding 6 per cent on the principal, and would know that when the mortgage should have matured that the entire indebtedness would have been canceled.

Another advantage in addition to what is above stated would be in the fact that the borrowers, all of whom would be members of the national farm-loan association, would own the Federal land banks; so that if said banks should make profits, which, in my judgment, they will, even at the limited rate of interest, the dividends would be repaid to the borrower who holds the stock, just the same as dividends in other banks are paid to the stockholders, and would thereby reduce the amount of interest that he would be paying to his own bank-the Federal land bank-just to the amount of the dividend declared by the Federal land bank. In other words, the borrower would be getting his money at not exceeding 6 per cent interest, and at the same time own stock in the Federal land bank and be receiving dividends from the same, in which case he would be both the borrower and, through this corporation, the lender. In other words, he would get the money on his loans at exact cost, less the expenses of the Federal land bank, which would be paid out of the profits of the Federal land bank, and not by the borrower; that is, if the 6 per cent—if that should be the amount agreed on—that he pays to the Federal land bank should be more than the money costs the Federal land bank, the difference would go to the bank in the way of profits, and the borrower, being a stockholder, and the borrowers owning the bank, would receive the same back in the way of dividends on his stock, thereby making it impossible for others to make profits out of him.

Another advantage he has by virtue of taking this stock is that the Government, in putting up the money for this bank, to wit, \$750,000, does not receive any dividend on its stock, and, whatever profits are made, the entire amount of same in the way of dividends would go to the stock held by the borrowers of the bank.

I might explain further, with reference to the capital stock of these banks, so that there may be no misunderstanding, that it is provided in the act that when the stock of the borrowers, who take the same through the national farm-loan associations, as hereinbefore stated, shall reach the amount of \$750,000, which would then make the Federal land bank have a capital stock of \$1,500,000, from that time on 25 per cent of the additional stock taken by borrowers shall be applied to the stock held by the Federal Government to reduce the same, and 75 per cent of such additional stock shall go to increase the capital stock of the Federal land bank, so that by the time all of the stock of the Federal Government shall have been paid in full by this method, the capital stock of the bank will have reached \$3,750,000 and will then be owned and controlled absolutely by the borrowers. It may be stated by some that this will take a long time, and that it will be a long time before this condition of affairs will arise, but that is because of the

fact that people do not know or realize the amount of mortgage indebtedness there is now existing on farm land, for if the amount now in farm loans was reborrowed through the Federal land bank, as provided by this system, within less than 12 months every Federal land bank would have a capital of the above amount and would be in the hands and control of the borrowers, who would reap all the benefits and profits of the same.

It is also insisted that this act will be of no material benefit to the farmer. As I have before stated, it does not meet my wishes and entire approval, but I still can see great good and great saving resulting to those who take advantage of its provisions. To illustrate, the difference between the amount of interest that would be paid under this system and the amount they have to pay now, if the farmers take advantage of this act and place their loans in the Federal land bank rather than in private concerns, as now carried on, where they have to pay at least 2 per cent more than could possibly be charged under this system, besides a great saving in commissions, fees, and expenses, would amount to an enormous sum every year, which would be a saving to the farmers interested and thereby result in much good, in my judgment, to every community, and especially to our part of the country, where we have to pay such missions and expenses.

To make this benefit clearer; the total indebtedness of the farmers of the United States, as shown by mortgages on their farms, is about \$3,000,000,000, and they are now paying on these loans an average of 8½ per cent interest. This would make the annual cost to them in interest alone \$255,000,000. Now, if only the farmers who now have mortgages on their farms should take advantage of this act, where money could not cost them more than 6 per cent, there would be an annual saving to them of \$75,000,000. And it should be remembered that a large amount of this is paid by the South, where the interest rates and expenses are highest. Other bonds bearing 5 per cent interest usually sell at par. They are deemed no better than these—in my judgment, they are not as good—so it is safe to assume that these will sell on equally as good terms. The farmers are now paying annually in excessive interest charges on farm mortgages from \$75,000,000 to \$100,000,000, which this legislation will save them.

WILL SAVE LARGE SUMS TO PARMERS OF GEORGIA.

Now, apply this act more specifically to the farmers of Georgia and see just what benefits they can derive by availing themselves of the terms of this act. I call attention to some statistics from the best information obtainable from the last census and other reports. The farmers of the State of Georgia have a mortgage indebtedness on their land, at the present time, of at least \$20,000,000—this amount is not entirely accurate, because it is impossible to get specific information of the exact amount. If they pay 8 per cent interest on this sum, and most of them pay at least that much, the annual interest payment is \$1,600,000. If they borrow this money and pay the highest rate, 6 per cent under this bill, the amount of annual interest would be \$1,200,000, making a net saving of \$400.000 annually in interest alone. If they secure the money under this bill at 5 per cent, which many believe will be the controlling rate after it goes into operation, the annual interest on this indebtedness would be \$1,000,000, and there would be a net saving annually of \$600,000 to the farmers of the State of Georgia.

It must also be remembered in considering the benefits under this act that these borrowers paid a commission in securing the loans of at least from 8 to 10 per cent. At 10 per cent—if they paid that much, and many of them did—it would be a sum of \$2,000,000 which these farmers paid that they would save under this bill in addition to the interest saving above. It should also be remembered that these loans, most of them, run for a period of five years and must be renewed at the end of every five years, and this same commission is paid again by them. In other words, the borrowers of the State of Georgia, in commissions and other expenses alone outside of the interest, pay every five years from \$1,500,000 to \$2,000,000 on these loans for which they get absolutely nothing. So when you take both items and the interest on these items it will be seen that a large saving will be made annually to the farmers of Georgia alone, even if none borrow except those who now have mortgages on their farms.

BENEFITS TO TENANTS.

It has been said that under this bill no one except those who already own land could avail themselves of its provisions, and no one would be enabled to purchase a home unless he had at least 40 per cent of the cost to pay cash. I do not agree entirely with this contention. A great many tenant farmers have saved a few hundred dollars, or could raise that much; they are afraid—

and rightfully so, under present conditions-to purchase land and invest all their earnings in it, not knowing what may happen, or whether they may not in a short time be closed out and lose all they have paid, on account of some misfortune, and because they could get but few years time at best, at a high rate of interest, giving them no chance to make improvements, and so forth. Under this bill he could purchase and have a long term of years-36 if he desired-and know that he would not be closed out and lose his hard-earned savings; and he would also know just exactly the amount he would have to pay, in my judgment not more than he now pays as rent each year, and feel absolutely safe and know that it was his home and feel secure. He would also know that his land was increasing in value all the time, and if he kept it for the full period of the loan, to wit, 36 years, the increase in price of the land and profit in same would amount, in my judgment, to a great deal more than his debt. And in this way many tenants would be able to secure homes and have time to improve and build them up.

Again, if he did not have a dollar and was a reliable and honest man he could contract for a piece of land, borrow 60 per cent of its value and pay to the seller, and arrange with him for time for the remainder of the purchase price. I have no doubt that many men who now have land that is paying them nothing would be glad to sell it to some good, honest, deserving tenant if they could get in cash 60 per cent of its value, and give him plenty of time to pay the remainder of the purchase price, the tenant being able, under this legislation, to borrow on this land 60 per cent, pay to the owner of the land this money, and have 25 or 30 years to repay same at a low rate of interest, and pay the remainder of the purchase price to the seller on terms satisfactory to both. I believe many who are now tenants and who under present conditions will never be able to buy and pay for a home, if they will try, can secure and pay for one under this legislation.

EXEMPTION FROM TAXATION.

Another provision of the bill is that it exempts the Federal land bank and the mortgages and bonds issued by it from Federal, State, and municipal taxation, thereby saving to the owners of the banks (who are the borrowers) this expense, which would be a large sum on the amount the bank would hold, and also increase the demands for the bonds and make them sell for a better price, thereby reducing the cost of the money to the borrower.

FEDERAL DEPOSITS.

Another provision that will be of benefit to the borrower and also aid in selling the bonds is that wherein it is provided that in the event any disaster should come to any section and the farmers who have borrowed money should be unable to meet their payments, the Federal Government is authorized to deposit in each land bank a sum not exceeding \$500,000 to enable the bank to meet the interest obligations on the bonds, thereby assuring the bondholder that his bond is good, and also assuring the borrower that under such circumstances he will not be closed out and his farm sold.

JOINT-STOCK LAND BANKS.

This is the provision in the bill that I have referred to as section 16, and which I think is a dangerous provision, because it authorizes the establishment of private land banks with practically all the privileges of the Federal land bank and with some less restrictions. I will not give all the dangers of same, but it puts these banks in direct competition with the Federal land banks and all their profits go to its stockholders and every loan less than \$10,000 that it makes takes from the Federal land bank just that much business and reduces the profit of the Federal land bank just that much, whereas if it were in the Federal land bank, the borrowers—farmers—would get the benefit and profit of the business.

Of course, it is within the power of the farmers themselves to make the Federal land bank a success by all of them making their loans through the Federal land bank and not in the joint-stock land banks. And I believe if they will look to their own interest and welfare, both for the present and the future, they will, everyone that comes under its provisions, take their loans through the Federal land banks, where all the stock will be owned and controlled by the borrowers themselves, and not in banks established for private gain, and where every influence will be to keep interest rates high. In Federal land banks all will be interested in reducing interest rates. Our agricultural departments, farmers' associations, and all really interested in the welfare of the agricultural interests of the country will do well to carefully look into this and see that none are misled.

REPAYMENT OF LOAN.

The amortization plan provided by this bill will be clearly understood by the following table, showing a loan of \$1,000 for

20 years at 5 per cent interest, if the borrower desired a loan for that period:

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on principal.	Amount of principal still unpaid.
1	\$80, 24 80, 26 80, 26 8	\$50,00 48,48 46,90 45,23 43,48 41,64 39,71 37,68 35,56 36,56 28,51 25,93 23,21 20,36 17,37 14,23 10,83 7,46 3,82	\$30, 24 31, 75 33, 34 35, 01 36, 76 38, 59 40, 52 42, 55 44, 69 46, 91 49, 26 51, 72 54, 31 57, 02 59, 87 66, 31 72, 78	\$969.76 938.00 904.67 899.66 832.90 794.31 753.79 711.23 608.56 619.66 518.67 444.33 407.34 347.45 234.65 218.59 149.23 76.50
Total	1,604.80	604.80	1,000.00	

I also, in order to show the maximum costs under this bill, if the borrower desires to take advantage of the 36-year loan, incorporate what is known as an amortization table showing the process by which the loan and interest are paid. The table is for a loan of \$1,000 for 36 years at 6 per cent interest, and the annual payment is \$68.39:

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount of principal still unpaid.
1	£68,39	260,00	\$8,39	\$991,61
2	68, 39	59.49	8,90	982,71
3	68.39	58,96	9.43	973, 28
4	68.39	58.40	9.99	963.39
5	68.39	57.80	10.59	952.80
0	68.39	57.16	11.23	941.57
7	68.39	56.49	11.90	929.68
8	68.39	55.79	12.60	917.08
9	68.39	55.02	13.37	903.71
10	68.39	54.28	14.11	889.60
11	68.39	53.37	15.02	874.58
12	68.39	52.47	15.92	858.66
13	68.39 68.39	51.52 50.50	16.87 17.89	841.79
	68, 39	49.43	18.96	823, 89 804, 93
	68.39	48, 29	20.10	784.83
17	68.39	47.08	21.31	763.52
18	68.39	45, 81	22.58	740.94
19	68.39	44, 45	23.94	717.00
20	68.39	43.02	25.37	691.63
21	68, 39	41.49	26, 90	664.73
22	68,39	39.88	28.51	636, 22
23	68, 39	38, 17	30, 22	606.00
24	68, 39	36.36	32.03	573.97
25	68, 39	34.43	33.96	540.01
26	68.39	32.40	35.99	504.02
27	68.39	30.24	38.15	465.87
28	68.39	27.94	40.45	425.42
29	68.39	25.52	42.87	382.55
30	68.39	22.95	45.44	337.01
31	68.39	20.22	48.17	288.84
32	68.39	17.33	51.06	237.78
33	68.39	15.26	53.13	184.65
34	68.39	11.07	57.32	127.33
35	68.39	7.63	60.76 66.57	66.57
36	70.56	3.99	00.57	
Total	2,464.21	1,464.21	1,000.00	

An examination of this table will show that if a farmer borrows \$1,000 for 36 years at 6 per cent interest, by the payment of \$68.39 per year all the debt and interest is fully paid at the end of that period. Under present methods if he gets his money on a five-year loan at 8 per cent interest he would pay in interest alone \$80 per year, and at the end of 36 years, if he should keep it that long, he would have paid in interest alone \$2,880, not counting interest on these annual payments of interest; in addition he would have to renew his loan every five years and pay the usual commission of 10 per cent, or \$100, which, covering a period of 35 years, would be \$700, besides interest on the same, making a total of \$3,580, besides interest on this amount that the borrower would have paid, and he would still owe the principal sum, whereas under a loan in the Federal land bank he would have paid in all \$2,464.21, being \$1,115.79 less than he would have paid under present conditions, and the entire debt of \$1,000 would be settled, making a net saving of \$2,115.79, besides extra interest on pay-

ments, and saving all the worry, trouble, and anxiety of renewing the debt every five years and raising cash to pay commissions. Of course on a loan twice this size the saving would be doubled. So it will be seen that there would be an enormous amount saved if only the present farm-mortgage indebtedness was handled by these banks.

This would be the proper loan to make, for it makes the annual payments smaller, and the act provides that after five years, at any time thereafter, the borrower can pay off the loan in full if he desires by paying the principal and interest then due. This table shows the highest interest rate; if the rate should be less, the annual payments would be less.

Now, Mr. Speaker, I have discussed in some detail the provisions of this bill. My excuse for so doing is my intense interest in the subject and an earnest desire that something might be done that will be of material benefit to our large agricultural interests, so long neglected without any just excuse or reason. This bill is not perfect; it is not all I wanted; it is only a beginning. It is a recognition of the kind of legislation that we so much need; more than any other kind of "preparedness" will legislation of this kind benefit and make secure our country. I sincerely hope that its provisions will be so liberally construed that great good will come from it. I trust and believe that many who have been struggling along, trying to secure homes for themselves and families, will be enabled to do so by the beneficent results of this legislation. Many who labor and toil from early morning until late at night heretofore have only seen their earnings consumed by extortionate interest rates and commissions and finally lose their homes. May they be saved by this law. Many tenant farmers have struggled all their lives, and still continue to do so, to secure a little home for themselves. I hope some way will be found under this legislation to make their efforts a success, for in this lies the success and safety of our institutions. It is my sincere hope that in the future tenant farmers will decrease, instead of, as heretofore, increase, and that home owners will increase until every worthy man will have a place he can call his own and feel secure and happy therein. And when this condition comes not only will our agricultural population be happy and contented, but the entire country and all interests will prosper as never before.

The American Farmer.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,

OF NEW YORK, .

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 24, 1916.

Mr. HICKS. Mr. Speaker, in the great forward sweep of the human race agriculture and civilization are synonymous terms; they have marched hand in hand down the ages from that far-distant past when a few weeds whose roots, more palatable than their fellows, growing in front of a cave constituted the husbandry of primitive man.

So strongly did the importance of agriculture appeal to the nations of antiquity that they ascribed its introduction to divine origin, venerating as its founders Isis, in Egypt; Demeter, in Greece; and Ceres, in Italy. While the cultivation of the soil is essentially the pursuit of sedentary people, the nomads of the time of the patriarchs, though dependent primarily upon their flocks, practiced agriculture to a limited extent.

On the mighty monuments of Egypt we see pictured the implements and methods employed in farming in the days of the Pharaohs. Chiseled in stone are the farm scenes of 4,000 years ago—oxen drawing clumsy wooden plows turning shallow furrows, which were afterwards leveled by crude hoes and simple sticks. Then pictures of the planting, when the seeds were scattered broadcast and pressed into the ground by driving sheep over the soft alluvial soil. After the harvest the grain was taken to the smooth clay thrashing floors, where it was beaten with sticks or trodden out under the hoofs of animals and then winnowed by throwing the grain into the air and allowing the wind to blow away the chaff. The main food products of these ancient people were wheat and barley, to which were added peas, beans, and herbs. To-day this primitive method of tillage is still carried on in that great valley of the Nile, and I have seen the same methods followed in Siam, Chosen, Java, and China, where often men, and even women, are yoked to the plows with donkeys and oxen.

Agriculture occupied a high position in the lives of the Greeks and Romans, and their writers treat of the scientific cultivation of the soil. Cato taught intensive cultivation, the value of live stock as an important adjunct of general farming, the importance of leguminous plants for soil fertilization, and advocated the use of manure. He gives the following advice:

What is the first principle of good agriculture? To plow well. What is the second? To plow again, and the third is to manure.

Pliny says:

Tradition reports that King Anglas was the first in Greece to make se of manure, and that Hercules introduced the practice into Italy.

Alfalfa, which we in the East are only beginning to cultivate, was one of the principal crops of ancient agriculture, as it was in France in the eighteenth century. According to Pliny it was introduced into Italy from Greece, whence it had been brought from Asia during the Persian wars. Virgil opens his Georgies with-

What makes a plenteous harvest, when to turn The fruitful soil, and when to sow the corn; The care of sheep, of oxen, and of kine, And how to raise on eims the teeming vine; The birth and genius of the frugal bee, I sing, Mæcenas, and I sing to thee.

The most primitive form of agriculture is that known as the most primitive form of agriculture is that the order the "field-grass" system. Under this simple method of convertible husbandry fresh tracts of grassland were successively appropriated, plowed, and tilled for grain. As the soil became exhausted it was abandoned and reverted to pasture for the cattle of the community. With the growth of population this wasteful method was displaced by the permanent separation of arable from pasture land. After the Norman conquest in 1066 the manorial system was introduced into England, by which the land was, for the most part, held for the benefit of the lord of the manor, to whom all but a few of the people as bondsmen paid service or produce Domesday Book portrays practically all the land of England divided into manors, although less than one-half of the tilled land was the actual property of the lord of the manor. Under the social system then in vogue the villagers cultivated the demesne for the benefit of the lord who had a definite claim on the labor of each "tenant of the manor," amounting in the aggregate to about one-half of his time. In addition to having his private lands worked for him, the manorial lord exacted tolls for the use of roads and bridges, and compelled each tenant to have his grain ground at his mill. The injustice of this arbitrary and unfair system of land tenure precipitated a struggle between lord and tenant which has been carried down to the present day.

When it was discovered that the same plece of land would recover its fertility when allowed to lie fallow for a time, the two-field system of cultivation was introduced, by which the tracts of arable land were divided into two parts, which were cultivated on alternate years, one field being tilled while the other remained fallow. When it was ascertained that the successive planting of crops was not so exhaustive to the soil as the continuous growing of the same crop on the same piece of land, the three-field system came into use. Under this plan the land was divided into three fields, upon two of which different crops were planted, the third field being allowed to lie idle. By regular rotation each field was cultivated two years in succession and then remained fallow for one year. The three-field system of agriculture was the universal practice in western Europe until the eighteenth century, when upon the introduc-tion of new seeds and the use of manure the fallows were

abandoned.

We hear much to-day about exhausted land and the inability ultimately of the soil to produce sufficient food for our increasing population. Elaborate treatises were written on this sub-ject centuries ago, when it was predicted that starvation in the near future would face the people of Europe. But those dire forebodings did not materialize, for with the increase of population came improvement in the seeds and the development of new varieties of crops. Fertilization was resorted to and more intensive methods of cultivation practiced. Another important factor in dissipating the predictions of those old pessimists was the introduction of agricultural implements. We to-day, employing vast numbers of farm tools, can scarcely realize the crudity of the tools of but a few generations ago. It is only within 200 years that farm implements constructed on scientific principles have been in use. Some of our most simple tools have been developed during this period, while the introduction of power-driven machinery is the story of but yesterday. Science, in increasing the productivity of the soil has kept pace with the growth of population. By intensive methods of cultivation and the use of fertilizers, land that has been tilled continuously in Japan, China, and in many parts of Europe is to-

day the most productive and of the greatest value after a thousand years of cultivation.

Mr. Speaker, as one born and reared upon a farm on Long Island, I desire to pay my tribute to the greatness and importance of agriculture and to raise my voice in praise of those conscientious, God-abiding citizens of the Republic upon whose toil and industry rests the greatness of our Nation, the American farmers. Encomiums from me would be superfluous; let me instead quote from that great orator of the South, the late Henry W. Grady, who had a full appreciation of the dignity of agriculture:

me instead quote from that great orator of the South, the late Henry W. Grady, who had a full appreciation of the dignity of agriculture:

A few Sundays ago I stood on a hill in Washington. My heart thrilled as I looked on the towering marble of my country's Capitol, and a mist gathered in my eyes as, standing there, I thought of its tremendous significance and the powers there assembled and the responsibilities there centered—its Presidents, its Congress, its courts, its gathered treasure, its Army, its Navy, and its 60,000,000 of citizens. It seemed to me the best and mightiest sight that the sun could find in its wheeling course—this majestic home of a Republic that has taught the world its best lessons of liberty—and I felt that if wisdom and justice and honor abided therein the world would stand indebted to this temple on which my eyes rested and in which the ark of my covenant was lodged for its final uplifting and regeneration.

A few days later I visited a country home. A modest, quiet house sheltered by great trees and set in a circle of field and meadow, gracions with the promise of harvest—barns and cribs well filled and the old smokchouse odorous with treasure—the fragrance of pink and hollyhock mingling with the aroma of garden and orchard, and resonant with the hum of bees and poultry's busy clucking. Inside the house thrift, comfort, and that cleanliness that is next to godliness—the restful beds, the open fireplace, the books and papers, and the old clock that had held its steadfast pace amid the froile of weddings, that had welcomed in steady measure the newborn babes of the family and kept company with the watchers of the sick bed and had ticked the solenn requiem of the dead; and the well-worn Bible that, thumbed by fingers long since stilled, and blurred with toars of eyes long since closed, held the simple annals of the family and the heart and conscience of his son. And as they started to the house the old mans hands rested on the young man's shoulder, toaching it with the knighthood of th

Sentiments such as these, so full of human pathos, awaken cherished memories of the fields and woods of our boyhood, and under the subtle influence of "Auld Lang Syne" our thoughts revert to the old home nestling among the trees. Under the spell of our reveries we behold the vision of the angel of our youth, the guardian of our life—the gray-haired mother whose soul has gone to God. For us the gentle voice is stilled forever, and yet in the sublimity of our faith we know that her song of praise swells the music of the heavenly chorus of the great hereafter.

The value of the farm products produced last year in the United States is estimated at the stupendous sum of \$10,000,-000,000, of which nearly one and a half billions were exported. This magnificent showing was not the result of chance or haphazard methods; agriculture to-day is a science, an honored and respected profession.

In 1849, years before the establishment of the Department of Agriculture, Daniel Lee, reporting from the Bureau of Patents, referred to the needs of the agriculturist as follows:

referred to the needs of the agriculturist as follows:

We overestimate the value of mere physical strength, like that of the ox or mule, and underestimate the intrinsic worth of cultivated, well-developed reason in practical agriculture. No inconsiderable degree of mental culture must precede all scientific tillage and husbandry.

Rural science is not a mere plaything for the amusement of grown-up children. It is a new revelation of the wisdom and goodness of Providence—a humanizing power, which is destined to elevate man an immeasurable distance above his present condition. To achieve this result the light of science must not be confined to colleges; it must enter and illuminate the dwelling of every farmer and mechanic. The knowledge of the few, no matter how profound or how brilliant, can never compensate for the loss incurred by neglecting to develop the intellects of the many. No Government should be wanting in sympathy with the people, whether the object be the prevention of disease, the improvement of land, or the education of the masses.

Great advances have been made since these words were written, and greater still will be the beneficial results as the science of the soil extends its lessons of efficiency. I favor governmental action whenever the purpose is to help the farmer, for whenever the producer increases his output it is a benefit to the whole community. The distribution of bulletins, the study and propagation of new seeds, and the furthering of investigations to promote the welfare of the farmer are worthy undertakings. I believe in protection to the agriculturist and wage earner. I can not favor throwing open to the competition of cheap-labor countries the products of the American farmer and American mechanic, which would jeopardize the high standards of living, which are the well-earned reward of their industry and thrift.

Mr. Speaker, the great State of New York, which I have the honor in part to represent, is one of the most important agricultural States of the Union, and we are vitally interested in all legislation that affects the farmer. New York stands first in dairy products and in the production of potatoes, apples, cabbages, sweet corn, celery, and in vegetable acreage, and is an important factor in the raising of grapes, hay, cauliflower, and the coarser forage crops. Poultry, eggs, and honey add their value to the industry of the farm. Long Island, which is the most beautiful section of the State, contributes its share to the agricultural resources of the Commonwealth. We send annually to the New York markets the finest potatoes, cauliflower, and green vegetables that are grown anywhere in this country, besides large quantities of the choicest poultry and eggs. While our farm acreage, under the flood tide of a residential population seeking homes in close proximity to their city offices, has steadily decreased, the value has greatly increased. The census gives the value of the farm property in our three counties as follows:

	Nassau.	Suffolk.	Queens.
1900	\$18,613,428	\$23,688.895	\$16,050,960
	43,189,302	33,537,021	29,554,662

The census of 1910 gives the following figures in reference to our farm products:

	Nassau.	Suffolk,	Queens.
Cereals bushels Potatoes do Value of vegetables Value of all crops.	361,588	924, 914	44,140
	1,168,369	2, 200, 178	391,804
	\$1,763,139	\$2, 339, 279	\$1,408,984
	\$2,541,503	\$3, 681, 470	\$2,444,835

Our farmers, self-reliant, patriotic, and public spirited, occupy an enviable place in the counsels of the county and State. While most of them trace their ancestry back through many generations of sterling Americanism, there are others who have but recently come to our shores. We have welcomed these foreign-born to our midst; they have been inspired by our ideals and have become potent factors of our great Commonwealth, standing with us in the advancement of our institutions and the perpetuation of the principles of liberty, equality, and justice.

There are many subjects that could be profitably discussed in relation to agriculture, but I desire to call the attention of the House to the matter of fertilizers, which are of prime importance to the farmers of the United States. It can be truly said that national prosperity is founded on successful agriculture, and successful agriculture is dependent upon an adequate supply of fertilizers. The need of fertilizers for the most profitable cultivation of many of our crops is now recognized, not only in the East, but also in those sections of the country where formerly it was believed that the natural fertility of the soil would not be exhausted for generations to come. As about \$500,000.000 is annually expended by the nations of the world for fertilizers, of which \$175,000,000 is spent by the United States, the importance of producing the materials within the confines of our own borders can not be overestimated.

The three chief elements of plant nutrition are nitrogen, potash, and phosphorus, of which nitrogen is the most important as well as the most expensive. While nitrogen exists in three forms—as organic matter, as ammonia, and as nitrate—it is the latter which is of the greatest commercial importance. Of these materials the United States produces only phosphates, and is dependent upon Germany for potash and Chile for nitrogen. The present conflict has exemplified the dependence of American agriculture upon foreign countries, and as a result of the war the prices of fertilizers have materially advanced, causing hardships to the American farmer.

The value of potash salts as a fertilizer was discovered in 1870, and from that time to the present Germany has had a practical monopoly of the industry. Of the amount annually

produced by the Strassfurt mines, previous to the war, about 20 per cent, having a value of \$14,000,000, was shipped to the United States. This represented 50 per cent of Germany's exports of this ingredient.

In Japan potash is extracted from the giant marine plant known as kelp, and an effort has been made to utilize the kelp of the Pacific coast, which is similar in character. The results of numerous experiments in extracting potash from this form of seaweed have been satisfactory, but whether it can be produced on a commercial basis as yet I do not know. The kelp grows over an open area of about 390 square miles, where it can be easily harvested, and it is estimated that the annual yield would be over 2,000,000 tons of potassium chlorides.

Let me now say a word about the great nitrate beds of Chile, because, so far as at present known, this country possesses the only natural deposits of any magnitude in the world. For much of my information on this subject I am indebted to the Hon. Señor Don Enrique Cuevas, chargé d'affaires of Chile, from whom I quote.

In the great desert of northern Chile lies an area of over 450 miles in length, barren and desolate, bereft of trees, shrubs, or even weeds. Yet it is the one spot upon which the world is dependent for its supply of the most effective means of increasing the productiveness of its soil, for along this arid region stretch the vast deposits of the precious mineral from whose exports alone the Government derives an annual revenue of over \$35,000,000 in gold. The area is commonly known as Pampa Salitrera—the nitrate plain—where lie the deposits of caliche, the raw material from which saltpeter is extracted, this salt containing nitrate of sodium. The nitrate zone is situated at an altitude between 2,000 and 5,000 feet above sea level within about 25° of the Equator.

According to tradition, the discovery of caliche was made in Tarapaca by the Indians, and it was first applied as a fertilizer by a priest at the head of a parish in Camina.

It is said that a party of Indians had straggled into what is known to-day as the Pampa Salitrera and, as a protection against the intense cold, they built themselves a bonfire. To their amazement, they noticed that the fire soon began to run along the ground in every direction, causing what to them were strange and unaccountable noises. Terrified at so unusual a sight, they fied from the spot, which they firmly believed to be the abode of the evil spirit.

The flames, spreading out sometimes to quite a distance from the original fire, were to their minds the evil spirit itself. So they went to the priest and told him of their terror and its cause. He quickly understood that the phenomenon was simply due to the existence of some special substance in the soil, and asked the Indians to take him to the place. They readily agreed, believing the priest possessed with the power of banishing the evil spirit, and an expedition was organized. Once on the spot he gathered many specimens which he took to his house, and with the meager chemical outfit at his disposal made analysis of his samples, and was able to determine the presence of nitrate of soda.

The samples which had not been used in the analysis were piled up in his garden, and a few days later i.e noticed an extraordinary development in the plants which happened to be near the piles. Convinced that he had discovered a powerful tonic for plants he undertook to experiment on his crops, finding after the first year that the product was much larger than and far superior to that he had obtained in his previous agricultural experience.

Then the priest announced to his parishioners that the soil was not the abode of the evil spirit, but a gift of Providence for increasing the productiveness of the earth.

For many years after its discovery the Indians used the substance, which they prepared in large copper caldrons, for the manufacture of gunpowder, and it was not until the middle of the last century that scientific principles were applied to the industry. Until 1868 the nitrate fields were unclaimed, and anyone could secure from the Government without cost a grant of 36,000 square yards. In 1873 the Peruvian Government, whose territory then embraced these deposits, assumed the monopoly of the industry and levied an export duty. At the present time Chile exacts a heavy export duty of \$12.54 per long ten. From time to time the lands yet owned by the Government and which have all been surveyed are sold at public auction. In appearance and taste nitrate strongly resembles common salt. After the rock is mined it is crushed and dissolved in hot water. The salts are then crystallized. In 1915 the production of nitrates amounted to 2,500,000 tons, of which the United States consumed 577,000 tons, valued at \$16.350,000. We take about 25 per cent of the amount produced, England

40 per cent, Germany 20 per cent, while other countries consume the balance.

As nitrogen is an essential ingredient in all explosives, the problem of an adequate supply presents two aspects—military and agricultural. Of the military I will refer but briefly, although it is of utmost importance. Any program of preparedness which does not contemplate an ample supply of powder is futile. Guns, warships, and men are all alike puppets without gunpowder, and so it behooves us to take immediate steps to build up this industry which will make our people independent of the world and furnish our arsenals with powder and our farmers with cheap fertilizers. At the present rate of consumption it is evident that in a comparatively short time—estimated at less than 75 years—the Chilean fields will fail, and as the supply decreases the price to the consumer is certain to increase. We must not wait until these deposits are exhausted before we seek to remedy the condition.

The only other known source of nitrogen, if we except the

nitrogen in coal, is in the atmosphere—an inexhaustible supply-and Congress should take immediate action to encourage the establishment of plants to extract nitrogen from the air. It has been estimated by scientists that the atmosphere above every square mile of the earth's surface contains 20,000,000 tons of nitrogen, and it is for us to devise the best and cheapest

means of extracting it.

Norway, by the utilization of her immense water power, has established many plants which are successfully engaged in the fixation of atmospheric nitrogen. It is claimed that by a chemical process nitrogen can be produced more cheaply than by the use of hydroelectric power. I do not pretend to know; that is a question for scientists to determine. But I am pre-pared, Mr. Speaker, to give my vote to any measure that will enable this Government to investigate the subject and which will hasten the day when the United States will be independent of all other powers in producing so essential a material as nitrogen, important alike to the Navy and Army and of inestimable benefit to the agricultural interests of the land. I would be derelict in my duty to my constituents whose commission I hold were I not to urge with all the sincerity and earnestness at my command the favorable consideration by this House of some measure of relief for the thousands of sterling, patriotic Americans, for, in the words of Daniel Webster, "the farmers are the founders of civilization and prosperity.

NOTES ON FERTILIZERS AND CROP YIELDS.

In foreign countries the necessity of using large quantities of fertilizers has long been recognized. In England the yield of wheat per acre is nearly three times that of this country. Germany, which uses more fertilizer than the whole United States, her crop yields are approximately 80 per cent greater than our own. By the use of fertilizers she has increased in 20 years her grain production 15 bushels per acre, while we have increased ours 3 bushels to the acre. The potato output has been increased in Germany 80 bushels and in the United States 24 bushels to the acre. It has been estimated that if the farmers of this country would use fertilizer to the extent it is used in Germany there would be a net gain above the cost of fertilizer of \$1,000,000,000 a year.

When it is known that our population between 1900 and 1910 increased 21 per cent, while our crop production increased only 10 per cent, the necessity for prompt action is forced upon us.

I desire to insert extracts from certain public documents bearing upon this subject:

THE NITROGEN PROBLEM.

[Compiled for Hon. David Franklin Houston by Frank S. Washburn, Jan. 29, 1916.]

Compiled for Hon. David Franklin Houston by Frank S. Washburn, Jan. 29, 1916.]

Without fixed nitrogen the earth would soon become an uninhabitable desert waste. Sir William Crookes, the English chemist and economist, declared that the food supply of the world is dependent upon the supply of nitrogen. It is absolutely necessary to the existence of animal and plant life. We live in it, we breathe it, we eat it, and it enters into the composition of the human body. Nitrogen is a constituent of all organized life and tissues. In a free state it is a colorless, tasteless, odorless, gaseous, nonmetallic element.

In the United States the per capita consumption is at present only a little over one-half that for Germany. It is, however, rapidly growing, and the annual sum now sent abroad for the purpose of nitrogenous compounds has become even a more important item. The fact that the United States, in common with all civilized countries, and especially with all agricultural and manufacturing countries, is dependent upon the one natural source of nitrate in Chile, and the additional fact that the Chilean nitrate deposits are not particularly extensive and are destined at an early date to complete exhaustion, constitute another factor in the nitrogen problem.

The efforts that are being made to release the manufacturing and agricultural interests of the world from this dependence assume increasing importance each day in many European countries. During 1913 the United States imported 625,000 tons of Chilean nitrate, valued at \$21,630,000,000 upon which the Chilean export duty was 60 per cent. Thus the people of the United States paid taxes to the Chilean Government of \$8,000,000 for part of the nitrogen they consumed.

INCREASING DEMAND FOR FIXED NITROGEN.

Dr. Norton, in his monograph on the "Utilization of Atmospheric

Dr. Norton, in his monograph on the "Utilization of Atmospheric Nitrogen," says:

"During the middle of the nineteenth century a disturbing force came into play as the result of the increase of population in those countries where cereal foods are a staple element of diet, especially in Europe and North America. The methods provided by nature for maintaining a certain normal degree of fertility were no longer adequate in order to insure a sufficient supply of wheat and other cereals in various countries. In order to increase the yield of a given area of land, recourse was had to artificial fertilizers. The needed nitrogen was obtained partly from the ammonia secured as a by-product in the manufacture of gas, to some extent, from accumulated deposits of guano, and largely from the remarkable deposits of sodium nitrate, in Chile. For over half a century the consumption of both ammonium compounds and sodium nitrate has increased constantly. In addition to the demands of agriculture, modern chemistry calls for vast amounts of nitric acid and its derivatives. One-fifth of the Chilean nitrate now consumed in Europe goes into the manufacture of explosives, of coal-tar colors, and of other allied products."

In 1898 Sir William Crookes estimated that the bread eaters of Europe and America numbered 516,000,000, and were increasing at the rate of 6,000,000 annually. The acreage of cereals in that year was 167,000,000, and only 100,000,000 acres more were available for such cultivation. The annual per capita consumption of wheat was 4.6 bushels, and the average yield per acre was 12.8 bushels. From these figures he calculated that by 1941 the wheat fields of the world must cover 292,000,000 acres in order to meet the demands of a population of 819,000,000 bread eaters.

It is conceded by eminent authorities that an adequate supply of nitrogenous fertilizer, along with methods of intensive agriculture, will easily increase the yield of farm products per acre to such an extent that the present food problem of civilization ca

USE OF FERTILIZERS WELL ESTABLISHED,

The history of the use of fertilizers has proved without a doubt that they have an essential and economic place in good agriculture. Within the last 20 years, Dean Price, of Ohio State University, tells us, Germany has increased her crop production over 61 per cent, and one of her leading authorities, Prof. Wohltman, predicts that within the next 20 years there will be an additional increase of 40 per cent. The Germans say that this increase has been brought about by a better knowledge of how to till the soil and how to use fertilizers. When American farmers take up the same methods with the same thoroughness, and not until then, will our yields be raised to the same high levels.

thoroughness, and not until then, will our yields be raised to the same high levels.

There is a great difference in the yield of the staple crops produced in Germany, where fertilizers have been used for the last 100 years, compared with the same crops grown in the five Northeastern States of this country, where fertilizers have been used for a period of at least a half century, and compared with the same crops grown in the five Central States, where fertilizers, are just beginning to be accorded their logical place in good farming, as shown by the following table:

table:

Average yield per acre for 1910-1912, inclusive. [United States Census Report for 1910.]

	Wheat.	Oats.	Potatoes.
Germany (fertilizers used over 100 years)	Bushels. 31.3	Bushels. 51.0	Bushels. 186.3
mont, Massachusetts, New York (fertilizers used for the last half century or more). 5 Central States—Illinois, Iowa, Ohio, Indiana, Mis-	23.9	36.6	134.5
souri (States that have used fertilizers less than 25 years)	14.5	34.4	79.5

The official German crop returns, issued by the German imperial statistical office, report that in 1912 there was an increase of 38 per cent in the crop production of that country over the production of 1911. It is interesting to note that in 1910 Germany used 6,000,000 tons of fertilizer, while in 1900 she was using only half that quantity. In 1912 American farmers, upon four times the area of land cultivated, used only 6,500,000 tons of fertilizers. To be more exact. Germany applied 145 pounds of fertilizer per cultivated acre, while the Eastern States applied 67 pounds per cultivated acre and the Middle West corn belt States applied only 8 pounds per cultivated acre. Undoubtedly the addition of plant food in this shape is responsible to a very large degree for the larger yields of superior quality obtained across the sea.

IMPORTANCE OF NITROGENOUS FERTILIZERS.

IMPORTANCE OF NITROGENOUS FERTILIZERS.

As a fertilizer nitrogen produces more immediate and direct effects than application of phosphoric acid and potash alone. The nitrogen in many fertilizer mixtures costs more than the phosphoric acid and potash together, but it produces the greatest crop increase, especially, in complete mixtures. This is illustrated by the following average yields obtained in tests covering 55 years at the Rothamsted (England) Experiment Station:

	Wheat.	Straw.
No fertilizer Phosphate and potash only Nitrogen only Complete fertilizer	Bushels. 12. 9 14. 8 20. 5 31. 6	Pounds. 1,175 1,380 2,090 3,570

It is the forms of nitrogen that account for the varying results obtained with different brands of fertilizers of the same analysis. Phosphoric acid and potash salts are alike in grade, but there are about

20 different forms of nitrogen in common use. Some are excellent, some are fairly good, and some are almost worthless.

AVAILABLE SOURCES OF FIXED NITROGEN.

are fairly good, and some are almost worthless.

AVAILABLE SOURCES OF FIXED NITROGEN.

Nitrate of soda: The deposits of nitrate in Chile are rapidly decreasing, and it is estimated that the exhaustion of the rich and more cheaply worked deposits is only a matter of a comparatively few years. Export taxes on shipments of nitrates are the only source of revenue to the Chilean Government. These taxes and high ocean freight rates, as well as increased mining costs, account for the high prices at which nitrate has been selling in recent years.

The fixation of atmospheric nitrogen may be expected to give the world its nitrogen supply at one-half the price that it would otherwise amount to. It is a wonderful providence that perpetual and inexhaustible supplies of nitrogen may be obtained from the atmosphere by the use of hydroclectric power. Hydroclectric nitrogen plants have long been in operation in Norway, Sweden, Germany, Australia, Switzerland, Italy, France, Spain, and Canada, but there are none in the United States. The industry has been in commercial operation for approximately 10 years. It has long emerged from the experimental period, and as early as 1913 was represented by an investment of approximately \$60,000,000. The annual value of the product is upward of \$30,000 000

In times of peace, explosives in the war sense are substantially unknown and without use. In their manufacture, as well as in fertilizer, nitrogen is uniformly required as the chief constituent. The only nitrogen material at present available for use on a large scale is Chilean nitrate of soda.

The United States Government now has absolutely no means of amplifying its nitrogen supply except as long as it can keep open and unmolested the sea route from Chile to United States ports.

The statement has been attributed to the Secretary of War that "The United States has a store of explosives sufficient only to enable her to conduct a war from 8 o'clock until half-past 10 of the same morning." Cheap nitrogen is the basis for making and suppl

The following report has just been published by the Smithsonian Institution:

Attention has of late been attracted to the important bearing of nitrogen on the self-supporting capacity of a country cut off by any emergency—such as a war—from external sources. In view of this important part played by nitrogen, it is worth while to know the available sources within the United States, and to this end the United States National Museum has just assembled an exhibit covering the situation.

As indicated in the exhibit, there are three great sources of nitrogen.

states National Museum has just assembled an exhibit covering the situation.

As indicated in the exhibit, there are three great sources of nitrogen, namely, mineral deposits of nitrogen in ores, nitrogen in the air, and nitrogen in coal, together with its present-day analog—peat. Of the three, the first-named source is at present confined entirely to Chile, and it is doubtful whether any significant deposits will ever be uncovered in this country.

The air is composed of approximately four-fifths nitrogen, and therefore affords an absolutely unlimited source if feasible means were available for the extraction of this atmospheric nitrogen gas and its conversion into some usable form. The employment of atmospheric nitrogen involves the problem of forcing the nitrogen gas to enter into chemical combination with other elements such that under ordinary conditions it will be in liquid or solid state available to use, or, in technical parlance, become "fixed." The underlying difficulties in this problem are in the inherent fact that nitrogen is chemically inert and extremely difficult to stimulate into the activity of entering into combination. This fact is forced home by the reflection that throughout the ages of the earth's existence its atmosphere has consisted of the self-same oxygen and hydrogen most intimately mixed. Had there been the least susceptibility on the part of the nitrogen, its complete combination with the oxygen would have taken place long ago and the earth's atmosphere would be devoid of life-sustaining oxygen, and in place of water our oceans would be composed of concentrated nitrie acid.

Much has been said recently about the process of extracting atmos-

combination with the oxygen would have taken place long ago and the carth's atmosphere would be devoid of life-sustaining oxygen, and in place of water our occans would be composed of concentrated nitric acid.

Much has been said recently about the process of extracting atmospheric nitrogen by means of electricity. It is a fact that, in passing through an electric arc, the oxygen and nitrogen of the air combine to form nitric oxide, which accounts for the odor which is so noticeable in the immediate vicinity of a flash of lightning. Many attempts have been made to put this scientific fact on a practical basis, but thus far the only commercially successful efforts have been made in Norway, where an enormous amount of water power is available for electric generation at a cost of about a third or a fourth that for similar development in our country. The power requirements necessary to this so-called arc process are vast, and, accordingly, power costs have prevented extension of its uses on any great scale outside of Norway.

Another method of recovering nitrogen from the air, known as the Cyanamid process, is dependent on the fact that ordinary calcium carbide, when heated to the proper temperature, may be made to absorb nitrogen gas, forming a combination of calcium, carbon, and nitrogen, known as calcium cyanamid, a name with which most farmers using fertilizers are familiar. Cyanamid manufacture employs only about a fifth the electric power required by the arc process, but nevertheless electric power is a very considerable factor in its cost of production, and, like the arc process, which takes nitrogen round the air and hydrogen from water. By means of great pressure they are made to combine into ammonia, a combination of these two elements in the ratio of 1 to 3. This process has been developed in Germany, but owing to technical difficulties has not made great headway even in that country.

Coal contains about 1 per cent of nitrogen, and in the course of coal-product operations, such as the manufacture of cok

No matter what the present associations of nitrogen are, whether in coal, mineral nitrate deposits, or what not, the atmosphere is the original source of nitrogen. When we speak of the atmosphere is the original source of nitrogen. When we speak of the three current sources, it is only by way of indicating the present-day whereabouts of the major portion of the earth's supply, for it is more or less ever present. The four processes mentioned do not by any means account for all of the nitrogen catering to the wants of man. When the farmer raises a crop to be plowed under as fertilizer, for instance, he is merely establishing a temporary atmospheric nitrogen plant of his own. Along the same general line, cotton seed and various other organic materials are nitrogen bearing to an important extent; still, broadly speaking, the four processes enumerated are the agencies upon which the world is dependent to-day, not only for the artificial means with which to wage wars, but what is far more important, the means of providing food for the hungry mouths fighting at the battle front and laboring at home.

In this connection the current situation in Germany is of special interest, cut off as she is from imports and dependent upon her own resources. At the outset they consisted in a highly developed coal-product indestry yielding sulphate of ammonia at the rate of a half million tons a year; a cyanamid industry, netting around 60,000 tons of cyanamid; and a Haber process development, capable of about 30,000 tons annually.

Since then she has had to meet her enormous demands for nitrogen in the form of nitric acid in munitions manufacture, while at the same time providing for her less warlike needs, such as agriculture. To do this she has erected one small are-process plant capable of a few thousand tons production, enlarged her Haber process activities to the extent of around 200,000 tons of ammonium sulphate, from which to meet her combined nitrogen requirements.

According to the census of 1910, 49,348,883 of our population is rural, with 12,388,623 persons engaged in agriculture, or 32.5 per cent of all employed in gainful occupations. The Shipping Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. OLIVER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. OLIVER. Mr. Speaker, I wish to give my hearty approval to the shipping bill now being considered by the House. This is one of the great constructive measures that the present Congress is called upon to deal with. We have long recognized the need of a merchant marine to transport to foreign markets the products of our farms and factories, and this bill is an advanced step in supplying that long-felt want. It would be difficult, if not impossible, to estimate the immense loss sustained by the farming and manufacturing interests of our country during the last two years, because of our failure in the past to provide proper shipping facilities. This bill will not only mark the beginning, in my opinion, of the building of an adequate merchant marine, but it likewise will provide a method to fix, regulate, and control ocean and interstate water rates. I wish to insert as a part of my remarks a very interesting article on this subject, written by Hon. Thomas P. Ivy, a former resident of my district and now a citizen of South Conway, N. H. Mr. Ivy for many years has been a close student of public questions and is widely recognized as a writer and thinker of great force. The article follows:

thinker of great force. The article follows:

The reason why our merchant marine has been almost wholly neglected for the past three-quarters of a century may be stated under two general considerations.

The first settlers of our country lived beside the water, and their financial thoughts were, therefore, in terms of the ocean. After a hundred years, this condition began to change, and was accelerated by the railroad development westward, so that at the time of the outbreak of the present European war our financial thoughts were quite exclusively in terms of the Interior.

The other general consideration is this: Whatever advantages may have been predicted in the beginning of our Government for a sovereignty divided between the State and the Federal Government, those advantages have been found at times to be Illusive in that this division of sovereignty imparted a weakness to the Federal Government that prevents it from doing some things of large concern which can be handled best through Government instrumentalities.

Shipping on the ocean in modern times is preeminently an undertaking for the Government, because the competition met there now is the competition of governments, a competition too comprehensive to be overcome by private enterprise.

DIFFERENCE IN POINT OF VIEW.

The shipping bill now before Congress is a step in the right direction, because it recognizes that in this particular matter that Federal activity has been too dormant and weak.

The striking difference between this bill and previous methods for the restoration of our merchant marine is in the point of view. Measures proposed heretcfore have been conceived and planned to benefit the shipowner alone. The great merit of the bill now under consideration is that it looks to the interests of the shipper and not to the shipowner, something our legislation for the past 50 years on this subject has not done.

done.

This bill provides for a shipping board that shall have general supervision of our shipping, and, among other things, this board may form a corporation, the controlling stock to be owned by the United States, the total holdings not to exceed \$50,000,000 to build or buy or lease ships to be operated under regulation by the board.

Now, while this is an aid to shipping, it is not a subsidy. A subsidy is a bonus to a shipping corporation for carrying the mails and other services. The benefits of a subsidy go direct to the shipowner, not to the shipper; in this shipping bill the benefit goes directly to the shipper in assuring him a reasonable rate and in taking his goods to markets from which he is now excluded.

The foreign shipowners who, disguised as Americans, are opposing this bill insist that subsidies shall replace the provisions in the bill named above. This is only one of the devices for trying to destroy the bill.

PANAMA LINE AN EXAMPLE.

That the bill is drawn on practicable lines is shown by the actual working of the Government owned and operated steamers between Panama and New York. That line, notwithstanding all other shipping rates have been trebled and quadrupled since the European war began, has maintained its usual rate as in normal times. So the business man knows exactly what to depend upon in shipping over this line.

Without doubt, if the bill under consideration is enacted into law, we shall see a great growth of shipbuilding in our own shippards and a great increase in our foreign commerce in American ships.

It is further provided in this bill that ships brought into operation by the bill may be taken at any time for the uses of our Navy. Thus our Navy will be made as strong offensively as it is defensively by the certainty of a quick and ready supply of auxiliaries.

The only other argument worth noticing is that this bill will prevent private capital from going into shipping. If there is one thing that attempts of this kind in recent years have proved, that one thing that no capital in large amounts can be secured to invest in new shipping companies, because the foreign shipping monopoly is so strongly intrenched in our financial centers that no bank or banker will lend assistance to such enterprises.

ECONOMIC STRUGGLE COMING.

In favor of this bill, finally, it may be stated that transportation is a facility of business and not properly business itself; and in all ages and countries it has been the practice and custom of Governments to provide transportation facilities for business, sometimes without any cost to business, and at no time with the dominant idea of direct return to the service.

So that this bill is defensible even if one cent of revenue never returns directly through the operation of the ships.

Statesmanship in this country under the conditions under which we are living consists in keeping our industrial masses employed. Since the products of our agriculture and manufacture far exceed domestic wants, if labor is to be kept employed, we must find foreign markets for our surplus products.

We can only enter foreign markets and at the same time pay decent wages to labor by furnishing to agriculture and manufacture a low rate of transportation to those markets. If that work is left to foreign shipowners to do, we shall never reach those foreign markets except by depressing labor and depriving it of its just rewards.

The time is at hand when the true American should think clearly and act promptily, for opportunity does not knock twice at the same door. The opportunity is now offered to free ourselves from foreign shipowners and shipping monopoly on the ocean.

When the conflagration in Europe burns itself out we shall be brought up against an economic struggle, mainly on the seas, no matter which side wins, that will challenge our industrial-supremacy and safety.

If England wins, she will use her great sea power against us com-

which state wills, that safety.

If England wins, she will use her great sea power against us commercially as effectively as she is using her naval supremacy in the war. If Germany wins, we shall face the same conditions, only intensified by Germany's higher efficiency in checkmating her competitions. mercially as effectively as she is using her navai supremacy in the war. If Germany wins, we shall face the same conditions, only intensified by Germany's higher efficiency in checkmating her competitors on land and sea.

If the views of the American producer, manufacturer, and business man are heard in Washington instead of the foreign shipowner, this bill will be speedily enacted into law as the greatest measure for the relief of our shipper.

The defeat of this bill would be to leave us still in the ocean monopoly which England and Germany held before the war and which one or both will hold after the war.

Increasing the Standing Army.

EXTENSION OF REMARKS

HON. JOHN H. CAPSTICK,

OF NEW JERSEY, .

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 24, 1916.

Mr. CAPSTICK, Mr. Speaker, while I am not satisfied with the report of the conferees of the House and Senate regarding the increase proposed for our standing Army, I am constrained to vote for the recommendations made. I am inclined to do this rather than agree with some of my colleagues who feel that they should register their disapproval in a negative vote as a rebuke to what they consider makeshift preparedness. find no fault with them for taking this course, and agree with their opinion concerning the inadequacy of the provisions, However, I see no hope in the immediate future to get anything better.

We have spent much valuable time here in consideration of a measure to provide adequate defense. It is but natural that ideas should differ as to what constitutes such armament. The necessities of the present situation assert themselves to the different Members in varying degrees of importance. The chairman of the committee has told us that this bill is in no sense an emergency measure. Accepting this statement as true, is not the question as to what is to be done in an emergency pertinent? Is not an army primarily an essential factor of safety and protection in emergencies?

It seems to me that when the committee was framing this bill on the basis that it was a regular, rather than an emergency measure, some provision should have been made with absolute definiteness for meeting contingencies which may arise, The suddenness with which this can happen has been repeatedly demonstrated on our border by the Mexican bandits. Our impotency in promptly meeting them has also been forcibly brought home to us. Who but did not feel the humiliation of it?

I can not help but feel regret that the Military Affairs Committee majority members were not more mindful of the deplorable condition along the Rio Grande. It is also a matter of deep concern with me that they were not more favorably impressed with the urgency of making a positive, general, and compre-hensive demonstration of fitness to the world, and the length to which we can, and will go, in defending our citizens, their rights and property at all times and under all circumstances.

This sort of a demonstration is the only thing that can make any impression on foreign powers to-day. They are in a temper

that only the most unequivocal and actual process can impress. I do not mean to convey an opinion that might is right, but I do mean that prudence alone should clearly reveal the time as being not one for temporizing, conciliatory actions or procedure.

Aside from the necessity for demonstrating to the world how the United States can and will arise in its might at the first sign inimical to its welfare, I believe no better assurance that our principles and ideals will be preserved can be obtained or displayed. This will not only bear fruit as it concerns foreign powers but will instill in the hearts and minds of our own citizens that old-time confidence, loyalty, and love, and will encourage them in the use and development of our national resources. This present bill gives scant incentive for any such endeavor, and as an inspiration of trust and faith I feel that it should have been made stronger.

Added to this feature is the defiant manner in which petty politics has been injected into the report. I refer to the most unusual and incomprehensible way in which a plum has been nicely ripened and destined for the one man in the country the designation fits in the matter of selecting a judge advocate. For my part I can not conceive how a question of an individual appointment could be so highly considered in a bill with the importance which this carries to the citizens of our land. do not doubt but that the same conscientiousness was exercised by the gentlemen in the performance of their duty, as they saw it, in preparing the Army provisions of the bill. I am sorry they could not have been made to see their plain duty in a vastly different light.

Reverting to the statement that this measure provides for an Army as a peace proposition, it is recalled that the chairman of the committee has said we already have a law authorizing the President to raise an army as large as he wants if we were to go to war. As I understand it, the trouble in getting troops started after the Mexican bandits did not lie entirely in the scarcity of men. What men we had were sent over the border inadequately equipped.

We all know about the President having called upon the National Guard of New Mexico, Arizona, and Texas to become a part of the Federal troops along our southern border. This was fully justified two months ago, and would have been favorably accepted by the country if done at that time. It now seems apparent that the move is to prove beneficial in more ways than one. Events have made it necessary to have the Dick law and other measures under which the National Guard operates fully interpreted. This will define the exact status of State militiamen in their relation to the Federal Government. At any time in the future should the same procedure be necessary we will have established precedents on which to act.

It is of particular advantage to know and understand the relationship and responsibilities of the militia reserve at this time. Sparks from the flames in Europe have been carried in our direction several times. Critical conditions have arisen. To-morrow may demand that we face others. We are at peace, but who is there to deny that in preserving it we have made concessions? It should not be necessary for us to do that. We should be able to boldly and firmly stand on our inalienable and inviolate rights.

History shows that the powers which have lived longest have been the strongest in security and protection. It also shows that armament is provocative of war only when it has been procured for aggression. It is generally conceded that the diplomacy of the strongest nations has invariably won out in questions of great importance. Therein is seen the power of large armies and navies in times of peace. In promoting peace they are the bulwark of diplomacy.

Preparedness for the Nation is like a police force for a city. As long as one is maintained well organized and efficient there is little disorder. Do away with your city policemen and what would the safety of citizens and their property amount to? There have been instances when one bluecoat on a block, merely by the moral suasion of his presence, has averted disastrous rioting and disorder.

It has been said that our country has unlimited resources; that we need not fear attack from any power; that we are in a position to be an effective influence in promoting world peace. To that I answer the invitation to attack is the greater unless we utilize some of our wealth and opportunities as a means of security and protection. Such utilization will increase, not diminish, our influence in promoting peace. The cost of preparedness now would be as nothing compared with the cost of repelling a foreign invasion.

Perte Rice.

SPEECH

HON. JOSEPH G. CANNON.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES.

Friday, May 5, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 9533) to provide a civil government for Porto Rico, and for other purposes.

Mr. CANNON. Mr. Chairman, this is a very important bill, and I think we should be careful before we enact it. eral proposition is made that Christ died for all, and that all mankind are equal. In God's chancery we are equal. But when we come to the creation of a government for the protection of life, liberty, and property, if we have a republic and it is to endure the first requisite is that there shall be a people who are competent for self-government, or substantially so. You may try all the experiments you please, you may adopt all the constitutions you please, and make all the laws you please, and they are but as a sounding brass and a tinkling cymbal, if you have not the people who are competent to exercise sovereign power. Is it necessary that I prove that? You will all recognize that it is true when you take Cuba, Mexico, the Central American States, Venezuela, and I might refer to others. Why, they have constitutions like ours. Mexico, when I was down there 20 years ago, the government under Diaz was a government by force, although they had a constitution almost precisely similar to ours; yet the great mass of the people had no more conception of a government by the people than I have of the duties of an archangel. [Laughter.] And what have they there under present conditions?

Now, when you talk about a people competent for self-government, certain things are to be taken into consideration. One is the racial question. Another is the climatic conditions. Now, we boast and say that the Caucasian race, a term the German, the Scandinavian, the Irishman, the Englishman, the Scotchman, the Frenchman, and others-we say that they are competent for self-government, and that is substantially correct; and I think they grow in competency from year to year. Now, in the fortune or misfortune of the Spanish War-whether it was fortune or misfortune God knows, and it will take the future to tell-we got the Philippines; we became responsible

for Cuba; we got Porto Rico.

Are you willing now to say that you will so legislate as to fix the time, or to say now that you will ever legislate to fix a time, when the Philippine Islands shall be divided into States and

to become part and parcel of our great Republic?

Then, there is Mexico, contiguous for 1,300 miles to the United We must protect our people along the border and in Mexico, but we do not desire to possess Mexico as a part of the United States. It has taken 2,000 years for our kind of people to attain the present civilization that there is in the most of Europe and that there is in Canada and in the United States, and there was a better base than exists in Mexico on which to build. It took all those centuries with a temperate climate, winter and summer, the four seasons. Why, I undertake to say that if one of our people would go down to Porto Rico-and I think the same thing would be true as to Cuba and as to Mexico-at the end of three or four generations, as the children would inter-marry, with the enervating effects that come from the Tropics, they would not be as competent for self-government as their great-grandfathers were.

Take the British West Indies. When England changed her colonial policy so that Canada, New Zealand, and Australia became self-governing she made it apply practically to her West India colonies. Well, if you will read Froude's British West Indies you will find that instead of advancing in the West

Indies they have been retrograding.

Mr. Chairman, the United States is in Haiti to-day under the Monroe doctrine, and we are in Santo Domingo and Nicaragua. and we will go further, you know, under that doctrine. But in your time or my time or that of our children or grandchildren shall we admit Porto Rico as a State? The people of Porto Rico

have not the slightest conception of self-government.

Now, this bill provides what? Citizenship? I have never been in favor of United States citizenship so far as Porto Rico is concerned. By this bill it is optional. Under this bill they will in the main become citizens, because they have to go before a court and say they do not want to be citizens or else they will become citizens. There is not one in ten that will go before the

court, or understand what it meant if they did.

I have no desire to throw any stones at the people of Porto Rico. I have been down there three times, spending almost a month there in the aggregate. There is a small percentage of the people there who talk about liberty and who are quite intelligent. There is a smaller per cent who understand liberty as you and I understand it—as we do in this country. Some of them do, no doubt, and also in the Philippines, and some in Cuba, and so on.

Porto Rico is populated by a mixed race. About 30 per cent are pure African. I was informed by Army officers when I was down there that when the census was taken every man that was a pure African was listed and counted as such, but that there was really 75 to 80 per cent of the population that was pure African or had an African strain in their blood. Now, gentlemen, will anybody say that I am abusing the African. I am not any more than I am abusing the Filipinos or the Moros; and I am certainly not abusing the Africans in the United States. The race has made great advance since servile labor was abolished, attributable to its association with the Caucasian race, being one-tenth of our population and living in the north temperate zone.

The CHAIRMAN. The time of the gentleman from Illinois

has expired.

Mr. TOWNER. I yield to the gentleman five minutes more. Mr. CANNON. There are so many things I want to talk about that a few minutes do not count for much. Now, a man can be a citizen of Indiana and not be a citizen of the United States. He can be a citizen of many other States and not be a citizen of the United States. A foreign-born man may come to the United States and live in this country, declare his intention to become a citizen of the United States, and he can vote for President or a Member of Congress, or members of the State

legislature under the laws of many of the States, You may say, What are we going to do with Porto Rico; she has made great advancement? Yes; she has. How? Under the control of law enacted by the United States by which the children of Porto Rico are being educated, and our people have gone over there in a business way. They have developed the sugar plantations. When the coffee trees were destroyed the United States assisted in repairing the damage.

I passed over that old highway from San Juan down to Ponce, on the other side of the island. It was a good road, but it had been remade under the direction of the United States. I found there a tobacco country-acres and acres of fine tobacco, which was being raised under glass. It is great tobacco and makes pretty good cigars. How? By United States enterprise and capital. I have heard capitalists abused for going over there, as it was said, spreading out and ruining the country and appropriating the whole thing. Yet as long as there is a United States they will not unduly oppress that people. But if you should take that capital out and take away our jurisdiction and should take that capital out and take away our jurisdiction and laws, in my judgment, with all due respect to everybody, inside of 20 years they will go back into a worse condition than they were when we acquired Porto Rico.

Now, I would like to see this bill amended, if it is to pass. You recall a few years ago that the house of representatives chosen by the people in Porto Rico refused to pass appropriation bills to carry on the government. Fortunately there was a provision under the Foraker Act that if the appropriations were not made the appropriations of former years should continue. I believe you have that provision in this bill, and it is a good

provision.

The CHAIRMAN. The time of the gentleman has again ex-

Mr. JONES. Mr. Chairman, I yield five minutes more to the gentleman.

The CHAIRMAN. The Chair will state to the gentleman from Virginia that he has only five minutes remaining.

Mr. JONES. Then I can not yield to the gentleman from Illinois, as I have promised that time to the gentleman from Porto Rico.

Mr. CANNON. Mr. Chairman, I will ask unanimous consent to take the first five minutes under the five-minute rule.

The CHAIRMAN. The gentleman from Illinois asks unani-

mous consent to take the first five minutes after we commence to read the bill. Is there objection?

There was no objection.

Mr. CANNON. This bill takes the franchise away from Porto Ricans who can not read and write and is objected to by some Members. In Pennsylvania, unless they have repealed the law within a year or two, a man can not vote unless he

pays a poll tax. He can not vote in Connecticut and Massachusetts unless he passes an educational test. The States fix the qualifications of the electors. You have got the poll-tax provision in some of the Southern States; you have the educational provision in some of them. It is said that you disfranchise the colored people; but the law of those States disfranchises the white people as well if they fail to pass the test and pay the poll tax. It is said that you are more strict in the educational test with the colored people than you are with the white man, but you know more about that than I do.

So there is nothing in that objection as far as the Porto

Ricans are concerned.

Now, I am glad that we are only responsible for law and order in Cuba. Do you know what our danger is? With the proximity of the West India Islands to the United States and Mexico and Central America and the Monroe doctrine, our danger is that, measuring their corn in our half bushel, that the United States will be compelled to furnish a government for those peoples who can not govern themselves and that in the end we may have States admitted to statehood whose people are not competent for self-government; the demagogue may come in great stress of partisanship and say this will give us two Senators and some Representatives, and in they may come. delighted that we have not got Cuba for a State. I do not know, but if it was we would have about five Representatives and two Senators.

Mr. YOUNG of North Dakota. Four Senators.

Mr. CANNON. Four Senators the gentleman says. What would be the result? We would have to go back to Cuba, I greatly fear, keep the provision we wrote into our law and they wrote into their constitution. I pray God that we may not have to go back, but I am glad that Cuba is not a State or two States of the Union, because the bulk of its population is not competent for self-government.

Mr. HILL. Mr. Chairman, will not the gentleman kindly suggest what the amendment is to which he refers? He said

that he would like to see an amendment adopted.

Mr. CANNON. Mr. Chairman, I would like to have an amendment to the bill, if it is to pass, that the governor, who is to be appointed by the President, should have the veto power and that his veto be absolute. I believe for our interests and for your interests, I will say to the Commissioner from Porto Rico, the present legal condition should continue and this bill should be defeated. But the Commissioner from Porto Rico said that this bill is not as liberal as he wanted it, and he hoped more and more would be given, and as I listened to his remarks I thought he was referring to statehood. God forbid that in his time or my time, there should be statehood for Porto Rico as one of the United States. [Applause.]

The CHAIRMAN. The time of the gentleman from Illinois

has expired.

Oil and Gasoline Situation.

EXTENSION OF REMARKS OF

HON. WILLIAM P. BORLAND. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 24, 1916.

Mr. BORLAND. Mr. Speaker, by unanimous consent of the House of Representatives I insert herewith a very complete and valuable statement of the present situation in the oil and gasoline industry from the point of view of the independent refiners:

STATEMENT ON THE GASOLINE SITUATION.

[By H. G. James, secretary Western Petroleum Refiners' Association, Kansas City, Mo.]

GASOLINE PRICES ADVANCE.

First. Because of an unparalleled consumption of gasoline.
Second. Because simultaneously with the big demand for gasoline, as a result of almost 1,000,000 new motor cars, came a spectacular slump of 200,000 barrels a day in the production of the highest quality crude in the world for the manufacture of gasoline, creating a scarcity of crude.

crude in the world for the manufacture of gasoline, creating a scarcity of crude.

Third. Because of an increase of 700 per cent in the price of crude. Fourth. Because when the changed conditions came it found all storage, both manufacturers' and dealers', empty, and everybody at once started to fill.

Fifth. Because of a deterioration in the high grade of Cushing crude from which less gasoline can be made now than when the pool was first opened.

Sixth. Because motor cars now are equipped to run the year round, and refiners do not have an opportunity to store gasoline in winter against a big summer consumption as they formerly had.

Seventh. Because of failure to find prolific new pools and the consequent continued high price of crude. When Cushing was at its height, 300 wells a month were drilled in the midcontinent field; to-day there are 2,000 wells drilling in the midcontinent field.

The old business has become one of the chief industries of the country. Time was when it was impervious to criticism and attack. In the past it was dominated by a single power. The industry was regarded as an outnaw. Because of this, public clamor against it was apparently justfiled.

But conditions have changed. The products of petroleum have become daily necessities in the home, the office, in the shop and on the farm. They enter every avenue of endeavor. The spectacular development of the business has drawn hundreds of thousands into it, and a single concern no longer "is the oll industry." When oil is attacked to-day, the people are affected. The wonderful development of the motor car and internal combustion engines has brought about a new condition in oildom, creating a consumption of gasoline and lubricants that has given oil an importance and relationship to the individual citizen little dreamed of a few years ago. The business has grown by leaps and bounds, and, as if has expanded, the rank and file of the critizenry have not only become consumers but producers as well. The millionaire, the professional man, and the artisan, as well as the shop girl and the wage earner, have invested their idle capital or their hoarded earnings in oil. Thus the public has become titally interested in any action touching this great industry, both as a stockholder in a multitude of oil enterprises and as a consumer of the products of this myterious oleaginous fluid. The independent movement has become a mighty factor in the business, and in some States the independents are handli

MAGNITUDE OF THE INDUSTRY.

MAGNITUDE OF THE INDUSTRY.

The magnitude and importance of the industry are illustrated in the amount of capital invested. Authentic data are not obtainable. The most reliable information at hand shows there are 262 active and 25 idle oil refineries in the United States. Their charging capacity exceeds the daily production of crude oil. It is estimated the total investment in refineries is approximately \$550,000,000,000,000. Crude oil and gas products last year were valued at approximately \$300,000,000. The manufactured products of crude oil are estimated to have aggregated approximately \$400,000,000. Hundreds of thousands of persons find employment in 25 different States in the oil industry. Nearly every State in the Union is interested, directly or indirectly, in the business, It is impossible to estimate the number of American citizens who have investments in some phase of the oil industry.

Interdeperendence of Gasoline and Chude Prices.

INTERDEPENDENCE OF GASOLINE AND CRUDE PRICES.

INTERDEPENDENCE OF GASOLINE AND CRUDE PRICES.

Because of its predominating influence upon the petroleum and gasoline situation in the United States, a consideration of the mid-continent field may be taken as indicative of the industry as a whole in this country.

Since 1910 prices of crude and gasoline in the mid-continent field have fluctuated in striking unison and according to the dictates of supply and demand.

In 1910 the average daily crude production of the mid-continent field was 128,931 barrels; price. 38 to 42 cents a barrel. The price of gasoline during this year averaged 8.25 cents a galion f, o. b. refinery (42 galions to barrel; standard grade of gasoline 60-61° Baumé gravity).

In 1911 the dally average erude production of the mid-continent field was 137,076 barrels. Notwithstanding the increased daily yield, crude was less plentiful than during the preceding year, and during 1911 the price advanced from 44 cents to 50 cents a barrel. The average price of gasoline during the year was 7.25 cents a galion at the refinery.

During 1912 the average daily crude production of the mid-continent wells was 147,144 barrels. Crude this year was scarce, the price advancing during the year to 83 cents a barrel. This was the most prosperous year up to this period in the mid-continent field the refiners had enjoyed. Gasoline quotations advanced from 6.5 cents to 11.5 cents a galion 6.0 b. refinery.

In 1913 the average daily crude production of the mid-continent field the refiners had enjoyed. Gasoline quotations advanced from 6.5 cents to 11.5 cents a galion 6.0 b. refinery.

enjoyed. Gasoline quotations advanced from 6.5 cents to 11.5 cents a gallon f. o. b. refinery.

In 1913 the average daily crude production of the midcontinent field was 180,128 barrels. The crude market advanced to \$1.03 n barrel, plus a maximum premium paid by independent refiners of 15 cents a barrel. The average price of gasoline during the year was 12.5 cents a gallon there being very little variation for the standard grade of 60-61 gravity during the year little variation for the standard grade of 60-61 gravity during the year.

In 1914, as a result of the Cushing pool, crude became plentiful, the production averaging during that, year 276,965 barrels a day. The price sagged during 1914 from \$1.05 in February to 55 cents a barrel, the price which prevailed after October I during the remainder of the year. At the same time there was an overproduction of gasoline, and prices weakened from 11.25 cents in January to 6.75 cents a gallon t. o. b. refinery in December.

During the early part of 1915 Cushing was still belching forth "rivers of oil." The daily average crude production this year was 324,243 barrels. During the first half of the year production reached over 400,000 barrels a day. By August, 1915, Cushing output began to recede. The price of crude advanced from 40 cents, pipe-line quotation, to \$1.20 a barrel. When the pipe-line quotation was 40 cents a barrel, millions of barrels were sold as low as 26 cents. When the

pipe-line quotation advanced to \$1.20 a barrel premiums were paid by refiners, making the actual price to them \$1.75 to \$1.85 a barrel. Under these conditions gasoline prices also increased, jumping from 5 and 6 cents a gallon f. o. b. refinery to 15 cents a gallon.

In the early part of 1916 crude prices continued advancing until the present quotation of \$1.55 a barrel prevails, refiners being compelled to pay producers a premium, making the cost of crude to them as high as \$2.10 a barrel, certain refiners finding it necessary to close down their plants 30 to 50 days for want of crude to operate their plants. These inactive refineries helped to aggravate the situation. With a daily yield of 325,000 barrels of crude or more, the constantly increasing consumption created a scarcity. The price of gasoline under these conditions naturally continued to increase, reaching 20 cents plus per gallon f. o. b. refinery.

REFINERS DID NOT MAKE PRICES.

Refiners have in no way been responsible for present gasoline prices. During most of the time since the summer of 1915 western refiners have not issued quotations at all. Oil centers of the Middle West have swarmed with eager buyers. The traveling salesmen refiners had maintained on the road for years were called in, jobbers and other buyers having opened offices in Tulsa, Okla. (making it unnecessary for the refiners to keep traveling salesmen on the road), and thereby themselves made the market by the prices they offered for gasoline. The refiner was able to sell every gallon of gasoline he could make at a higher price than he or the marketers and retailers could sell the same in his so-called territory.

REFINERS MAGNANIMOUS

The statement has been made that independent refiners have done nothing for the consumer in this period of high prices. This statement is wide of the facts. It should not be overlooked that the independents a year ago placed at the disposal of the public gasoline at retall as low as 7.8 cents a gallon, and since last summer, when the price advanced, the refiner has made it possible for many jobbers to continue in business by supplying them with gasoline at from 1 to 3 cents less than the refiner could have sold his entire output in other markets. This was for the purpose of protecting the jobber against financial ruin, but the consumer received the benefit. The loss to the refiner in some instances is claimed to have amounted to as high as \$25,000 in a single month.

The public has never suffered because of excessive prices for the products of petroleum. No other necessity is placed at the command of the public at so low a price as are the products of petroleum. The price of gasoline to-day is not too high in proportion to the great cost of procuring the same—the price in the past has been too low. In this connection, in view of the fact that a bill has been introduced in Congress suggesting that the Federal Government take over and operate all oil business in this country, it is significant to call attention to the fact that the consumer has never at any time in the history of the business been charged up with the millions of dollars spent in drilling wells which failed to find oil. If the Government were to take over the oil industry, the Government would have to do all of its own development, and the tremendous expenditure in prospecting for new fields would be charged to the cost of crude oil, which is not true at the present time, and which the great independent movement contributes to the consumer, making the remarkably low price at which petroleum products have always been delivered to the consuming public. Thus the price to the consumer, making the remarkably low price at which petroleum products have a

mandaments of the meet the growing demand for crude.

WHAT BROUGHT ABOUT THE PRESENT CONDITION.

Oil dealers rarely, if ever, buy petroleum products on a receding market. While the flood was on last year jobbers and retailers bought only for their immediate needs. Their storage tanks were empty. Then when crude began to advance there was a stampede to cover at as low prices as possible. Every concern in the country began storing gasoline. One independent jobber alone in the Middle West put 6,000,000 gallons of gasoline into his tanks. Every man at all familiar with oil country conditions knew there was no possible way of preventing a greatly advanced market, and every dealer everywhere frantically appealed for a supply—price becoming of little consequence. A wet summer was followed by a remarkably pleasant iall; there was unparalleled country touring and a tremendous increased consumption of gasoline. The statistics show 892,618 motor vehicles were made and placed in commission in 1915, increasing the consumption of gasoline at least 446,000,000 gallons a year. There was a great increase in farm tractors and farm gas engines, many of the former having been changed from kerosene to gasoline fuel because of lighter construction and better results. For the first time the motor car was quite generally equipped in 1915 for winter service, and consequently gasoline consumption did not slacken last winter as usual. Gasoline consumption per mile is greater in winter than in summer. Exports in 1915 were approximately 84,000,000 gallons more than in 1914. The refiner did not have an opportunity to store, according to his custom, gasoline last winter for the big spring and summer demand. While jobbers and other buyers were amazingly increasing their demand other elements were at work to further affect the situation. The increase in the price of crude from 30 cents, which was the average price paid a year ago by refiners, regardless of pipe-line quotations, to \$2.10, the amount they were compelled to pay, including premium

contracts for fuel oil as low as 30 cents a barrel and gasoline at low contract prices.

It is significant, however, that the price of crude was not the only influence upon the refiners' price. When Cushing was at its flood there was a heavy gas pressure on the oil-bearing sand, the oil under treatment yielding from 27 to 37 per cent gasoline. To-day oil from these same wells yields from 22 to 26 per cent, an average of not more than 24 per cent, if that, owing to the decreased gravity and deterioration of quality. At the same time the daily yield of Cushing dropped from 300,000 barrels a day, plus, to \$5,000 barrels, and it is now about 100,000 barrels a day.

The importance of this statement is better realized when it is understood the midcontinent field produces 60 per cent of all the gasoline

made in the United States; that Cushing has been the greatest source of high-grade crude the world has ever known, and any fluctuation in its yield affects vitally the whole gasoline situation of the country; that 60-61 gravity gasoline produced from Cushing oil is equal to 64 gravity gasoline made from Pennsylvania crude, in spite of any general notion concerning the superiority of Pennsylvania crude.

Thus we have these amazing figures:

Gallons per year. 100, 000, 000 735, 000, 000 84, 000, 000 446, 000, 000

_ 1, 365, 000, 000

These figures do not include further increase by reason of several hundred thousand motor cars made and sold the present year, additional farm tractors, etc.

Now, let us parallel these two sets of figures. The loss of gallonage and increased consumption in 1915 amounted to at least 1,365,000,000 gallons of gasoline.

We only manufactured, all told, 1,600,000,000 gallons of gasoline in this country in 1915.

Is not the argument cinched? Can anyone successfully refute the statement?

RESULT OF SUPPLY AND DEMAND.

It is believed from the facts set forth it is conclusively shown present price of gasoline is the result of supply and demand. It must be understood the great demand of the country to-day is for gasoline; but the refiner can not manufacture gasoline without manufacturing at the same time an equal or greater amount of kerosene and a still greater percentage of fuel oil. There is little demand for either kerosene or fuel oil. Midcontinent refiners have been carrying sixty to seventy-five million galions of kerosene in storage, unable to sell the same at 3 cents a gallon. They have been selling great quantities of fuel oil on old contracts at 30 cents a barrel, while the price of crude to them has varied from \$1.55\$ to \$2.10\$ a barrel. Their surplus above these contracts has been a drug upon the market at 3 cents or less a gallon. Fuel oil comes in competition with coal, and no matter what the price of crude may be, the price of fuel oil can not exceed the equivalent amount of coal. During the past six months many fuel-oil consumers have reverted to coal because of the increased price on fuel-oil. So it is obvious, if there is an inadequate demand for kerosene and an impossibility of disposing at a remunerative price the fuel-oil product, gasoline, for which there is an great demand and which demand makes necessary the production of these other porducts, must carry the burden of cost. There can be no escape from this, and no amount of agitation can change the condition.

In almost every other line of business each article placed upon the market is expected to produce a profit. Under conditions usually prevailing this is utterly impossible in the oil business, so far as the refiner is concerned. The jobber and the retailer, as a rule, sell at a profit both kerosene and gasoline, but the refiner is compelled to sell both fuel oil and kerosene a very large part of the time at less than cost and make up the difference and any profit he may enjoy on the sale of his gasoline.

It has been proposed that all western refin

THE RITTMAN PROCESS.

THE RITTMAN PROCESS.

It has been heralded far and wide that by reason of the Rittman process the cost of manufacturing gasoline has been reduced 50 per cent. This statement is untrue and not fair to the public nor to the refiner. The Rittman process has been used very satisfactorily in the manufacture of benzol and toluol, and is about to be employed in the manufacture of dyes. This country has heretofore been dependent upon Germany for these articles. In this respect the Rittman process has been of great importance and has been worth to the conservation of our natural wealth all the possible cost of maintaining the Bureau of Mines. If, as was stated on the floor of Congress a few days ago, one strup plant in Mississippi, producing 25,000 gallons a year, is worth the entire annual appropriation of \$250,000 for distribution of free seeds, then surely the making of millions of dollars worth of benzol, toluol, and dyes by the Rittman process from a residuum heretofore sent to the furnace as cheap fuel is worth at least an equal appropriation for the thorough equipment and maintenance of a petroleum department under the supervision of the Bureau of Mines. In this connection it might be well to commend the clever business ability of the Director of the Bureau of Mines, who carried on the Rittman research in the name of his bureau almost wholly by the aid of private capital.

The petroleum department has also demonstrated its great value by the gilmpse it has given into possible further hidden products of petroleum, and also the conservation of natural gas it has brought about by shutting in gas which has heretofore been wasted. Its conservation of only \$35,000 a year.

That the Rittman process will eventually be used successfully in the manufacture of gasoline is firmly believed by Dr. Rittman and others, but no plant is yet in successful operation making gasoline by the

Rittman process, and the Bureau of Mines has no funds to make such experimentation. Therefore it is quite impossible for the Rittman process to have reduced the cost of manufacturing gasoline 50 per cent. The fact is the Rittman process, if it is successful in making gasoline, will not reduce the cost, for the reason that in order to make gasoline by this method it is necessary to perform more work than at present required to refine oil. To make clear this point: By present methods of refining, the oil is taken direct from the wells and placed in stills and, by heating, gasoline, naphtha, kerosene, and fuel oil or residium are made. Dr. Rittman discovered that oil is made up of molecules; that the small molecules are gasoline; larger molecules, naphtha; still larger ones, kerosene, etc.; that if these molecules in naphtha, kerosene, and residium could be "cracked" or broken more gasoline could be extracted from a given amount of crude oil. So his process contemplates taking naphtha, kerosene distillates or residuum and running the same through a perpendicular tube under 300 pounds pressure and a temperature of 1,400° F., cracking these molecules, and thus making a new or synthetic crude, which, after this action, must still be treated or refined in the same way the original crude was distilled. The Rittman process requires this additional work, but will, it is believed, if it is a success, make possible two or three times as much gasoline from a given amount of crude as formerly. All depends upon proper mechanical equipment. Refiners of the Middle West have spent over \$300,000 experimenting unsuccessfully with cracking processes. At present seven or eight Rittman plants are under construction. If they do what Dr. Rittman confidently expects them to do, a large quantity of gasoline which has heretofore passed on in products of petroleum will be manufactured into a motor fuel to meet the increasing demand, but the cost, by reason of this extra process before distillation can take place, will not be materially red

FUTURE SUPPLY AND PRICE OF GASOLINE.

There has been much speculation as to the future supply of motor fuel. It is impossible for anybody to make a reliable prediction. It is beyond the ability of man to tell how much oil yet remains in the ground. Crude-oil pools are generally found in unexpected places. The oil-producing area of the United States is exceedingly small considering the territory that has never been tested. The amount of motor fuel reduced from a barrel of crude to-day is largely in excess of the amount refined a few years ago. When motor cars first came into use we were using 68 to 70 gravity gasoline. Later we dropped to 64 gravity, then to 60 gravity (speaking in terms of Baumé), and at the present time we are using 58 gravity as a basis, with every indication that within the next year or two the average gravity of motor fuel will be 50° Baumé. Hundreds of thousands of dollars are now being expended in efforts to develop some process by which large percentages of crude may be converted into gasoline, and as these experiments are being made the refiner is discovering his ability to turn more and more of the crude product into an acceptable motor fuel. One of two things seems inevitable—either that a carburetor will be devised that will use successfully kerosene or that kerosene by some process will be converted into gasoline. It is not so much a question of what the price of gasoline is going to be as it is a question of whether the supply will equal the demand. It is very doubtful if gasoline prices can recede materially under present conditions. Another Cushing pool and additional reflueries might send the price downward, but any increased precipitation of gasoline or motor fuel from the present supply of crude is not expected to any more than equal the natural increase of consumption. sumption. TOO MUCH PREJUDICE AND AGITATION.

There is too much prejudice and agitation against the oil industry. There was a time when the Standard Oil Co. so dominated the oil industry that agitation and prejudical action only nominally affected the independent movement. To-day the independent movement is of such magnitude that it is affected equally with its big competitors. In the mid-continent region alone the independents to-day are manufacturing 120,000 barrels of crude a day into gasoline and other products, and this 120,000 barrels per diem is the best crude procurable in the mid-continent field, and consequently in proportion the independents are producing more gasoline per barrel of crude than their big competitors, except for that crude which is manufactured through the Burton process. Most public statements concerning the oil industry have been untrue and hurtful. Since every man, woman, and child in this country is daily dependent in some way upon the condition of the oil industry, hurtful, spiteful, prejudicial agitation is against the common weal. The independent oil men believe it is due them that a fair and accurate statement of conditions in the oil industry should be officially made at the earliest possible date, based wholly upon actual conditions existing and without prejudice for or against any element in the business.

be officially made at the earliest possible date, based wholly upon actual conditions existing and without prejudice for or against any element in the business.

If Congress would effectively aid the oil industry, and in adding the oil industry the public generally will be benefited, it will create without delay a petroleum bureau, where all matters pertaining to petroleum will be centered, in charge of thoroughly competent men, and which will disseminate accurate and comprehensive information concerning the industry, and which will gather complete statistics regarding petroleum and its products, now so urgently needed; and in connection with such a department the Government, if it will ald the industry, will create a chemical and mechanical research department to exploit petroleum and its products, which it is generally believed will result in the discovery of many valuable products contained in petroleum and still unknown to either scientists or manufacturers. The Standard Oil Co., by reason of its wonderful system, maintains exhaustive statistical and research departments for its own use, but no such information is at the disposal of the general public. Present petroleum statistics issued by the Government are necessarily delayed and incomplete. They do not set forth the comparative value of one year's production of crude with another year's production of crude by reason of impregnation of demanded products, and there are no statistics whatever as to the amount of products manufactured from year to year, the amount of domestic consumption and foreign shipments, the value of these products, nor is there any available governmental information as to the number of petroleum refineries in this country, nor the character of products manufactured by them. We know of no way the Government can aid the consumers of petroleum products more effectively than by stabilizing the business through accurate publicity and extensive research, and to this end we believe the Government should make an appropriation of at least \$25

Rural Credits and Other Agricultural Legislation.

EXTENSION OF REMARKS

HON. RICHARD S. WHALEY,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. WHALEY. Mr. Speaker, when Congress enacted into law the Federal reserve act the commercial, industrial, and manufacturing interests of this country were emancipated from the Money Trusts of the big cities. For more than 50 years the business of this country was controlled by a few rich men in a few centers, and through a defective banking system these men could dictate not only the interest to be charged but also the actual amount of money to be had in any community or section of the Nation. By the control of these funds they were masters of the business of the Nation and could give prosperity or cause ruin. This power was wrongly placed from a governmental point of view, even if it had been fairly and justly exercised. But it was unjustly and wrongly exercised, and the stock market of New York was the real gainer, the stock speculator the actual beneficiary, and the commercial business industries and farmers the real sufferers.

Under the old Federal banking law the farmer received no consideration. The national banks were prohibited from lending on real estate. The Democratic Party promised in its platform adopted at the Baltimore convention to revise the banking laws of this Nation, and in pursuance of that pledge to the people Congress passed the Federal reserve law, and on December 23, 1913, it was approved by President Wilson. For the first time in the history of this Nation provision was made in this act to help the farmers in financial legislation. Under the provision of this law the commercial and industrial interests are provided with ample money to meet their requirements; and with the 12 regional banks ready always to loan to member banks on sound commercial paper, there can never be a shortage of money to meet the demands, and, therefore, no panics to cause ruin to thousands of honest, industrious people. But, in addition to supplying the industrial and commercial interests with funds, this law also permits short-time loans to farmers on agricultural paper for not more than six months, and allows the national banks to loan a limited amount of their capital on improved farm land. This was the first step taken by the Democratic Party to extend credit to the farming community of the United States, and was the forerunner of the rural-credit bill now before Congress. It was a long step, but not long enough; not what the great farming interests of this country deserve and are entitled to receive. Realizing its limitations and inadequacies, the Democratic Party has had the courage to stretch out the helping hand to the farmer in full measure, as it has done to the commercial interest, and framed the present rural-credits bill. It has not gone about this matter hastily, but with a full realization of its magnitude and impor-To fully appreciate the size of this question it is only necessary to say that it is estimated that the aggregate wealth of the farmers of the United States is about \$40,000,000,000 and the aggregate indebtedness about \$6,000,000,000, with a little more than half of this indebtedness secured by mortgages on farm lands. The farmer pays an average interest rate on all indebtedness of about 81 per cent; so that on the amount of indebtedness there is yearly paid something like \$500,000,000. These are vast amounts, and are deserving of the careful thought and attention of the people's Representatives in Con-gress. The main objects sought by a farmer when he borrows are a reasonable interest rate, a long-time loan, and means by which the loan can be repaid in easy installments. Offering the best security, he is entitled to a low rate of interest, and, being subject to the varying conditions of the elements, he can not be sure of the return received from his toil and industry; therefore he should be allowed to repay his loan in small payments covering a long period of time.

The immediate object of this bill is to give to those who are farmers, and those who wish to become farmers, a greater volume of land credit on most favorable terms and at much lower and more uniform rates of interest than are had at present. It is a difficult matter in some sections to secure favorable loans on farm lands and farmers are paying annually on their vast mortgage debt of nearly \$4,000,000,000 from 5 per cent to 25 per cent, when commissions, lawyers' fees, and renewal charges

are included. This bill does for the farmer what the Federal reserve act does for the commercial interests. It provides him with the means of procuring a loan at a reasonable rate of interest and for a long time without all the excessive charges outside of the actual use of the money. It provides a loan at actual cost and all the benefits, such as profits, to be returned to the farmer borrower. There are some features of the bill I am not in favor of, but, realizing that all legislation is a matter of compromise, I have determined to give my support to the bill because the bad features are very few and the good very many. There is some Government aid in this measure, and I have always believed in order to have a workable system of rural credits it is compulsory for the Government to assist. Private capital under private management is bound to make all the profits possible, and therefore high rates of interest are bound to be charged. There is no such inducement for the Government funds under Government management. This bill provides for both systems, and therefore is a compromise measure. In my judgment a few years will see the repeal of the section providing for private profit making. The bill provides:

1. For the creation of a Federal farm-loan board to consist of three members, who are appointed by the President for terms of nine years and whose salaries are paid out of the Public Treasury. General powers of supervision and control are given this board so that it will have power to control the rates of interest under which loans to farmers are made and bonds shall be sold. The official appraisers are appointed by this board, the object being to remove local and personal influence so that there can be no shadow of suspicion that a fair, unbiased, and just valuation of the land is made. The removal of all favoritism and partiality in appraising the value of the land is absolutely necessary for the successful working of the system. The salaries of the appraisers are fixed by the board, but are paid by the land banks. The board also has a farm-loan registrar in each land-bank district, who is paid by the Government, to receive applications for issue of farm-loan bonds and to perform other services. The board is required to make examination of land banks and to prepare and publish repayment-amortizationtables, which must be used by the loan association and land banks in computing the amount periodically paid to finally retire the loan in a given time.

It is given the sole power to charter Federal land banks, national farm-loan associations, and joint-stock land banks; to review and change the rate of interest charged by the Federal land banks for loans; to grant or refuse authority to make any specific issue of bonds; to make rules and regulations governing charges made to borrowers for appraisal, examination of title, and recording.

2. Like the Federal-reserve act, this bill provides for the establishment of 12 Federal land banks. The 48 States of the Union are divided into 12 districts, and in each district a Federal land bank is established with a minimum capital stock of \$750,000 and a board of directors of 9 members, 6 of whom are selected by the farm-loan associations in the district and 3 by the Federal farm-loan board. Should the capital of these banks not be subscribed by private parties within 90 days after the books are opened, then the Government, acting through the Treasurer of the United States, subscribes whatever is necessary to complete the subscription, and if none has been subscribed, the full amount of \$750,000. In subscribing to this stock the Government aids to the extent of \$9,000,000. order to retain complete control in the Government of the United States over these banks, no private stock can be voted, and in that way there is precluded any possibility of private control of any one or all of these institutions. The temporary management of each of these banks is given to three directors named by the Federal farm-loan board. Directors appointed or elected must be residents for two years of the district, and one, at least, must be a practical farmer and engaged in farming within the district, and he can not be an officer or employee of any other institution, association, or partnership engaged in banking or in the business of making or selling land-mortgage loans.

The capital stock of each land bank is divided into shares of \$5 each. After these banks have been chartered there are two ways of procuring loans from them. The first is through national farm-loan associations. The second is through approved agents, such as banks, trust companies, mortgage companies, or savings banks chartered by any State.

FARM-LOAN ASSOCIATION.

3. When 10 or more farmers, or persons who desire to purchase lands for farming purposes, wish to borrow money on the land for farming needs, or to partly pay for the land, they can join together to form a national farm-loan association. The

prerequisite to be a member of the association is that the person applying desires to become a borrower on farm lands; when he ceases to be a borrower his membership ends. The articles of association need only specify generally the object of its formation and the territory in which it is to operate, and to be signed by the organizers and forwarded to the Federal land bank for the district. These associations elect a board of directors consisting of five members. The board of directors then selects a secretary treasurer and fixes his salary. The directors also elect a president, vice president, and a loan committee of three members, but these officers are to receive no salaries unless approved by the Federal Farm Loan Board at Washington, and must be residents of the territory in which the association operates and shall be borrowers. The secretary treasurer need not be a resident of the territory and a shareholder.

The secretary treasurer of the association keeps the funds, pays to the borrowers the amount borrowed when received from the land bank, and he also collects all payments of interest, amortization installments, or principal arising out of loans made through the association. It is his duty to keep all securities, records, papers, certificates of stock, and all documents of the association. The 10 or more persons must desire loans not less than \$20,000 in the aggregate, and each loan must be for not less than \$100 and not more than \$10.000.

When these applications for loans are received by the Federal land bank of the district an appraiser is sent to report on the loans. For each hundred dollars loaned the borrower must subscribe for one share of stock in the association, and the association in turn must subscribe for an equal number of shares in the Federal land bank. When the loan is paid the mortgage is satisfied and the amount of stock subscribed by the borrower repaid. All the profits, after deducting expenses, of the land bank are paid to the associations, and by the associations to its members. The borrower receives all the benefits of an economical management of the land banks.

The Federal land banks are given the power to issue bonds secured by the mortgages held by them in series of not less than \$50,000 each at a rate of interest not more than 5 per cent, and the interest charged the borrower can never be more than 1 per cent higher than the rate the last series of bonds sold for. So the farmer, or prospective farmer, can never be charged more than 6 per cent. These bonds are exempt from all taxation and are made lawful investments for all trust funds, accepted as security for all public debts, and purchasable by national banks under the Federal Reserve System.

What has been said above presents a summary of the general features of the bill from a practical viewpoint for those wishing to avail themselves of its benefits. It is only necessary now to see what is meant by amortization payments. It, in a few words, means a definite amount paid at certain definite periods for a certain definite time and at the last payment the interest, charges, and principal are fully discharged and the land freed from all debt. These installments reduce the principal debt at each payment, therefore there would be less interest to pay each year, so a larger portion of the payment is applied each year to reduce the principal. To illustrate the plan more clearly, it has been estimated that the total farm-mortgage indebtedness of the Nation is about \$4,000,000,000 and the average interest rate is 7½ per cent. This makes the yearly interest paid annually \$300,000,000 drew only 5 per cent and still the debtors would pay the \$300,000,000, the entire debt, principal and interest, would be paid in 22 years and 6 months. That is to say, the difference between the 5 per cent and the 7½ per cent, namely, 2½ per cent, paid under the amortization plan would extinguish the entire debt in 22 years and 6 months and would mean a saying of \$175,000,000 yearly.

Under the operation of this bill the farmer is afforded ample long-time credit on favorable terms, and the tenant farmer given the opportunity to become a farm owner. It encourages farming by those who wish to become farmers and enables those who are farming to enlarge their operations and better their conditions. It supplies a long-felt want in this country and one

that has been crying for assistance for many years.

I am pleased that this Democratic Congress has had the courage and capacity to work out this great reform in behalf of the farmers and the country, and I am proud to be numbered among those who have assisted in its passage. It will mean reasonable credit at reasonable interest rates and an opportunity to meet the principal of the debt by installment payments; but, more than this, it means the creation of the cooperative spirit among farmers, not only in respect to their credit facilities but in respect also to other lines of activity, such as cooperative selling and buying, cooperative markets, and cooperative live-

stock work, and the like, which, when accomplished, will-mean prosperity and happiness for the tillers of the soil.

JOINT-STOCK BANKS.

4. The capital stock of these banks is to be from private subscription, the management of the banks in private hands, and the profits to go to the stockholders. The borrowers from this institution share in no part of its management, but it is a money-making scheme for those who invest in its capital stock. It is true the Federal farm-loan board supervises it, and farmloan bonds can not be issued by a joint-stock bank unless permitted by the Federal farm-loan board. A joint-stock bank must have a capital stock of not less than \$250,000, and its operations are confined to a single State and adjoining States and can not engage in any other business than farm-mortgage loans and issuing bonds, but they are given a free hand as to interest rates on the loans and the bonds, provided it does not exceed 1 per cent on the principal of the outstanding loans. I do not believe that this provision should be left in the bill, and voted to strike it out. It has no place in a measure designed solely for the farming classes of this country and supposed to be conducted not for profit but for the benefit of the borrowers. It is my belief that this is the only unwise feature in the bill, and I believe it is only a question of time before it will be taken out of the law.

OTHER AGRICULTURAL LEGISLATION.

This Democratic administration has been keenly alive to the interest of the farm producers of this country. No administra-tion in the history of the Government has been more so, nor

along broader or more comprehensive lines.

The Government since 1862, when the Land Grant Colleges were authorized to be established, has been spending millions of dollars, more than two hundred millions of dollars, in teaching the farmers of the country better methods of production. This has been done through bulletins, printed reports, lectures, and more lately through the occult method of teaching; that is, through the traveling demonstrator who goes from farm to farm and there under the conditions surrounding the farm takes up with the individual farmer his own especial and peculiar problems and with him works out their solution. This is all important and it has brought back large dividends upon the investment, but it was left for a Democratic administration, a Democratic House of Representatives, to recognize the fundamental fact so long overlooked by students of economics that production and distribution of farm products must be made to go hand in hand in any well worked out and well-balanced system of agriculture. It is not enough to teach the farmer how to produce more things upon the farm. This is important. But it is necessary, at the same time, to undertake to teach him the best and most economic methods of distributing that which he produces. He must be provided with such machinery as will cut out the waste in the present system of marketing farm products and guarantee to him a full return for his year's toil. It is variously estimated that through the present system of marketing farm products there occurs a loss from the farm to the kitchen, from the producer to the consumer, of anywhere from fifteen to twenty-five millions of dollars a year. This tremendous waste falls both upon the producer and consumer of these products and it is of the utmost importance that it should be saved to both. It was left to a Democratic administration to say by legislative enactment that it is foolish to teach the farmer how to produce two bales of cotton where one grew before without providing at the same time machinery for getting the true value of the two bales of cotton into the pockets of the producer. A few years ago an item carrying an appropriation of \$50,000 was carried in the Agricultural appropriation bill for studying the problems of the marketing of farm products in this country

Out of this small beginning has grown up in the Department of Agriculture the present Bureau of Markets, whose object is to encourage and promote the economical distribution of farm products and to save the waste of the present uneconomical system of distribution. It was stated a few days ago by a South Carolinian, now residing in Texas and formerly of my district, that the market news service just established in the Bureau of Markets had saved to the onion growers of Texas last season not less than \$1,000,000 and to him personally many thousands of dollars. The appropriation for this market news service during the present fiscal year amounts to only a few thousand dollars, but the agricultural bill which has just passed the House, and for which I voted with a great deal of enthusiasm, carries an appropriation of \$136,000, so as to extend this service to more people and more different kinds of farm products. The fact is that the Bureau of Markets, though of such

recent origin, has proven so satisfactory and beneficial in its work that this year's appropriation has been increased from the meager sum of \$50,000 carried three years ago to \$792,000. It is my belief that the Bureau of Markets will continue to grow until it assumes its proper place in the great Department of Agriculture, and I feel that too much encouragement can not be given to this great work, nor can too much money be appropriated for the carrying out of the purposes for which it was organized.

Tick eradication: The general agricultural appropriation bill carries other items of much interest to the people of my section. One of the most important items is that providing for the eradication of the southern cattle tick, and there is an appropriation of \$632,400 for this work, which is \$194,500 more than last year. Tick eradication work has been conducted by the department for the last 10 years and has made most satisfactory progress each year. The South is naturally adapted to cattle raising, but it can never take its place in the beef supply of this country until the Texas fever is eradicated and the free movement of cattle

permitted by the raising of quarantine.

It is estimated that the South, on account of cattle tick, is losing annually in the price paid for its beef sold in the markets of Chicago and elsewhere anywhere from forty to sixty million dollars; and, of course, the people of my own State bear their relative loss. A carload of steers shipped to a market from a tick-infested area is put into separate pens, which are marked "Quarantined," and these steers will sell from six to ten dollars a head cheaper than steers of the exact same weight and class on the same market coming from a tick-free area. It is upon this difference in price as a basis that we can calculate almost to a certainty the tremendous loss which the farmers of the South are suffering each year because of the presence of Texas fever caused by the cattle tick. With such an appropriation as is carried in the Agriculture appropriation bill the quarantine against southern cattle should be raised in the next five or six years and southern cattle be placed upon an equality in the markets of the country with cattle from other sections. HOG CHOLERA

There is a provision made in the bill this year which permits the expenditure of \$405,000 for the investigation, treatment, and eradication of hog cholera.

INSECTS AFFECTING TRUCK CROPS.

There is a provision for the expenditure of \$42,760 for the investigation of insects affecting truck crops, such as potatoes, cabbages, onions, tomatoes, and so forth. This is particularly valuable for and of interest to the people of my district, where some of the largest truck farms in the world are located.

ROAD MAKING.

This bill also carries a provision of \$142,780 for the investigation of the general methods of road making, especially ordinary sand-clay and dirt roads. Under this appropriation the Government will assign engineers for the building of short sections of roads, and in that way assist any locality in having a standard by which to build its other roads. Of course the Government pays no part of the construction of the road, but only furnishes the engineer. DRAINAGE.

Another great improvement and interesting item is that providing a fund of \$94,720 for the investigation and reporting of farm drainage and drainage of swamps and other water lands, with the object in view of making them available for agri-cultural purposes, to provide expert advice in the drainage of lands, and to conduct experiments in the construction and maintenance of farm-drainage work.

COTTON GRADING, ETC.

There is also carried in this bill the sum of \$48,000 for the purpose of conducting investigations and demonstrations of the different grades and qualities of cotton and the study of ginning, grading, and compressing, and the tare of cotton. Under this appropriation the Department of Agriculture will furnish a grading expert to any community of cotton growers in order to demonstrate the proper method of grading and classification of cotton. It has been estimated that the cotton farmers lose millions of dollars each year by improper grading. The purpose of this item is to demonstrate how this loss can be saved by proper methods of grading and handling cotton.

COTTON-FUTURES ACT.

Until the passage of the Lever cotton-futures act certain cotton exchanges were permitted to furnish quotations upon a debased contract, which resulted in spot cotton being sold upon these quotations and for less than its actual value. When this act went into effect and was in operation it resulted in raising the price of cotton almost \$2 a bale, but recently a New York

judge has declared the act unconstitutional on a technical ground. The Agricultural bill this year reenacts the cotton-futures act so as to meet the objections made in the recent decision. The fact that under this new contract provided by this law cotton was raised to almost \$2 a bale more than it was selling for before the law went into effect justifies its retention on the statute books, for the reason that it is an actual demonstration of its beneficial effects to the cotton growers. The chairman of the Federal Reserve Board, the Hon. W. P. G. Harding, the only southern member of the board, has openly expressed the belief that this act was one of the three things that saved the cotton situation during the critical period of the past two years.

FEDERAL WAREHOUSES.

Another most important provision of the present Agricultural bill is that providing for Federal warehouses. This bill makes provision for a national system of bonded warehouses, supervised by licensed weighers and graders, in which agricultural products can be stored. The object is to provide a warehouse receipt uniform in character for the same product throughout the country. These receipts, being negotiable, can be pledged as collateral for loans, and the farmer in this way is provided a means by which he can hold his products until he believes the market price is acceptable. These warehouse receipts give him a bankable paper on which he can realize ready cash. It also provides for expert grading of cotton, which means millions saved to the farmers.

GOOD ROADS.

This session of Congress will see the enactment into law of a good-roads bill, under the provisions of which the Federal Government appropriates many millions of dollars to build and maintain roads throughout the United States, along with State aid. This bill is along the right lines, especially so now that the Government is making liberal appropriations through the Post Office Department for the extension of the parcel post and the expansion of the rural mail service. Good roads mean a heavier load and a larger and quicker haul with the same animal power.

In addition to the above-set-forth items, the Subcommittee of the Judiciary Committee of the House has for the last two months been conducting hearings for an investigation of the Beef Trust. It is alleged that the entire beef supply of this country is controlled by a few packers, who are noncompetitive in their bids for cattle and who fix the price of cattle each day on the market by providing only one bidder each day and a division of the cattle after they are purchased.

Congress has also provided in the Army bill for the manufacture of nitrate from the air, the erection of a Government plant or plants, to cost not more than \$20,000,000, and the nitrate from these plants to be used for the production of powder when necessary, and to be sold to the farmer for fertilizer when not needed by the Government.

SHIPPING BILL.

There is a bill now before Congress for the Government to purchase or lease ships to the extent of \$50,000,000, and it also provides for a shipping board to have supervision and control of these ships and of the shipping interests of this country generally. These ships are to be in the foreign commerce of the world, to carry the products of the farm and factory of this Nation to all foreign countries at reasonable rates of freight and reliable service. It was attempted to pass a similar bill in a previous Congress, but it failed by a few votes in the Senate. I believed then, and I believe now, that had this shipping bill passed the cotton farmers of the South would have received at least 2 cents a pound more for their cotton during the last year than was actually received.

I do not believe the Shipping Trust should be allowed to fix such exorbitant rates that the exporter is forced either to go out of the business or make the producer accept a lower price for his staple than its real market value. Yet this has been the case in numerous instances. There is no excuse or justification for the freight rates now prevailing, and the excuses offered by the Shipping Trust are both paltry and indefensible. In July, 1914, the freight on a bale of cotton from New Orleans to Liverpool was \$1.40; in April, 1915, \$7; and in January, The Atlantic Ocean is controlled by the British fleet, and yet there is an increase of over 1,000 per cent in freight money to ship a bale of cotton in an American or British vessel from an American port to a British port on the At-Iantic Ocean. One of the excuses offered is the increased insurance rate; yet two years ago the Government established an insurance bureau and has been and is now issuing policies at a reasonable rate of premium. There has been only a small increase in the running expenses of a ship. It is simply a

case where the Shipping Trust realizes that there is no competition, and therefore it can charge any price it pleases. I am not in favor of the Government entering into business competition with private enterprise under ordinary conditions, but I do believe that it is the duty of the Government, when necessary, in order to stabilize prices and to control the trusts, to enter into the business to such a reasonable extent as to prevent the people from being gouged.

It can be said without fear of contradiction that more important legislation has been enacted during the past three years in the interest of agriculture than during any 50 years combined in the history of our country. Representing a district where agricultural resources and possibilities are unsurpassed in this or any other country, it has been my pleasure to assist in all these wise and patriotic efforts to do justice to the greatest of all professions of mankind.

The Army Bill-Massachusetts Patriotism.

EXTENSION OF REMARKS

HON. RICHARD OLNEY, 2D,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 22, 1916.

Mr. OLNEY. Mr. Speaker, in view of the fact that various aspersions have been cast upon Boston as a recruiting station for the Regular Army, in the House of Representatives, with special reference to the Joint resolution passed by the House on March 15 recruiting the Army to its statutory strength of 100,000 men, I desire to correct the impression that Boston, and particularly Massachusetts, is derelict in patriotism and loyalty to the flag.

Several Congressmen stated on the floor of the House that the Boston recruiting station in one particular week enlisted but one volunteer in the Regular Army. However, that week is no criterion for the eight remaining weeks which have been open for recruiting. As a matter of fact, the records show that 70 applicants for this week were rejected.

The latest bulletin from the office of The Adjutant General

The latest bulletin from the office of The Adjutant General of the United States, obtained before the close of business on Tuesday, May 23, states that 655 men have volunteered their services in the Regular Army, at Boston, of which 59 have been accepted. Thus Boston as a recruiting depot compares favorably with other places in the country; the traditions of Massachusetts as to loyalty and patriotism begun at Concord and Lexington are preserved and retained, and doubtless will prevail ad infinitum.

Rural Credits.

EXTENSION OF REMARKS

HON. CORDELL HULL,

In the House of Representatives, Saturday, May 13, 1916.

Mr. HULL of Tennessee. Mr. Speaker, for several years I have kept in close touch with the movement to establish in this country a system of rural credits for the benefit of agriculture. I have strongly realized the necessity for this highly important and long-delayed legislation from the beginning. My training, experience, and close observation with respect to farm conditions and farm needs in this country early convinced me of the urgency for the establishment of the most feasible and practical system of rural credits possible to be devised. I have therefore lost no opportunity during my service here to emphasize and to urge upon members of the appropriate committees of Congress and upon Members generally the wisdom and the need of speedy and favorable legislative action.

I do not deem it necessary to rehearse the detailed facts in support of these views and of this nation-wide movement. They have been fully and ably presented by members of the committee which reported this bill and are reasonably familiar to the American people, and especially to the farmers of the country. I am glad to be able to testify to the fact that a large majority of the membership of the two Houses of Con-

gress have for some years been engaged in an earnest study of the rural credit systems of Europe and their application to conditions in the United States with a view of developing and perfecting a law for this country designed to contain sound principles of finance and at the same time to give to those engaged in agriculture the largest possible measure of practical benefits. I rejoice that after this period of patient endeavor we have reached a stage where the first decisive and practical and far-reaching step is about to be taken. I confidently expect the study of these questions to be constantly pursued to the end that Congress a little later on may be able to add any new and additional provisions to the present measure deemed necessary and beneficial, until within a reasonably short time a thoroughly completed and perfected rural credits system, embracing every essential provision calculated to secure the maximum of results in aid of agriculture will be enacted into It is true that conditions in those European countries which have a rural credits system are very different from conditions in the United States, and it is likewise true that many years of investigation and amendment of their original were required there before a completed and thoroughly workable system was brought about.

For the successful development of their industry farmers must have credit just as people engaged in other lines. Furthermore, their business conditions are such that they must have longer credit than others, and, of course, they should have it

at the lowest consistent rate of interest.

A farmer with \$1,000 in money should be able to purchase a \$2,500 farm and under a properly devised rural-credits system borrow the amount necessary to pay for the same for such time and at such reasonable rate of interest as would enable bim to meet the payments as required. Under existing conditions his interest rates and charges are so high that they eat up his annual profits, with the result that in the end his mortgage is frequently foreclosed and a forced sale results, so that he often or usually loses all he has, including his initial payment.

I was gratified to see a provision favorable to the adoption of this system inserted in the last Democratic platform.

In my judgment, the pending measure will give a large amount of substantial relief to the farmers of the country. I think it represents the best thought and the best effort of the majority of the Members of both Houses of Congress feasible to get written into law to this date. This is and has been a most difficult legislative problem to solve with entire satisfac-I shall continue, along with the membership here, to give my best efforts to the consideration of such new and supplementary provisions as may be deemed necessary to perfect the pending measure into the most complete modernized ruralcredits law in existence to-day.

I consider the efforts of Congress to give to the farmers a suitable system of rural credits among the most important legislative steps Congress has ever taken. Thanks to the present Congress, this long needed and greatly needed legislation

is now assured.

Rural Credits.

EXTENSION OF REMARKS

HON. SAM RAYBURN.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES.

Friday, May 19, 1916.

Mr. RAYBURN. Mr. Speaker, during this administration there have been passed many great constructive measures of legislation that will cause it to go down into history as one of the most notable in the Nation's history. The tariff has been revised that the burdens of taxation may bear more equally and equitably. The antitrust laws have been overhauled and made definite and understandable. The currency system of the coun-try has been rewritten and the Federal reserve act, sometimes referred to as a legislative marvel, has been put upon the books. But, to my mind, this program, however great, would be wholly lacking if this Congress does not pass some legislation pertaining to farm credits. The bill now under consideration will go a long way to giving to the great host of farmers of this country some hope and relief and will to a great extent go far toward bringing the landless man and the manless land together.

admitted as true it could not be attacked as anything but a wholesome thing for the Government to do; for any legislation that will cause more citizens of this country to become home owners will be legislating to help the Government. could go further to make this the ideal country in which to live than for some action to be taken that would cause the men who till the soil to own the soil that they till. Nothing could go so far toward making good citizens of the Government as for the people who make up the Government to think that they are a part and parcel of that Government and that Government is instituted rather to help than to hinder the citizenship from enjoying the fullest liberties and freedom. Some will say that this rural-credits bill will be disappointing and will not come up to the expectations of the farmers of the country. I do not think it will come up to the hope and expectation of all as many have been led to believe more will be done than can be I do not expect to see the time ever come when all men who live on farms shall own their farms, however much this condition may be hoped for, but I know that the greatest hindrance in my section to home buying is the high rate of interest and the short time given on farm paper. will provide, as I believe it does, a lower rate of interest and long time for payment, it will go a great stride toward the consummation of this happy hope. Many a man who wants to own his home will have a small amount of money to make the first payment, but under present conditions knows that the high rate of interest and large short-time payments he will be expected to make can not in any human probability be met; but suppose that the man who has a few hundred dollars to make first payment on a home knows that he can get a low rate of interest for the balance and by having long time the other payments will be small each year he can see a far brighter picture, and he will buy a home and make the first payment, believing that he can pay the remainder, and he can, if health follows him.

Mr. Speaker, many men who oppose this bill say that we are demagoging with the farmer. That this bill will not work. That it is imperfect. Mr. Speaker, no human instrumentality is perfect, and I feel sure that this bill will in the light of experience have to be amended, but I know that it goes a long step in the right direction, and I can therefore vote for it without reservation, knowing that when defects show in the system that there will be men in Congress of enough patriotism and

good sense to amend it.

Mr. Speaker, some of our city friends talk about the beautiful life on the farm and seem to assume that all is one long day of happiness and freedom from care. All these men know about farm life is from what they have got from reading some novel or visiting on the farm or driving through it in the springtime. But, Mr. Speaker, I was reared on a farm where I have picked cotton, gathered all kinds of crops, and plowed and hoed from sun till sun. If some of our city friends who talk about the beauty and romance of farm life would go out and bend their backs over a cotton row for 10 or 12 hours per day and grip the plow handles that long, they would see how fast this romance that they have read in the novels would leave it and how surely it would come down to a humdrum life of work and toil. I want to make the farm a more attractive place to live, and I want, if I can, to help to lift some of the burdens from the backs of those who go forth at early dawn and labor with their hands to dewy eve, to bring forth the products that feed and clothe the world. If this Congress can do this, it will have made for itself an enduring fame.

Rural Credits.

EXTENSION OF REMARKS

HON. WYATT AIKEN,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. AIKEN. Mr. Speaker, that the pending bill, in its present form, will be disappointing to those it is sought to serve, if, indeed, it does not totally fail of its purpose, is a foregone conclusion.

It is needless for me to go into details to justify this statement, for its vital defects have been thoroughly discussed on the floor of the House. But if any Member has not taken the time and trouble to study the bill for himself, I commend to Some may say that we propose to do for the farmers what we him the remarks of the gentleman from Arkansas [Mr. Cara-do not propose to do for any other class. If this statement be way] in the Record of May 9, whose exhaustive analysis of the bill shows it to be little short of an absurdity. So cumbersome and intricate are its provisions that a farmer, undertaking to borrow under it, will have to retain both a lawyer and an accountant to tell how much of his neighbor's obligation he carries, what rate of interest he is paying, and the initial expenses incident to a loan. Under this bill the initial expenses to the borrower will so materially decrease the amount actually received in cash, as compared with the amount obligated for, as to materially increase the rate of interest nominally given the farmer in the bill.

Then, again, the expense to the Government incident to putting the proposed bill in operation, with its boards and sub-boards, its system of land banks and subbanks, with its new high-salaried offices and contingent expenses, will pile up an immense sum, to be borne primarily by the Government, but in

the end by the borrowing farmer.

I propose to vote for the bill, with all its imperfections, because it contains some good provisions and is one step toward the attainment of the rural-credits system. I introduced one of the first bills that was offered in Congress on this subject, and while I have no pride of opinion as to my own bill it, at least, is not subject to the criticism made of the pending bill by many Members on this floor.

I am going to ask leave to print my bill, along with a short digest of it, so that it may be read by individual Members

pending amendments to the bill under consideration.

The question of rural credits is one with which I have been deeply concerned for a number of years. Our farmers are paying approximately \$500,000,000 annually in interest, and our landowners are decreasing in an alarming degree year by year. Thirty-seven per cent of our farmers are tenants, and in the South it would perhaps be safe to say that the tenant class is

nearly double this number.

Since the Democratic Party is pledged to the passage of a rural-credits bill, it is not necessary to defend such a measure here. But for the information of those who attack the measure as being class legislation, it may be recalled that Congress in times past provided for commercial agents, at big salaries, to tour the world and hunt out markets for merchants and manufacturers. Then, again, the funds of the United States Treasury were deposited without interest in Wall Street to prevent a panic threatened by excessive speculation. The funds of the United States Treasury have been ever ready for the protection of the business man, but as the farmer is not classed as a business man by those papers that are controlled by a lot as a business man by those papers that are controlled by a lot of money sharks in Wall Street, it is not surprising to note that such papers as the New York Press refer to the question of rural credits as "a crazy socialistic experiment," "a distillation of populism," "a piece of vicious class legislation," and so forth. Any measure that removes dependence for money from Wall Street, or its dependent banks over the country, is "vicious class legislation" in the opinion of those banks.

The question of rural credits is not a new one. More than

one European country has raised its tenants from a condition bordering on serfdom to that of independent landowners through this system, and, incidentally, national wealth has been doubled thereby. In a former speech I cited statistics to prove this statement, but, as all this information was in the hands of the committee that considered this bill, it is not necessary

to repeat those figures here.

In taking issue with the committee on some of the points of the pending bill, I do not, in any sense, question their good intentions, but I have lived in daily contact with the farmer all my life, and I know of a certainty that before he will undertake to unravel the intricacies of the committee bill, he will continue to go to the banks that have been serving him, and pay his 8 or 10 per cent, rather than pay a lot of initial fees, and subscribe for stock that he knows and cares nothing about. I know again that the plan of banding a lot of farmers together, that the whole may become responsible for the debts of each, has been proven a failure, and must again fall if retained as a part of the pending bill. My bill does not disturb existing relations between borrower and lender, but merely enlarges accommodations to the borrower, at the lowest possible rate of interest, through a local agency that can best judge of its customers, and the value of property hypothecated. Without objection I will ask leave to append my bill and a digest of it.

DIGEST OF MY RURAL CREDITS BILL.

The Democratic Members of Congress and the President are committed to the passage of a rural credits bill, it is unnecessary to urge upon the House the importance of this legislation,

The only question to be considered is the framing of a bill with the least complications which will fully meet public de-

mands and carry relief to the tenant farmers of the United States.

When the Democratic Party came into power, realizing the obligation the party had assumed on this character of legislation, I introduced a bill (H. R. 16028) which I believe would have fulfilled practically every requirement for long-term loans on real estate, but owing to the positive statement of the President that he preferred that no rural-credits legislation be taken up at that time I did not endeavor to push my bill.

I have reintroduced practically the same bill, with a few amendments that I think may add to its effectiveness.

The bill that is simplest in form, entails the least expense for putting in operation, furnishes adequate relief to the tenant farmer, and involves the Government in the smallest degree, it seems to me, should meet the approval of the House.

In the hope of calling the attention of the House to the desirable features of the bill which I have reintroduced, hereto attached, I beg to submit the following digest thereof and ask that the House give it careful consideration in connection with the bill.

Section 1 of the bill provides that national banks as now organized establish a land-loan department. This is made a part of the present banking system with existing banks to avoid the creation of a new system of national banks, with all the cumber-

some machinery necessary for their establishment.

I have examined the hundreds of bills previously introduced and this bill appears to be the only bill that can be put in effective operation without disturbing the present national banking system. Some of the other bills propose a "bureau of farm " some a system of "farmers' associations" with banking privileges, some "land-loan" banks in each State with a central bank in Washington and branches in the various counties, but none except this bill proposes to use existing national banks, with existing officers, State and National.

Now, is there any good reason why existing national banks can not meet every requirement without the cost of an extra dollar to the Government and perform the work more efficiently by reason of the fact that the officials are located in the same community with the borrower and are doing just the kind of work they are doing every day in the course of their ordinary

National banks will gladly take on the work, and as my bill provides further on they do it without extra cost to the Government, although the national banks are made to assume all responsibility in making loans.

Section 2 of this bill provides that loans shall not be made except on farm lands, for not more than two-thirds their value and for a period of not more than 10 years. Further on it is provided that the lands shall be actually tenanted. The reasons for this section are obvious and will not be commented on.

Sections 3 and 4 provide for the local bank president or bank attorney to examine the county records in which a loan is asked to ascertain whether or not the property on which a loan is asked is unencumbered. The wisdom of this provision as contrasted with the suggestion of some other bills that such examinations be made by special deputies from the district attorney's office or by special representatives of a bureau in Washington must be evident.

Section 5 provides for publication of a list of the lands on which loans are asked, not that the mortgage would otherwise be invalid, but to avoid litigation.

Section 6 provides that national banks shall receive loans from the Treasury of the United States in amounts of \$10,000, and serially thereafter, if desired or needed. With each loan asked for mortgages of real estate on lands worth \$15,000, approved by the bank making the application, are filed with the United States Treasurer to form a basis for a bond issue provided for further on in the bill.

Loans from the Treasury to the national banks, as provided in the bill, are to be in serial amounts of \$10,000, in order that they may be handled both by the banks and by the Treasury Department in block sums, thereby facilitating and abridging the work entailed in securing a loan.

The rate of interest to the bank is fixed at 3½ per cent. It will be noted further on in the bill that the rate charged the customer is fixed at 5 per cent. This allows the bank 1½ per cent for becoming responsible for the loan, for examining titles, and for such other expenses as is incurred in making the loan.

Section 7 is practically covered in remarks on section 6. Section 8 provides an appropriation of \$25,000,000 as a working fund to be used and replenished from time to time by Government bond issues based on first mortgages of real estate at two-thirds the value of the property mortgaged, filed with the

Treasurer of the United States. These bonds are to bear interest at 3 per cent, and the one-half of 1 per cent paid by national banks for loans is to be used in preparing and floating the bond issues and for department expenses incident to handling the funds derived from the sale of bonds.

Section 9 provides the compensation to national banks, provides for a sinking fund in the land loan department of national banks, and provides that national banks give bond commen-surate with the amount held in the sinking fund.

Section 10 limits the amount loaned to any one person to \$2,500 on not less than 50 acres of land actually tenanted.

This is for the obvious reason that the bill is intended to encourage home building and to place loans where they are desirable.

Section 11 provides for examination of the "land loan department" of national banks in the same manner and by the same officials as national banks are examined, as now organized. This section further provides for the extension of the "land loan department" to State banks in counties where no national banks have been organized, the State banks to be subjected to the same examinations that are made of national

banks by national-bank examiners,

Section 12 provides that if any person borrowing from any national bank under the provisions of the bill shall make default in two payments, the mortgage shall be foreclosed in the usual way, and the bank that made the loan must see that the full amount loaned, together with all expenses, is recovered from the selling price. This makes the bank responsible to the Government for the mortgages deposited as collateral. The loan value fixed on lands is fixed at two-thirds rather than one-half, as suggested in some of the bills, for the reason that the bank taking the mortgages can not lose at this rate, and it secures the loan to the Government.

Default of two payments is allowed for the reason that it is a safe business allowance, and allows the tenant land purchaser to get over a hard year and not lose his land. Of course, the bank would see that the tenant availed himself of

this as seldom as possible. Section 13 provides a plan by which the person who has mortgaged his land and desires to sell it to advantage before the close of his loan may do so and leave the bank and the

Government whole.

Sections 14 and 15 fix the profits allowed to national banks; and provide that the Secretary of the Treasury take the neces-

sary steps to put the bill into effect.

Now it does seem that this bill will meet all the requirements of an effective "rural credits law." It certainly can be put in execution with less expense than any bill offered. It safeguards the Government against loss. It imposes an easy task on officials now in Government service, to wit, nationalbank officials, and compensates them moderately for their new duties. It makes no radical change in the present manner of banking and does not upset in the slightest the present relations of borrower and lender in the local communities. It is brief, easily understood, and simple of execution; and I trust that at least in some of its important features it may meet the approval of the House.

A bill to establish a system through which national banks may make loans upon agricultural lands in aid of agriculture.

A bill to establish a system through which national banks may make loans upon agricultural lands in aid of agriculture.

Be it enacted, etc., That any national bank doing business in the United States be, and is hereby, authorized and empowered to establish a land-loan department, under such provisions and restrictions as are hereinafter set forth.

SEC. 2. That loans shall not be made from this department of said national bank except on farm lands; and in no case shall said loans exceed two-thirds the actual value of the land to be hypothecated as collateral for said loans, nor shall said loans extend for a longer period than 10 years.

SEC. 3. That when a national bank has applications for loans in a sum aggregating \$10,000 it shall examine the records in the county office in which deeds are recorded in the county in which said applications for loans are made and ascertain whether or not the lands on which loans are asked are unencumbered.

SEC. 4. That if the office of the register of deeds, or such other office in which deeds are recorded, shall show the lands sought to be hypothecated as collateral for a loan are already mortgaged no loan shall be considered on said encumbered land until the encumbrance has been removed and the record satisfied.

SEC. 5. That a list of the lands to be free from encumbrance, as shown by the county records, shall be advertised once a week for three consecutive weeks in a newspaper published in the county in which said loans are sought, and in case no person notifies said bank of a prior unrecorded mortgage or a judgment against any of the parties making application for loans, which said mortgages beld by said bank shall be deemed sufficient public notice, and the mortgages held by said bank shall be deemed and adjudged to be first mortgages by the State and Federal courts of the United States.

SEC. 6. That when any national bank located in any State of the United States shall have applications for loans on farm lands aggregating \$10,000, on a basis of two-thirds the value o

the Treasurer of the United States, and said national bank shall revelve therefor from the United States Treasury a leant of \$10.000, bearing interest at the rate of \$4\$ per cent per annum and to run for a period of 10 years.

Sec. 7. That the fund derived from the deposit of first mortgages of real extate in the Treasury of the United States as provided for in the said state in the Treasury of the United States as provided for in the said state in the Treasury of the United States as provided for in the said state in the Treasury of the United States as provided for in the said state of the exempt from all the said state in the said state in the said state of the said state in the said state of the said should be exempt from all taxes or duties by the United States or any State, municipality, or local authority.

Sec. 9. That any national bank making loans as herein provided to be based on mortgages of real estate in an equal amount and covering the approximate period of said bond issue, and to be further guarantee be exempt from all taxes or duties by the United States or any State, municipality, or local authority.

Sec. 9. That any national bank making loans as herein provided for shall annually collect the interest due on any loan and \$100 of the smaller loans. Out of the outhor states of the said spate in the same ratio on smaller loans. Out of the outhor states of the said spate in the same ratio on smaller loans. Out of the outhor states of the said spate in the same ratio on the said spate in the same ratio on the said spate in the same ratio on the said spate in the same ratio of the said spate spate

Conference Report on the Army Bill.

EXTENSION OF REMARKS

HON. EDMUND PLATT, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916.

Mr. PLATT. Mr. Speaker, after all these months of delay, with the world on fire and sparks falling all around us, with practically the whole present mobile Army of the United States chasing a few bandits in Mexico, we are finally confronted with this conference report on the Army bill. I for one shall not vote to accept it. The chairman of the Committee on Military Affairs himself has just told us that it is "in no sense an emergency measure." He recognizes no emergency, no necessity for any preparedness, and has agreed to just as little of the real preparedness in the Senate bill as possible, while agreeing to the one bad feature, the antiquated nitrate provision. The bill should be sent back to conference with instructions to agree to the Regular Army provisions of the Chamberlain bill and to the Federal volunteer reserve provision, and to disagree with the water-power nitrate provision already proven out of date.

Mr. Speaker, I yield to no one in high regard for the National Guard of States that have a real National Guard, such as the guard of the State of New York; but look at the spectacle in Texas at present, where that great State can not turn out 3,000 men, after all its bluster, to protect its own borders. The National Guard can not fill the place of a Federal reserve, as it is constituted the country over. Furthermore, even where the guard is best organized and in the highest efficiency, as in New York and New England, I doubt if its present members, many of whom are men with families dependent upon them, have reckoned upon the possibility of being called into Federal service for Their patriotism is not to be doubted, and they a long period. would be of immense service in any emergency; but why not supplement them by building up a Federal volunteer reserve, such as the Senate bill provides?

THE PEDERAL VOLUNTEER RESERVE, OR CONTINENTAL ARMY.

This plan of a Federal volunteer reserve was first advocated by Secretary Garrison under the name of the continental army, It was a new idea, but a good one. The President took it up and made it a part of his preparedness message at the opening of this session of Congress in December. But the political adju-tant generals got after it so vigorously that within three weeks the President reversed himself, refusing to stand by Secretary Garrison, who was forced to resign. The sequel shows what a blunder the President made. This Federal volunteer plan, which apparently had no friends then, has steadily gained ground. The Senate has approved it, and it has gained many supporters in this House, as it has come to be better understood. Those who have opposed it so vehemently, supposing they were currying favor with the militia voters in their States, have recently been confronted with strong evidence that the best guardsmen are not opposing it. I have letters here, Mr. Speaker, from National Guard officers in my State who strongly favor it. One of them is from Maj. Francis G. Landon, who has four times represented my district in the New York State Assembly. Maj. Landon wrote me March 22:

What we need is a national reserve—call it what you like—which Mr. Garrison came nearer to suggesting than any other man. You can not federalize the guard as proposed by the bill pending. You will only keep the worst element in and the good element out. You will create a political organization which will call for more and more each year and you will find that the Government has hung around its neck a monster that will never let go.

Maj. Landon strongly opposed some of the militia-pay sections of the bill, but was not opposed to paying the men enough to cover expenses of attending drills.

I should like to quote also briefly from a letter written me by resident of my district who was one of Roosevelt's Rough Riders in the Spanish War. He speaks of Col. Leonard Wood and of Col. Roosevelt as excellent and intelligent regimental commanders, and he testifies to the high qualities of some of the company officers, but shows that soldiers can not be improvised, and adds:

In spite of all the newspaper notoriety we got we dld not amount to much as a fighting unit, and the other Volunteers in Cuba were much worse than we. The success of the Santiago campaign was due, first, to the excellent fighting qualities of the United States Regulars; second, to the demoralization of the Spaniards.

ONLY PLAN OPEN TO PARMERS.

Mr. Speaker, I want to add one argument for the Federal volunteer plan which, though now apparently crushed, will, I believe, rise again, an argument which I have heard no one else use, though it seems to me the strongest of all. The Federal volunteer plan offers the only plan by which a country boy, a farm boy, can obtain military training short of enlisting in the Regular Army. The National Guard as to-day organized is almost wholly composed of city men; at least, outside of Senator Wadsworth's troop of cayalry in central New York, that is true in my State, and I know it is true in many other States. Now, in the past most of our best soldiers have come from the Why deny the young men of the farms a chance to obtain military training to-day? They can not get into the cities, generally speaking, to attend even once-a-week armory drills in winter, but many of them could get off for a whole month's training at some time during the summer or fall. Why not give them a chance?

In my county, the county of Dutchess, in Revolutionary days there were three or four regiments of militia, all farmers with the possible exception of a few of the officers. Those regiments kept their organization down through days of "general train-

ing" until some time in the forties or fifties of the last century. I have heard my grandfather tell of general training. Of course, it was not training to any extent, and probably too often was a general picnic, but the obligation to military service was

FOUR REGIMENTS REDUCED TO ONE COMPANY.

Every able-bodied man of military age was enrolled, and right here I want to note the fact that the Legislature of the State of New York has recently passed an act for another militia enrollment which shall take in every man. It is an excellent idea. But that is a digression. I spoke of the old-time militia of my county merely to show how many there were of them, and all farmers. Later the old regiments were reduced to one, a regiment that was called out for 30 days' service at the time of the Battle of Gettysburg. This regiment represented the county. Nearly half of the companies were in the city of Poughkeepsie and the rest in small towns and villages within a radius of 18 or 20 miles. They got together at intervals for regimental drill, and they made a good showing in parades, as I very well remember.

In 1882 this regiment was cut down to two separate companies, and in 1897 one of those was disbanded-without sufficient reason, in my opinion-so that now we have only one company of less than 100 men, where we used to have within my own memory a regiment, and at an earlier time, when the population of the county was very much less than at present, three or four regiments. Very much the same is true of the other Hudson River counties in my neighborhood, though Orange County has retained three separate companies. My whole district, three counties, has only four National Guard companies. My whole disalthough it includes five cities, ranging in population from 12,000 to 30,000, and a number of important villages.

Evidently there is room for a much larger local military force. The National Guard is already recruiting, and with the en-couragement offered in this bill will doubtless be doubled; but there might easily be found three or four hundred young men drawn from the farms and the smaller villages for a Federal volunteer reserve, men who could find time between May and November for a month of training in camp, but who can not

well join the National Guard.

The very fact that 50,000 men have already volunteered for training at Plattsburg and elsewhere shows that the Federal volunteer reserve could have been made successful and could have been adopted had the President stood manfully by his first position in support of Secretary Garrison. I believe we shall yet at some future time take up this plan, and I hope that the Republicans, particularly those from the great agricultural States, will get into line in favor of it.

Rural Credits.

EXTENSION OF REMARKS

HON. FINLY H. GRAY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES, Monday, May 15, 1916.

Mr. GRAY of Indiana. Mr. Speaker, it is objected that this legislation is extending favors and special benefits to farmers as a class. There is a difference between commercial transactions and agricultural operations. There is a difference in credit facilities to carry on commerce and trade and credit facilities to carry on farming and agriculture. There is a difference in the fundamental conditions of agricultural operations. Other men may hasten their business transactions and thereby increase their profits. But no amount of industry, energy, and enterprise can hasten agricultural operations in advance of the seasons or mature crops at an earlier date than the time fixed by nature. There is a difference in the contingencies incident to agricultural operations. Other men may guard against loss and insure against casualties in business, but no amount of precaution will safeguard against droughts, floods, blights, and other contingencies in farm production so as to hold the farmer safe from loss. And there is a difference in the use of capital in agricultural operations. Other men may multiply their transactions and use their money over and over again during the same year. But the farmer by nature is limited to single annual operations and his profits are accordingly circumscribed.

These different conditions and contingencies call for a different and peculiar form of credit and loans under which to carry on the farming industry. The farmer must make his business calculations in accordance with these different and peculiar business contingencies and conditions, and he must be afforded a different and peculiar form of credit to carry on his operations. The general banking institutions of the country have been organized, framed, and established upon a basis to furnish credit for commercial transactions. They do not and can not afford credit facilities to meet the requirements of agricultural operations.

The farmers have at last come to be recognized as business men who require capital the same as other business men in order to do business. The want of capital will limit their business the same as in other lines of industry and with other business men. They require a form of credit that will make capital available to them in accordance with their business operations the same as other business men. The farm owner is in constant need of capital for the improvement of his farm, for the erection of buildings, for the purchase of stock and fertilizer, machinery, and other apparatus. The tenant is in need of capital for all these as well as capital for the purchase of a farm.

An agricultural system is necessary to meet the requirements of the farming interests of the country and under which the farmers in every locality may organize to avail themselves of necessary credit facilities where credit, on terms to meet their requirements, is not otherwise furnished them by the existing loan and banking institutions.

But there is another and a greater reason than an economic reason for the cooperation of the Government to promote the welfare of the farmers of the country. History has taught that the strength and security of a nation depends upon the proportion of landowners among those who till the soil and that tenantry is a condition fraught with national weakness and instability.

As a policy to increase the national strength and stability European countries have expended large sums of money to encourage and aid farm tenants to become landowners. To accomplish this purpose Germany has provided for lower interest rates and easy payments on the purchase of farms. France has subsidized Government-controlled banks to extend credit as an inducement for the purchase of farms by tenants. England has appropriated over \$500,000,000 to help Irish tenants to become landowners. Russia has expended more than a billion of dollars to aid her tenants to own their homes and the lands they cultivate. And other European countries, realizing the national menace of landlordism, have inaugurated similar policies for relief against tenantry.

If all the great European nations can afford to formulate great policies and support the same by appropriations running into millions of dollars to restore the ownership of land to occupying tenants, then this Government ought to profit by their experience and make reasonable provision to enable the farmers of this country to hold their land and prevent them from becoming tenants. Tenantry is on the increase among the farmers of the United States, and to-day only 67 per cent of the farmers own the lands they cultivate, while in Germany, an old country, under a system of Government cooperation, 81 per cent of the farmers now own the lands upon which they live. The farmers now owning farms should be helped and encouraged to hold them and the farmers now tenants should be helped and encouraged to become owners of farms by affording them a form of credit suitable to their requirements.

Two Platoons for Firemen.

EXTENSION OF REMARKS

HON. CHARLES POPE CALDWELL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 25, 1916.

Mr. CALDWELL. Mr. Speaker, under the leave granted to me to extend my remarks in the Record. I include an argument I made upon this subject the last time it was presented in New York.

The argument is as follows:

ARGUMENT BY CHARLES POPE CALDWELL BEFORE THE COMMITTEE ON LAWS
AND LEGISLATION IN RE TWO PLATOONS FOR PIREMEN.

Mr. Chairman and gentlemen, on behalf of the members of the uniformed force of the fire department, their families and friends, I wish to thank you for this opportunity to present their side of this controversy. The fight for two platoons has been waged unceasingly for about 15 years. The idea originated in the ranks, and for that reason was opposed by the then chief of the department. As the discussion went on, it developed into a personal fight resulting in the removal of the proponent of the measure and the scattering by transfer of his supporters. No chief or commissioner since has seen fit to take up the subject and decide it upon the merits after a hearing at which the men would be given an opportunity to present evidence, but all have continued the fight, apparently on the theory that to grant the relief demanded by the subordinates of the department would be to defeat the executive officers.

All political parties have advocated this reform, and in the campaign of 1902 both political parties wrote an indorsement of it in their platforms. The legislature then granted the three platoons to the police and left the two platoons for the firemen to the discretion of the commissioner.

No relief being granted, although continuously urged, the matter was presented to the legislature in 1913 and a bill was passed directing the installing of the two-platoon system, but the governor, although he advocated the bill, vetoed it upon the ground that it was a violation of the home-rule law.

This ordinance is presented to you upon the theory that it is properly within your province, and we are here to discuss it upon the merits. It has the indorsement of representatives of organized labor, who, on behalf of 250,000 men who work, will file their protest against a 20-hour day. The indorsement of the representatives of 40,000 churches, who claim that the men who risk their lives that others might live or property be not destroyed, are entitled to attend divine service more often than once in 35 days; the representatives of the classified civil service; of the per diem employees of the State; and of the policemen, who have found relief in the laws limiting their hours of service; the indorsement of the representatives of the Yonkers fire department, where the two platoons have been tried, and will never be abandoned; and last, but not least, it is demanded by the wives and children of your firemen heroes, who ask that you give them just half of the previous life that every true fireman is willing to risk in an endeavor to save yours, or that of your loved ones, whenever the occasion presents.

The uniformed force of the fire department numbers 5,500. They are chosen by civil-service competitive examination after three separate physical examinations. When they enter the service they are almost perfect specimens of manhood. From the time they enter the service until they die or are removed for disability, their every moment is under the control of the commissioner. By his good graces they are allowed 24 hours' leave every fifth day, and if the commanding officer of his company sees fit and he has been real good, in all boroughs except Richmond, they have four 12-hour night leaves per month.

If they take one meal per day they have four hours off; if two, three and a half hours; if three, three hours. They go to bed in the fire stable with their underclothes and blue shirts on, and are aroused on an average of six times every night, and must dress, slide down a pole hole, and get ready to go out whether they are needed or not. For if a peanut stand on Dyckman Street catches fire, the company at Liberty Street must go through the monkeyshine of getting ready. This even though the Liberty Street company had been fighting fire until 4 o'clock in the morning. And besides that, they must get up at 7.30 a. m. no matter how greatly they are suffering from fatigue or how often disturbed. If they are needed they must rush into the cold night air mostly from a warm bed, and rush off partially clad, to a fire before they are half awake. Such a system, we maintain, is cruel, inhuman, and not in accord with the sentiments of the times.

The two-platoon system would permit a man to spend at least 10 hours of each 24 with his family; to have two meals at home and one on the job, for he could bring his lunch with him; to sleep eight hours without being disturbed, in his own bed, in his night clothes. It would do away with the pole hole, through which not less than 80 men have been killed or maimed for life within the last 10 years and hundreds hurt.

Chief Kruger, one of the greatest and grandest of firemen, met his death in Canal Street by falling through a wellhole left unguarded and open by the tenant of a building that caught fire. A jury in the Supreme Court in New York County awarded to his family \$25,000 for the loss of his life. If the city of New York paid at this ratio for the crippled and injured and deaths occasioned by the wellholes or pole holes in fire houses, its annual expenditure would be approximately a quarter of a million.

It would permit a fireman to attend church as often as his conscience requires.

The system would provide for a working force always awake, always on duty, equal to the working force now on duty, al-

though half of the time in bed. It would do away with the monkeyshine tactics of getting ready where not needed, and would save the time necessarily consumed in waiting for the present gong signal to operate without a cent increase in cost.

It would provide a reserve force to protect and take care of the city when the fire fighters were exhausted from hard duty.

It would also do away with the necessity of maintaining a dormitory in which a drunken fireman may hide his breach of

discipline by claiming that he was asleep.

It will do away with the clubhouse features and the roof gardens recently installed, all to the great advantage of the city in reducing the expense of maintenance and the cost of con-

And last, but not least, it would bring health and contentment to the fire fighters and thus add to their efficiency.

That there is something wrong with the present system is dis-

closed by the following things:
First, There is a widespread discontent among the force.

More than 80 per cent demand this relief.

Second. The statistics of the fire department show that the health of the firemen is being outrageously impaired by the

present system.

After five years a fireman is entitled to examination for promotion. After three years a policeman is entitled to examina-tion for promotion. The policeman has a three-platoon system, spends one-third of his time on the streets or on stationary post, where he is subjected to the inclemency of the weather, yet the figures show that only 3 firemen are entitled to promotion to 17 policemen. And this on account of the physical test alone. The law has dealt harshly with the fireman.

Labor law, section 3, provides eight hours shall constitute a legal day's work for all classes and employees in this State, except those engaged in farm and domestic service, unless

otherwise provided by law, etc.

In the case of McNulty v. City of New York (60 A. D., 25; affirmed 168 N. Y., 117) it was held that a driver of a cart in the street-cleaning department of the City of New York was

protected by this section. But in the case of Sweeney v. Fire Commissioner (78 A. D., 460; affirmed 175 N. Y., 470) it was held that a driver in the fire department was not so protected by said section, nor was any other member of the uniformed force, because by the city charter the commissioner is given the authority to regulate

the hours of duty of all members.

In the street-cleaning department 8 hours constitutes a day's work, and the employees working overtime get extra pay.

But in the fire department 20 hours constitutes a day's work,

and the employees working overtime get no extra pay.

In the police department each man is required to do 8 hours of tour duty in 24 hours, and 8 hours of reserve duty in 72 hours; the remainder of his time he may spend at home.

But in the fire department each man is required to do 20 hours of continuous duty and is with his family only one day

The laws of this State prohibit the corporations to require employees in brickyards to work more than 10 hours per day, exclusive of meals.

But the fire commissioner can and often does require members of the uniformed force to work 24 to 48 hours without meals.

Street surface and elevated railroad employees are not permitted to work more than 10 consecutive hours including half hour for dinner, on the theory that longer hours would be dangerous to lives of passengers.

But in the fire department employees are required to work 20 hours exclusive of meals, on the theory that the longer they work and the less time they have to cat and sleep the more efficient they become.

Upon steam roads more than 30 miles in length, 10 hours out of 12 is a legal day, and where an employee has worked for 24 hours consecutively he can not again work until he has had at least 8 hours' rest.

But a fireman is required to work 20 hours every day, and fatigue is no excuse for failure to report at every call, whether he is needed or not.

Block-system telegraph and telephone operators may not be on duty more than 8 hours out of 24, and a violation is punishable by fine.

But a fireman is required to work 20 hours out of 24, and if he fails to respond to continuous duty he is punished by fine or discharge.

A drug clerk is not permitted to work more than 70 hours per week, and his day must be consecutive and allow 1 hour for each meal, and he shall not sleep in the store.

But a fireman must work 20 hours per day and must sleep in the stable.

barber is prohibited from working on Sunday by statute. and the court of appeals has held the same constitutional on the ground that it tended to promote the public welfare.

But the fireman is off duty only 1 Sunday in 35 days.

Certainly upon a statement of the law the fireman has not been given a square deal.

The present commissioner, in his opposition to the proposed ordinance, has, with his characteristic play to publicity, sent to the public press his argument, and it seems to me that the fair way to deal with this subject is to take up the various points raised by him and discuss them with this committee.

He says:

The chief of department, with an experience of more than a quarter of a century in the uniformed force as officer and man, and who has served in every grade and rank, from the lowest to the highest, concurs with me in the opinion that this is a pernicious measure, diametrically opposed to the best interests of the department, of the city at large, and of the members of the uniformed force.

The chief of department is John Kenlon, who, while deputy chief, installed the two-platoon system in the marine division of the fire department, and who, as chief of the fire department, has continued the two-platoon system in that branch of the service, notwithstanding the fact that he has had authority to discontinue it. It therefore does not seem reasonable that the chief could honestly and sincerely believe as the commissioner says he does, for if he does he is certainly guilty of a breach of duty in continuing a system in the department where he established it.

He says:

Every fire commissioner and chief of department since consolidation, in 1898, has strenuously and successfully opposed such attempted legislation, convinced that its enactment into law meant the demoralization of the uniformed force and the loss of prestige as the finest fire-fighting organization in the country.

As I said at the outset, it is conceded by those in favor of this measure that the chiefs of department have fought them, but the fighting has been a personal fight based upon the theory that the granting of this relief demanded by the subordinates of the department would be a defeat of the chiefs of the department and in their mind would tend to demoralize the uniformed force. But this is a day of individual justice; the day of autocratic rule has passed.

He says:

In May, 1913, a bill which incorporated the same features as the present ordinance was sneaked through the State legislature.

In February, 1913, three months prior to the date on which it was sneaked through, Commissioner Johnson, over his signature, wrote to the chairman of the city's committee of the senate at Albany and laid before him the commissioner's objection to the passage of the bill. A hearing was held, the bill was reported out, and passed both houses of the legislature.

He says:

It was vetoed by the governor after a strong protest by the officials of the New York City fire department and by several organizations, including the Retail Dry Goods Association, the Central Mercantile Association, the Merchants' Association, the City Club, and the Board of Trade and Transportation.

To which I might add, none of whom are usually supporting a law proposed for the benefit of the man who works, and that the governor vetoed the bill notwithstanding he favored granting the relief, because it was in violation of the home-rule law, one of his pet measures.

He says:

The division of the uniformed force into two distinct bodies would, in my opinion, be analogous to the division of an army brigade into two parts with distinct hours of duty.

The firemen are not soldiers, and never have been. They are civil employees. They have had placed upon them many of the onerous duties placed upon military men, but none of the comforts and none of the benefits. If the firemen are to be a military body, make them such. Furnish them homes. Furnish them meals at regular hours. Furnish them clothes. Furnish them their furlough, and let them off duty when they are not needed, and provide a relief when worked to exhaustion by duty. If they are to be civil employees, treat them as such. Permit them to have a home life. Permit them to have rest and recreation as other civil employees, and hold him responsible for his civil duties as any other civil employee.

He says:

In the fire service, as in the military service, the members should be accessible at all times except when necessarily absent for meals or on leave for purposes of rest or recreation for periods of short duration, and these absences should be taken in rotation, so that the number of men on duty should never be less than that necessary to officer and man the company in a thoroughly efficient manner. That this is so will appear from a consideration of the peculiar character of the fire service.

I never heard of a military service in which the men were absent for their meals. The two-platoon system meets all the other conditions.

He says:

The department is engaged in a battle with a foe that never sleeps.

But under the present system the whole of the fire department on duty, with the exception of a watchman in each house, lies down to sleep every night at the same time. Under the twoplatoon system the same fire-fighting force would be wideawake at all times.

He says:

All other kinds of similar service of trained men can count in some degree upon the exigencies of their service and when and where their extreme exertion of labor will be required. With the fire department this is not so.

True, to a large extent. But in all such work, where they can not determine in advance when the peak load will arrive, there is always a reserve force, except in the fire department.

He says:

The explosion of a gas pipe, the falling of a wall, or the careless dropping of a lighted match may in the shortest interval of time start a conflagration the extent of which can only be limited by the force and promptness with which it is attacked.

Yet for half of the time, under the present system, the firefighting force of New York City is in bed. Under the twoplatoon system the fire-fighting force would be awake, dressed, and ready to respond instantly.

Neither battles nor fires can be fought with limited hours of service.

But all good generals provide in the organization of their army for a reserve force that can be brought up when his men are exhausted from fighting their enemy.

Men can not be accorded the right to go off duty when duty presses, or to ask relief therefrom when engaged in a hand-to-hand contest, or to request leaves of absence by reason of having been detained when the time comes for their platoon to go out of service, without greatly reducing the efficiency and the morale of the department and introducing added complications and difficulties into its management.

With this we agree, and so does the ordinance, for it provides that under such conditions the commissioner may require the attendance at such times of all men.

He says:

Under the two-platoon system an unfortunate division of responsibility would take place. One house and one set of apparatus would be operated alternately by two sets of officers and firemen, and it would oftentimes be impracticable to fix definitely the responsibility for any work that might be neglected.

There is nothing in the bill to prevent the present method. which is that a watchman who goes on duty makes report of the condition of all of the property and apparatus, and his report goes.

He says:

Alarms come in at all hours, and would doubtless arrive at one of the periods of changing platoons. The confusion which would then unavoidably result as to which body of men should perform the service would, in my judgment, be very serious and result in errors for which it would be difficult to establish the responsibility.

He overlooks the fact that in such an event both platoons would respond under the proposed ordinance.

He says:

It might be alleged that in case of necessity reinforcements from the platoon off duty could readily be obtained. This, however, is entirely erroneous and misleading. The units of the platoon off duty would scatter immediately, either to their homes or to places of amusement, often outside of the borough in which their company is located. It would clearly be impossible to reach even a small percentage of their number and even if reached an excuse of illness might operate to prevent attendance.

No such contention has been made, but an emergency squad equipped with automobiles could always be on hand and easy of access, and there is nothing in the law to prevent the establishment of such a relief force.

He says:

The necessary increase in force would introduce a number of entirely green and untrained men into the service which, distributed among the various companies, would mean a large percentage of the men assigned thereto without experience in fire service. It is an axiom of old officers that it requires five years for a fireman thoroughly to learn his duty under present conditions when he serves at all times except when on vacation leave. Under the two-platoon system it is safe to say that he could not obtain the necessary experience in less than 8 or 10 years.

The fire department is at present being continuously added to and has its green men scattered throughout the department. We claim, as will appear later, that the two-platoon system will not cause any great increase in the number of men. Certainly a man can learn more when awake than when asleep.

He says:

Another serious danger is involved in the proposition. It is a well-known fact that the larger portion of the cases of breach of discipline and violation of the rules and regulations of the department are committed by members of the force on the day following their day off.

To which we say that the irregular life that the fireman To which we say that the irregular line that the irreman leads—the fact that they go without meals and without proper sleep—tends to exhaust their nervous energy and creates a desire for stimulant. With regular lives this desire would decrease. That the lodging-house feature of the fire stable tends to foster the drinking habit. The two-platoon system would reduce and not increase this evil. No such trouble has been found in the marine division.

He says:

A certain percentage of the uniformed force is not free from habits of occasional overindulgence in the use of stimulants. These men are frequently arrainged on trial for this reason.

Those men under the two-platoon system, or the one platoon, or any other system, should be dismissed. The city has no occasion to employ men who report for duty when their senses are beclouded by the use of intoxicating liquor.

He says:

They find this period of relaxation from the restrain of duty a temptation which they can not resist. Speaking of this class of men, if every 24-hour day carried with it a period of 10 to 14 hours release from restraint, the increase of trouble from this source would undoubtedly be very considerable and the discipline of the department to a corresponding extent injuriously affected.

But he cites no such condition in the marine division of his own department, where the two-platoon system is now in force. And it is hardly to be supposed that a man who works 7 days in the week and has 10 to 14 hours off each day will not spend at least 8 of it in sleep, 2 of it at his meals, and with the present system of assigning the men far distant to their homes, 2 more on their way to and from their place of business. Little or no time is then left in which he could indulge if he was so inclined.

This is practically the argument propounded by Pharaoh when Moses and Aaron asked for leave of absence for the Israelites that they might worship their God. It did not maintain then,

and I don't think it will maintain now.

He says:

But there is still another important and controlling consideration operative. The tendency of the proposed ordinance would be to change entirely the character of the uniformed force. Their service is now regarded as a profession and not as a trade. They recognize in their high pay the generous provision for their pension and for the care of their wives and children in the event of their death, in the opportunity always open to them of promotion to a higher grade and rank, with proportionately increased compensation, conditions which differentiate them from an organization of mechanics of any class, and which they accept as satisfactory compensation for the dangers and risks to which they are constantly exposed.

To which we say that to make their lives more pleasant surely will not cause firemen to have any less pride in their work; that their pay has not been increased except to the fourth-grade men since 1895; that the generous provision to their wives and children has been curtailed by the present commissioner by his habit of obtaining an affidavit from a recruit that he will not join the Firemen's Benevolent Association, which pays within two hours from the time of the death of a member the sum of \$650 to his family. As to his opportunity for promotion, only 3 firemen to 17 policemen are capable of taking the physical examination for promotion after the same period of service.

He says:

The two-platoon system would practically make of the uniformed force a labor union. There is nothing to be urged against the propriety of labor unions in mechanical trades. With such bodies the continual struggle for fewer hours of work and higher rates of pay is legitimate. With a fireman such an ambition is totally contrary to the instincts of his profession. The alm of the vast majority of the firemen is and should be to perform the greatest possible measure of faithful and notable service and to obtain the rewards justly flowing therefrom. When this ambition is lowered by the constant efforts for fewer hours of duty and less service the high standing of the New York fire department will be a thing of the past.

The happiness and contentment of the firemen and their wives and children is amply demonstrated by their outpouring here to-day in protest against the present methods enforced by the present commissioner. Labor unions have found that in organization is their only salvation. But in the fire department organizations are under the ban.

He says:

The two-platoon system, it should be remembered, was given a thorough trial in the third battalion of this department in 1904. The test began at 8 a. m., December 5, 1904, and continued until February 25, 1905, when it was abandoned.

And it is claimed on the part of the firemen that the test was instituted for the purpose of defeating the proposition; that it was not a fair trial, and there are men here to-day ready and

willing to tell you from their personal experience the grounds upon which this charge is made.

The two-platoon system has been adopted in Butte, Mont.; Kansas City, Kans.; Kansas City, Mo.; Lincoln, Nebr.; Omaha, Nebr.; Pueblo, Colo.; Seattle, Wash.; Yonkers, N. Y.; Youngstown, Ohio; and in the marine division of the fire department of the city of New York. Wherever tried it has been found a

It is to be borne in mind that the additional expense incident to the operation of the two-platoon system would be very great even were its introduction considered advisable from the standpoint of the public good or welfare of the officers and men themselves.

To this we reply that there would be no such increase. illustrate: At present, in a company of 15 men, during the day 3 men are off duty on a 24-hour leave every day; 5 men are off duty on meal leave at all hours; and, as a general average, 1 man is off duty on vacation, special leave, or for sickness or special assignment, from which we find that there is on the average, out of 15 men in a company, only 6 men actually on duty, and none of them properly fed and all drowsy from lack of sleep. And at night 3 men are off duty on 24-hour leave, 2 men are off duty on 12-hour night leave, and by reason of special assignments to theaters 2 or more are off duty on vacation, special assignment, special leave, or sick leave—an average of 7 men off duty and 8 on duty, and all but 1 lie down in their clothes endeavoring to sleep, as none have had an opportunity to sleep during the day.

Under the two-platoon system we would have half the men

on duty in the day and half at night, all awake, fully dressed, and ready for business without any extra increase in expense, and with a corresponding decrease of expense to the city in the elimination of the costly construction of the fire houses to provide dormitories and club rooms and their equipment and maintenance.

He says:

The persent salaries paid to the uniformed force are based upon the amount of service now rendered. If the quantity of this service were cut in half, or measurably reduced, it might lead to a proportionate decrease in salaries all along the line, and this would necessarily result in a lowering of the pension schedule.

To which we reply: First, Mr. Johnson recently presented to the board of estimates an application for an increase of the salaries of the uniformed force upon the ground that they were underpaid for their present hours of service; and second, the men would perform more hours of duty awake under the twoplatoon system than they do at present.

He says:

The treatment accorded officers and men in the matter of time off with pay is moreover very liberal. Chief officers are granted an annual vacation leave of 30 days, and 1 day off in every 5 for purposes of rest and recreation. Company officers are allowed an annual vacation leave of 21 days, I day off in every 5, and three short leaves of 12 hours each monthly, which may be taken in conjunction with the regular leaves if conditions warrant. Engineers and firemen are accorded an annual vacation of 14 days, I day off in every 5, and four short leaves monthly of 12 hours' duration each. All officers and men are likewise given full pay when suffering from illness or injury.

But he neglects to say that the balance of the time they are kept in the fire house that their meal hours are irregular; that they must sleep in their clothes, and that they respond to alarms half awake and rush out in the cold air with their bodies covered with perspiration developed in a warm bed, and otherwise suffer hardships unnecessarily imposed upon them in their long hours of duty.

He says:

The conditions of service in the uniformed force are as fair and reasonable as it is possible to make them in a body necessarily organized and conducted on a military basis, and the high standard of efficiency now obtaining therein should be maintained at all hazards.

We say that the conditions of the service of the uniformed force are as unfair and unreasonable as it is possible to make them in a body organized and conducted on a civil basis; that the high standard now obtaining would be improved by better treatment of the men; that the force is not organized on a military basis.

He says:

The passage of a two-platoon erdinance at this or any other time would be disastrous not only to the fire department but to the public at large, the safety of whose lives and property is dependent upon the efficiency of the fire-fighting force of this city.

We say that the passage of the two-platoon ordinance at this time is an act of humanity; that it is necessary and requiredyes, demanded—not only by the fire department, their wives and children, but by the public at large, the safety of whose lives and property is dependent upon the efficiency of the fire-fighting force of this city.

Preparedness.

EXTENSION OF REMARKS

HON. FRANK BUCHANAN, OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, May 25, 1916.

Mr. BUCHANAN of Illinois. Mr. Speaker, I have taken the occasion a number of times recently to state to this House my stern opposition and disapproval of the pernicious propaganda that has been and is now being carried on in this country under the name of "preparedness." I am convinced that it is a scheme of the munition traffickers and allied manufacturers to stir up a false sentiment among the people in their desperate effort to harness this country with a system of militarism which history has proven always leads to disaster and the decline of civi-I am also firmly convinced that the great masses of the people of this country are opposed to this propaganda.

This crowd of parasites upon civilization and the progress of humanity, this sordid crew of money-mongers, who would sacrifice the flower of our manhood and coin their precious blood into filthy dollars to appease their voracious appetites for money and power, are now cunningly planning a monstrous parade in Chicago, where they will lash every helpless breadwinner into line under threat of discharge, and hope thereby to force their stamp of approval upon this criminal and unnecessary expenditure of the people's money under the name of so-called preparedness.

As a further indication of the firm opposition to this propaganda that exists among the great masses of the wealth producers of our country I hereby submit the following resolution passed by the Chicago Federation of Labor:

Resolutions adopted by the Chicago Federation of Labor Sunday May 21, 1916.

Whereas the Chicago Federation of Labor, at its meeting on Sunday, February 6, 1916, defined its position on the subject of military preparedness by the adoption of the report of the executive board on that subject; and

Whereas in acordance with the official position of this body as defined in this report, Secretary E. N. Nockels has refused to cooperate with the demonstration known as the preparedness parade, to be held in Chicago on June 3; and

"Whereas the position of the Chicago Federation of Labor, as defined in its report of Sunday, February 6, 1916, has been further justified by recent events, of which the following

are illustrations:

First. The organization on May 17 by the National Association of Manufacturers of a National Federation of Employers, to include the employers of the 8,000,000 workers in the United States. One of the chief objects of the federation, as stated in the press reports, is to 'present a solid front to the American Federation of Labor in battles between capital and labor.'

Second. The passage by the New York Legislature of the most drastic legislation providing for a system of compulsory militarism, beginning with school children of 8 years of age and including every male citizen in New York State between 8 and 45 years of age, and the signature of these military bills by the governor of New York on Monday, May 15, 1916, two days after the employers' stampede for militarism known as the preparedness parade was held in New York City, Saturday, May 13.
"Third. The adoption by the school management committee of

the Chicago Board of Education, on Thursday, May 18, of the report of the military committee, against which the representatives of the Chicago Federation of Labor protested, which provides for military training in the Chicago high schools, and which report will be before the board of educa-

tion for adoption on May 24.

"Fourth. The exposure by the Hon. CLYDE H. TAVENNER, Congressman from Illinois in the United States Congress, on May 3, 1916, of the world-wide war trust, showing the criminal conspiracy between the commercial interests which fatten on war and their creatures in high governmental positions to fasten upon the people the burden of militarism under the guise of 'preparedness': Therefore be it

"Resolved, That the Chicago Federation of Labor reiterates its position on preparedness as defined in its report of Sunday, February 6, 1916: That we are opposed to the introduction of military training in our public high schools and demand ownership of all munitions of war; and be it further

"Resolved, That we are opposed to the military preparedness being forced upon this country by the employing and big business interests, determined upon the destruction of organized labor;

and be it further

"Resolved, That this federation indorse the action of its secretary, E. N. Nockels, in refusing to cooperate in the preparedness parade to be held in Chicago on June 3, which is being promoted by such 'friends' of the workingman as John A. Spoor, representative of the Banking. Street Railway, and Beef Trusts; Sam Insull, of the Electric Light Trust; Bernard E. Sunny, of the Telephone Trust; and John M. Glenn, of the Illinois Manufacturers' Association.

"Resolved, That copies of these resolutions be sent to the members of the board of education, the city council, the legislature, Members of Congress, and the President of the United States.'

Respectfully submitted.

CHICAGO FEDERATION OF LABOR.

I also insert a news item and editorial from the Chicago Day

Book of May 22, 1916.

The Chicago Day Book is the only daily publication in Chicago that refuses paid advertisements, and therefore can not be influenced by the beneficiaries of the extortionate profits in war traffic, and consequently expresses the judgment, sentiment, and aspirations of the great working masses.

This editorial is from the pen of Ed. D. Cochran, the editor

of the Day Book, who has the reputation as a fighter for the cause of humanity throughout his entire career, and can not be influenced by the criminal rich of our country:

[From the Day Book, May 22, 1916.]

CHICAGO FEDERATION OF LABOR UNANIMOUSLY OPPOSED TO PREPAREDNESS PARADE.

"Chicago Federation of Labor unanimously decided to oppose the June 3 preparedness parade, after deciding that democracy

and militarism can not be combined.

Labor leaders look upon the parade as a signal demonstration of capital against labor and speculations on the real hidden meaning of the preparedness campaign were made by the speakers. Some saw an attempt to pervert the minds of school chil-Others saw immigration opened up from the East and the betrayal of the American workingman to the little yellow man. The resolution of protest will be mailed to the board of education, city council, and members of the legislature.

"Federation was shocked when Miss Margaret Haley, delegate

from the Teachers' Federation, told of five bills recently secretly passed in New York Legislature. They provide a military education for every child over 8 years of age; the creation of a State military commission, and empower the governor to draft any amount of men he pleases from the citizens of State to serve in newly formed 'reserve militia' for riots, tumult, and to these ends.

"The only New York paper which mentioned these bills was the New York Call.

"Delograte West."

Delegate Walt, Spanish War veteran, read the list of names on the preparedness committee and told how these 'junkers had refused to fight for the United States in both the Civil and Spanish Wars, and how they would refuse to fight if they managed to find a fee for this country.

"President Fitzpatrick called the parade a 'symbol of sci-

entific murder.

Other delegates told how the army of unemployed was out of business and how much more it cost to break a strike with the high cost of strike breakers and sluggers. Still other delegates, men who served in foreign armies, warned against the doctrine of militarism."

[From the Day Book, May 22.]

COCHRAN MAKES SOME SUGGESTIONS FOR THAT PREPAREDNESS PARADE. [By N. D. Cochran.]

"Many large employers of labor in Chicago are taking a great interest in the preparedness parade. The manufacturers are The papers tell us that a great American flag now flies from the roof of the Chicago Telephone Co,'s building, and that Commonwealth Edison has converted a big electric sign into a huge American flag. There are other indications of flag patriotism by our captains of industry and large exploiters of

"They want a big standing army, one of the biggest navies in the world, and there's a vigorous campaign on for universal military training.

"Of course, the clerks, mechanics, laboring men, farmers, and the sons of the working and middle classes will have to man the battleships and fill out the ranks of the Army. For the battleships can not sail without sailors and an army is no good without privates.

"And the enlisted men must be healthy. They must have good teeth, good lungs, and a strong enough body to stand the

wear and tear of army life.
"One big reason for England's unpreparedness at the beginning of the big war was the physical unfitness of so many of her men who otherwise were available for the army. Thousands upon thousands of them, and their fathers before them, had been so thoroughly exploited that they couldn't come up to the physical test.

"So if we are going in for preparedness now is the time to find out about the physical fitness of our soldiers-to-be. If wages have been too low for them to have plenty of wholesome food and to live in sanitary homes in wholesome surroundings, we had better get busy on such important preliminary pre-

paredness

"It might help some if the physically unfit-those who have been made physically unfit by overexploitation-were to join in the parade. We could have one brigade of tubercular men and boys—yes; and women, too. There might be a division of men and boys made cripples by our fierce industrial system. Also a division of defectives for each of our occupational dis-We could easily have in the parade many thousands of eases. boys and girls taken out of school too young and put to work in mills, stores, and factories, where their souls and bodies are put into the machines that grind out millionaires.

"Another interesting and educational exhibit would be a division of girls from the tenderloin-especially those who made

their way thither through the low-wage route.

"We would like to see Stanley Field, John G. Shedd, Jimmie Simpson, and the trustees of the Fleld estate march at the head of the army of Field employees, each division carrying a banner indicating the wages they are paid.

"Similar divisions might be made up by the other department

stores and the mail-order houses.

"Og Armour, Art Meeker, and the other millionaire hog butchers could march at the head of the stockyards division, with banners indicating the wages the butchers pay and expect their employees to manufacture and raise American citizens on.

"Why, this Chicago preparedness parade can make the New York thing look like a parade by the Mulligan Guards-if we make it a real preparedness parade, and show the world just how we are making American citizens in Chicago and what kind of American citizens we are making.

"We should turn loose in our parade all the inmates of the blind asylums, those for the deaf and dumb, our jails, hospitals,

and all institutions for the care of our defectives.

"And don't forget the police-let them head the parade, each copper carrying the club and gun he uses over the heads of the men and boys while helping them learn to love the law, their country, and their flag.

"Let our captains of industry mobilize their thugs, sluggers, gunmen, and strikebreakers, including those of all of our patri-

otic publishers of preparedness newspapers.

"If we are going to show how Chicago is preparing for preparedness, let us do the job up right. Let us show the world the truth about this great industrial, financial, and social melting pot.

"Then, perhaps, some of our patriotic captains of industry will see that when we start in to prepare to defend our home and fireside and country that we must begin with the babies and insist on the right of every babe born in this country to be born under such conditions as will give it a fair chance to become a healthy, robust American man or woman. And that means that its father must be paid a wage that will enable him to take decent care of the mother and of the children she bears for her country

"I'm for preparedness—you bet. But I want it to be the eal thing. I want it to begin before the baby is born and to real thing. stay right with the baby until all its physical and mental possibilities are developed to the highest and the best.

"I'm for the preparedness that enables young men to love and marry and to raise babies that are healthy, happy, and

strong.

"I'm not for the preparedness that wastes millions upon millions in building and maintaining jails, workhouses, penitentiaries, hospitals, asylums, and other institutions to care for the defective Americans that we are bringing into this vale of tears every day of our national existence and industrial development.

"I'm not for the preparedness that breeds consumptives, syphilitics, or the otherwise physically defective and unfit.

But I'm afraid Chicago's preparedness parade will cover up poverty, disease, vice, and crime, and merely scratch the surface of national preparedness by making it a display of flags and blinded patriotism, beneficial mainly to the manufacturers of arms, armament, and the munitions of war.

"We'll show the world a pretty picture of State Street, but won't let it look back o' the yards."

The Shipping Bill.

EXTENSION OF REMARKS

HON. J. CHARLES LINTHICUM.

OF MARYLAND.

IN THE HOUSE OF REPRESENTATIVES.

Friday, May 19, 1916.

Mr. LINTHICUM. Mr. Speaker, I feel that the bill now under consideration, H. R. 15455, generally referred to as the shipping bill, is one which unquestionably meets the sentiment of the country. That the Government should take a hand in shipping matters is generally admitted. I believe this bill will reflect great credit upon the Democratic Party as another piece of constructive legislation. The terms of the bill are fair and honest, and I believe it will be of inestimable benefit to the country at large and solve many of the difficult problems appertaining to the merchant marine and shipping.

The bill before us is almost wholly different from the shippurchase bill of the last session, inasmuch as the previous bili was in a strict sense a ship-purchase bill, the principal purpose of which was the purchase and operation of ships in the mer-chant-marine transportation by the Government, while the present bill is to create a shipping board, naval auxiliary, merchant marine, and regulate carriers by water engaged in the foreign and interstate commerce of the United States; a far broader, more important, and comprehensive bill, and covering many

HISTORY OF MERCHANT MARINE.

There is no more pathetic chapter in the legislative history than that of our merchant marine. At the close of the Revolu-tionary War, our forefathers found that 75 per cent of our oversea commerce was being carried in foreign vessels, and with the ability and foresight which characterized them, immediately set about to transfer that control to where it properly belonged. This they succeeded in doing by reducing the duty on all imports in American vessels 10 per cent, fixing a tonnage tax of only 6 cents a ton on American vessels, of 30 cents on Americanbuilt foreign vessels, and 50 cents a ton on foreign-built foreignowned vessels. Through this method they so stimulated American shipping that within five years American ships were carrying 90 per cent of our foreign commerce. Thus we were rescued from foreign competitors and succeeded in placing the trade in the hands of American shipowners.

Then a later generation, feeling that our position was so secure that nothing could wrest from our grasp the control of the seas and not satisfied with carrying 90 per cent of the commerce, so modified our laws as to remove the preferential duties, and in our efforts to capture the remaining 10 per cent we lost the 90 per cent we had been able to secure. Since that time we have seen, through competition with the subsidized lines of Great Britain and other foreign countries, our shipping decline until we carry in American bottoms a very small percentage of

our foreign commerce.

EXORBITANT FREIGHT RATES.

For the last two years ships have charged such exorbitant rates that the freight charges for one passage have been as large as the worth of the ship itself. The cost of shipping a bushel of wheat from New York to Liverpool two years ago was 5 cents; now it is 48 cents, an increase of 43 cents. The same thing is true of other commodities. If the freight rates to-day were the same as they were two years ago our farmers would receive a substantial part of this difference in a higher price for their grain and other products and the consumer would also share in the benefit of the lesser freight rate. Statistics show that it is clear that there is close connection existing between ocean freight rates and the price the farmer receives and the consumer pays. It is true that we are getting good prices for wheat now, but as the foreign market is pay-ing enormously high prices, there seems to be no good reason for allowing the shipping combine to take advantage of the crop shortage in Europe and the ship shortage on the high seas

to increase freight rates from 100 to 1,600 per cent.

Last year the absence of shipping facilities, together with increased freight rates, cost the American farmer and manufacturer \$300,000,000. Shall we continue to let this situation prevail and declare ourselves unable to protect the interests of America? Not only have the increased rates on ocean freight affected us, but many of the shippers have been unable to secure ships to transport their products. Can we afford to allow our mercantile business to be ruined for lack of facilities? I am informed that a number of manufacturers have reported to the Committee on the Merchant Marine and Fisheries that they are deprived of the privilege of bidding for foreign business because of the lack of ships to transport their products. It only requires an examination of the various industries of our country to see how they have been crippled by the lack of merchant marine. The absence of shipping has also caused the railroads to place an embargo on the shipment of freight to the Atlantic ports for export, and thousands of cars are tied up in the vicinity of the various export cities, the grain elevators crowded, and so forth, all of which hampers the producer and business man and affects the trade generally of the country.

DECREASE IN SHIPPING TONNAGE.

Since the beginning of the great war now raging in Europe, through the ships being sunk, interned, and diverted to the purposes of war, together with the elimination of the merchant marine of the central powers and the fact that to-day the shipyards of Europe are busily engaged in constructing vessels for naval and military purposes, the decrease of the shipping tonnage has been enormous. In addition to this, the belligerents are constantly diverting more of their ships for the purposes of war, which has resulted in the commercial world facing the gravest shipping crisis history has ever recorded. From present prospects there is every reason to believe that this condition will continue to grow worse until peace is once more restored; and when that will be no man can even prophesy with any degree of accuracy.

NECESSARY TO PROTECT OUR INTERESTS.

Furthermore, unless we have an independent merchant marine before the end of the war, or at least in the immediate future, our commercial position will be even worse than it is at the present time, for when the allies and the central powers, as they undoubtedly will, begin to wage their commercial war after the military operations are concluded, which will doubtless exceed any heretofore experienced, nations possessing no merchant marine and a scant supply of merchant vessels will be entirely at the mercy of the commercial powers, who are bound to discriminate against us and in favor of the merchants and business men of their own lands, causing our people not only untold financial loss but business inconvenience and stagnation.

THE HOPE OF OUR FOREIGN TRADE.

In view of the present aspects of the shipping situation there is little wonder that President Wilson has urged Congress to take the shipping bill under immediate consideration. If our foreign trade is to be saved, then we must supply ourselves with sufficient vessels to export our products. If this country hopes to avail itself of the splendid opportunities of trade with South America, the Orient, and so forth, it must provide itself with the proper shipping facilities, so that it will not be dependent upon the foreign powers who are also competitors and who would be in position to charge us exorbitant and often prohibitive rates on products intended for the world markets and would only accept for transportation such goods as needed by them. If foreign Governments are to assume control of their shipping in combination with one another, it is indeed time that the United States should endeavor to protect itself against such combination. This, to my mind, can most adequately be accomplished and independence on the high seas be best achieved by enacting into law the present shipping bill.

For over 40 years private capital has not undertaken to build up a merchant marine for the United States, and for the good reason that it preferred to invest in railroads, manufacturing, and various other enterprises intended to develop our country

and which presented more attractive inducements.

NAVAL AUXILIARY.

In addition to the immense value a merchant marine would be to our manufacturers and farmers the statements contained in an article by Hon. Carl Vrooman, Assistant Secretary of Agriculture, which follows, shows the dire need of ships to supplement the United States Navy. Mr. Vrooman said in part: NEED OF NAVAL AUXILIARIES.

Strange as it may sound, the United States at the present time does not really possess a navy. It possesses a number of splendid battleships, with a hopelessiy inadequate contingent of the other necessary naval units. But battleships do not constitute a navy any more than a collection of bass drums would constitute a band. It takes many different kinds of instruments to make a band. It requires a number of different parts to make an automobile. It takes something more than wheels to make a wagon. It takes something more than wheels to make a statesman. And it requires a number of other essential units besides battleships to make an efficient fighting navy. A navy without scout ships and aeroplanes would be a navy without system of the naval auxiliaries of various sorts would be a navy without supplies. A navy without submarines and adequate means of defense against submarines in time of war would be a joke, short and to the point. In other words, if we are to have a real may to defend our coasts and trade routes, we must have a navy that is complete, that is equipped with every feature that will add to its fighting efficiency. Without auxiliaries a navy in the presence of an enemy at sea would soon become a hopeless and helpless aggregation of floating batteries.

During the Spanish War we squandered millions of dollars purchasing nondescript bottoms in a hasty and hysterical effort to supply our deficiency in the way of an auxiliary merchant marine. We paid, as a rule, much more than these vessels were worth, and after the war sold them for whatever we could get. But not only did we thus squander immense sums of the people's money in this foolish and futile operation, but the efficiency of this scratch collection of vessels was so low that had our contest been with a first-class naval power instead of with a nation even less powerful on the sea than ourselves the weakness of our auxiliaries might easily have resulted in disaster and defeat for us. It would be not only incredibly costly, but criminal and perhap

Thus it will be seen that if we are to have a real navy to protect our coasts and commerce we must have one that is complete in all respects and bountifully supplied with colliers, scout ships, and numerous auxiliaries, without which a navy at sea would soon become a helpless collection of ships at the mercy of the enemy's battle fleet.

SHIPBUILDING AND OPERATING.

It is generally conceded that merchant vessels at this time can be built in American shipyards at less cost than in foreign shippards, and unless conditions change materially in Europe at the end of the war all vessels for the construction or purchase of which provision has been made by this bill will be built in American shipyards. Then, too, assuming that our typical new freighter is equipped with the modern type of Diesel engine, burning crude oils by internal combustion, there will be certain elements of economy of operation incident to this type of propulsion which will enable us to compete with the world. For instance:

First. A smaller number of men will be required, thus reduc-

ing the cost of wages of the operating force,
Second. The cost of fuel necessary for operation will be less. Third. Owing to the less space occupied by the propelling ma-chinery and less space necessary for storing fuel, which it has been demonstrated can be carried in a ship's double bottom, a space in steam-propelled vessels heretofore utilized only for water ballast, there is a great gain in freight-carrying capacity.

Perhaps a few figures may better explain the additional earn-

ing capacity of these new ships when constructed:

Typical new American ships with Diesel engines, American crew, American wages, and American standard of food versus typical existing foreign competitor with average efficiency of steam propulsion, European crew, fair wages, and fair food, both vessels making five round trips a year between the east coast of the United States and the east coast of South America, a distance of 5,000 miles:

Increased annual cost for American ship:

Wages of 44 officers and men

\$8,520
Food, at 50 cents per day instead of 30 cents

\$11.724

\$11,724

Decreased annual cost for American ship, saving in cost of oil 7,672

Net annual loss for American ship over foreign______ Annual increase of earning capacity of American ship from 400 tons additional freight space_____ 4, 052

Operating returns in favor of American ship, per an-27, 948

Of course our foreign competitors can probably also build these modern ships, but it can readily be seen that they are not very likely to consign to the scrap heap their existing fleet of coal-burning vessels, which will give us a period of time before their vessels could attain the same degree of efficiency as the proposed American fleet of new ships. We would certainly by that time be able to meet all contingencies.

The United States is peculiarly well endowed by its natural resources to enter into a world-wide competition in shipping, since it will be reduced to a battle for the supremacy in economical equipment. Oil will be the most vital factor in this competition on account of its many advantages, and, as is well known,

60 per cent of the world's supply is within the borders of the United States. It is a matter of common knowledge that American shipowners are deterred at present from equipping their new vessels for oil burning owing to the extreme fluctuations in the price of oil. Fortunately, the Government has reserved large tracts of oil-producing lands from the public domains, and should private producers tend to deter the development of our merchant marine, it is possible to resort to the Government's own oil supply.

THE SHIPPING BOARD.

The shipping board created under this bill is in many respects similar to the Interstate Commerce Commission, which exercises the authority over the railroads of the country. It is to be composed of two members of the Cabinet-the Secretary of the Navy and the Secretary of Commerce-together with five commissioners to be appointed by the President, by and with the advice and consent of the Senate-men of character and patriotism, who will be drawn from both parties.

It has been said by some members of the Republican Party that this board by abusing its discretion may destroy our commerce, but this I refuse to believe. Then, too, every order of the board affecting the public or an individual is subject to

the review of the courts of the country.

Through the provisions of section 16, which provides that every agreement or modification thereof, every understanding, oral or otherwise, of every combination of carrier or of individual carriers with other carriers, interstate or foreign, so far as they affect us in the United States, shall be filed with the board: said board is advised as to the situation, the relationship of carriers, and so forth, and places them in a position to intelligently discharge their duties. Thus they are able to discreetly and wisely deal with these great issues that are under their direction and control.

In addition to the above the board, under the proposed bill, will have authority to secure information from wherever it desires relating to unjust discrimination, unfair devices employed by competitors, and so forth, and in this manner be able to suggest to Congress those things which will aid the

infant industry.

It is highly improbable that the vast authority invested in the shipping board will be abused. Without the power the board would not be in position to effectually cope with its duties of removing discriminations, overthrowing unfair practices, and those things which are detrimental to the progress of our merchant marine. Then, too, by the opportunities thus set forth. we open up a practically new field to American capital, and by enabling our American citizens to meet their competitors on equal terms, through the various advantageous rates allowed them, we will be able to bring about the much-desired result.

I believe the passage of this bill will add another to the galaxy of splendid constructive measures enacted by Congress

within the last few years.

We have provided the country with a financial system over which our opponents wrestled for more than 30 years and were no nearer the solution at the end of that time than they were in the beginning—a system which has withstood the strain of a world war and has carried the financial and business interests of this country through without even the slightest panic of any kind

The Federal Trade Commission, which guarantees protection to the small as well as the large business interests of the country, has likewise been placed upon the statute books by a

Democratic Congress.

The preparedness of the country by the increase of the Army and Navy and greater coast defenses are fast materializing into laws of the land and will give us protection against inva-

sion from every source.

This shipping bill, as it is called, will give our commercial interests a merchant marine upon which they can depend for the transportation of their goods, wares, and merchandise in times of peace and on which the Government can depend as an auxiliary to the Navy in the time of war. It will result in a very large increase of our merchant marine, and will solve the vexatious problem which has confronted the American people for many decades; will carry our flag into every nook and corner of the globe and take our products and manufactures to the peoples and ports of the world.

As was well said by the President-

We must have ships of our own, not ships of war but ships of peace, carrying goods and carrying much more; creating friendships and rendering indispensable service to all interests on this side of the water. They must move constantly back and forth between the Americas. They are the only shuttles that can weave the delicate fabric of sympathy, comprehension, confidence, and mutual dependence in which we wish to clothe our policy of America for Americans.

Rural Credits.

SPEECH

OF

HON. MICHAEL F. PHELAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 2986) to provide for a system of rural credits for the United States.

Mr. PHELAN. Mr. Chairman, sufficient has been said, I think, about the history of rural credits to obviate the necessity of further comment at this time. As the bill is a long bill dealing with a more or less complex question, I think I can perhaps best use my time in limiting my remarks to an exposition and explanation of the bill.

It will facilitate a clear explanation of the bill to direct attention at the outset to a few primary essentials. In the first place, we have the farmer who wants to borrow money upon his land, and in the second place we have all over this country prospective investors who are very willing and even anxious to invest money in some kind of security which will be absolutely safe. One of the main problems of the bill is to devise some system whereby these two, the farmer borrower and the prospective investor, can be brought together to their mutual advantage. The bill aims to establish such a system by the formation of certain organizations which I shall presently describe.

These organizations are the intermediaries between the borrowers and the investors. They take mortgages from the farmers in return for the funds loaned. Upon the mortgages as security they issue bonds to the investors to obtain the funds to loan the farmers.

The bill provides for two general systems of organizations designed to carry out its purposes. One of these systems is in its nature mutual or cooperative and the other is privately controlled or, as designated in the bill, joint stock. The cooperative system is designated as the Federal land-bank system, and the other as the joint-stock land-bank system.

A Federal farm-loan board has general supervision over the entire land-bank system. The members of this farm-loan board, three in number, are appointed by the President of the United States. The whole system therefore is under governmental control. The board is a nonpartisan board, as it is the intent that there shall be no partisanship or politics in the administration of its affairs. The salaries of its members, who are appointed for terms of 9 years, are \$10,000 each. Under the cooperative system this board divides continental United States into 12 great districts and in each district is placed a Federal farm land bank. The capital of each bank may be supplied originally from private subscriptions of individuals, corporations, or States. In case the whole or any part of the minimum capital, which is \$750,000 for each bank, is not subscribed the Government of the United States subscribes for the balance unsubscribed or the whole as the case may be. It is possible, therefore, under this system for the Government to subscribe for \$750,000 stock in each bank, or \$9,000,000 altogether. Subsequently the original capital, whether subscribed by private individuals, corporations, States, or the United States, is returned to the original subscribers under the provisions of the bill.

The permanent capital is gradually put into these banks by local associations called national farm-loan associations. These farm-loan associations, every time they get money from the land bank to put out on mortgage loans, subscribe for an amount of stock in the land bank equal to 5 per cent, or one-twentieth, of the loan which is made by the land bank through such association.

The administration of these Federal land banks is at the beginning put into the hands of three directors appointed by the farm-loan board. Subsequently, when the various associations have contributed \$100,000 to the capital of a land bank, such land bank is administered by a board of nine directors, six of whom are elected by the local associations and three appointed by the farmers' loan board. When a bank gets well into operation, therefore, these local associations will have six out of nine directors, but the Government will have three directors to retain a proper supervision and control of the system.

Subordinate to these land banks there is provision for the organization of national farm-loan associations. Any 10 or more farmers who desire to borrow money on farm lands may form one of these associations. Nobody can be a stockholder in the association who is not a borrower; hence these associations are made up entirely of borrowers. In order to become a member of the association a man is obliged to subscribe for an amount of stock equal to 5 per cent of the loan he wants and to assume a liability equal to 5 per cent more. He puts up 5 per cent of the amount of his loan, not necessarily in cash. Mr. SMITH of Texas. Will the gentleman yield?

Mr. PHELAN. Mr. Chairman, I should prefer to get through before I answer any questions. I shall perhaps answer them.

Mr. PHELAN. Mr. Chairman, I should prefer to get through before I answer any questions. I shall perhaps answer them as I go along, but I prefer to wait. The farmer is not obliged to put up the 5 per cent in cash. It is optional with him to include that in the amount of his loan. Under the provision of the House bill, therefore, a man may get into the system without making any cash payment for stock. That is not so in the Senate bill. The capital of the association is obtained in that manner from the borrowers, and that is the only capital which they have. As the association subscribes for an equal amount of stock in the land bank the cash it gets is passed to the land bank and the association gets capital stock in the land bank. The borrower gets his stock in the association, Although this stock is held as an extra security for the loan given to the stockholders.

These local associations are managed by the borrowers themselves, who are the only stockholders. Each association has a board of directors, a president, a vice president, and a secretarytreasurer. The chief officer is the secretary-treasurer. This briefly gives an outline of the cooperative system.

Every man in the association is a borrower. The borrowers entirely control their own affairs. They control the affairs of the association, and the associations thus made up of the borrowers control absolutely, except for the intervention of the Government, the administration of the land banks. Thus all through the system we have the idea of cooperation and the idea of mutuality.

Except for earnings applied for expenses and reserves, the entire profits go back to the borrowers themselves. Under the Federal land-bank system, no profit goes to outsiders. It is the intent of the bill to give to the farmer borrowers through this cooperative plan the opportunity to borrow upon mortgages at the lowest rate obtainable; to obtain funds from the investors in farm-loan bonds without intervention of intermediaries who shall make profit which the borrowers must pay.

Passing now from the organization to the credit instruments which are employed under its operation, I desire, first, to comment upon the mortgages upon which loans are to be made.

These mortgages are long-time mortgages, such as are not available to the farmer to-day. They may run for periods of from 5 to 36 years. They are not callable by the bank to whom they are made. In other words, so long as the farmer keeps up his obligation assumed by him at the beginning the bank can not foreclose on him. On the other hand, he has the privilege by this bill of paying any part or the whole of his principal at any interest day or installment day he pleases.

These mortgages are what are called amortizable. While this term "amortizable" is familiar to us all, it is well to repeat again just what it means, so that we shall have a clear concep-

tion of it constantly in our minds.

It means this. When the farmer makes his payment upon his mortgage he pays a fixed installment. That installment includes the interest due on the loan made to him, including the administration charges of the bank. It includes also an extra sum called an amortizement. For example, he may borrow his money at a 6 per cent interest rate. He may pay 2 per cent additional as amortizement, making 8 per cent altogether. Taking a concrete case, a farmer borrows \$1,000 and agrees to pay an annual installment of \$80. Sixty dollars of the installment is necessary to cover the mortgage interest; \$20 is an amortizement paid to reduce the principal. After the payment of the first installment, only \$980 of principal remains due. The borrower, however, continues to pay the regular installment of \$80. Of the second payment, however, only \$58.80 is necessary to cover the interest charge and \$21.20 is applied to reduction of principal. With each successive payment less and less of the \$80 installment is required to meet the interest charge, and more and more is applied to the reduction of principal. In a surprisingly short space of time the entire principal is paid off.

Before concluding I shall give some figures which will show the gratifying results which can be secured under the amortization plan.

These mortgages are given by the farmer borrower to the land bank through the local association. The local associa-tion indorses these mortgages and assumes all the liabilities

of an indorser.

When the land bank takes these mortgages, what does it do? Where does the farmer get his money, and where does the bank get its money to loan the farmer? As I pointed out, there is a capital of \$750,000 in each bank, a large portion of which is available to loan on first mortgages on farm lands. Where does the rest of the money come from? It comes from the source I pointed out at the beginning, the private investor. The bank takes the mortgages put up by the farmers, and upon those as security it issues farm-loan bonds.

The investor desiring an attractive investment buys these bonds, and the bank has the money obtained from the sale of bonds to loan to the farmer. As the bank secures new mortgages, it issues new bonds and again obtains funds to loan. The process may continue indefinitely so long as the bank does not issue bonds to an amount greater than twenty times its capital. We feel assured that these bonds will be in great demand and hence be sold in great volume, for every effort has been made

to make them a thoroughly safe security.

The primary security behind them consists of first mortgages upon very carefully appraised farm land. There is, moreover, as further security, the capital of the bank issuing the bonds, This capital can not be less than 5 per cent, and in practical operation will be more than 5 per cent of the outstanding bonds. Moreover, all the other assets of the banks-and provision is made for steadily increasing reserves-are behind the bonds. In addition, every one of the 11 other Federal land banks is liable ultimately for the payment of the interest and

principal of the bonds.

With reference to the primary security—the mortgages—it will be noted that the loans can be made only up to 60 per cent of the value of the land, and, in addition to that, 20 per cent of the improvements upon the land, so that there is a margin of 40 per cent on the land and 80 per cent on buildings or improvements on the land. Those mortgages, therefore, are good mortgages at the beginning. As time goes on, those mortgages are constantly growing better, because every mortgage is written upon the amortization plan, and every borrower pays a part of its principal at the very first installment day. The indorsement of a local association on each mortgage adds to its security

Mr. CANNON. If the gentleman will permit, it was stated the negroes in the South, and the poor men, could come in under this law, when it was passed, by one of the gentlemen, and I do not know but all of them. Now, then, where is the poor man going to get the 40 per cent that he must get before

he can have farm property that he can spout?

Mr. PHELAN. I will say in response to the gentleman that I have been in Congress only three years, and I do not know, from the short time that I have been here, where he is going

to get the money. [Laughter.]
Mr. CANNON. Then, the poor mans' proposition—the idea that everybody could come right in and lift this money out—is

a mistake?

Mr. PHELAN. It will help out any man who has some money and wants to buy farm land. It will help him to buy that land. But we can not under any system that I know of make any provision where a man who has no money can come

in and get farm land.

Mr. CANNON. I would like to ask another question. The farmers of the country, if I recollect the census figures aright, are about one-third of the people. The other two-thirds live in the cities or along the railroads, and are engaged in mercantile and professional and mechanical pursuits, and in machine shops, doing all kinds of work. Now, you may make these farmers nontaxable, and the Government issues all the stock that is subscribed for, or whatever is not subscribed for. Now, then, when they are nontaxable, somebody has got to pay for the taxes; and if the other two-thirds have to pay the taxes, who gets the benefit. From one standpoint, is this bill broad enough? Had we not better take in the whole population, including the cities as well as the country? Should we not include the little homes, and all that kind of thing, and the building-association people? Then, as I understand it, there are nearly forty billions insurance policies in this country, in the main small insurance policies—forty billions.

Mr. PHELAN. I hope the gentleman will not take up too

much of my time.

Mr. CANNON. After all, is this spread around sufficiently? [Laughter.]

Mr. PHELAN. Let me go on without interruption, and I will try to finish an outline of the bill.

Mr. GLASS. I suggest, Mr. Chairman, that many of these questions can be asked during the debate under the five-minute rule. The gentleman from Massachusetts is trying to explain the main features of the bill now.

Mr. PHELAN. Only a few minutes will be necessary to explain the outline of the bill. There remains one other thing to speak about, and that is the matter of agents. There is a provision in the bill whereby in those localities where difficulty is found in establishing these cooperative associations the farmers may borrow through existing banks. I will pass that over with hardly more than passing comment. I may say that that was put in there because some Members coming from rural districts thought this provision should be inserted. It was felt that some farmers could not get into an association, because they lived too far apart, and that they ought to have some opportunity to get the advantage offered under the cooperative system. That is the reason for putting this section upon agents into the bill. Personally, I think the associations will give sufficient accommodation, so that there will not be any necessity for the provision in the bill allowing agents to act.

In addition to the cooperative system already explained provision is made for a joint-stock system—that is, any individuals can get together and form a bank with \$250,000 capitalization. They can loan money to the farmer under conditions and limitations in most respects similar to those placed upon Federal land banks. Each joint-stock bank, however, is an independent institution. These banks are in no way federated together. will remember that the Federal land banks can issue bonds to an amount equal to twenty times their capital. In the case of the joint-stock banks they can issue bonds to the amount of fifteen times their capital and surplus. In each case the great bulk of the money to be loaned to the farmer is obtained from the investing public by the issue of bonds. There are some differences in the joint-stock bonds and the restrictions and conditions imposed upon them, but in general the joint-stock banks are under the same conditions and restrictions as the banks under the other system.

The differences will come out in the debate under the five-minute rule. In some cases the borrowers will prefer to deal with the Federal land banks and in other cases with the jointstock land banks. In permitting the establishment of the two different systems, the borrower is given his choice as to which he prefers. The purpose of the committee has been to give the borrower every available source of credit and accommodation. The committee believes that success will attend the operation

of each system.

There are some less important provisions of the bill which I have passed over without comment. I think they will receive

sufficient explanation under the five-minute rule.

In the time remaining I shall point out some matters of in-terest and importance in this bill. In the first place, under the operations of the bill the farmer can not be charged a greater amount for interest and expenses of administration or charges than 6 per cent. The gentleman from Illinois pointed out a seeming inconsistency in the bill. That came into the bill in this way, and I will frankly explain it: Originally in the bill, as we framed it, we called the interest charge and the expense charge "interest." At that time we limited that charge to 6 per cent. Subsequently, in order to clarify the provisions of the bill, we called one thing "interest" and the other "ad-ministration charge," and did not at the same time change that 6 per cent interest clause to which the gentleman from Illinois has made reference. I noticed the apparent inconsistency, and at once decided that I would suggest that the change be made in the committee; but subsequently I saw this, that originally when the bank makes its mortgage loans there have been no bonds issued, so that there is no bond rate on which to base the rate in the mortgage. For that reason the original money contributed by the original stockholders can be loaned at 6 per cent, and, everything considered, we thought we would leave that discretion in the hands of the original directors of the farm-loan bank.

I see my time is getting short, but before closing I desire to make clear a matter about which there seems to be some misunderstanding: I want to repeat that the farmer borrower does not have to put up any cash to his local association when he gets his stock. He can include the subscription for his stock in his loan. I would also like to point out the fact that under the provisions of the bill no commission can be charged to the farmer borrower except what is specifically authorized in the bill. I again call your attention to the fact that the farmers can get these long-time nonrecallable mortgages, so that they have a privilege of paying the principal over a long period of years or in a shorter time if they so desire.

Mr. PLATT. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from New York?

Mr. PHELAN. Just one minute. How much time have I re-

maining, Mr. Chairman?
The CHAIRMAN. The gentleman has four minutes remain-

Mr. PHELAN. I will yield to the gentleman.
Mr. PLATT. I wanted to ask the gentleman in regard to
the subscription of private capital to the land banks. Does the gentleman think that the capital of the Federal land banks should be fully subscribed by private capital and without Government capital? Is there any way by which that private capital could prevent the organization of the cooperative control by the borrowers?

Mr. PHELAN. No; I do not see any way by which they can

control it.

Mr. PLATT. That is what I wanted to bring out. The discouraging of private capital in these corporations is something

that ought to be clearly understood.

Mr. PHELAN. You must do one of two things. make your system either cooperative or noncooperative. can not get private individuals to put their money into a proposition where you are going to let the borrower control and administer the business.

Under this cooperative system we have a system made up of borrowers. Those borrowers go out on the open market and borrow money at the best rate they can get upon bonds. get in their mortgages an interest rate which is exactly the same as the rate which is paid to the investor upon his farm-loan bonds except that the borrower has to pay the expenses of doing Every cent of expense that there is in the system is under the control of the borrowers.

Every cent of profit goes to the farmer. So the effect of it is that the farmer goes direct to the investing public, gets his money at the very lowest rate, and the charge to him ultimately is that the lowest rate of interest plus the expense of doing the business. There is no private profit made by anybody else. I want to say, with reference to some criticisms that have been made of this bill, that it is entirely erroneous to say that the farmer borrower who is a stockholder will not get any dividends upon his stock. If you can reduce the price paid by the farmer from 7 to 6 per cent, if you can save him 1 per cent upon his mortgage interest rate through this system, even though he contributes 5 per cent of his loan to the capital of this bank. then he gets indirectly a saving of one-fifth upon the amount that he puts up for his capital stock. In other words, in-directly he is getting 20 per cent return upon the amount of money he puts up in this bank, even if he never gets a dollar of dividends.

For example: Suppose a farmer who pays 7 per cent on a \$1,000 loan under present conditions can get a \$1,000 loan at 6 per cent through this system. He will, it is true, be obliged to purchase \$50 worth of stock in the association. He saves, however, \$10 per year in interest upon his mortgage. allowing that he gets no dividends upon his stock, the \$10 he saves as interest amounts to 20 per cent upon the \$50. fully expect moreover that the interest rate will be below 6 per cent, for 6 per cent is the maximum allowed under the bill. As a matter of fact, he is bound to get dividends, or else to get so low a rate of interest that he will not care about dividends. It must go one place or the other. If it goes into the expense of doing the business, then it is the farmer's fault himself, because he controls the operation of the system.

In conclusion, I have a table here which I want to read. can answer any questions under the five-minute rule. illustrate what can be done under this system and under the amortization plan, we will take as the interest rate of the mortgage the highest rate of interest that the farmer will pay, which, including expenses, is 6 per cent. In New Mexico the interest rate is 101 per cent. In other words, the farmer there pays \$105 per year as interest upon a \$1,000 mortgage loan.

If he pays \$105 annually under the system which will be in operation under this bill, and the interest rate, including expenses is 6 per cent, then he will not only pay all the interest and the expenses necessary to run the system, but he will pay his entire principal in a little over 14 years. In other words, instead of paying \$105 every year for 14½ years and owing the principal at the end of that 14½ years, he will pay the same amount—\$105 a year—and at the end of the 14½ years have the principal fully paid off.

In the case of the State of Washington the present average interest rate is 8.7 per cent. Under the same conditions the farmer would pay his entire principal in a little over 20 years.

In the case of Texas, where the average interest rate is 9 per cent, he would pay his principal in 19 years.

In Alabama, where the average interest rate is 9.4 per cent, he would pay the principal indebtedness in a little over 17 years. In South Carolina, where the average interest rate is 8.4

per cent, he would pay the principal sum in a little over 21 years. In Virginia, where the interest rate is 6.8 per cent, he would pay the principal in 36 years. In Nebraska the interest rate is 7.1 per cent, and there he would pay the principal in a little over 32 years. In North Dakota the interest rate is 8.7 per cent, and there he would pay the principal in a little over 20 years. In Ohio the interest rate is 6.1 per cent. There the difference in the interest rate between the two systems would take 70 years to discharge the principal. So we come down to the State of Maine, where the interest rate is 6.2 per cent, and under this system, paying exactly the same installment every year, he will get rid of his entire indebtedness in a little over 59 years. That is at 6 per cent interest rate, the outside limit which can be charged under this system. Coming down to 5 per cent, the whole amount would be paid in a very much shorter space of time. In New Mexico he will pay off the whole principal and interest in a little over 13 years; in Washington in a little over 17 years; in Texas in a little over 16 years; in Alabama in a little over 15 years; in South Carolina in a little over 18 years; and in Maine in 334 years, with corresponding reductions in the other States. With this suggestion of some of the benefits to be anticipated from the operation of this rural-credit system, I must conclude, as my time has expired.

The system once established, however, will do vastly more than accomplish its immediate purpose of securing adequate mortgage credit for the farmer. It will inevitably contribute in generous measure to the future growth and development of agriculture, a growth and development upon which in so great degree depend the prosperity and well-being of the Nation. [Applause.]

The Work of Congress in Behalf of Agriculture.

EXTENSION OF REMARKS

HON. GORDON LEE.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 25, 1916.

Mr. LEE. Mr. Speaker, the last four years have been notable in the work of Congress in behalf of agriculture. No administration in the history of the Government has undertaken or accomplished more in behalf of this industry than the present administration.

For more than fifty years the Government has been making appropriations to conduct work through the Department of Agriculture, the agricultural colleges, and the State experiment stations to promote increased production of agricultural products. More than \$200,000,000 have been expended in this direction, and the results have been good. It was not, however, until four years ago that any systematic effort was undertaken to encourage and promote the better and more economical distribution of farm products. Until then the important fact that economical and wise distribution was as essential as economical and wise production seems to have been overlooked by agricultural students. The Agricultural Committee, of which I have the honor to be the second on the committee, came to realize the greatness and importance of marketing products, and inserted in the annual appropriation bill an item carrying an appropriation for \$50,000 under which it was proposed to do for the distribution of farm products what has been done for their production. This sum has been increased from year to year, until the bill just passed by the House carries a total amount of \$792,000 for this work of helping to market farm products so that the farmers may get their full value. No one can overestimate what this work must mean ultimately to the farmers of the country. AGRICULTURAL EXTENSION.

The enactment into law of the so-called Smith-Lever agricultural extension bill in 1914—a bill reported by the Agricultural Committee and handled by it—is perhaps one of the most significant movements in behalf of agricultural education in this or in any other country. Under this act the States and the Federal Government cooperate to teach agriculture by the demonstration method, and ultimately it will mean that every agricultural county in Georgia will have the services of from two to four teachers, men and women, of agriculture and home economics.

COTTON EXCHANGES.

For many years various efforts were made to find a way of meeting the objectionable methods and practices of certain

cotton exchanges, notably the New York exchange, which practices resulted in furnishing quotations upon a debased contract, with the result that spot cotton sold upon these quotations always sold for less than its intrinsic value. passsage of the Lever Cotton Futures Act, which was recently declared unconstitutional by a New York judge and which was added to the Agricultural appropriation bill the other day as a rider, is the effort to meet this situation in the interest of the farmer. The law, while in effect undoubtedly served to stimulate the price of cotton anywhere from \$1.50 to \$2.50 per bale, as shown in the difference in the value of the old contract of the New York Cotton Exchange and the contract provided for in this law, which shows a difference in favor of the contract of the law from 20 to 50 points. In addition to this it is significant to know that within 10 minutes after the information reached the New York exchange that the cotton-futures act was declared unconstitutional and invalid, the price of cotton fell \$2 per bale, although the market during the morning of that day had been a bull market. The Hon. W. P. G. Harding, the southern member of the Federal Reserve Board, has publicly said that this act was one of the three things that saved the cotton situation during the critical period of the past two years. I think there is no doubt about it, and I am sure that every well-informed person will agree to this.

GRAIN STANDARDIZATION.

During the last session of Congress the House passed what is known as the grain-standardization bill, which provides a system of national supervision for the grading of grain. This bill is not of such vital importance to the South at this time as it is to the West, but it is hoped that the South may more and more come to a system of growing more small grain and raising more live stock, and when that time comes this bill will be of immense benefit to the people of the South.

FEDERAL WAREHOUSE BILL.

In some respects the most important bill that has been passed in recent years in behalf of agriculture is the bill that we passed the other day with the appropriation bill, known as the Federal warehouse bill. This bill provides for a national system of bonded, federally supervised warehouses for certain agricultural products, including cotton. These warehouses will be under bond, and all products that go into them will be weighed and graded by persons holding unrevoked licenses from the Federal Government, thus insuring integrity of weight and grade of product. They will then issue negotiable warehouse re-ceipts, uniform in character for the same product throughout the country. These uniform warehouse receipts will quickly become a basis of credit for the farmers who wish to market their crops gradually, thus preventing the usual glut upon the market during the first fall months of the year. In fact, this bill furnishes the machinery by which each farmer can get the full advantage which is offered in section 13 of the Federal reserve act, which provides for the rediscount of farm notes through the system. The sentiment in the House in favor of this bill was overwhelming and it was opposed by only a few Representatives from the large cities who did not seem to realize that the prosperity of their great cities after all depended absolutely on the prosperity of the farmers of the country. This amendment was passed by a vote of 289 to 46. I believe that in the course of time the country will look back to this piece of legislation as one of the greatest efforts ever made in behalf of agriculture.

HOG CHOLERA AND CATTLE TICK.

In addition to these fundamental acts the Committee of Agriculture of the House and the Congress have been most liberal in appropriating for the support of all lines of agricultural activity. It was not until we got charge of things that any serious attempt was made to control hog cholera, which places an annual toll upon the farmers of \$60,000,000. We are furnishing funds now and have been for three years with which to make a vigorous fight against this disease. We are likewise providing large funds for getting rid of the cattle tick, which is costing the South from \$40,000,000 to \$50,000,000 a year and making it impossible to build up a real live-stock industry.

GOOD ROADS.

The question of cheaper transportation is of greater interest to the farmer than perhaps any other legislation that has been discussed in Congress for many years. This Congress has passed a bill whereby the Government is to cooperate with the States and counties in the construction of good roads. If this bill meets '/ith the approval of the President, and I am sure it will, the United States Government will spend \$75,000,000 during the next five years in encouraging the building of good country roads.

RURAL CREDITS.

Every since I have had the honor of representing my district in Congress I have advocated and have desired to vote for some measure that would enable the farmer to borrow money at a lower rate of interest. The lack of power to borrow money at a low rate of interest on long time has handicapped the development of our rural sections. The bill we are now discussing, and which I trust will become a law, will go a long way to relieve the situation, and will render the farmer the greatest service possible at this time. The bill does not establish a system of personal short-term credits. It deals only with long-term loans secured upon farm mortgages. Under this bill a man of moderate means who owns a farm will be able to borrow money for 5 to 36 years, at 6 per cent interest or less, and be able to build his barns and houses, stock his farm, and begin a prosperous era without being seriously burdened with debt. The same will be true of many who are now renting land and have no place that they can call their own. I believe these men will be able to negotiate for the purchase of homes, and by thrift and energy be able to own farms they can call their own.

Without attempting at this time to discuss the full text of the bill I desire to briefly describe the effect of this bill when it becomes a law. There will be established in the United States 12 Federal land banks, located in 12 districts. The minimum capital stock of each bank will be \$750,000. This stock is placed on the market for sale. If not purchased in 90 days, the Government purchases the stock sufficient to finance the institution. The Government will not share in the profits; only stockholders of the Federal land bank share in the profits. The Government will not share in the profits; only the

Local farm-loan associations will be organized. Every member of the farm-loan association must be a borrower. farmers or more can organize an association. The minimum loan is \$100, and the maximum amount that can be borrowed is \$10,000. It will be necessary for the borrower to subscribe stock in the local association, paying \$5 per share for the stock. If he borrows \$100, he must subscribe for 1 share; if he borrows \$1,000, he must subscribe for 10 shares, or \$50 worth of

The subscription of stock and the description of the land is forwarded to the Federal land bank. If the titles to the land are approved and the appraisement of the value of the land is found just, the bank pays the money to the borrower. Under the law the borrower can borrow as much as 60 per cent of the value of his lands and 20 per cent of the value of his improvements. The rate of interest to be charged can not exceed 6 per cent, and I believe when investors become accustomed to this class of securities money can be borrowed for 5 per cent or less. No loan can be for less than 5 years and no longer than 36 years, as desired by borrower.

On these loans the interest and a portion of the principal is paid annually. This is called the amortization plan. To illustrate: Under the present system of borrowing money, if you borrow \$1,000 for 20 years at 6 per cent interest, you would pay \$1,200 interest, and the original amount borrowed would be unpaid. If you borrowed \$1,000 at the rate of 10 per cent interest, you would in 20 years pay \$2,000 interest and owe the original \$1,000 borrowed at the end of 20 years. Under the amortization plan as defined in this bill, if you borrowed \$1,000 for 20 years at 6 per cent interest, your payments would be as follows:

Amount Total Paid on principal on prin-cipal un-paid. Annual periods. annual \$60.00 58.36 56.63 54.80 \$972. 81 943. 98 913. 42 -881. 03 846. 70 \$87. 19 \$27. 19 28. 83 30. 56 32. 39 34. 33 36. 39 38. 58 40. 89 43. 34 45. 94 48. 70 50. 80 48. 61 46. 30 43. 85 41. 25 810. 31 771. 73 730. 84 687, 50 641. 58 51. 62 54. 72 58. 00 480. 52 428. 52 367. 04 301. 87 232. 79 159. 56 61. 48 65. 17 69. 08 73. 23 9.57 4.91 77. 62 81. 94 81.94 Total..... 1,743,46 743, 46 1,000.00

By paying \$87.19 per year for 20 years you will have paid both principal and interest.

In order to show the maximum costs under this bill, if the borrower desires to take advantage of the 36-year loan, I incorporate what is known as an amortization table showing the process by which the loan and interest are paid. The table is for a loan of \$1,000 for 36 years at 6 per cent interest, and the annual payment is \$68.39:

Annual periods.	Total annual payment,	Interest at 6 per cent.	Paid on principal.	Amount of prin- cipal still unpaid.
1 2 3 3 4 5 6 6 7 7 8 8 9 9 10 11 1 12 12 13 14 15 15 116 17 18 19 20 20 21 22 23 24 25 26 27 25 26 29 30 30 30 30 30 3	\$68. 39 68. 39	\$50.00 59.49 58.96 58.40 57.80 55.79 55.79 55.79 55.79 55.70 54.47 56.49 47.08 48.22 47.08 44.45 43.02 44.49 38.81 38.17 36.36 36.36 37.36 38.40 39.24 49.25 59.26 5	\$8. 39 8. 90 9. 43 9. 99 10. 59 11. 23 11. 90 12. 60 13. 37 14. 11 15. 02 16. 87 17. 89 18. 96 20. 10 21. 31 22. 58 22. 94 25. 34 25. 34 25. 34 25. 34 25. 34 25. 34 25. 34 25. 34 25. 34 25. 34 26. 30 28. 51 28. 51 29. 33 33. 96 35. 99 38. 15 40. 45 40. 45 4	\$991. 61 982. 71 973. 29 963. 39 952. 80 941. 57 929. 68 917. 08 903. 71 889. 60 874. 58 868. 65 841. 79 823. 89 804. 83 703. 52 740. 94 711. 60 691. 63 684. 73 636. 22 606. 00 573. 97 540. 01 564. 02 465. 42 382. 55 337. 01
31	68, 39 68, 39 68, 39 68, 39 68, 39 70, 56	20, 23 17, 33 15, 26 11, 07 7, 63 3, 99	48. 17 51. 06 53. 13 57. 32 60. 76 66. 57	288, 84 237, 78 184, 65 127, 33 66, 57
Total	2, 464. 21	1, 464. 21	1,000.00	

Should the borrower be able to get \$1,000 for 20 years at 5 per cent his payments would be as follows:

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on princi- pal.	Amount of prin- cipal still unpaid.
	\$80, 24	\$50,00	\$30, 24	\$969.76
2	80. 24	48.48	31.75	938.00
3	80.24	46.90	33.34	904, 67
4	80.24	45, 23	35.01	869, 66
5	80.24	43.48	36.76	832.90
6	80. 24	41.64	38. 59	794.31
7	80, 24	39.71	40.52	753, 79
8.	80. 24	37,68	42, 55	711. 23
9.	80.24	35.56	44.68	666, 56
10	80. 24	33, 32	46.91	619.64
1	80. 24	30.98	49.28	570.39
2	80.24	28.51	51.72	518.67
13	80.24	25.93	54.31	464.36
14	80.24	23.21	57.02	407.34
15	80.24	20.36	59.87	347.46
6	80.24	17.37	62.87	284.60
17	80. 24	14.23	66.01	218.59
18	80.24	10.93	69.31	149.28
19	80. 24	7.46	72.78	76.50
20	80.32	8.82	76.50	
Total	1,604.80	604.80	1,000.00	

By paying \$80.24 per year you could pay the interest and liquidate the loan of \$1,000 in 20 years.

The borrower under this law would be liable for double the amount of the stock he holds in the association. To illustrate: If he borrows \$1,000 he will necessarily own 10 shares of stock, representing an outlay of \$50. His liability then could not be more than \$100. As soon as the borrower discharges his debt he is no longer liable for this amount, but receives in cash the amount of the par value of his stock, plus the accrued interest on the same. As the Government has direct supervision over these farm-loan banks there will be in my opinion little danger of the stockholders in the association being called on to pay any

When the farm-loan bill becomes a law, I believe the farmers will realize that it is one of the greatest pieces of legislation ever enacted into law. Congress no doubt will amend this law from time to time as the needs of the farmers are shown. I trust it will not be long before we can add to this legislation and give to the farmers who do not own land a credit system that will enable them to easily purchase a home and finance their crops without paying the exorbitant rates of interest under the present system.

Our agricultural legislation has been filled with progressive proposals in the interest of agriculture, and I think it can be said without a doubt that more has been done for agriculture within the last four years through Federal laws and appropriations than during any period of 50 years combined in the history of this country, and I am proud to have had my humble part in this great work.

Rural Credits.

EXTENSION OF REMARKS OF

HON. JAMES S. DAVENPORT. OF OKLAHOMA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 12, 1916.

Mr. DAVENPORT. Mr. Speaker, the amendment I offer giving to each of the Federal land banks a capital of \$1,000,000, instead of \$750,000, should, in my judgment, be adopted. For many years we have been providing for all classes of business and all classes of enterprises in Congress, and in doing so every man on both sides of the aisle has been advocating that it was for the interest of the farmer. We come now to a proposition where we can do some good for the farmer if we are willing to do so, and if we are going to do it let us provide each of those banks with a sufficient amount of capital in starting, that the farmers may secure loans and get their money without taking time to issue bonds and float them and then await a reissue and sale before we can make other loans. I say to you that \$1,000,000 is a small amount to start these banks with. It is going to take some time under the system and the machinery provided in this bill to put those banks in operation, and it is going to take some time after getting them started to get a sufficient number of mortgages executed in order that you may place upon the market a sufficient amount of bonds so as to have sufficient funds to accommodate the new loans.

It is but a few years since we authorized and appropriated to 84,000 white people in Alaska a \$35,000,000 contribution to build a railroad. Only a few days ago we authorized and appropriated, if it gets through the other end of this Capitol, \$20,-000,000 for a nitrate plant, and if the bill passes that we are now considering, known as the flood-control bill, in a few days you will appropriate about \$45,000,000 for those living in the Mississippi Valley. If we are going to be so liberal with our contributions, let us place at the command of the farmers of this country where they may get it upon proper security a sufficient sum of money, or at least let us give them \$12,000,000 for the many farmers throughout the United States.

It is now apparent that Congress is at last aroused and will during this session pass legislation giving to the man who owns a farm a chance to borrow money at a cheaper rate of interest than he can now secure from a loan company, and that he will be able to secure the loan for a longer period of time. One of the difficulties in the past has been the farmer could only secure short loans and too often he was compelled to pay an exorbitant rate of interest, such a rate that he could not make a living for himself and family and meet the interest and lay aside a suffi-cient amount to pay the principal at maturity. The time has come when all realize that to properly develop the agricultural industry it requires capital; no one can successfully run a farm this day without a sufficient fund to pay for the implements, machinery, and to meet the overhead expenses incident to planting, cultivating, and marketing the farm products. There are two necessary prerequisites for the farmer's success in this country. They are money at a low rate of interest and a long-time loan. The manufacturer, the jobber, and the other business men of the country can use money advantageously on three or four months' time, because the most of them turn over their money three or four times in a year. Not so with the farmer.

makes only one crop during the year, and therefore realizes on his investment only once a year. It is therefore important to the farmer that he secure long-time loans. I want to call attention to some of the provisions of this bill, and in doing so I shall try to show that they are so drafted as to make the law workable and to give to the farmer that relief he has so long hoped for but has been denied.

Not only do we propose to invoke national authority, but we propose to make this system a separate and distinct system, having no connection whatever with existing commercial banks. We commence the organization of this proposed system by the creation of a farm-loan board, composed of three members, to be appointed by the President of the United States and confirmed by the Senate. Not more than two members of this board shall be of one political party. General supervisory powers are given to the farm-loan board. The board is given power to supervise the rates under which bonds shall be sold and loans to farmers made. The members are appointed for full terms of nine years, removable only for cause. We have provided a generous salary, as we hope to have the board composed of the three best qualified men in the United States. We feel that it will be safe to vest such a board with the general supervisory powers granted in this bill. In addition, the board also has the power to appoint the appraisers who will make the appraisement under which the loans are to be made. I desire to call attention also to the fact that not only is the board appointed by the President, but the salaries are paid out of the Treasury of the United States, and the burden of meeting the expense of the salaries of the members of the board does not fall upon the borrower.

I am proud that it is proposed in this bill to pay the salaries and expenses of supervision out of the Treasury of the United We will have a Government board appointed by the President of the United States, with salaries paid by the people of the United States, making them absolutely independent in every sense. One of the difficult features of mortgage credit is the system of appraisement. An honest, conservative appraisement of every tract of land accepted as security will prevent favoritism and will insure perfect safety to the system. Losses are practically impossible under a safe system of appraisement. Under this bill appraisers are to be public officials. They are appointed by the farm-loan board and are removed from every possible influence, either by borrower or lender. The appraisers have no connection whatsoever with the banks or any other agency controlling the loan. We give the farmers of the country an impartial official appraisement on their lands.

Having spoken of the general powers of the farm-loan board, we come to the organization of the land banks. of the United States is to be divided into 12 land districts by the Federal farm-loan board. We have here the same problem that has come up on every question of banking in the United States: Shall you have a great central bank or several district organizations? I think it is admitted by every person that the plan of the Federal reserve system is better than one central bank; but if that were not true of a commercial banking system, I should still contend that the district plan is a better one for land-mortgage credit. One of the problems is to bring the loan agency into immediate contact with the borrowers. trict plan more nearly accomplishes this than the central plan. But there is another important reason. If it should happen that there was any difficulty in maintaining a uniform rate in the United States, which I do not believe there would be, and you had a great central bank, the minimum rate would be fixed at the point of greatest difficulty of getting the money rather than upon the average difficulty of obtaining it. That is to say, the lowest rate for the whole system would be the highest rate which would prevail under the district system. Therefore I feel that the proposed plan of dividing the United States into districts will commend itself to the judgment of Congress. In each one of these districts a land bank is organized with a minimum capital of \$750,000. Thus there will be organized 12 land banks, having a combined minimum capital of \$9,000,000. The committee believes this sum to be ample to inaugurate the new system and to give it that sense of security, stability, and importance which will enable it to command the confidence of the farmers on the one hand and the investing public on the

The temporary organization is controlled by the Government of the United States. Now, how is a bank organized and how is it controlled? As indicated, there is a temporary organization after the minimum capital stock is subscribed. The first step is to secure subscriptions to capital stock; and for a period of 90 days after the books are opened any citizen, corporation, company, or any State in the Union is given permission to sub-

scribe to the capital stock in the amount of \$750,000, and if at the end of 90 days this stock has not been fully subscribed, then the Treasurer of the United States completes the subscription, precisely as in the organization of the Federal Reserve System.

No voting power goes with any of the stock except that held by the Government of the United States, so that the sole power to organize these banks is vested in the Government of the United States, and it is impossible for any private interests to secure control. The Federal farm-loan board organizes the banks by appointing three directors. These directors complete the organization and operate the bank during the period that full control is vested in the Government. The land bank is instituted, organized by the Government of the United States, controlled absolutely by the United States Government until the borrowers in that land district shall become strong enough to take over the permanent control under the terms of the bill. The permanent organization is perfected by the borrowers themselves.

Now, when the land bank organizes, how are the loans made? There are two methods in the bill under which loans can be made by the land bank in the federated system. One is through the national farm-loan association to be organized by farm borrowers, and the other is through the existing banks of the coun-The first method is preferred by the committee and is given first opportunity to control all territory. If, however, such associations are not organized in any part of the United States after fair opportunity for such organizations shall have been given, then loans in such territory may be made through State banks. We hope these associations will organize and form the nucleus which will ultimately extend cooperative methods among farmers to include marketing of standard farm crops and the purchase for cash of standard farm supplies. Better credit facilities is but one phase of better farm organization. There are three great movements among farmers to be organized, fostered. and wisely directed. Farmers need a larger volume of credit at lower rates and upon more favorable terms of repayment.

If the farmers have an organization, they will secure equality as to rates and service in that territory better than any individual farmer can do. In a Nation of 48 States with wide diversity of industrial conditions, over which we seek to extend the farm-land banking system, I can readily apprehend that without local organization among farm borrowers some section of the country might be greatly neglected. But wherever 10 borrowers come together there is an organization and a selection of officers. These borrowers create an instrumentality, and a necessary result is that particular section will secure all the benefits that should come to it under this bill. These associations are favored in order to make the system cheaper in its operation. The question of reliability of borrower and the value of his land are vital questions to be de-It will require an expensive organization if the land bank is compelled to make these preliminary investigations at the instance of every applicant for a loan. difficulty which effectually precludes small borrowers in sparsely settled country districts from securing mortgage loans. The loan agency can only investigate the more profitable deals. We propose in this bill to serve the small borrower. We propose to make loans as small as \$100. Such a system is impossible without cooperation on the part of borrowers in making this preliminary investigation of land and character.

To secure a loan there are three ways—first, from farmloan banks through the agency of the national farm-loan association; second, from farm-loan banks through agents; third, joint-stock banks.

When the borrower makes application for a loan the same must be made through a national farm-loan association, and the prospective borrower must become a member, if not at the time of the organization of the association, then the borrower becomes a member by two-thirds vote of the directors after the association is organized and chartered. No one can be a member of the association who is not a prospective borrower. Any member of the association can borrow 60 per cent of the value of his farm lands and 20 per cent of the insured value of permanent improvements, and the borrower must subscribe and take stock in the local association to the amount of 5 per cent of the desired loan. The local association in turn subscribes for a like amount in the farm-loan bank. This stock is capable of paying dividends, and I believe, if properly managed, will be a paying investment, and the stock will be paid off at par when the loan is paid.

The stock held by the Government of the United States receives no dividends and is paid off as the stock is subscribed for by local associations. It is intended and I believe that ultimately all the stock in the farm loan banks will be owned by the local associations. In making an application for a loan it must be made out in proper form, upon blanks prepared by the farm-loan board, and the borrower must accompany the application by an abstract or evidence of his title, as well as an appraisement of the lands signed by the members of the loan committee of the local association and approved by the The application of the borrower is transmitted to the farm-loan bank, and when it is received by the farm-loan bank, as soon as possible thereafter, an appraiser is sent to view the lands. If the application is in proper form and the abstract shows the title to be good, and the appraiser reports favorably upon the application, the loan is made. All loans granted must be indorsed by the local association. If the farmer wants to borrow \$1,000 he joins the local association and makes application in proper form to the secretary-treasurer of the local association, subscribes for \$50 worth of stock in the Federal land bank, his abstract of title is then examined, appraisement approved, and, if everything is regular, the loan made. Some question has arisen as to the liability of each of the berrowers under a local association. It is clear from the provisions of the bill that each farmer who borrows money will be liable for the amount of his loan, and he will be personally liable for all loans of the local association to the amount double the stock he holds in the association, just as a director of a bank is liable for the indebtedness of the bank. liability of the borrower for other loans of the members of the association need not be alarming to anyone when it is remembered that no one can borrow more than 60 per cent of the value of his land and 20 per cent of the permanent insured value of his improvements. It must also be remembered that the character and integrity of each of the borrowers is vouched for by the association; that the land will be appraised by the local loan committee of three members; that the application for the loan must receive favorable reports from the Government appraisers; and that the loan must be approved by the directors of the farm-loan banks. A complete cooperative action from the time the application is made until the loan is granted and a supervision of the loan is made by those directly interested in the association and those cooperating together for the benefit of each other and for the assistance of all members of the association. Under the provisions of this bill loans are only made on first mortgage on farm lands for the following

To purchase land for agricultural purposes, equipment, and live stock necessary for the operation of the farm, and to provide suitable and adequate buildings, and for the improvement of farm lands, and to liquidate existing indebtedness. The bill is only intended to give aid to those of the citizens who own farm lands in the United States, that are real farmers, and not to those who may desire to engage in land ownership for speculative purposes.

The advantages to the farmer under this bill are that he can secure loans from 5 to 36 years, payable on the amortization plan, and the rate of interest he will be required to pay will be governed by the rate charged on bonds sold. The bill provides that the farm-loan banks are prohibited from charging more than 1 per cent upon farm lands in excess of the interest borne on the last series of bonds sold. The 1 per cent is intended to meet the administrative expenses. It is hoped, however, that the expenses will not amount to 1 per cent and that the rate may soon be greatly reduced. A provision in the bill is that in no event shall interest be charged in excess of 6 per cent. This provision in the bill, to my mind, is where the borrower will receive the greatest benefits, for the reason that the rate of interest will be so greatly reduced from what he has heretofore been paying to what he will have to pay under this bill. In fact, after the machinery providing for the putting into operation the purpose of this bill is in full operation and bonds have been issued and placed upon the market it is believed the rate of interest may be reduced as low as 4 per cent to the farmer who desires to borrow money. The average rate of interest in the United States on farm lands is a little more than 7 per cent, but in my State-Oklahoma-it is more than 8 per In some of the Eastern States it is contended that the provisions of this bill would not benefit the farmers. This I believe to be true, because many of the Central Eastern States loan money upon farm securities at from 4 to 6 per cent interest, and, of course, where that condition exists and money can be procured by the farmer at from 4 per cent to 6 per cent the advantages under this bill would not be as great as they would be in States where the rate of interest is 8 per cent or more. Yet there would be some advantage to the farmer in the Central or New England States, and that is the length of time for which he

could secure a loan. No ordinary loan company loans money on long-time loans, and the local banks of the different communities can not do so. The average loan from land companies at present in the Western and Central States is five years, seven years being the maximum length of time for which you can secure a real-estate loan. Therefore it will be seen that great benefits will be derived if the provisions of this bill are enacted into a law to all sections of the United States by granting to them long-time loans.

The question may be asked as to where the money is going to come from to be loaned to the farmers throughout the country. The provisions of the bill answers this question. zation of the 12 Federal land banks each will have a capital stock of \$750,000, as hereinbefore stated, and if the stock is not subscribed by individuals or corporations within 90 days after the books are opened for subscriptions, the Secretary of the Treasury is authorized to make up the amount from the Treasury. This will give a capital of \$9,000,000 to start with and to make loans. As soon as loans are made upon farm lands to the amount of \$50,000 bonds may be then issued by the farm-land bank, which bonds will be secured by first mortgages on lands, also by the stock of the local loan associations, and by the farm-land bank, and by the 11 other farm-land banks, and by the authority for the issuance of these bonds from the farmloan board. These bonds will be placed upon the market, and I am satisfied will be readily sold and will be considered a good investment. The bonds, under the provisions of this bill, can only bear 5 per cent interest, and when issued and approved in accordance with the provisions of this bill will be as safe an investment as Government bonds. They are issued in denominations of \$20 to \$1,000. As soon as the first \$50,000 are sold the proceeds from the sale of these bonds can then be used to make additional loans, and in this way, by a continued process of issuing and selling bonds upon the securities named in the bill, ample funds will be secured to meet all the requirements of the farmers desiring loans. The stock of the national farmloan association and the Federal land banks, including reserve and surplus and the mortgages executed to farm-loan banks and to joint-stock land banks, as well as farm-loan bonds issued by the banks, are exempt from Federal, State, and local taxation, This provision, in my judgment, is in the interest and to the benefit of the borrower and lightens one of the material burdens that have heretofore been imposed upon him. The organization of the joint-stock land banks, under the provisions of the bill, is as follows: The stock in these joint-stock land banks or corperations may be privately owned; their capital can not be less than \$250,000; and these joint-stock land banks will be authorized to make leans upon first mortgages and to issue bonds based upon said loans upon forms to be prescribed by the Federal farm-loan board.

These banks can not charge a farmer more than 1 per cent in excess of the rate of interest established for the last series of farm-loan bonds issued by them. Some contend that if these joint-stock land banks are organized, they will compete with the Federal land banks and they should not be established. Others present the argument that these banks would loan at a lower rate of interest than the farm-land banks, and in this way prevent the organization of the local associations. Whether or not these contentions are true and will develop when the banks are in operation, I am not prepared to say, nor am I going to worry about it. What I desire to do is to assist, if possible, in securing a low rate of interest for the farmers of this country, and I do not care whether they get it through the farm-loan banks or the joint-stock loan banks, so they get the loans at the cheapest rate of interest possible and for a long period of time. I am therefore willing that both classes of banks be established.

The legislation now being considered is legislation that I heartily approve, and legislation that has long been promised to the farmers of the United States. Legislation of this character has been enacted and in operation in almost all civilized nations of the world and has proven to be satisfactory. It has proven a great benefit to the farming class of the people, and its workings have been entirely satisfactory to the financial The bonds that have been issued by the European investors. countries having a similar law to the proposed bill have been taken by the bond investors and sought after as earnestly and persistently as any other bonds of the Governments issuing them. If this bill becomes a law, there will be no question but that the bonds when issued will be readily taken, as they will be The security that will be behind them can absolutely gilt edge. not be questioned, and the interest will be met promptly and the bonds redeemed at maturity. If the borrower who secures a loan desires to pay it off before the maturity of the loan, he is permitted to do so at any interest-paying period. He is not compelled to let the loan run the full length of time, but may use his own option in meeting the payment. Since the beginning of our Government all classes of business have had legislation looking to its assistance but the farmer. Congress has legislated and given land grants to railroads to induce capitalists to construct their lines of railroad in the United States. It has appropriated great sums of money for the construction of a railroad

in the Territory of Alaska.

Many millions of dollars have been appropriated and expended upon the construction of roads and trails in the Territory of Alaska and our possessions. Millions of dollars have been expended in the construction of public buildings in our cities. Millions of dollars have been appropriated and expended in the improvement of our rivers and harbors and the inland waterways of the United States. All the time these large appropriations have been made and the expenditures of the money have been going on. The mainstay of our Government is the people who feed and produce the raw materials for the clothing of our people and the greater part of the world has not had any direct legislation in their behalf. Notwithstanding, the Representatives in Congress have heretofore plead that they were the friends of the farmers. The farmer and the man living in the rural districts of our Government have not been provided for in the same way that those who live in the cities and towns and those interested in corporations have been provided for. The farmer has not had road construction or any assistance by our Government in the construction of roads in his neighborhood, nor has he had legislation similar to the provisions of this bill giving him the opportunty of securing cheap money for the improvement of his farm and the education of his children and the successful management of his business. The passage of this bill will not only give the farmer the right to secure cheap money on long-time loans from these organizations mentioned in this bill, but, in my judgment, it will be the means of causing the loan companies and the banks doing business in the communities where these organizations are loaning money to reduce their rate of interest, and thus redound to the benefit of the tenant farmer as well as the man who owns his farm. The provisions of this bill providing for the raising of funds upon farm security can not benefit the man who labors upon the farm and who does not own the farm; but, as stated above, my contention is that the man who works upon the farm but does not own the farm will receive the indirect benefit by reason of enacting into law the provisions of this bill, and I earnestly trust that every man in both Houses will earnestly and conscientiously support this measure and give to the farmers of the country and to the people of the United States interested with him that to which they are entitled and have for so many years contended.

Preparedness.

EXTENSION OF REMARKS

HON. GEORGE F. O'SHAUNESSY, OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES, Saturday, May 20, 1916.

Mr. O'SHAUNESSY. Mr. Speaker, in June, at St. Louis, the Democratic National Convention will nominate Woodrow Wilson to succeed himself. The delegates and people there assem-bled will acclaim the President as the champion of democracy, and, in a broader sense, as the national guide in times of stres His renomination will be gratefully made by his party, in full recognition of his statesmanship, his genius, his unfaltering patience, and his undoubted loyalty to party faith. And when he is nominated the citizen, in the quiet of his home, all through this broad land will nod his approval and await his chance to confirm Woodrow Wilson's selection at the polls.

The Republican Party is to be pitied. In its quest for a candidate it would violate the sanctity of the Supreme Court and remove from that august tribunal a distinguished jurist and embroil him in the maelstrom of politics, supposedly buried and forgotten by him. Not an assuring spectacle, certainly. No greater compliment was ever paid Woodrow Wilson than

the mad quest of his opponents for a competitor worthy of his lance. Some would resurrect Roosevelt, blinded by his garish advertising and confused by his truculent talk on heroes and heroic moods. I do not question Roosevelt's Americanism; neither do I doubt his self-seeking. I firmly believe that had he

been President instead of Wilson we would long ago have been

involved in war.

The people of this country want peace with honor, and they applaud the patient resignation of Woodrow Wilson, ready for

any emergency.

There is little talk of hard times at Republican gatherings these days; the busy mills and factories, the congested railroads, the banks stuffed with money, highly paid labor, and a positive inability to get workers confront the Republicans, whose last gasp will be given when the Democratic Party enacts into law the tariff-commission bill for a scientific revision of the tariff, freed from partisan control and responding to the need and not

the greed of the American manufacturer.

can not too strongly impress upon the business men of this Nation the great service rendered to the country by the Democratic Party in passing the Federal reserve act, which even before its full operation in the autumn of 1914 prevented a panic. Here is a law that helps business and stabilizes our finances. To the shame of the Republican Party for 50 years we had a panic-breeding financial system, which they were unable or afraid to change. "In 1907, the Roosevelt panic year, New York banks were unable to advance \$50,000 to a country bank to meet its commercial demands; the unscientific system had then been in force 43 years. In 1915, after one year of the new system and after three years of Woodrow Wilson, New York banks loaned \$500,000,000 to two European countries, and after doing that had larger deposits than ever before in their existence." The Republican banking system stood for destruction and panic; the Democratic system stands for construction and

Woodrow Wilson sounded the alarm for preparedness and awakened the Nation from its false-security sleep. After years of Republican control the Army and Navy were neglected; the politicians had forgotten the Nation's needs and were only thinking of the useless Army posts and worthless navy yards for their districts. Wilson has done more for preparedness in one year than the Republican Party did in half a century.

By adopting the Army conference report we increase the Regular Army to 175,000 men, capable of expansion in time of need to 216,000 men, and make a thoroughly reorganized militia a stronger factor than ever in our national defense. By paying men in civil life who go into training camps, a knowledge of military tactics will be spread throughout our land and a hearty stimulus be given to the preparedness propaganda. Let us study

this naval showing alone:

The Wilson administration in two years authorized the construction of 5 dreadnaughts, 12 destroyers, 26 submarines, and 1 auxiliary. If the same ratio of construction had been authorized by the Republicans during the nine years of their in-cumbency following the advent of the dreadnaught era in 1906, they would have authorized 22.5 dreadnaughts, 54 destroyers, 117 submarines, and 4.5 auxiliaries. Instead, they authorized only 14 dreadnaughts, 46 destroyers, 40 submarines, 14 auxillaries, besides 2 tugs and 2 gunboats.

Mr. Reosevelt's showing is worse than Mr. Taft's. by the Wilson standard, there is a deficiency of 8.5 dread-naughts, 8 destroyers, and 77 submarines, and during the nine years from 1905-1918 America lost second place among the world's navies, allowing Germany to supersede her. cratic Party proposes to put our Navy back into at least second

place among the navies of the world.

What party could be more confident than the Democratic arty? What party more inspired by valiant and wise leadership? What party more justified in securing indorsement from the wage earner, the business man, the manufacturer, than the Democratic Party, which witnesses to-day in the Nation a greater financial prosperity and strength than ever before re-

corded in our history?

Bank deposits are now secure and panics are things of the past, due to the Democratic Federal reserve act. The hard lot of the farmer struggling with money sharks will be softened by the passage of the rural-credits bill. Throughout the land voluntary increases of wages to millions of men in mill and mine and factory testify to faith in Democratic policies and give the lie to the prophecies of disaster that were made by Republican tariff publicity leagues as to what would happen under a Democratic tariff. At no time in the history of the United States have wages been higher for the employee and profits been greater for the employer than under this Democratic administration of Woodrow Wilson. Woodrow Wilson deserves reelection at the hands of the people. Peace in our land; prosperity in mill and mine and factory; preparedness of our Army and Navy, ready for any emergency, tell the story of Woodrow Wilson and the Democratic Party's claim to approval from the American people.

A Fair Wage for Labor.

EXTENSION OF REMARKS

HON. JOHN M. EVANS, OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 25, 1916.

Mr. EVANS. Mr. Speaker, in last year's appropriation act there was appropriated for this item the sum of \$280,000. District Commissioners recommended an increase of \$42,000, and the committee which had this bill in charge have allowed, instead of \$42,000 asked, an addition of \$10,000, making the appropriation \$290,000 for the year. The amendment offered by the gentleman from Wisconsin [Mr. Stafford] increases that appropriation \$20,000, making a total of \$310,000. This additional appropriation is to be used for the purpose of increasing the wages of street laborers from \$1.50 a day to \$1.75 a day and those now receiving \$1.75 a day to \$2 a day, and, in my judg-

ment, the amendment should carry.

I regret to find myself not in accord on this question with the Appropriations Committee, of which I am a member. But I can not bring myself to believe that \$1.50 or \$1.75 is sufficient

pay for any man for a day's work.

In the towns of the State which I represent, at least all the larger towns, the authorities provide a minimum wage of \$3 a day. Wages are higher and living is probably more expensive in that country than here, but in my judgment \$3 is little enough for any man anywhere, and a pittance of \$1.50 or \$1.75 simply means starvation for any man who has anyone dependent upon

The Government of the United States is amply able to give any man a fair wage for a day's work. It has been the fashion for many years for men engaged in legislative matters to attempt to control the wages paid by corporations and industrial concerns, to the end that the working people might receive fair compensation. We have all taken pride in berating and talking about their selfishness and their grinding of their workmen; and yet we, Members of Congress, directors of the largest corporation in America, are setting the example by asking men to work for a starving wage.

I did not realize until this matter was called to attention here how niggardly the Government has been in dealing with a lot of

its employees.

The workmen affected by this particular item are not only asked to work at a starvation price but they are not given con-

asked to work at a starvation price but they are not given continuous employment. As the gentleman from Missouri [Mr. Meker] says, they are paid the munificent sum of \$1.50 on bright, sunshiny days but are given no employment during rainy or inclement weather when they can not work.

I have no interest in any individual that is affected by this bill. So far as I know, I never met anyone that would be affected, but to me a principle is involved—the principle that "a workman is worthy of his hire." During the last three years I have been here I have heard much on the floor of this House about the maintaining of American ideals and standards. I about the maintaining of American ideals and standards. I have heard much about pauper labor from Europe invading this country to drag down the standard of living for our working people, all uttered, I have no doubt, with perfect sincerity; and yet, when we are dealing with our own people in the Capital City of the Nation we are so penurious as to ask them to work for a daily wage of less than \$2.

Mr. Speaker such treatment is a travectory it is a travectory.

Mr. Speaker, such treatment is a travesty; it is a travesty upon

our big, rich, generous, wasteful Government.

I dare say there is not a week that passes by when Congress is in session that we do not waste more than the amount involved is in session that we do not waste indee than the amount involved in these increases. But, as suggested, I am not so much in-terested in this particular item as I am in the principle involved that no man should be employed by the Government of the

United States that does not receive a living wage.

The Government is annually spending thousands of dollars to ameliorate the conditions of labor. We have regulated the hours of Government employees, the hours of men operating railroads—many of the States are doing the same—and yet, in the face of those facts, we are asking a lot of people to work for the Government at a price that would scarcely keep body and soul together and that every right-thinking man knows will not allow him to live and support himself and family. know that if he has no other source of income he must throw himself upon the charity of his community.

It has been suggested by those who have this bill in charge

that many of these people can not earn more than the price

paid; that many of them are superannuated, crippled, or otherwise incapacitated, and to increase the wages would be the cause of many of these people losing their positions.

Mr. Speaker, if it be correct that many of these people are not physically capacitated to do a normal day's work, then their employment must be to some degree out of a sense of sympathy and charity. And I can not believe that the authorities of the District of Columbia, out of the goodness of their hearts, would employ men where the Government is paying a bill for \$1.50 a day and decline to employ the same man when the Government provided funds with which to pay them \$2 a day.

The Government of the United States should in all matters of this nature be the model employer. If we ask railroads and industrial concerns to treat their laborers fairly and throw restrictions around them to enforce fair treatment to their workingmen, then surely we, as a Government, can afford to set an example, if not of generosity, at least of justice and fair treatment. [Applause.]

While on this subject, Mr. Speaker, though it has no particular bearing in this particular item, I desire to submit some facts contained in the report of the Labor Committee, of which the gentleman from California [Mr. Nolan] is chairman. That committee on yesterday reported out a bill which should receive the serious consideration of the country and this Congress. Let me quote the bill:

Let me quote the bill:

Be it enacted, etc., That after the beginning of the first fiscal year following the passage of this act, the minimum compensation of any person employed by the United States or by the government of the District of Columbia shall be not less than \$3 per day; or if employed by the hour, not less than 374 cents per hour; or if employed by the month, not less than \$90 per month; or if employed by the year, not less than \$1,080 per annum: Provided, That the provisions of this act shall not apply to persons enlisted in the military branches of the Government nor to persons receiving quarters and subsistence in addition to their compensation, nor to persons holding appointments as postmasters: Provided further, That the provisions of this act shall apply only to those persons who have been continuously in the employ of the Government of the United States, or in the employ of the government of the District of Columbia, for a period of not less than two years, and who shall have attained the age of 20 years.

Sec. 2. That upon the passage of this act the heads of departments in which are employed persons as defined in section 1 of this bill shall issue new appointments at the increased rate of compensation herein provided.

The report of the committee on this bill reveals many startling

The report of the committee on this bill reveals many startling facts, many of them well known to you and to me, but facts, nevertheless, that have not received congressional consideration because probably never assembled in so concrete, positive, and official a form.

The testimony before that committee shows the average wages paid to certain classes of employees of the Government of the United States and shows the estimated cost of living, and I desire to incorporate some of these figures in my remarks.

Mr. Arthur E. Holder, representing the American Federation of Labor, has compiled an itemized statement showing the cost of living for a family of five for a period of one year, providing for the bare necessities of life, making no allowances whatever for doctor's bills, medicine, insurance, lodge dues, newspapers, church contributions, or amusements of any sort. And his estimate is \$767.95, itemized as follows:

Estimated minimum cost of bare existence for husband, wife, and three children for a year of 365 days.

I Ry Arthur E Holder 1

[by Arthur E. Holder.]	
Food:	
3 meals per day for 5 persons at 5 cents per meal each, equals 75 cents per day; for 365 days	\$273.7
Rent: House or rooms, at \$20 per month	240.0
Vater:	
50 cents per month	6. 0
2 suits for husband (no overcoat), at \$15 each	30. 0
3 suits of underclothes, at \$1 per suit	3.0
1 suit for wife, with cloak 3 suits of underclothes, at \$1 per suit	25. 0 3. 0
Clothes for 3 children, at \$10 each	30. 0
Underclothes for children, stockings, etc	9. 0
pair	10.0
2 pairs each for 3 children, at \$2 per pair	12.0
Repairs for shoes for year (no rubbers)	3. 0
Gas for light and cooking, at \$2 per month	24.0
Coal, 7 tons, at \$7 per ton	49.0
lousehold needs: Soap for laundry and bathing, 10 cents per week	5. 2
Matches, firewood, replacing broken crockery ware, cook-	30.0
ing utensils, etc., per year New bedding, tablecloths, matting, rugs, other floor cover-	10.0
ing, and replacing broken or worn-out furniture, per	
year	20.0
Towels, window shades, other minor but essential articles for household and family wear, such as hats, caps,	
wraps, umbrellas, etc., classed as miscellaneous	15.0
Total cost of bare existence for family during year	767. 9

None.

It will be noticed that no entry has been made for the following ex-penses, which are usually necessary:

penses, which are usually necessary:

Street cars
Tobacco
Whisky
Other stimulants
Candy
School books and other school needs
Church expense
Newspapers, magazines, etc
Theaters, movies, excursions, social or church parties
Insurance, lodge dues, trade unions
Postage and stationery for correspondence
Cost of births
Cost of deaths None.
None. Cost of deaths _____ Cost of sickness, medicine ____ Cost of accidents or lawsurts_

Using this estimate as a basis it will be observed that not a single man employed under this item in the bill could maintain himself and his family of three on the wages paid, ever though he should work every day in the year including Sundays. The report of the Labor Committee reveals the startling fact that thousands of men outside of the Army and Navy are working for the Government at wages insufficient for the upkeep of a home even in the most humble manner.

For my part, Mr. Speaker, I insist that the Government should not employ anybody and ask him to work for a wage on which he can not maintain his self-respect. I am for the amendment.

The Shipping Bill.

EXTENSION OF REMARKS

OF

HON. ALBERT ESTOPINAL.

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916,

n the bill (H. R. 15455) to establish a United States shipping board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with its Territories and possessions and with foreign countries; to regulate carriers by water engaged in the foreign and interstate commerce of the United States;

Mr. ESTOPINAL. Mr. Speaker, the Sixty-third and Sixtyfourth Congresses, constituting the two terms with a Democratic administration, will go down into history with the record of having given the country more of important constructive legislation than has been enacted in any entire decade of years preceding these two Congresses. But none of this constructive legislation will have more influence, in my judgment, in determining the future prosperity of this country than this measure if it becomes a law. Be it granted that, in the greater cost of the shipping provided for in this bill and in the larger wages we must pay the officers and crews to operate these vessels, after we build or buy them, we shall be under some disadvantage as against other countries, especially the oriental countries, with which we may be thrown into competition; and be it granted that the consequences will be much less profit than the shipping of other countries get, perhaps no profit at all, and even the probability of losses which mail subventions will have to cover, it still remains that these are trifling considerations when weighed against the advantages which will accrue to our country from having this merchant marine to safeguard our foreign commerce and to make our Navy fully rounded out in practical That there is in this move by the Government the hazard of financial loss and almost the certainty of having to buttress this measure by other legislation involving perhaps the extension of our foreign mail facilities seemingly beyond our degitimate needs is all the more reason why we should enact this bill into law.

If good profits were in the offing and seemed certain enough of realization to attract private capital to the full extent of supplying all the tounage we should have for our expanding commerce, and to afford our Navy the auxiliaries and reserves of vessels that we shall need in the unfortunate event of being involved in warfare, it would be a relief to all of us who favor this measure, for I am sure there is no enthusiasm in this body for any proposition which will force the Government into activities that clearly lie outside the scope of its legitimate functions. But there is no present prospect of profit in ocean shipping, as such, to private investors when it must be developed under the handicap of our shipping laws, while there is such prospect, to a more or less degree, in almost every other field of commercial and industrial endeavor. Therefore private capital turns to those activities which promise more certain returns. Business

and the employment of investing capital could not enter a project on any such terms of uncertainty as the Government will in this, except that shipping, in certain cases, may be but a part of an extensive business, the other departments of which are sufficiently profitable to make the ownership of vessels, as an insurance against extortion and uncertainties, of more importance to them than the question of temporary low freight rates. There are corporations of this kind in the United States that have been willing to put a part of their capital into shipping, which they maintained on terms that were higher than the competitive market prices for freight, so as not to be caught in the toils of such situations as confront us to-day in shipping matters, and this expenditure was good business for them for that purpose. There is all the more reason for the Government of a great people, whose interests are jeopardized, to take like precautions

Our lack of shipping might easily demoralize our whole foreign commerce. We can readily understand that, from the circumstances of uncertainty and extortion which have entered into our business relations with foreign shipping since the opening of hostilities among the European nations, even greater turdens may be placed upon us and increased tribute demanded from our commerce, with its almost complete paralysis not impossible.

And this lack of merchant shipping might easily neutralize the advantages we are seeking through the increase of our

fighting strength on the seas.

While we are naturally prepared to make some allowances for war-time conditions, we can not reconcile ourselves to the immorality of the enormously increased shipping charges that have been laid on our products which we are sending abroad. But these excessive charges are quite in keeping with the circumstances which have attended the use of foreign shipping by our business men when they sought to place their goods in the newer countries in competition with business concerns from the countries in which the shipping was owned. Our export business had but small chance for success when operating under this handicap. This measure will free us from the hazard of interruption of our business and make us independent of the causes of extortion and favoritism. And it is not certain that there will be losses to us in the final striking of balances, so to speak. The appropriations which doubtless we shall be called upon to make for mail conveying in the way of this shipping support may be of a final advantage to our commerce far beyond the amounts we supply. There is wisdom and economy in advance work in communication, for it often leads to lucrative business connections. Our competitors know this better than we do, for they have been making a science of foreign trade development while we have been content to put our best thought and employ our best energies in developing our internal commerce. But by the logic of events we have been drawn more and more, slowly but progressively, into this world game, and we must play it in the best American spirit. And within the five-year period to which this measure limits us we ought to easily find a way to transfer this whole shipping matter to private hands in such shape that it will bring ample support for its continued activity and enlargement.

Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. C. BASCOM SLEMP, OF VIRGNIA,

IN THE HOUSE OF REPRESENTATIVES, Saturday, May 27, 1916.

Mr. SLEMP. Mr. Speaker, the people of the United States were wholly unprepared to receive the news of the outbreak of the European war. It came with startling suddenness. Not until Belgium had made the costly sacrifice of her people, and Namur, Liege, and Antwerp had fallen before the powerful attacks of Teutonic artillery, did the American people realize that the greatest and most disastrous war of all time was upon the world.

A pall spread over our country; men tried to reform their views of civilization, Christianity, religion, ethics, to reconcile their beliefs with the existence of such a frightful calamity. Their convictions, preachings, teachings were gone over to see on what moral, ethical, or even material hypothesis this war could have been brought on humanity. No sure explanation was found then, and there exists none to-day. Racial antagonisms, growth of population, commercial jealousies, territorial rivalries, revenge for lost provinces, the domination of the militarist spirit—each, all, and others doubtless contributed their respective shares to this catastrophe. History alone can determine the cause and the responsibility.

The President of the United States in due time issued the customary proclamations of neutrality, and the people of the United States settled down to await the outcome. Many believed the war would end in a few months. It is still raging with

undiminished fury.

The European war found this country in the throes of an industrial panic—labor unemployed, industry paralyzed, earnings eliminated, foreign goods flooding our country, and our National Treasury practically bankrupt. The war brought further, but only temporary, disruption to business. Shipping was demoralized, our trade with Germany and Austria cut off, railroads ran with no freight to carry, passenger trains carried no passengers, coal mines remained closed down, and the stock market shut its doors. Financial leaders wondered how it were possible for the American market to absorb the \$6,000,000,000 of American securities held by European people—an amount more than six times the national debt of the United States. A representative of English bankers, Sir George Paish, visited this country to secure a balance of \$100,000,000 we owed to English people in trade settlements, and we were disturbed about it, about this strain on our resources.

The country soon, however, became flooded with European agents to buy American goods, to buy our horses, our wheat, our flour, our steel, and, in fact, anything and everything we could produce to sell. Contracts were entered into, involving the purchase of millions and millions of dollars worth of goods; guns and bayonets, powder and shot, overcoats and shoes, elec-trical supplies, and hospital equipment, food and clothing. The wheels began to turn, industry to hum and make glad the heart-the fires were lighted in our furnaces, coal began to roll out of the earth, labor once more got employment, the pall of gloom fell off the American people, and the one great good of the European war to us-the revival of American industry came to the American people. It brought with it new hope, new optimism, and a new spirit, constituting doubtless the most remarkable reversal in thought and material achievement the world has ever known. But the prosperity it is said we enjoy is not the prosperity of life, but the prosperity of death; it is not the prosperity that comes from an interchange of commodities throughout a peaceful world, but a prosperity that comes from blood-soaked battlefields, from noble but bleeding countries, from the wounded and the dying, from the death struggle of the very flower of the human race.

In the midst of this holocaust of destruction, while the prayers of the Christian world are raised to put an end to the frightful carnage, the only basis for our temporary prosperity, Democratic orators and speakers are rising to say that they brought this prosperity to the country. They claim that credit should be given the Democratic Party because goods are now being sold abroad to feed, clothe, and arm millions of soldiers now marching on European battle fields, and for that reason people this year should vote the Democratic ticket. Yes, vote for the Democratic Party because we have a modicum of prosperity, brought about by the European death struggle. Yes, vote for the Democratic Party after their tariff and other policies had brought ruin and stagnation to all American enterprise. How ridiculous to think that any man could advance any claim for Democracy on such account, and how inconceivable to think that any intelligent man could be misled by it.

Since the war started we have had one campaign—the congressional campaign of 1914. The Democratic majority in the House was changed from 147 to the narrow margin of 26.

There was no appeal made by the Democratic leadership in that contest—on Democratic promises or Democratic performances. There was no defense of domestic policies, or of the "New Freedom," or of "Unlocking the Fetters." These were treated with contemptuous silence. There was only one Democratic argument: "He kept us out of war." Neglecting the fact that our soldiers had invaded the soil of Mexico, killed a number of her citizens, and had then been withdrawn, the whole farce to the eternal shame and disgrace of the American Nation, it was said, "He kept us out of war."

Notwithstanding that we had no possible place in the European conflagration, the hallucination was encouraged that the President had also kept us out of that conflict. The horror of the European tragedy had so filled the human heart, and the relief so genuine and so solemn because our young men were not being killed in battle, that the people yielded to their generous though illogical impulses and elected a Democratic House of Representatives.

The success of this experiment had a reflex action on the present occupant of the White House. Apparently the road to political success lay in "calming the judgment" and evading responsibility. Moving in the unreal atmosphere of idealism, he assumed to be the champion of peace and to have the opportunity "seldom vouchsafed to any nation," to "obtain peace in the world." Filled with these dreams while living in a savage world and in a savage age, he took no thought of the future, but an December 8, 1914, speaking of national defense, he stated in the lightest vein:

But I turn away from the subject. It is not new. There is no new need to discuss it.

One could scarcely imagine that within one year this same President would be saying, on February 2, 1916:

I say to you in all solemnity that there is not a day to be lost, not because of any new or critical matter, but I can not tell what will happen in 24 hours.

When the Imperial Government of Germany issued its notice of submarine warfare, in contravention of the rules of civilized war, President Wilson stated to Germany that she would be held to "strict accountability," if American interests were invaded. Heedless of our solemn and emphatic warnings, the Lusitania was sunk in mid-ocean, carrying hundreds of innocent American citizens to a watery grave. The country was stunned at the unprecedented act and demanded action. The President, however, was not to be moved, and, accordingly, in Philadelphia, made his famous speech:

There is such a thing as being too proud to fight.

The example of America must be the example not merely of peace because it will not fight but peace is the healing and elevating influence of the world and strife is not.

By this statement American pride, American self-respect, was touched. The country became aflame with indignation. It was felt that the policy of the President in Mexico of shifting, of hesitancy, of indecision, of reversal, was being repeated in the European crisis. Strong men, strong newspapers, came to the front, societies were formed, asserting American rights and demanding that the country be placed in a position not only to protect itself but to assert its rights.

Slowly the movement took shape. First, Roosevelt, then Gardier and after them innumerable patriotic citizens and societies appeared before the public, until the national conscience was aroused and the issue of preparedness and the common defense became the dominant thought in the public mind. How quickly also did the President change his views. He who had viewed only with mental distress the destruction of life and property in Mexico ever since he had become President, now exclaimed. February 2, 1916:

I have not even enough men to keep bandits from raiding into the United States territory.

He who one year before said-

Let there be no misconception; the country has been misinformed, we have not been negligent of national defense-

now exclaimed in the new atmosphere of Americanism:

The Army is not large enough for the ordinary duties of peace.

In 1914, in his address to Congress, he said in regard to the Navy:

We shall take leave to be strong upon the seas in the future as in the past.

This meant no relative naval increase if it meant anything. Yet, in 1916, when national defense had full sway and was sweeping over the country, he urged:

I think our Navy should be the greatest in the world; it should be unconquerable.

The change in the President's attitude has carried along with it a change in the attitude of members of his party. They who have for generations denounced the Republican Party for extravagant expenditures for both the Army and Navy are now shouting for preparedness, national defense, and the expenditure of untold millions. They are entering this business without apology for their previous contradictory attitude and with shameful disregard of their teachings and professions.

It is hoped by the Democratic managers to play both ends

It is hoped by the Democratic managers to play both ends against the middle in a desperate effort to secure the confidence of the people of the country. This I do not believe they will be able to do, nor do I believe they are entitled to the confidence of the American public.

No individual and no party should be judged by a single declaration of belief or policy nor a profession for a single campaign. It should be judged by his or its repeated actions and utterances, official and unofficial. This principle should be applied to the Democratic Party when it is attempting deliberately to deceive the public, and judgment rendered accordingly.

ately to deceive the public, and judgment rendered accordingly.

The real attitude of the Democratic Party and its leaders is based upon the traditions and early teachings of its founders,

and it has been maintained in modified form from the early days of the Republic to the present time. The doctrine of State rights had its necessary concomitant in a weak navy and a citizen army. Those who advocated the retention of rights and power by the several States necessarily did not sympathize with a "national viewpoint." The followers of Jefferson and Hamilton differed, as did the leaders, as to the functions of the respective States and of the Federal Government. The hesitancy of making the National Government powerful to-day is the hesitancy of those who in their youth imbibed the teachings of Thomas Jefferson, James Madison, and later John C.

In a letter of April 17, 1801, he wrote:

I shall really be chagrined if the water in the Eastern Branch will not permit of our laying up the whole seven there in time of peace, because they would be under the immediate eye of the department and would require but one set of plunderers to take care of them.

Later, in 1806, he wrote:

Believing myself that gunboats are the only water defense which can be useful to us and protect us from the ruinous folly of a navy, I am pleased with everything which promises to improve them.

President Wilson, discussing the naval policy of Thomas Jefferson, on page 190, volume 3, in his History of the American

Mr. Jefferson had brought a party to power which had dismantled the Navy which the Federalists had begun. The few ships that remained were tied up at the docks out of repair, out of commission, or lacking crews and equipment. English cruisers overhauled American merchantmen when and where they pleased, looked into their manifests and bills of lading, forbade them their voyage if they chose, and took their seamen off to serve in their own crews.

This has been the general attitude of the Democratic Party in recent years, and until public sentiment had forced them to advocate some measure of preparedness. Only a few months ago the Democratic leader of the House approved the program of preparedness submitted by President Wilson, and said in a public statement:

All the talk and writings by the press and the so-called "patriotic societies" about our "utter helplessness," our "dangerous unpreparedness," "our defenseless condition," our "growing weakness," our "having failen to the third or fourth grade of inferiority in naval strength," etc., is pure tommyrot, based not on a single fact.

To-day he is voting for this bill in order that the Democratic Party may not be attacked too severely in its coming campaign.

Speaking generally, the Democratic Party is taking any posi-tion whatever to be with public sentiment in the coming presi-dential campaign. It is shifting, shambling, hesitating, and reversing. Their course admits of one conclusion, and one conclusion only, and that is, that it is dictated by expediency and not by conviction, and that Democracy will change its position on any subject, provided a passing whim would seem to make such change popular.

Now, Mr. Speaker, with reference to the particular bill before the House, I shall vote for it, and for such amendments as will strengthen it. I not only intend to vote for the cruisers mentioned in the bill, but I intend also to vote for the amendment providing for additional battleships. The Naval Committee has given five months' time in preparing the bill. Representatives of the best naval thought have been before the committee. This is the result of their deliberation. I prefer to take no chances when the honor and the safety of the country may be involved. Since I have been a member of Congress, I have voted for a consistent naval program, and I expect to do so, so long as I am a Member of Congress, while conditions in the world approximate what they are to-day.

The naval bill carries an appropriation of \$241,000,000, the largest appropriation made for naval purposes by any Government, at any time, in the history of the world. At any other time it would make a professional Democratic politician faint The appropriation is made necessary in order to make up for the neglect of the Navy since the Democratic Party came into power in 1911. At that time our Navy was admittedly second in the world; to-day it is a doubtful fourth.

The Government of the United States and the people of the United States can not escape relations with the rest of the While in a sense we may be geographically isolated, yet our people are commingling more and more with the rest of the world, and our wares and merchandise are entering ports to which heretofore they were strangers. In this one war we have seen German ships of commerce driven from the sea, the trade connections of their merchants with the rest of the world suspended if not destroyed, and American goods taking their place. Without a strong Navy the same thing may happen to us. No one can say what may follow the suspension of hostilities in Europe. The United States is the one large country of the world whose people will not be burdened

with debt. It may be the object of envy and the jealousy of other powers. It has a seacoast of thousands of miles to It has two shores of a great continent, dotted with innumerable cities of happy, prosperous people, depending for protection upon the strong arm of the Government. Our commerce is literally covering the ends of the earth; scarcely a spot on the globe but is reached in some way by American goods, the product of American labor. It staggers the mind to think of the amount of foreign commerce to-day, and it is daily growing. Shall we keep it or, by adopting a supine policy, lose it? Much of it must be lost later, but in any event much of it may be retained. Shall we prepare ourselves for any reasonable emergency? To do so our Navy must be strong. Possibly the strongest Navy in the world, as the President would have it, should be our policy. For the present, therefore, in accordance with the judgment of the committee and the judgment of our lest naval experts, I expect to vote for the bill and for such amendments as will make our Navy even stronger.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

HON. EUGENE BLACK.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES, Saturday, May 27, 1916.

Mr. BLACK. Mr. Speaker, I have voted against the river and harbor appropriation bill because I believe that its passage means a large waste of the public funds. There are undoubtedly meritorious projects in this bill, but they are coupled up with others which it seems to me can not be reasonably de-fended on any ground. The chaff is all mixed up with the grain, and in my opinion a careful study of the bill and its different projects will disclose that the proportion of chaff is very large. The system of grouping these worthy projects in an omnibus bill with others of doubtful merit is all wrong. What is the remedy for this evil practice? Certainly it will never be found in continuing to pass these bills without protest. The only way that I know of is to vote against them and go before the people and show the error of the system under which these appropriations are made, until public sentiment shall be aroused to that extent that it will demand that the custom of dumping millions of dollars into some of these so-called navigable rivers will stop.

Two years ago I stated in my platform to the people of the

congressional district which I have the honor to represent, as follows:

I think that a great deal of money that is spent on so-called navigable rivers could be much better spent upon the public highways and in building demonstrative roads in different sections of the Union, and if I am elected to Congress I shall vote for no appropriation to be expended in making a river navigable, unless there is really some reasonable expectation of being able to do so, and this shall apply whether the river is in my own district or the district of some one else.

My views in this respect have undergone no change and I have, therefore, at the present session of Congress voted for the Shackleford good-roads bill and against this river and harbor appropriation bill.

SOME FACTS SHOWING WHY I VOTED AGAINST THIS RIVER AND HARBOR APPROPRIATION BILL.

Mr. Speaker, I have repeatedly stated that I did not oppose any proper appropriations for the improvement of the harbors of the United States, either on the Great Lakes or the ocean seaboard; neither do I oppose appropriations for the proper improvement of our rivers where they are really in the navigable class and where the prospective commerce to be developed will at all justify the expenditure. My attitude on this is perfectly clear. It is simply this: I believe that every dollar of the public money expended should be with the purpose of getting a dollar's worth of return to the people or the Government, either in the near present or the not too distant future. Examine this bill, if you please, and see if it will meet the test of ordinary business judgment and common sense. The bill appropriates in round numbers the sum of \$40,000,000, and is, as I have heretofore stated, an omnibus bill in which all the different projects—good, bad, and indifferent—are grouped together; and if you vote in favor of any, you have to vote for all; and if you vote against any, you must vote against all. My criticism against this bill is not directed against the membership of the committee but against the unbusinesslike method of the way it is made up and the method which has been pursued

for years past in river and harbor appropriations, both under Democratic and Republican administrations. There are projects carried in this bill which have been carried from year to year, which are apparently but little nearer completion than when first begun.

Take the Trinity River, for instance, to which I will refer more at length later on. The third and last survey of that river was made by Col. Riché under the act of March 3, 1899, and he recommended that 37 locks and dams be constructed in the river between Dallas and its mouth in order to give navigation on the river. Thus far five of these locks and dams have been constructed since this report of Col. Riché; and if it takes as long to complete the balance of these locks and dams as it has taken to construct the five which have been built, the improvement will be completed in 105 years from the time it started, and Dallas will have navigation in the spring of the year of 2004 A. D. Long before that time the present inhabitants of the city of Dallas will be gathered to their Fathers and the gentle murmur of the Trinity will be singing requiems besides their graves during seasons of the year when it has sufficient water to ripple at all.

And in my own district the navigation of the Red River from Fulton, Ark., up to Denison, Tex., is another fiction of the imagination that would rival the fables of Æsop or the tales of the Arabian Nights.

Mr. Speaker, the unbusinesslike way of the Federal Government of trying to take up every river and big creek in the United States and placing them on the navigable list reminds me of the foolish poultry raiser who sometimes puts too many eggs under one hen and has the unpleasant experience of seeing none of them hatch. On many of these expenditures the Government gets neither navigation nor reclamation, and the money is wasted

RIVER COMMERCE GROWING SMALLER.

A study of the statistics of river commerce will show that despite the large amounts which are annually appropriated in these river and harbor bills that in most cases the river commerce is growing smaller and smaller each year. If it was even holding its own we might in some measure justify the expenditure. The actual condition reminds me of an incident which occurred during the Civil War. A Confederate captain and his company were on a march to Vicksburg, and when they thought they had traveled long enough to be there the captain stopped at a house by the wayside and inquired how far it was to Vicksburg. "About 2 miles," responded his informer. After going about that distance and still not having reached Vicksburg, the captain stopped at another house and made the same inquiry and received the same response. Going still farther and appearing no nearer his destination, the captain inquired again, and was told that it was still 2 miles to Vicksburg. Well, thank God," said the captain, "we are still holding our wn." Gentlemen of the House, we can not say so much for this river navigation. We are not even "holding our own. Notwithstanding the enormous sums of money expended on some of these rivers, the commerce on them is steadily diminishing.

Take the great Mississippi River, for instance, upon which so many millions have been spent, some of it wisely and some unwisely. St. Louis, on the Mississippi River, has for the past 50 years been the principal origin or terminus of the traffic on our western rivers, and we have the authority of Col. C. McD. Townsend, Army Engineer and president of the Mississippi River Commission, for the statement that in 1880 the river commerce of that port reached the total of 2,120,000 tons and has steadily declined since then to 153,000 tons in 1914. I have seen it stated on what I deem to be responsible authority that commerce on the Mississippi River has decreased 90 per cent in the last 50 years. What is the reason? It is simply this: The railroads are hauling the freight and this commerce has been diverted by the natural law of economics into these quicker and more convenient arteries of transportation.

MISSOURI RIVER.

The improvements for the Missouri River have already cost the Government \$21,000,000, and to carry out the present project will require \$14,000,000 more, making in all \$35,000,000 on the Missouri River. Prof. H. G. Moulton, of the University of Chicago, in an article published in the Journal of Political Science, No. 10, December, 1915, analyzes this Missouri River proposition. For the sake of argument he assumes that the commerce should expand on this river until it finally reaches the enormous total of \$00,000 tons per annum—a result that requires a very large stretch of the imagination to expect. Mr. Moulton points out that even though the traffic should eventually reach this heavy total that the saving in freight

charges of 20 per cent on the average would be only \$200.000 annually. Against this annual saving of freight would be a charge on the Federal Government of \$500,000 for estimated annual maintenance, besides the annual interest on the investment. Spending money like that looks to me to be just about as sensible as trying to fill a barrel through a bunghole with both ends open.

As illustrating the "large and growing" commerce on the upper Missouri River, I quote from a letter from a citizen of Omaha, Nebr., dated August 21, 1915, and which appeared in the Chicago Tribune in August, 1915. The letter says:

In 1915 there is just one steamship on the river between Sioux City and Kansas City. She is the Julia of 10 tons, and she plies between Omaha and Decatur, 60 miles. The United States Government spent many millions of dollars in order that the Julia might operate. On her last trip the Julia brought one passenger, the first and only steamship passenger to land in Omaha in 30 years.

Indeed, I imagine the whir and splash of this wonderful steamship, the *Julia*, sounded quite as "navigation-like" to the people of Omaha as the Government snag boat plying on Red River sounds to the people of my district; or the *Commodore Duncan*, which every once in a while makes a trip up Trinity River, sounds to the people of Dallas.

Now, if we are getting such uncertain results from these expenditures on great rivers like the Mississippi and Missouri, how much more doubtful is the propriety of including a great many of these smaller rivers and streams in this bill. There are many figures which might be cited to show the waste that has attended this field of Government activity in the past. In fact, instance after instance can be cited, using the Government's own engineers' reports as a basis. But I will not encumber the Record with too long a recital of statistical information. However, before I leave this phase of the subject, I will insert some figures which I have received from the clerk of the Rivers and Harbors Committee relating to two Texas projects, viz, the Trinity River and Red River, the latter being in my own district. These statements are as follows:

Appropriations made for Trinity River, 1902-1915.

June 13, 1902	8125, 000, 00
Mar. 3, 1902	
June 30, 1906	111, 000, 00

Grand total _______ 519, 000. 00 Total amount expended up to June 80, 1915 ______ 444, 783. 00

Unexpended on hand _

Now, what commerce has developed on these rivers to justify these expenditures? I quote the exact language used in the report of Hon. Stephen M. Sparkman, chairman of the Committee on Rivers and Harbors, filed with this bill on February 24, 1916, and which information certainly does not come from hostile sources, because Mr. Sparkman was in full charge of this bill and in the passage of which he was the able leader. On page 248 of the report the following commercial statistics are given for the Trinity River:

Commercial statistics.

The commerce transported during the calendar year 1814 consisted mainly of logs in rafts and of merchantable timber, with a small amount of cotton and other farm products.

Comparative statement.	2000	DECEMBER
	Short tons.	Value.
1912	60, 677 27, 147 12, 610	\$768, 115 406, 428 102, 394
Financial summary. Amount expended on all projects to June 30, 1915: New work Maintenance	_ \$1,83 _ 23	0, 595. 06 8, 667. 36
Total	2,069	9, 262, 42

Thus it will be seen from the above statistics that the more work that is done and the more money spent the less the commerce carried on the river. Can we not see at a glance that the commerce on the river fell from 60,677 tons in 1912 to 12,610 tons in 1914, a diminishing of 500 per cent in two years. Of course, it is but fair to state that the people of Dallas do not claim that there will be any commerce on the river of any considerable magnitude until the whole project is completed. But will there be any then in comparison to the cost of improvement? I can not believe so. Dallas is one of the leading cities of the Southwest, progressive in its spirit, and aggressive in its policies. I take off my hat to the city of Dallas. But I do not take it off enough to cause me to support the Trinity River project. In my opinion, the Brazos River project, from Old Washington to Waco, is practically as bad a proposition as the Trinity, and similar figures in con-nection with it could be cited but I will not take the time to do it now. The statistics, however, are easily available to those who desire to study them.

Now, what does this report of Mr. Sparkman say in regard to commerce on Red River above Fulton, Ark.? Here is what the report says on page 250:

Commercial statistics: Navigation on the Red River above Fulton has practically ceased. No steamboats are now in operation, and the rafting of logs has been reduced to an almost negligible quantity.

Need I say more to illustrate the folly of some of the appropriations in this river and harbor bill? I think not. It seems to me the evil is plain enough that even "He that runs may read." There are other Texas projects in this bill which are very meritorious and I am making no criticism of them whatever.

WHAT IS THE REMEDY?

How are we going to stop this waste? How may the reform be brought about? That is the question. In answer, I ask: How have we dealt with the endless confusion in freight rates? It has been by the creation of an Interstate Commerce Commission which is gradually bringing order out of chaos in our transportation charges. What method have we devised to deal with unfair competition and disreputable trade practices? The answer is: The Federal Trade Commission. How is the tariff, which has so long been the football of American politics, to be taken hold of in a sensible way and removed from the bitter partisanship which has so long attended it? We hope to accomplish it by a tariff commission which this session of Congress will create.

Then, why not deal with this waterway proposition in the same way? Why not create a national waterways commission to deal with this matter in an efficient and businesslike manner? The bill introduced by Representative Frear of Wisconsin, H. R. 6821, embodies the idea and deserves the favorable consideration of Congress and thinking people all over the country. In my opinion the annual waste in river and harbor improvement will continue so long as the present method is followed, and can only be stopped by a change in the system. In this way the useless and impracticable projects can be dropped and the good ones go on to completion, and the charge of reckless waste and extravagance, so often made-and many times with such good grounds to support it-should not, and probably would not, any longer

THE PROBLEM OF FLOOD CONTROL.

The House of Representatives at this session of Congress has created the Committee on Flood Control, and this is a matter quite different from the question of navigation, and the jurisdiction of the two committees are separate and distinct. I hope that the creation of this new Committee on Flood Control will result in much good to the country and that it will not adopt the unbusinesslike method of scattering its activities among a multitude of questionable projects, such as has been pointed out respecting river and harbor appropriation bills. The most fertile and productive lands in the United States lie in our river bottoms, and with the rapid growth of our population the reclamation of these lands from overflow is a problem of increasing importance and one that may well engage the attention of the Federal Government and command its activities. We should not wait until the need becomes acute before turning our attention The better grades of public lands have been homesteaded: that is to say, those that are easy and susceptible to cultivation. And now the problems of soil conservation and of reclamation of arid lands by irrigation and swamp and overflowed lands by drainage is beginning to engage our serious attention. It is not a provincial problem; it is one of national concern, and deserves the consideration of our best thinkers and workers.

Public officers should regard themselves as public servants and not merely as local instruments for the consideration of local questions and local issues. In this way only can we adequately meet the problems of the present and provide safely for the future. If we as a Nation have been somewhat careless and indifferent in the past, it is by no means too late to make amends for it by applying ourselves diligently and intelligently to the tasks which

nature and the needs of our people have set before us.

I have supported this flood-control bill, and believe that it is a step in the right direction to solve one of our great national

The Naval Bill-A Response to Hysteria.

EXTENSION OF REMARKS

HON: WARREN WORTH BAILEY. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 29, 1916.

Mr. BAILEY. Mr. Speaker, while this bill runs far beyond what I had hoped it might be, while it is a response to hysteria rather than to the needs of the country, while it yields far more to the demands of the munitions ring and the war traffickers than might have been the case had a loftier courage asserted itself in this House, it is still so far within the lines of moderation as compared with the tremendous and staggering specifications set forth in the program proposed by the Navy Board and the defense leagues that I find myself almost willing to support it-certainly willing to support it as against the alternative of a more costly and ambitious measure such as that advocated by the Republican minority.

THE COUNTRY IN NO DANGER FROM WITHOUT.

This bill would have been impossible before the outbreak of the European war. It is almost unthinkable even now. It is without any other excuse except this, that the people have been frightened into the fantastic belief that we are in some imminent peril. Yet President Wilson himself has said again and again that we are in no danger from without. Nor are we. Let it not be understood that I regard war between this country and another as impossible. Unfortunately, it were only too easily brought about.

What I wish to have understood is, that if we should become embroiled in trouble it will be by reason of some impatience on our part, some lack of forbearance, some insistence on legal or other rights which might better for the moment be foregone. I do not wish to see American rights abandoned. But I do wish to have our country take into account conditions and circumstances as they affect other countries, to meet rashness with reserve, to confront war madness with toleration, to present to the world an example of moderation and good will which in itself will make for better understandings and for adjustments of differences on firmer bases than force could ever afford. We are in no danger of war unless, indeed, we ourselves shall invite it; and I do not believe the Democratic Party will do that. President Wilson has kept us out of war thus far. He has borne himself with splendid poise in a difficult situation. Where another might and almost certainly would have substituted force for peaceful negotiation, the occupant of the White House has pursued a patient course, appealing to reason rather than to arms in bringing other nations to a realizing sense of their obligations to humanity and civilization. The world can never too highly appraise the debt it owes to Woodrow Wilson for the way in which he has steered the ship of state through the troubled waters of recent months. Had a Roosevelt or a Root or a Taft been at the head of our Government during the last year and a half, it is a practical certainty that long before this we, too, would be wallowing in blood along with the other distracted nations which have been drawn into the whirlpool of disaster across the Atlantic.

PILING BURDENS ON THE PROPLE.

Let me repeat, we are in no danger of war. Yet we are providing in this bill for vastly increased expenditures for war purposes. More taxes must be laid upon the people to meet the cost. It may be urged that the additional revenue which must be secured will be wrung in greater part from the men of millions. Perhaps. But about this I am not wholly convinced.

The men of millions are contemplating this possibility with an air so complacent that it makes me feel that they do not ex-Unless they pect the load to rest finally upon their shoulders. have lost their cunting, they will find a way to shift it to the backs of those who toil in the field or at the forge, in the factory or at the mechanic's bench. And in any event, should war come, the men of millions would do little of the fighting. That would devolve upon the boys from the mills and the farms. The soldiers would come not from the bank parlors and the countinghouses of big business but from the shops and stores and factories and fields. Soldiers have always come from the humble walks of life, and they will still come from that source rather than from the ranks of the rich; and the rich for some reason are always less anxious to keep the peace than the poor. The latter have nothing to gain from war. It is all loss for them. But war often brings golden harvests to the rich, and preparations for war are as profitable to the fortunate class as war itself; and here we find the explanation of much of the clamor we have heard during recent months through the metropolitan press for vast and ever vaster expenditures on Army and Navy. These expenditures would put money in the purses of the Morgans and the Rockefellers, the Schwabs and the Garys, the Maxims and the Fricks. This is the whole story.

ARE OLD IDEALS TO BE ABANDONED?

Never before in the history of this country has it been seriously proposed to abandon the American ideals as we are proposing now to do; for if we are to place our reliance in force, and that is what this bill implies, then we no longer stand upon the old ground—the ground that reason and justice must prevail over fire and sword. In all the glorious past of this Republic, until very recent years, our military and naval establishments were relatively negligible. Yet we were held in universal respect. No nation ever dreamed of attacking us.

In all countries and in all climes the American flag was regarded as the emblem of liberty and of opportunity for the humblest. It had no stains of blood upon it. It stood for no gospel except that of right. It typified the best aspirations of a free people who had a passion for the sacred rights of all mankind. And no oppressor ever dared assail it, even though there were neither ships nor armies to enforce its claims upon the respect of the world. It floated fair and free as the symbol of hope and good cheer to the oppressed of every land; and to the American people it was the expression of their undying zeal in the eause of freedom.

THE FLAG CAN NOT HAVE TWO MEANINGS.

Are we now ready to have it take on a different meaning? Are we prepared to have it symbolize something very remote from the old ideals? Is this flag in future years to speak to mankind a message couched in other terms than those that won it the veneration of the lovers of liberty in all climes? It can not be the emblem of two ideals at the same time; it can not symbolize at once the ideal of reason and justice and that of force. Either it must stand for the one or for the other. And I think in cooler moments the people of the United States will demand that it shall continue to stand for the old ideals rather than for the new ideals which have been borrowed from the tyrants of the past.

WHERE HAS THE MONEY GONE?

That the American people have seemed to acquiesce in the militarist program, that they have permitted matters to proceed unchallenged to the present moment, is almost obviously due to the spread of misinformation regarding, first, our state of military and naval preparedness; and, second, the imminence of trouble from without. But if we are unprepared, why are we so? In all conscience we have been spending enough to have given us the defensive equipment which is thought to be ex-

pedient if not necessary.

The total expenditures on the Navy from 1883 to 1915, inclusive, have been no less than \$2,166,040,762.42. What human mind can grasp these figures? What imagination can interpret them to the ordinary intelligence? They simply stagger the thought. To comprehend them is impossible. It were only by translating them into an understandable language that we can get any hold upon them at all. And we can do this only by ascertaining how many homes at \$2,000 each could be built for an equal sum, how many churches at \$10,000, how many school-houses at \$5,000, how many miles of permanent road at \$20.000 a mile, how many libraries at \$100,000 each, how many colleges

at \$500,000 each, and how many hospitals at \$200,000 each. Let the men out on the farm figure this out for themselves. Let the men in mill and mine do the same. Let the workers who foot the bills do a bit of calculating with a view to making an application of this huge sum of money to the useful and productive things which have been burdened to supply it. How would it have been with these had the billions been employed in developing and expanding them instead of resting upon them solely as a burden and a continuing drain?

As I have said before, this bill is predicated on the theory that our country is threatened from without and that we are unprepared to meet a probable emergency. But I have shown that if we are unprepared it is because billions have been wasted, and if billions have been wasted by those charged with the business of the national defense, what guaranty do they give that the money we are now appropriating will not be wasted in the same way? Has the country any assurance that profligacy will not continue to mark the administration of this arm of the public service? Can we count with better reason on prudence, economy, and integrity in future administration than we were able to do in the past? Until we can do so, were it not the part of ordinary business precaution to withhold further grants until there can be some guaranty that they will be faithfully administered?

NATION ALREADY VERY ADEQUATELY PREPARED.

However, I deny that we are unprepared for any probable I deny that we are without adequate defense. Our Navy is undoubtedly equal to, if not greater than, any other afloat with the single exception of that of Great Britain. It is true that the naval experts class our Navy as third, but they base this conclusion on facts which are at least doubtful. assume that Germany has carried forward an augmented building program since the outbreak of the war, yet there is no proof this. It is a bare assumption without any actual fact upon which to base it. It is more probable that Germany has confined its building program to the construction of submarines. has not done so, the Germans are entitled to less credit for intelligence than they are ordinarily given, for why should they build more ships to crowd the Kiel Canal? Why should they construct dreadnaughts that dare not venture out of a protected harbor? Why should she put more money into battle cruisers that would no more venture into the open sea than the ones she had when the war broke out? It is preposterous to assume that Germany has been expending her energies in this direction. reason, on the contrary, to believe that she has learned a lesson which has been lost upon the naval experts of this country, namely, that the submarine has changed the whole theory of warfare and that so far from battleships and battle cruisers being an element of naval strength, they are mere dead weights upon the country which possesses them. Great Britain has a navy twice or possibly thrice as great as that of Germany. Yet Great Britain keeps her fleet in protected waters. as much afraid as Germany is to send her fighting ships into the open sea where mines may be floating or where a submarine may be lying in wait.

WHY THINK IN TERMS OF STRIFE?

But why are we thinking in terms of war? Why are we telling ourselves that we must prepare for defense? Who is harboring designs upon us? Who has any reason to wish to do us injury? What is the fear, in fact, which possesses some of our eminent patriots? Is Germany coming over here on crutches and in wheeled chairs to carry forward her campaign of "frightfulness"? This seems to be the thought in the minds of some of our war lords. They are in mortal terror of this land which is already staggering under the burdens of the most terrible war in all history. They are telling us that Germany is coming hither to hold New York and Boston and Philadelphia to ransom, Yet she has been unable to hold any coast city of the allies to ransom. And it is equally true that the tremendous naval forces of the allies have thus far failed even to attempt so to hold a city of the central powers. Only a distorted imagination could have suggested the thought that Germany has any such design upon us as the prophets of evil would have us believe.

WILSON'S APPEAL TO REASON.

We have had some misunderstanding with Germany, now happily past. It grew out of incidental injuries sustained by Americans who ventured into the zone of danger. Germany never intentionally injured this country or our people. Any injury sustained by our citizens was merely incidental to her war on her enemy. With a wisdom and a prudence which are beyond praise, the President of the United States has reached an understanding with Germany which is satisfactory and which gives assurance that further cause for complaint shall not arise. And no occasion for complaint would have arisen at any time had Americans consulted their country's interests and

safety rather than their own pleasure and convenience. They very deliberately ignored the obligation they owed their Government by running into places of danger, into danger not aimed at them but at the enemies of Germany. Fewer Americans will do this in the future than in the past, for while a formal warning may not have been given them by Congress to avoid taking passage on armed belligerent vessels another way of effecting the same thing through the issuance of passports has happily been

So I deny that we are confronted by any great peril. This is all a herrible fit of hysteria. We have been stampeded into doing a foolish thing, into pursuing a foolish course, into indulging in a foolish extravagance by those who have a sordid reason for raising this hue and cry. There is money in the "preparedprogram for the gun founders, the powder makers, the manufacturers of munitions, the bankers, the high financiers, and the shoulder strappers. The latter are looking for promotions; the former for profits. And there are huge profits in this business of "preparedness." If the masses of the people could only realize how their money is going and where it is going, there would be a revolution in politics or at least in policies before this year is out. But the people know little concerning this mad business. Their sources of information are largely polluted. The great newspapers and the magazines of the country are joined together in the crusade for increased Congress is being mercilessly assailed because it has dared to cross the purposes of the war traffickers. public is being plied industriously with deceitful outgivings intended to excite the apprehensions of the multitude and so to force the hand of this body. Only here and there is to be found a public print which has the courage to stand out against the allied forces of greed and cunning back of this sordid propa-Too much praise can not be accorded papers like the New York Evening Post, the New York Mail, the San Francisco Bulletin, the Detroit News, and other publications which have exerted their influence in the effort to stem the tide of millitarism which has threatened to overwhelm us and to sweep us back into utter forgetfulness of our high ideals and our high

PEOPLE SHOULD HAVE HAD MORE TIME FOR STUDY.

I am sorry that a little more time might not have been afforded the people of the country to study the situation with which we are dealing now in this bill. It is hardly conceivable that they would approve so heavy a draft upon their resources as this calls for-a draft of nearly \$2.50 per capita-if they had before them all the facts to be studied in the calm of a world again at peace, as we all must hope it soon will be.

We have caught something of the infection which prevails in Europe. There is a blood lust here as there is a blood there. Unhappily we have a few men who long to see our there. Unhappily we have a few men who long to see our country mixing in the dreadful fray. Perhaps they are not thinking themselves of making sacrifices in the trenches or on the firing line. Rather they are thinking of sending your boy or mine to face the deadly shell or to go with his ship to the bottom of the sea. I can not myself understand the state of mind of these people. Their point of view is not mine. Their code is not the one which appeals to me. I can think only of the great masses who in any war must pay the dreadful price. And I am here to-day to protest with all my soul and with all my strength against a policy which has war for its ultimate object. For let no one believe that armaments make for peace. They have never done so and they never will. They make inevitably for war. They breed fear, suspicion, ill-feeling, distrust, irritation, and the spirit of reprisal. We can not go far along the course we have chosen without stirring other nations to activity by way of counterpreparation. They will not believe us when we profess that we are thinking only of self-defense. They will have a right to assume that we are concealing our real purpose behind that thin profession, and they will arm themselves to meet a situation which they will believe to be impending.

A RAY OF HOPE.

Yet there is one ray of hope projected by this measure—the hope that it will so arouse the American people by its enormity that they will rebuke the forces which have driven Congress and the country to give it countenance. It is so extravagant in its provisions that it certainly must challenge the heart and the conscience of the masses and arouse them to a sharp resentment of the burdens which it imposes. On the theory that things must become worse before they can become better, it may be possible for some of us to look upon the passage of this measure with some degree of complaisance. Yet this is rather a sorry reliance. It affords only a melancholy satisfaction. To most of us who feel that we are traveling rapidly along

a dangerous path the thought must come that in writing this bill into law we are at the same time hastening the country toward the precipice.

HOW THOUGHTS MAY PROVE FIREBRANDS.

Never truer word was said than this by President Wilson, that "remarks start fires." And when these remarks are written into law, how much more likely they are to kindle a flame. "There is tinder lying everywhere," said the President, "not only on the other side of the water, but on this side of the water; and a man that spreads sparks may be responsible for something a great deal worse than burning a town on the Mexican border. Thoughts may be bandits," he continued; "thoughts may be raiders; thoughts may be invaders; thoughts may be disturbers of international peace; and when you reflect upon the importance of this country keeping out of the present war you will know what tremendous elements we are all dealing with. We are all in the same boat."

Yes; we are all in the same boat, and rocking that boat is the most dangerous of pastimes. I would that the thoughts in which we are indulging were of peace rather than of war, of kindly offices rather than of suspicion and prejudice, of amity rather than of hatred, of good will rather than of hostile threats. It seems to me that the thought contained in this bill may be interpreted abroad as we would not have it interpreted; that it may disturb rather than allay feeling; but, happily, it contains one reassurance in the provision which empowers the President to call a congress of the nations at the close of the great war to consider the matter of disarmament. Let us hope that out of such a congress may come action which shall stop forever the mad race in which we have at last joined and which can have but one other end-that of national bankruptcy.

Speech of President Wilson.

EXTENSION OF REMARKS

HON. WILLIAM E. COX, OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 29, 1916.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech of the President delivered Saturday night at the peace meeting in Washington.

The speech is as follows:

SPEECH OF PRESIDENT WILSON, DELIVERED AT THE PEACE MEETING IN WASHINGTON.

When the invitation to be here to-night came to me, I was glad to accept it-not because it offered me an opportunity to discuss the program of the league-that you will, I am sure, not expect of me-but because the desire of the whole world now turns eagerly, more and more eagerly, toward the hope of peace. and there is just reason why we should take our part in counsel upon this great theme. It is right that I, as spokesman of our Government, should attempt to give expression to what I believe to be the thought and purpose of the people of the United States in this vital matter.

This great war that broke so suddenly upon the world two years ago, and which has swept within its flame so great a part of the civilized world, has affected us very profoundly, and we are not only at liberty, it is perhaps our duty to speak very frankly of it and of the great interests of civilization which it affects.

RIGHTS OF NATION AFFECTED.

With its causes and its objects we are not concerned. The obscure fountains from which its stupendous flood has burst forth we are not interested to search for or explore. But so great a flood, spread far and wide to every quarter of the globe, has of necessity ingulfed many a fair province of right that lies very near to us.

Our own rights as a Nation, the liberties, the privileges, and the property of our people have been profoundly affected.

are not mere disconnected lookers-on,

The longer the war lasts the more deeply do we become concerned that it should be brought to an end and the world be permitted to resume its normal life and course again. And when it does come to an end we shall be as much concerned as the na-

ARE PARTNERS WITH THE REST.

We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and of

One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future, as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a

It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for

MIGHT HAVE AVERTED WAR.

If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the policies and practices against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel which might have averted the struggle would have been considered worth weighing and regarding.

And the lesson which the shock of being taken by surprise in a matter so deeply vital to all the nations of the world has made poignantly clear is that the peace of the world must henceforth depend upon a new and more wholesome diplomacy.

Only when the great nations of the world have reached some sort of agreement as to what they hold to be fundamental to their common interest, and as to some feasible method of acting in concert when any nation or group of nations seeks to disturb those fundamental things, can we feel that civilization is at last in a way of justifying its existence and claiming to be finally established.

MUST BE GOVERNED BY HONOR.

It is clear that nations must in the future be governed by the same high code of honor that we demand of individuals.

We must, indeed, in the very same breath with which we avow this conviction admit that we have ourselves upon occasion in the past been offenders against the law of diplomacy which we thus forecast; but our conviction is not the less clear, but rather the more clear on that account.

If this war has accomplished nothing else for the benefit of the world, it has at least disclosed a great moral necessity and set forward the thinking of the statesmen of the world by a

Repeated utterances of the leading statesmen of most of the great nations now engaged in war have made it plain that their thought has come to this, that the principle of public right must henceforth take precedence over the individual interests of particular nations, and that the nations of the world must in some way band themselves together to see that that right prevails as against any sort of selfish aggression; that henceforth alliance must not be set up against alliance, understanding against understanding, but that there must be a common agreement for a common object, and that at the heart of that common object must lie the inviolable rights of peoples and of man-

NATIONS ARE OUR NEIGHBORS.

The nations of the world have become each other's neighbors. It is to their interest that they should understand each other. In order that they may understand each other, it is imperative that they should agree to cooperate in a common cause, and that they should so act that the guiding principle of that common cause shall be even-handed and impartial justice,

This is undoubtedly the thought of America. This is what we ourselves will say when there comes proper occasion to say it. In the dealings of nations with one another arbitrary force must be rejected, and we must move forward to the thought of the modern world, the thought of which peace is the very atmosphere. That thought constitutes a chief part of the passionate conviction of America.

RIGHTS OF THE LITTLE NATIONS.

We believe these fundamental things: First, that every people has a right to choose the sovereignty under which they shall live. Like other nations, we have ourselves, no doubt, once and again offended against that principle when for a little while controlled by selfish passion, as our franker historians have been fight to prevent the adoption by Congress of a provision in the

honorable enough to admit; but it has become more and more our rule of life and action. Second, that the small States of the world have a right to enjoy the same respect for their sover-eignty and for their territorial integrity that great and powerful nations expect and insist upon. And, third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

So sincerely do we believe in these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

READY TO CHECK AGGRESSION.

There is nothing that the United States wants for itself that any other nation has. We are willing, on the contrary, to limit ourselves along with them to a prescribed course of duty and respect for the rights of others which will check any selfish passion of our own as it will check any aggressive impulse of

If it should ever be our privilege to suggest or initiate a movement for peace among the nations now at war, I am sure that the people of the United States would wish their Government to move along these lines:

First. Such a settlement with regard to their own immediate interests as the belligerents may agree upon. We have nothing material of any kind to ask for ourselves, and are quite aware that we are in no sense or degree parties to the present quarrel. Our interest is only in peace and its future guaranties.

Second. A universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world, and to prevent any war begun either contrary to treaty covenants or without warning and full submission of the causes to the opinion of the world—a virtual guaranty of territorial integrity and political independence.

ONLY AVOWS A CREED.

But I did not come here, let me repeat, to discuss a program. I came only to avow a creed and give expression to the confidence I feel that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all Governments, when coercion shall be summoned not to the service of political ambition or selfish hostility but to the service of a common order, a common justice, and a common peace.

God grant that the dawn of that day of frank dealing and of settled peace, concord, and cooperation may be near at

hand!

The Postal Service.

EXTENSION OF REMARKS OF

HON. HALVOR STEENERSON, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 29, 1916.

Mr. STEENERSON. Mr. Speaker, the House will recollect that on March 17 last I called attention to the Senate amendment to House bill 562, conferring on the Post Office Department the power and authority in their discretion to abolish any post office in the United States and make it a substation of some other selected office.

The conferees on this bill of which I had the honor to be one, eliminated this extraordinary provision, and when the report came up for action I had the honor to address the House in explanation of this extraordinary proposal, and I was glad to see that finally my views and the views of my colleagues on the committee received the sanction of both Houses of Congress, and the proposition defeated.

The people are just beginning to realize the significance of this "joker," and I am receiving letters and clippings on the

subject. Some of these I here insert:

[From St. Paul Pioneer Press, May 14, 1916.] STEENERSON SAVES THE POSTMASTERS-MINNESOTAN DEFEATS PROPOSITION TO ABOLISH ALL EXCEPT 3,000 POST OFFICES.

WASHINGTON, May 13.

Post Office appropriation bill to abolish all except 3,000 post offices and throwing the appointment of successors to the branch offices proposed to be created under the civil-service laws.

ORIGINATED IN SENATE.

The provision, which was put into the bill by the Senate, was rejected by the conferees in their report, and the House adopted the report with the objectionable provision eliminated. Mr. Steenerson pointed out the effects of the provision to the House just before the vote on the conference report was taken, saying, among other things:

FAVORS CARPETBAGGERS.

"This is not a civil-service measure at all. The effect would be that you would fill these places by creating vacancies in them, and I believe that is the real motive behind this proposition. Under this proposition you could send these carpetbaggers all over the United States to fill places in the North and West.'

[From Minneapolis Journal, May 15, 1916.] STEENERSON SAVES POSTMASTERS' JOBS IN 56.000 TOWNS-MINNESOTA CONGRESSMAN DEFEATS PLAN TO ABOLISH FOURTH-CLASS OFFICES-REPRESENTATIVE COMMENTS UPON TENDENCY TO INCREASE DEPART-MENT POWERS.

WASHINGTON, May 15.

Representative Halvor Steenerson won his fight to prevent the abolishment of fourth-class postmasterships throughout the At the instance of the Post Office Department the Senate placed in the bill to increase the limit of postal savings to \$1,000 a provision authorizing the establishment of a central office in each county in the country, with the other post offices as branch stations.

Although the same provision had been submitted to the House Post Office Committee and rejected, the House Members generally were not informed upon it, and the Minnesota Member had to make his fight practically alone for a time, when he won over the Democratic House conferees.

When the conference report was before the House Thursday Representative Steenerson made a short speech telling what the department was seeking to accomplish.

CRITICIZES INCREASE OF POWER.

"The most serious objection to the proposal," he said, "lies in the fact that it is along the lines of many others that are brought here every session of Congress for an increase in the discretionary power of the department. It is advocated as 'civil-service reform.' We are told that this will promote efficiency.

"Every time we unduly increase the discretionary power of administrative officers we reap trouble. Look at the Rural Delivery Service. The law simply authorizes the department to establish it. There are no restrictions except those prescribing the salaries. The department has used its large discretionary The department has used its large discretionary power, and now see where we are. Department officials have sought to revolutionize that service. Every time we get a new Postmaster General he thinks it is his function to turn things upside down, to undo everything that has been done by his predecessor, Republican or Democrat. Hence we have an out-cry on both sides of the Chamber against the changes in the Rural Delivery Service, and bill after bill is introduced to limit the discretionary power of the department, and the people are up in arms.

JOBS FOR MORE DEMOCRATS.

"Take this proposition. It would have wiped out 56,000 postoffices, creating vacancies that would be filled by worthy Democrats, who would all be included in the classified service, to serve the Government for life. As to efficiency, who can tell? Assertions that the efficiency of the service would be improved are purely speculative. Results heretofore reached after an enlargement of the discretionary power of the department certainly have not been satisfactory.

"It would result in a change of personnel in the public service. If the department wanted to make a change in Crookston or in any other office, the department could send a man up from Virginia. Out in the Northwest, where people make money and can not afford to be in the public service, the offices will be filled from States near Washington, where everybody seems willing to serve the public in the civil service."

> NORTHFIELD COMMERCIAL CLUB. Northfield, Minn., May 26, 1916.

Hon. HALVOR STEENERSON, M. C., Washington, D. C.

Sin: While I do not live in your district, I admire a Congressman that acts and makes a fight on the floor and in committee when a bill is being considered that is of vital interest to all the people—more especially the great commercial interest | and whose timidity, fostered by a half century of special privi-

of the country. I have reference to the change proposed in our Postal or Post Office Service.

You made a gallant fight, and I know that I speak for a goodly number of our citizens. I hardly think the press has given the matter the publicity that the bill warranted as to the bad condition that such a law would bring to the people.

It was only a few days past that I was talking to Mr. Charles Dougherty, who has been alderman from his ward here in the city for 19 years and is now our postmaster. He can not speak too highly of you and your fight. He says the masses of the people did not comprehend what a bad thing it would have been for the people. When one tackles our great, tried, and good Postal System in a radical way, the people "holler."

We get the Congressional Record regularly here at the club and many of our people keep in touch with Congress. This letter has been requested written by many of our citizens, and it was my sentiment.

With best wishes, I am, sir,

Very respectfully,

J. A. LAWRENCE.

The Democratic Party.

EXTENSION OF REMARKS

HON. JOSEPH J. RUSSELL, OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 30, 1916.

Mr. RUSSELL of Missouri. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a speech of Hon. Frank E. Doremus, Member of Congress from the first congressional district, as temporary chairman at the Democratic State convention held at Lansing, Mich., May 17, 1916.

The speech is as follows:

SPEECH OF HON. FRANK E. DOREMUS, MEMBER OF CONGRESS FROM FIRST DISTRICT, AS TEMPORARY CHAIRMAN AT THE DEMOCRATIC STATE CON-VENTION, HELD AT LANSING, MICH., MAY 17, 1916.

The representatives of the Michigan democracy assemble today under unusual circumstances. Not before in 60 years has Michigan had a Democratic governor and the Nation a Democratic President at the same time. We congratulate the people upon the record of Woodbridge N. Ferris in the executive office. His administration has reflected credit upon the State and won the commendation of members of all political parties. His unselfish devotion to duty, his comprehensive grasp of the affairs of our various institutions, his rugged honesty, and his splendid ability have united to make him one of the best governors the State of Michigan ever had. The people are awaiting an opportunity to give him another term, and I think I voice the unanimous sentiment of this convention when I express the hope that he will consent to again lead his party in this State.

When President Wilson took the oath of office on the 4th of 1913, and beckoned all forward looking men to his side neither he nor the country understood the tremendous task that lay before him. Peace reigned within our own borders and throughout the world. The dark shadow of war had not thrown itself athwart the path of civilization nor given an intimation of the coming storm. To the solution of domestic problems and the correction of long prevalent abuses none could foresee that there would be added the tremendous responsibilities incident to a great world war. Upon this occasion we entertain a deep feeling of satisfaction and pride, shared in, we believe, by the great majority of our countrymen, as we attempt to assess at their true value the achievements in both theaters of

The Democratic Party came into power pledged to the correction of various abuses which had resulted from 16 years of uninterrupted Republican impotency, incompetence, and misrule. It was a time of social unrest. The public will as expressed at the ballot box had been ruthlessly cast aside by the party in power, and Republicans as well as Democrats were openly charging that our legislation was being written by the servants of special privilege and at the dictation of their masters. The power of the invisible government had reached its height, and the people had become convinced that our legislation reflected the desires of our unseen rulers rather than an expression of the popular will.

They had seen their rights ignored in tariff laws enacted to satisfy the greed of those who had grown rich through favor,

lege, made them fear to meet competition in the open markets of the world. They had seen tariff taxes, under the guise of protection, raised far above the legitimate needs of American in-The popular opinion of the last Republican tariff law was well expressed by the late Senator Dolliver, one of the greatest Republicans of his time:

Two great hoaxes occurred last summer. One was the discovery of the north pole by Dr. Cook: the other was the downward revision of the tariff by the Senator from Rhode Island. Each was warmly congratulated by the highest official of the Government.

Three times within the memory of living men industry had been paralyzed, business prostrated, and millions of men thrown out of work under a panic-breeding banking and currency system that the Republican Party had not the capacity to change. had seen thousands of men in our large cities tramping the streets and begging for work. They had seen honest and re-sponsible business men, with ample assets, refused credit to which they were fairly entitled. Time and again under this pernicious system, which enabled a few men to control the money and credit of the Nation, they had seen honest merchants thrown into bankruptcy, sound banks close their doors, and great industries fall like a house of cards, carrying misery, desolation, and want to millions of our people. In recent years the most painful example of the evils and abuses of that system was furnished by the great Roosevelt panic of 1907.

They had seen our natural resources, the heritage of all the people, given away to be exploited for private gain. They had seen the adoption of the parcel post prevented by the representatives of the express companies. They had seen the Nation's Capitol swarming with the paid lobbyists of special privilege.

In short, the people had lost confidence in the party in power and believed that their Government was rapidly drifting away from them. Charles Sumner Bird, a prominent Massachusetts Progressive, has said:

The 4,000,000 Republican voters who left the Republican organiza-tion in 1912 did so because they believed it had outlived its useful-ness—had lost its vision and its intimate contact with the people.

As one views the violent opposition of the Old Guard to much of the progressive legislation of the past three years, notably the Federal reserve act, and its frantic efforts to again get its foot in the door, he is unable to discover any evidence of a recovery of vision or of a more intimate contact with the people.

To the work of remedying these evils and enacting legislation long demanded by the people, President Wilson and a Democratic Congress addressed themselves. Let the record itself answer the question whether we have dethroned the rule of special privilege and set up a reign of the people.

THE TARIFF LEGISLATION.

When the Democratic Party came into power it found in force the obnoxious Payne-Aldrich tariff law, which the people had so thoroughly repudiated that the party that enacted it carried only two small States, Utah and Vermont, in 1912. That law represented a shameful betrayal of a solemn party pledge. The American people in no uncertain tones had demanded its repeal. In enacting the present tariff law the Democratic Party redeemed its promise to the people, and no man has yet asserted and none will ever charge that a single section or line of the law was dictated by special interests. It reduced the tariff tax upon neces sities, increased it upon luxuries, and provided for \$100,000,000 of revenue by a tax upon incomes. Though the European war has operated to reduce the customs receipts it has yielded more revenue from taxes on imports and incomes than its predecessor did from custom duties and corporation taxes. Despite all that has been said about the Underwood-Simmons law, there is more money in the Federal Treasury to-day than there would have been had the Payne-Aldrich law remained in force.

Our opponents will charge in the coming campaign that when the war in Europe is over the present tariff law will be proven a failure. It is beyond the power of any man to foretell the conditions that will exist then, but whatever they may be the Democratic Party is preparing to meet them. Before this session of Congress adjourns there will be enacted an antidumping law to protect American manufacturers against unfair competition from abroad and a law creating a permanent nonpartisan tariff commission, clothed with ample power to investigate every phase of the tariff question, including the tariff relations between the United States and foreign countries, preferential provisions, the effect of export bounties, and all the conditions, causes, and effects relating to competition of foreign industries with those of

the United States.

Not only that, but if the pations of Europe, in an effort to regain markets lost during the war, should inaugurate a system of export bounties, the Federal Trade Commission, through its power to suppress unfair or ruinous competition, can meet any

conditions that such a policy might create. Thus will the Democratic Party, with farseeing statesmanship, provide the machinery by which to protect America's great productive forces when the war is over and cause to wither upon the tongue of him who utters it the dishonest charge that the Democratic Party is a free-trade party.

THE FEDERAL RESERVE ACT.

For 50 years this country had endured the baneful effects of an inelastic currency and an elusive bank reserve. The nationalbank currency, being based upon bonds issued during the Civil War, could be neither expanded nor contracted to meet the changing needs of business. The country banks were permitted to deposit their funds in the reserve and central reserve banks of our large cities and count them as though on deposit in their own vaults. These reserves of the country banker, attracted by the interest rates, went to swell the deposits in the vaults of the big banks of New York. On the 14th of March, 1914, eight months before the Federal reserve law went into operation, the banks of New York City alone held \$836,000,000 of the reserve funds of interior banks, with loans against the interior banks of \$192,000,000. It had already been developed by the monetary investigation that on November 24, 1912, the custodians of these reserves had loaned to Wall Street speculators \$240,000,000.

Pause for a moment and reflect what such a condition meant to legitimate business and industry. These and many more millions, representing the accumulation of American thrift, industry, and labor and the working capital of business men in every quarter of the country, were thrown into the gambling vortex of Wall Street, far removed from those to whom it belonged and unavailable for business uses when required.

Panics were the natural offspring of such a pernicious and unscientific system. In its operation it wrecked more industries, ruined more honest merchants, closed the doors of more reputable banking houses, and threw more men out of employment than any other single agency since the foundation of the Government. No one was immune from its blight. None could

escape its devastating sway.

When the country banks, anxious to meet the local demands for credit, drew upon the banks of the big financial centers for their own money, these banks called their loans to the speculators, thus contracting their credit. Interest rates rose by leaps and bounds, panic ensued, banks everywhere stopped payment, and merchants, manufacturers, farmers, and laborers were crushed beneath the débris of the most rotten financial structure ever erected by the folly of government and supported by the avarice of men.

The Democratic administration supplanted this panic-breeding, prosperity-destroying system by the Federal reserve actone of the crowning achievements of American statesmanship. It gave to the country an elastic currency, based upon sound commercial transactions and ample for every legitimate requirement—a currency that appears when needed and disappears when no longer required-every dollar of which is as good as a Government bond. Hon. Carter Glass, chairman of the committee that prepared this great constructive measure, well illustrated the difference between the old system and the new when

"So that where the banks of a given community with \$5,000,000 of liquid commercial assets could not, under the old system, in time of stress get a dollar of currency on their holdings, because there was no source of supply, the same banks, under the Federal Reserve System, could exchange their \$5,000,000 of liquid assets at a Federal reserve bank for \$5,000,000 of the best currency on earth, less a fair rate of discount. That one reform, gentlemen, represents the difference between disaster and success.

But this is not all. Challenging the powerful interests that had before dictated the financial policy of the Government, the Democratic Party abolished the ancient bank reserve system and established 12 regional reserve banks. These banks are to-day the legal custodians of the reserve funds of the country and the great rediscount agents of the Nation. They are attendants upon the legitimate wants of business instead of conservators of the interests of Wall Street gamblers. Under the new system it is impossible to centralize the financial resources of the country in a single locality. The country is no longer dependent upon the financial centers, but the financial centers are dependent upon the country. The party in power has set the business of the Nation free by emancipating it from a financial despotism.

Yet the Republican Party, which permitted this demoralizing system to exist, in spite of a notorious and thoroughly recognized necessity for its repeal, and winked at the evil practices and disastrous consequences directly attributable to it, claim to be the only party with sufficient intelligence to run the Government. Why, my friends, this one act of omission ought to exclude that party forever from the control of the Government.

LEGISLATION FOR THE FARMERS.

The Democratic Party has been particularly mindful of the interests of the farmers. It has passed the agricultural extension act, which provides for Federal cooperation with our State agricultural colleges in the work of soil treatment, fertilization, crop rotation, and marketing. It has provided for the expansion of farmers' credit through the Federal reserve act, and will, I anticipate, supplement this with a general rural credits law before this session of Congress adjourns. It has taken effective steps to stamp out hog cholera, which cost the country \$65,000,000 in 1913. It has created a Bureau of Markets in the Department of Agriculture for the introduction of more economical methods of crop distribution, and recently the House of Representatives passed a bill for the standardization of grain and cotton. It was not until the Democratic Party obtained control of the lower House of Congress that the farmers were given the great boon of the parcel post, and since that time it has been extended and improved. The record of no administration for 50 years even approximates the great benefits that have been conferred upon the agricultural classes by the present administration.

THE NATIONAL DEFENSE.

Congress is now working on a plan for the national defense. The program includes a substantial increase in the Regular Army, the federalization of the National Guard, an enlargement of the Navy, the strengthening of land fortifications, and a comprehensive plan for mobilizing the industries of the country. While this country will use every honorable means to avert war, it must prepare to defend itself if attacked. Should we ever be threatened by a great power, our first line of defense will be the Navy and land fortifications amply able to protect our extensive coast lines,

THE MERCHANT MARINE.

Closely associated with our national defense is the question of restoring our ocean carrying trade. We need ships to carry our products to foreign markets, and which, if necessity should require, can be used as auxiliaries to the Navy. A program is now before Congress, strongly backed by the administration, and which I am confident will be enacted into law, to restore the American flag to the high seas and wrest our ocean-borne commerce from the control of foreign shipowners. This program contemplates the development of a merchant marine by private capital if it cares to take the initiative, but by the Federal Government if private capital fails to respond.

We must have a merchant marine worthy of the greatest nation in the world. The necessity for it is so imperative that we can no longer quibble over the means of getting it. This law will free our export and import trade from foreign domination and the Stars and Stripes will again be seen on every one of the seven seas.

OTHER REFORMS.

It will be impossible within the limits of one speech to detail all the great constructive and reformatory legislation of the past three years. The system of Cannonism in the House of Representatives, which made one man the practical dictator of all legislation, has been destroyed, thus making the House of Representatives once more a deliberative body responsive to the will of the people. A Federal Trade Commission has been created as a great cooperative tribunal for the business interests of the country. The physical valuation of railroads as a basis for rate making has been authorized and is now in progress. A Government-owned railroad is being built in Alaska and the untold resources of that Territory will be developed in the interests of all the people.

OUR WONDERFUL PROSPERITY.

The American people have had their inning. This record to which I have briefly referred forms the greatest chapter of legislative achievement in our history. It is a record that causes the American citizen to hold his head a triffe higher, quicken his step, increase his confidence in republics, and pledge anew his faith in representative government. And with this record before us and on the threshold of a new campaign we may well ask the question, What will it profit the people to return the Republican Party to power? We look around us and behold a nation of 100,000,000 happy and contented people. What could we ask for ourselves that we are not already enjoying? If our opponents could guarantee to set up an Aladdin's lamp on every crossroad, what could they give us that is not ours to-day? In the cities labor is employed at the highest wages ever received and our farmers are enjoying their greatest era of prosperity.

For the calendar year ended December 31, 1915, our total exports reached the astounding sum of \$3,547,480,000, exceeding by more than a billion dollars the record of any previous year. I apprehend our opponents will proclaim in the coming campaign that this was due to the shipment of war munitions, yet explosives and firearms contributed but 5½ per cent to this great volume of exports. Our shipments abroad of breadstuffs alone were \$527,800,000, or nearly three times the value of munitions exported.

The total resources of our Federal banking system on March 7, 1916, the date of the last call, were \$13,827,000,000, an increase of \$3,000,000,000 over the national banking resources as shown by the corresponding call of 1912. In four years the aggregate individual deposits have grown \$2,000,000,000, or 35 per cent.

In Michigan the 99 national banks have become 106 member banks under the Federal reserve system. Their total resources have grown from \$182,500,000 in 1912 to \$257,500,000 in 1916—an increase of 30 per cent. The individual deposits have shown a growth in that period of over \$40,000,000, or 30 per cent. That Michigan producers and manufacturers have prospered under this administration is shown by the fact that exports from this State to foreign markets in the calendar year ended December 31, 1915, aggregated \$157,648,000, or more than 50 per cent above the record for any previous year.

The resources of the national banks of the United States, after 18 months under the Federal reserve law, exceeded by \$3,000,000,000 the combined resources of the Bank of England, the Benk of Germany, the Bank of France, the Bank of Russia, the Swiss National Bank, the Bank of the Netherlands, and the Bank of Japan.

The prosperity of this Nation is upon an enduring basis. Let me quote from a speech delivered by Mr. Jacob H. Schiff, a prominent New York banker and lifelong Republican, delivered at a banquet of the New York Republican Club in January last:

I want to explain that nothing can stop that great prosperity we now have except a renewal of tariff agitation in the next campaign. Standing here on holy Republican ground I say without fear or favor if you renew in the next presidential campaign the tariff agitation of the past, if you threaten the country and show it you want a renewal of special privilege and high protection, the people will have none of it. The people have learned; the workmen and the farmers have learned and they can not be misled any longer. I do not say that because I love the Republican Party less but because I love it more. My heart is for the Republican Party but my common sense makes me a Democrat.

When the war is over and America's productive forces begin to supply the multiplied wants of stricken Europe, this country will enter upon an era of production far exceeding the marvelous activities of the present.

THE PAY ENVELOPE.

The American workingman's pay envelope is fatter than it ever was before. The first day of the present month marked an increase in wages unprecedented in the history of the world. According to the Chicago Tribune, this wage increase affected 706,500 employees, who will receive increased wages aggregating the vast sum of \$64,426,464 annually. This estimate is supported by the authority of the United States Bureau of Labor Statistics, the Federal Reserve Board, and the American Federation of Labor. It applies to practically every branch of industry in the United States, including the building trades, the steel workers, the cotton operators, the coal miners, the woolen-mill operators, the paper makers, the machinists, and the electricians, Every business and industry in the United States is enjoying the fruits of peace and prosperity.

Carrying his full dinner pail in one hand and the American

Carrying his full dinner pail in one hand and the American flag in the other, and shouting the slogan, "Peace-prosperity-Wilson," the American workingman will march to the polls in November to indorse the program of social justice enacted into law by the national Democracy.

PRESIDENT WILSON'S EFFORTS TO PRESERVE PEACE.

We assemble to-day amid conditions unprecedented in history. For nearly two years every great nation in Europe has been shedding the blood of her sons in a titanic struggle for national existence. On hundreds of battle fields countless lives have been sacrificed and numberless homes desolated forever, and the reign of horror, grief, destruction, and famine continues with unabated furor. In this great war for the mastery the only protection of neutral nations against being drawn into its horrors has been the long-established rules of international law. Unfortunately for us the various belligerents have sought to place a construction upon those rules that suited their own caprice or best served their own purposes, regardless of the rights and immunities of neutral nations. They have gone still further and arbitrarily set up their own rules of conduct in defiance of international law, the only chart by which to guide nations in their intercourse with each other. There ought to be no man so blind that

he can not see that such a course, if persisted in, will sooner or later extend the theater of war to every country in the world and involve the earth in a chaos of death and destruction from which it may well be doubted if civilization could emerge

International law, based upon centuries of experience and dictated by the highest considerations of justice, has been adopted to preserve peace and order among nations. Municipal law, grounded upon the experience of mankind and dictated by the same considerations, has been adopted to preserve peace and order among individuals. The breaking down of international law would have the same effect upon nations as the destruction of municipal law would have upon the separate units of organized society.

Unthinking men speak lightly of breaches of international law, little realizing that its persistent violation is the sure forerunner of war and that insistence upon its observance is the only way to preserve peace. These men may think they are the friends of peace, but in reality they are the unconscious exponents of war.

In a time like this the continued observance of the well-established rights of neutral nations makes for peace. The continued violation of those rights leads to war. This being true it follows that he who insists upon a strict adherence to the principles of international law seeks to avoid the causes of war and becomes the true friend of peace.

Such a friend of peace is Woodrow Wilson, who for nearly two years, through the shifting winds of circumstances and the cross currents of vituperative criticism has sought to keep our ship of state with its 100,000,000 passengers off the cruel rocks

True, there has been more or less mutiny on board, but much of this has come from a few passengers, who, through political misfortune, were not captains themselves or members of the

President Wilson has been viciously assailed for his extreme patience in handling our intricate foreign problems. He has been sneeringly referred to as "the note writer" and ambitious men have denounced him as a coward and poltroon. These things, however, are not new in American history, besides, the people must constantly bear in mind that this is a presidential year, and that numerous gentlemen are abroad in the land who think they would make better Presidents than Mr. Wilson.
In the New York Tribune of September 6, 1864, we find a col-

lection of some of the names applied to Lincoln. Remember that 1864 was also a presidential year. According to the Tribune here are some of the names used by those who were bent upon destroying Lincoln: "Filthy story teller," "despot," "liar," "thief," "braggart," "buffoon," "usurper," "monster," "perjurer," "robber," "swindler," "tyrant," "fiend," "butcher."

These verbal assaults upon Lincoln, however, availed his op-ponents nothing. The people believed in the patience, courage, and patriotism of the man and he was triumphantly reelected. To-day, as surely as the sun shines, history is repeating itself. The oldest voter who will go to the polls in November will be able to recall but two Presidents to whom the acid test of statesmanship has been applied-Lincoln and Wilson. And as the plain people of America came to the support of Lincoln in those dark days of the Republic, so will they rally around the standard of Wilson, who, with fortitude and statesmanship, has sustained our noblest national traditions and preserved his country in peace and honor in the midst of a world gone mad with war. As Emerson said of Lincoln, so the historian will write of Wilson:

He is the true history of the American people of his time.

If you sought the most commanding figure in the world to-day you would not find him on the battle fields of Europe but in the Executive Mansion at Washington, applying those principles of humanity, liberty, and justice, which are the greatest hope for the future of civilization.

OUR TROUBLE IN MEXICO.

Again, there are those who look with covetous eyes upon things that do not belong to them, and who, regardless of the sacrifice of American boys and the desolation of American homes, would force our country into a policy of territorial aggression, with its attendant opportunities for personal aggrandizement.

The thoughtful man views the Mexican situation with an eve to the future. He is considering whether, if we intervene in Mexico for the purpose of restoring order and establishing a stable government, we will retire when our purpose has been accomplished. He realizes that it would take a long time. Knowing something of history, he is familiar with the way those things usually work out, and he is wondering if history will repeat itself in Mexico. He is thinking of the obligation that rests upon the United States, under the Monroe doctrine, to protect the territorial integrity of the Western Hemisphere, and of how

permanent occupation would affect our influence in South America if we were ever called upon to defend that doctrine. He is wondering if in the years to come any Republic of Central or South America will be called upon to prefer a land robber of the Old World to a land robber nearer home.

It may be that we will have to intervene in Mexico, but if we do it will be in response to a grave national duty and after every honorable means has been employed to avoid it.

When nations stop taking what is not theirs war will cease and peace will reign supreme. If the ministries of Europe had been dominated by men of Woodrow Wilson's high ideals the

world would be at peace to-day.

There are those who have criticized the President for changing his mind. In the days of the Civil War the same criticism was leveled at Lincoln, who answered by saying:

I am not controlling events, but events are controlling me.

And so at this time, when President Wilson's enemies criticize him for changing his mind, we may properly respond as Lincoln did: "The President is not controlling events, but events are controlling him."

Again I ask, what could the people gain by returning the Republican Party to power?

With war disturbing commercial relations and affecting the revenues of every country in the world, do they want another job of tariff tinkering, superintended by "Boss" Penrose, of Pennsylvania, who would be chairman of the Senate Finance Committee, and Joseph W. Fordney, of Michigan, who would be chairman of the House Ways and Means Committee?

Do they want to go back to the discredited panic-breeding banking and currency law of unpleasant memory?

Do they want the income tax abolished?

Do they want to turn the Government over in a time like this to men who, fired by political ambition, have viciously assailed Woodrow Wilson for a course of conduct that has kept his country out of the European war?

Do they want "action" in Europe as many of these men have

demanded?

Do they want to trust the destiny of this Republic to the men whose utterances for a year and a half will bear no interpretation but the interpretation of war?

Do they want to exchange prosperity and peace for industrial

uncertainty and the dangers of war?

Gentlemen of the convention, I think these questions are already answered in the hearts and minds of the American people. In the campaign of 1864 a great Lincoln mass meeting was held at Cooper Union Institute in New York City. Upon that occasion the declaration that caused the greatest enthusiasm

As the President has stood by the country in the hour of trial, so stand we by the President.

In the coming election the people will again stand by the President. Forgetting their political differences and moved by the patriotic sentiment, America first and party afterwards, they will indorse by an overwhelming majority the man who with infinite patience, quiet courage, and masterly ability, and without the sacrifice of national honor, has successfully guided his country through storm and stress and danger into the quiet barbor of peace, safety, and prosperity.

Statement of Mr. W. S. Isham.

EXTENSION OF REMARKS

HON. OSCAR CALLAWAY, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. CALLAWAY. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD, I include the following:

COMMITTEE ON NAVAL AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, April 4, 1918.

The following statement was submitted by Mr. W. S. Isham in writing and ordered printed in the record:

STATEMENT OF MR. W. S. ISHAM.

STATEMENT OF MR. W. S. ISHAM.

Gentlemen, I wish to direct attention to cortain facts heretofore established and presented to this committee and again illuminated by the testimony of witnesses during these hearings, which, it is submitted, tend to establish:

1. That our Navy as constructed, armed, and equipped is useless on the high seas as a defense against any first-class naval power.

2. That the proposed naval building program, requiring seven years to complete it and the expenditure of over \$500,000,000, does not sup-

ply the ships and elements accessary to coordinate with what we have to seven a navy adequate for method affects of the control less than one-fifth as much, and that could be carried out in three years' time our Navy could be given such strength that the second largest naval power of the world could not coavy an expediture of the country of the country in the country of the country in the coun

Naval Ordnance, Journal United States Arthrery, July Says:

"The torpedo has brought about a very considerable limitation in the powers of the battleship. Not only is the battleship itself open to attack by small craft which it can not engage on equal terms, but it is powerless to protect any form of vessel against the attacks of such craft, The battleship has developed merely into a vessel for fighting other battleships and it shuns as far as possible encounters with most other classes of vessels."

Lord Charles Beresford, in The Betrayal, page 62, says:
"No guns, heavy or light, will protect a battle fleet from torpedo attack at night. The only effective method of protection is to employ a large number of small cruisers to clear a wide area about the battle fleet at sundown and form a protecting screen distant 120 to 140 miles on all sides from the battle squadron. By no other means is it possible to move a battle squadron at night without risking its destruction by the attack of torpedo craft,"

Rear Admiral N. C. Twining, late Chief of the Burcau of Ordnauce. United States Journal of Artillery, January-February, 1912, page 88,

United States Journal of Artillery, January-February, 1912, page 88, says:

"No navy has at present an adequate system of defense against torpedo attack if efficiently delivered. Torpedoes have been designed which can cut, penetrate, or displace the nets. The scarchlight is ineffective, since a torpedo may be successfully launched at a range beyond its reach. Gunfire is ineffective against an invisible target and the torpedo boat can launch its weapon while still invisible to the gun. Pickets and scouts are not thoroughly effective, since they may themselves be attacked and disabled or they may be cluded."

It is therefore overwhelmingly established by our own authorities, as well as by those of other countries, that a fleet of slow battleships is defenseless at night unless protected by a fleet of destroyers and cruisers greatly superior in strength to that of the attacking force. Now, the Yearbook and the expert testimony before this committee shows that our destroyer and cruiser fleet is inferior to that of any first-class naval power. Therefore, if our battleship fleets were to go, to sea accompanied by our entire destroyer and cruiser force it could be destroyed any night by an enemy's cruiser and destroyer fleet. If we even possessed twice the present force of cruisers and destroyers our fleets would be still defenseless, because his battle cruisers could run down and destroy in daylight at long range our superiority, if we had any, in cruisers and destroyers, when our battleships would become defenseless to his torpedo attack at night. (Hearings, pp. 2390, 2393, 2396, 1387, 1388, 2956, 2958, 2960, 2963.) Hence the offensive and defensive strength of a fleet at sea is measured by its strength in battle cruisers and not by its battleships which are defenseless by themselves and a hindrance to the efficiency of the rest of the fleet, and I here and now challenge any officer or board of officers in the service to present any facts or any tactical scheme on the game board to controvert this conclusion.

The q

now challenge any officer or board of officers in the service to present any facts or any tactical scheme on the game board to controvert this conclusion.

The question then arises, How can we best give our fleets at the earliest possible date the necessary superfority in battle cruisers in view of the lead now held by all other great naval powers? This brings us to a consideration of the functions of battle cruisers and the conditions under which they must operate in the exercise of these functions. The game board shows that battle cruisers are employed to the best advantage when they perform but two functions, namely, to scout out and report the movements of an enemy's capital ships (hearings, p. 2002) and to run down and destroy his cruisers, destroyers, and other auxiliary craft. (Hearings, pp. 1753, 2003, 2070.) The war game also shows that if they accomplish these purposes, the enemy's capital ships are rendered defenseless against torpedo attack at night. (Hearings, p. 2539.) Hence battle cruisers should not be risked by combat with more powerful ships. They should, however, be provided with mines and torpedoes to be used on the head of a line in case the enemy should foolishly assemble his ships in fleet formation. (Hearings, p. 2699.) The testimony shows that there is no capital ship affoat to-day that has a speed of 35 knots. Therefore, if we build battle cruisers with this speed they can safely watch and report the movements of any capital ships (hearings, p. 2733), and if they are given an armament of two 14-inch guns they can run down and destroy any ship afloat, except capital ships, which the testimony shows are then defenseless at night against torpedo attack.

2733), and if they are given an armament of two 14-inch guns they can run down and destroy any ship afloat, except capital ships, which the testimony shows are then defenseless at night against torpedo attack.

The question then arises, How many of these ships do we require? Here, again, we must go to the game board for an answer. This shows us that numbers count in scouting operations; that, irrespective of the size, we must have not only a sufficient number to watch and report the movements of each of the enemy's battle cruisers which otherwise might trap and destroy them, but also an additional number sufficient to keep all of his auxiliaries under the protection of the guns of his capital ships. The war game shows that 12 such battle cruisers provided with kite balloons to prevent them from being led into traps (hearings, p. 2734) and accompanied by our destroyers to give offensive power for night attack could defeat the fleets of any naval power but one attempting to cross the seas to attack our coasts. These twelty 35-knot battle cruisers, mounting two 14-inch guns each, would cost the same as four battle cruisers to the type recommended by the General Board. Each of these small battle cruisers would be as efficient as one of the large type in every legitimate sphere of usefulness. While the large type would have the serious drawback of being 40 per cent more liable to be hit by a torpedo or a mine because of its greater dimensions (hearings, p. 2733), and both alike would be worthless after being hit, even though they were not sunk. These ships are designed to observe on and remain at a safe distance from the enemy's capital ships; hence they are in no danger of being destroyed by gunfire, but, on the contrary, while running down cruisers, destroyers, and other auxiliaries they are continually exposed to torpedo and mine attack, especially at night. Hence it is absurd to pay a premium for dimensions which are in themselves a serious disadvantage. The large size battle cruisers would compare more favorabl

improved if our twelve 22-knot cruisers mounting 8-inch and 10-inch guns in their turrets had their afterbatteries changed to single-gun installations of 12-inch or 14-inch caliber, which would make it possible for them to cruise in daylight at a distance from our battle fleet and strike back if attacked by an enemy's battle cruisers, which they can

improved if our twelve 22-knot cruisers mounting 8-inch and 10-inch guiss in their turrets had their afterbatteries changed to single-gui installations of 12-inch of the 12-inch of 12-inc

tion of the steel turrets was effected by the explosive force alone of their contained bursting charges.

These results agree with those obtained in the Puritan test, where 200-pound charges blew in the turret and sunk the ship. The testimony further shows that a unique feature in an attack on ships by torpedo shells is that the size of the target is more than doubled (hearings, pp. 2949, 2953), as all shells striking even as far as 130 feet short of the ship fired at will make an underwater torpedo rm and explode against her under-water section (hearings, pp. 2947-2948), blowing it in and putting her out of action, even though the ship might be so constructed as to retain her buoyancy. It was stated in English newspapers that the Blücher was hit about 100 times by large shells. Afterwards she was sent to the bottom by a single torpedo. This shows the relative value of shells striking against the upper part of the ship compared with one making an under-water run and exploding against her bottom. Admiral Twining stated before this committee in 1912 that such a hit would be fatal and that it would have the same effect if it exploded even at a distance of 30 feet, but he claimed that a shell could not be made to bite, run under water, and explode against the ship. The testimony, however, before this committee shows that this is now an accomplished fact. (Hearing, pp. 1776, 2703-2704, 2719; also important testimony by Admiral Fiske, 2951-2953.) A further fact brought out is that for use against an enemy that has made a landing, armor-piercing shells are practically useless, while torpedo shells are especially suited to blast such a force out of its intrenchments and destroy its material and supplies (Hearing pp. 2721, 2952.)

Capt. Hobson, on the floor of the House year after year demonstrated the importance to our Navy of battle cruisers, antirolling devices, long-range firing, and torpedo shells, and showed how by supplementing each other they developed a new tactics which revolutionized tests, and Capt. Sims, tw

Government-Owned Armor-Plate Factory.

EXTENSION OF REMARKS

L. HASKELL. HON. REUBEN OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. HASKELL. Mr. Speaker, while opposed to the proposition of Government ownership in the general acceptation of the term, I believe in and shall vote for a Government-owned armor-plate factory, because it does seem to me that where a governmental function is involved dealing with an essential product required in obtaining military preparedness, and of

which the Government is the sole consumer, an exceptional sit-

uation exists justifying Government ownership.

I voted against the appropriation of \$50,000,000 for a Government owned or operated merchant marine, believing it to be an absolute Government-ownership proposition pure and simple.

It is true that it was disguised as a naval auxiliary and naval eserve, but it is popular now to claim for all dubious legislation

that it is in the interests of preparedness

When \$50,000,000 can be voted for a Government-owned merchant marine by this House, and twenty millions for a nitrate plant by this Congress, both extra-hazardous experiments, and twenty-five millions for good roads, not to mention the river and harbor proposition at all, surely there can be no logical objection to a Government-owned armor-plate factory, a practical instrumentality in the aid of preparedness which is not an experiment, because the results to be accomplished thereby are fairly capable of accurate calculations, and when many who have studied the question state it will save the Government

Confidence in the minds of many suspicious about the preparedness program will be obtained when it is observed that Congress has made provision for a Government-owned armorplate factory as a safeguard against excessive charges against

the Government.

There have been adverse criticisms of the navy yards and attempts to have them abolished. I hope all such efforts will always fail. Various arguments have been advanced to show that it costs more to build the battleships in the navy yards as compared with the building by private concerns. It has not been proven, but assuming, for the sake of argument, that such a difference does exist, it is more than made up by the advantage and protection to the Government in having the necessary equipment and organization of skilled workmen who can build the best there is and at the same time protect the Government from being entirely at the mercy of the private shipbuilders, and this same advantage and protection will at least be derived by reason of a

Government owned armor-plate factory.

The people very generally, I believe, favor real military preparedness and consider the Army bill which was passed as insufficient and look upon the plan now proposed for the en-

largement of the Navy as inadequate.

The Army bill was at least an improvement in authorizing a peace and war Regular Army strength of approximately 211,000 and 236,000, respectively, and by providing for the federalization of the National Guard, consisting of an added strength of about

As a Spanish War veteran and former member of the Guard in my State, I take this opportunity to resent the criticism made by some as to the merit of the provision made for the National Guard. The high standard and efficiency of the service rendered by the Guard has earned for it this provision, and the recognition, while just and proper, constitutes a real economy in that the Federal Government has utilized an established organization without having incurred the original cost of construction.

The aid given the Guard will be generally commended as a just recognition of the men, whether as officers or in the ranks, who have labored long to build an organization which in time of war

would almost immediately be called to the front,

My record of votes to date have been, and will continue to be, on the side of real preparedness, and I hope and trust that when all is said and done that the naval appropriation bill will be amended so as to provide for 2 battleships, 6 battle cruisers, 50 submarines, 28 torpedo boats, 6 scout cruisers, with provisions for aviation and the other increases recommended by the minority of the Committee on Naval Affairs, and will also contain the amendment for the Government armor-plate factory as recommended by the majority of the said Committee on Naval Affairs.

An Efficient Army and Navy is Our Best Assurance for Peace.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. SIEGEL. Mr. Speaker, this great Republic of ours, with a population of over 102,000,000 of inhabitants and with boundless wealth, consists of citizens who are loyal to our institutions and who are prepared to make every sacrifice necessary to uphold

the dignity of our flag. America means to them home and all that the word implies. Here they are growing up and here they look forward to spending the remainder of their days. they hopefully anticipate seeing their children and grandchildren make the great strides that the opportunities in the United States afford them. They realize that a country which has given equal opportunity to a Lincoln and a Garfield, to a McKinley and a Cleveland, and which in a few days will have elevated to the Supreme Court Bench Mr. Louis D. Brandeis, one who has reached the goal of his ambition by hard and conscientious faithful service to the people, is worthy of having given to it every possession which they own. They are anxious to have an efficient Navy and they need not be taught that an ounce of prevention is of more value than 10 pounds of cure.

It is far better to demonstrate to the world that although our mission is peace, that we will have our passports honored abroad, our commerce properly protected, and our flag respected wherever it floats. We propose to say to all Governments that we shall never be the aggressor in any war, but we shall demand and must receive the respect of all nations, whether small or large; that we do not propose to blow hot with one and cold with another; that we recognize the fact that during times of peace the United States has made its most extraordinary progress in business, commerce, science, invention, and education; that it is our purpose to endeavor in every way to dispose of all disputes with other powers by diplomacy and arbitration if same can be accomplished.

We desire to have it known all over both hemispheres that the United States is not China, and that in order that our rights may not be ruthlessly trampled upon we are determined to maintain an efficient Army and Navy.

Mr. Speaker, there has been printed in Hearst's Magazine for

June, 1916, an article by E. Ashmead-Bartlett, the famous war correspondent, which is so full of meat, that I will read it in full. It is entitled "Command of the Seas Above and Below."

The article is as follows:

correspondent, which is so full of meat, that I will read it in full. It is entitled "Command of the Seas Above and Below."

The article is as follows:

The final court of appeal for the above-water command of the sea must remain with the battleship or superdreadnaught cruiser—call her what you will.

Control of the trade routes of the Seven Seas might be secured, in time, with an Immense number of submarines, but the method would be slow and precarious. In addition, attack by submarine means the total destruction of hostile vessels; they can not be brought into port as prizes of war and sold to the advantage of the captor.

Therefore, the fast and light cruiser must remain the chief weapon for the control of the world's highways. But these vessels can carry out their work with impunity only if they are kept free from the attacks of larger and faster and more heavily gunned ships. Every great naval power must, in fact, build against her opponent, ship for ship, every class which her prospective enemy is constructing.

For instance, Germany desired to dispute the supremacy of the seas with England. Her fleet was not allowed to get within measurable distance of numerical equality, and therefore can do nothing but lie in the Kiel Canal. England's great fleet of dreadnaughts has done nothing, and can do nothing, until the German fleet declies to come out. Yet its presence somewhere off the east coast of Scotiand is the bulwark behind which lighter craft have cleared the enemy from the seas, and alone enables Great Eritain to keep up the war by insuring the constant and completed to come and the seasy of the seasy coast of Scotiand is the bulwark behind which lighter craft have cleared the enemy from the seas, and alone enables Great Eritain to keep up the war by insuring the constant and completed to come and the seasy of t

dean."

The British cruisers, with their modern 12-inch guns, overtook and destroyed the German vessels almost without suffering a scratch.

Admiral Beatty's action off Helgoland is another case in point. The German dreadnaught cruisers were outgunned. Their 11-inch were no match for the British 13.5 and modern 12-inch. Only a lucky shot, which hit the Lion below the water line forward, prevented the de-

struction of the entire German squadron, in the opinion of British experts. The unfortunate Bluecher, with her slower speed and weaker armament, fell an easy prey—a good example of the futility of sending a slow vessel with a fast squadron.

In the various engagements fought off the Dardanelles between the allied fleet and the forts many vessels were damaged, besides those sunk by submarines or mines. In almost every case the damage was caused by shells falling on the unarmored decks. In no case do I recall a ship being damaged by a shell striking her side armor.

The battle of the future in which dreadnaughts are engaged will be won by the big gun mounted on the fast-moving platform.

It is a curious fact that Germany, who brought the big gun to perfection in land warfare, should have allowed herself to be outclassed, up to the present time, at sea. For instance: Her dreadnaught cruisers, like the Goeben, the Von der Tann, the Sepulitz, and the Moltke, are armed with only the 11-inch—an excellent weapon, but outclassed by the guns of the dreadnaught cruisers, which carry nothing smaller in their main armament than 12-inch, and some that excellent weapon, the 13.5. All England's latest superdreadnaughts carry the 13.5, whereas Germany has none of these weapons, 12-inch being the largest gun she had actually afloat—up to a few months ago.

But England has advanced beyond the 13.5 stage. On her latest dreadnaughts, the Queen Elizabeth class, are mounted 15-inch guns, a weapon which has proved itself to be more accurate and powerful than any other afloat.

Now, a navy numerically weaker than its enemy can hope to equalize matters in only two ways, namely: By building ships of greater speed.

the 13.5. All England's mices superureannistics carry the 13.5. were are in she had actually affont—up to a few months ago.

But England has advanced beyond the 13.5 stage. On her latest dreadnaughts, the Queen Elizabeth class, are mounted 13-inch guns, a weapon which has proved itself to be more accurate and powerful than a Now, a naxy numerically weaker than its enemy can hope to equalize matters in only two ways, namely: By building ships of greater speed and higher gunpower. This is likely to be the policy of Germany in the future, and already there are rumors that she has vessels combined the provided of the provided and higher purpower. This is likely to be the policy of Germany in the future, and already there are rumors that she has vessels combined the provided of the provided and provided and provided the provided and provided a

tific lines, admirable craft for home defense or for operations against an enemy's coast near at hand. In building them you are not concentrating too many eggs in one basket; that is to say, if one is temporarily put out of action, it means the loss of only 2 capital guns to a fleet in place of from 8 to 12, as with the modern dreadnaught. To

fleet in place of from 8 to 12, as with the modern urrannagate.

(1) The great weapon of naval warfare, both in attack and defense, in the future will be the submarine.

(2) The weaker power will concentrate on these craft rather than spend money on costly dreadnaughts.

(3) The eventual design of the dreadnaught cruiser is going through a transition stage, but all indications tend to show increased speed and heavier guns at the expense of armament.

(4) There are certain to be great developments in the underwater protection of dreadnaughts.

(5) The two nations to whom dreadnaught cruisers are essential are England and the United States.

That the press of the country is in favor of an increased

That the press of the country is in favor of an increased Navy is established beyond dispute by the newspaper comments gathered by the Literary Digest in its issue of June 3, 1916,

and I quote therefrom:

Navy is established beyond dispute by the newspaper comments gathered by the Literary Digest in its issue of June 3, 1916, and I quote therefrom:

The value of the battle cruiser is crisply summed up by one editor in the statement that "no floating thing that can whip her can catch her, and nothing that she can whip can escape her." Far superior in speed to a superdreadnaught, and not inferior in the range and power of her guns, this type of sea fighter "seems destined to dominate the ocean for years to come," says the New York World, and the Syracuse Post-Standard thinks it due to something more than chance that "England's greatest naval losses in the present war have been in the dreadnaught or battle ship class, while the battle-cruiser fleets are intact." Yet the United States Navy possesses not one of these ships. This explains perhaps why all other features of the remarkable naval program laid before the House by its Committee on Naval Afairs are cellpsed in popular interest by the clause providing for the immediate authorization of five monsters of this type that will outsteam and probably outshoot any possible enemy now afloat. The proposed ships, which will cost more than \$20,000,000 cach, are to have a speed of 35 km is. Significant of the state of the state of their type in the British and German navies." notes the Brooklyn Eagle, and the Springfield Republican describes them as "nearly 20 per cent larger and 20 per cent faster than any first-class fighting craft known to have been projected up to the opening of the war." In the New York World we read:

"The Molitic and the Soydlitz, the strongest and fastest of the German battle cruisers, are 29-knot ships—one of 52,000 horsepower and the other of 63,000 horsepower. The Tiper, which is the most powerful of the British battle cruisers are to have 180,000 horsepower. They are to be 6 knots faster than the fastest British battle cruisers and fastest of the German battle cruisers. as 29-knot ships—one of 52,000 horsepower. They are to be 63,000 horsepowe

And, Mr. Speaker, as our interest in preparedness is not limited to the Navy alone, but includes our Army as well, I think that an article which appeared in the New York Evening Sun on Memorial Day should be read in full by me:

WHAT ARE THE CHIEF DEFECTS OF OUR NATIONAL DEFENSE?—OUR ARMY IS AN INEFFICIENT PATCHWORK, UNDULY PROPORTIONED, LACKING MATERIAL AND JUSTICE, AND MISDIRECTED IN ITS ENERGIES.
[By Maj. John Henry Parker, Twenty-fourth United States Infantry.]

By Maj. John Henry Parker, Twenty-fourth United States Infantry.]

The present organization of the Regular Army is a patchwork that has grown up by plecemeal legislation without much reference to national defense. As a rule, the actual method by which various increments to the Army have been secured has been the law of the strongest political pressure.

The result is an ill proportioned establishment, in which no single element is complete for the purpose for which it was designed, put together in a haphazard way, without any traceable plan of organization, promotion, or distribution. Such a force is uneconomical, inefficient in a broad way, not adapted to the objects to be accomplished, and not suited to the times. Its principal defects may be summaraized as follows:

1. Undue proportion of parts. Some elements are constituted.

as follows:

1. Undue proportion of parts. Some elements are conspicuously deficient in numbers or equipment. The machine-gan service has no statutory organization at all and exists only as a "provisional organization, subject to constant experimentation, with no permanence of

personnel or matériel." The Field-Artillery equipment is far below the normal strength both in numbers and in matériel. The Infantry is wholly inadequate in numbers for its duties. The Coast Artillery can not furnish even one complete relief for its guns, though three reliefs are necessary to actual service with a good reserve in addition.

2 Lack of material: The Field Artillery could not last out even one week of the war in Beigium for lack of ammunition. There are not machine guns enough by half for an army of 90,000 men. There has never been in the history of the Government an adequate equipment of field transportation on hand. There is practically no reserve stock of uniforms on hand to meet any real emergency. Even the blank forms in daily use are doled out a few at a time.

CAUSES OF DISCONTENT.

CAUSES OF DISCONTENT.

3 Inequalities and injustices in the service: Some noncommissioned officers, those of the line, are compelled to serve out a lifetime on foreign service and tropical duty in order to avail themselves of the legal privilege of honerable retirement after 30 years' service. Others are privileged, on the other hand, to obtain the same status by easier service in the United States.

Great inequalities in the promotion of officers have grown up. Field officers are from 30 to 40 years old in some parts of the service, while they are from 50 to 64 in other parts. In other words, in some elements of the service held rank has been attained by from 10 to 20 years of service, while in other elements officers have marked time in subordinate grades from 20 to 30 years, attaining only with almost incapacitating age a rank in which their talents, if they have any, could make themselves felt in any effective way by any considerable number of men.

This difference in age is not based on more important, more arduous, or more dangerous service by those who have been favored, but upon sheer accidents of legislation without reference to the merits of the officers or the character of their work. This inequality breeds discontent and is responsible for efforts by those who have suffered to promote additional legislation with the object rather of correcting these inequalities, so keenly felt by the individual, than of creating a soundly organized and proportioned military service.

4. Misdirection of energy. The Regular Army, created in this haphazard manner, has always been under the spur of immediate pressure.

THE USES OF AN ARMY.

If the uses of the Regular Army depended upon the Army alone, its energies would be directed very skillfully. But such is not the case. Its uses also depend on Congress, and heretofore little or no effort has been made to coordinate the activities of the service.

Most of these defects arise from lack of logical analysis of the prolifem rather than from wrong intentions. The problem of national defense has not been analyzed on its merits. All the discussions of it have been complicated by questions foreign to the issue—politics, promotions, prejudices, misinformation, and lack of information have played their part in preventing a sound analysis of the problem of national defense.

One Secretary of War (1812-1814) tried to be a commander of troops. Perhaps two others made the same attempt in the Civil War. Congress has always failed to discriminate between militia and volunteers, between State and Federal forces, between its general war power under the Constitution to "levy and maintain armies" and its strictly lin ited power to "prescribe the training" of the militia, and to all that body in Federal service for strictly limited periods.

Evidentis, then, analysis of the duties of the Regular Army is the first step toward solution of the problem of national defense. When its duties shall have been determined the problem will be how to get its duties performed in the most effective and economical manner—the same problem that confronts a big employer of labor.

AN ARMY'S DUTIES.

Any intelligent man can see the following duties for the Regular Army of the United States:

A first line of national defense: Because it is the only body of professional soldiers in the country; because it is the only body of military men organized and trained for immediate action.

A colonial force: Because militia is not suited for that service; because the law does not authorize the use of militia for that duty, at least there is a dispute on that point, and such a dispute is enough, as long as it lasts, to veto such employment of militia; because a permanent force, with continuing responsibility for its acts, is necessary for this service.

An expeditionary force: The Texas border, Vera Cruz Pekin, the

nent force, with continuing responsibility for its acts, is necessary for this service.

An expeditionary force: The Texas border, Vera Cruz, Pekin, the Venezuela controversy in the time of President Cleveland, the Valparaiso incident in 1891-92; all of these are eloquent of this necessity.

A training school for "minute men" for national defense: Such a school of training has become necessary because the American people are no longer adapted to "minute-men" service, as no doubt they were in 1776. They are no longer a nation of rifemen, and modern military operations have developed such a technique that the untrained minute man is at the mercy of the trained man. The fate of Belgium and Luxemburg ought to be warning enough on this point. The futile resistance of a mass of untrained volunteers called out by an act of Congress after August 1, 1914, would only have resulted in greater severity on the part of the conqueror, without in any way impeding his advance, if the United States had been the victim instead of Belgium. Such resistance would have merely resulted in wholesale massacre of incompetent patriots if such resistance had been necessary and had been attempted.

The only "minute men" in our country are the few Regular Army men, for they are the only men ready for immediate action. The cost of these "minute men," in round numbers, is \$1,000 per man per year. The "minute man" of 1776 did not cost a cent. This cost is prohibitive. It would bankrupt Midas to maintain a national defense on this financial basis, "Minute men," trained minute men, are absolutely necessary if any national defense is to be made in case of necessity.

If Farmer Smith, Blacksmith Jones, Carpenter Brown, at the village

this financial basis. "Minute men," trained minute men, are absolutely necessary if any national defense is to be made in case of necessity.

If Farmer Smith, Blacksmith Jones, Carpenter Brown, at the village store on Saturday afterneon, can not understand the solution and the reason why, that solution will not do, for under our system of government these are the men who have the say and they are not going to say "yes" unless they see why and how the thing will work.

Let me say, then, to Smith, Brown, and Jones, this Regular Army you are paying for has four uses; a first line tor war, a colonial force at all times ready for field service, an expeditionary force always ready for field service, and a training school for "minute men" for national defense.

100 are paying a big bunch of experts to determine how to use what force you see fit to have, and their recommendations as to the exact

size and composition of machinery to do the work you have assigned to them are worthy of consideration in exact proportion to the ability of the expert and the ancunt of special study he has devoted to the subject. Merely Jecause Maj. A has been in the Army 35 years does not make his recommendation worth a cent; how much has he studied the particular thing? Merely because a man has the rank of a colonel or a general does not make his recommendation worth a cent; what does he know about it?

If a recommendation will not bear a clear, clean, understandable answer to every one of these questions discard it, no matter what the rank, what the age, how long the service of the man who makes it. Prove all things; hold fast to what is worthy.

Mr. Speaker, the citizens of New York are as patriotic men as can be found anywhere in our land. They have requested their Representatives in Congress to vote for an increased Army and Navy regardless of political affiliations. I have voted for an increased Army and I shall vote for an increased Navy, because I will in that way fulfill my obligation as a citizen and

my duty to our country.

In conclusion, Mr. Speaker, it is with a feeling of pleasure that I call attention to the fact that the idea of having Flag Day more generally celebrated originated in my congressional district, and on March 24, 1916, the request for the issuance of such a proclamation was brought to the President's attention, demonstrating once more that New Yorkers love and cherish our flag with an intensity that words can not adequately describe, but if the time ever comes, and I hope that it may never come, by their deeds they will show that they stand at all times for the United States, and will continue to do so until they pass to the far beyond.

Another Thing Henry Ford Does Not Know.

EXTENSION OF REMARKS

HON. LOUIS C. CRAMTON. OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. CRAMTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article from the Detroit News.

The article is as follows:

ANOTHER THING HENRY FORD DOESN'T KNOW.

Highly educated and smart writers are devoting many columns these days to exposing the scientific ignorance of Henry Ford.

They are really pitying Mr. Ford in the density of what he doesn't know, for not knowing what scientists know has led him into several barge blunders.

Highly educated and smart writers are devoting many columns these days to exposing the scientific ignorance of Henry Ford.

They are really pitying Mr. Ford in the density of what he doesn't know, for not knowing what scientists know has led him into several huge blunders.

The industrial scientists had it all figured out to a nicety that the largest industrial institutions that could possibly succeed was one that would employ 5,000 men in a single unit. These scientists knew that a very shrewd, clever, careful and thoroughgoing man, with plenty of resources and ability for organization could make a go of it with 3,000 men; and if he was one of the world's trare industrial geniuses he might possibly handle 5,000 men in a single plant; but that was the limit of human capability, and to try to go beyond that was to fail of self-disintegration, or something of the sort.

Now, poor Mr. Ford lacked woefully in scientific business training. He was ignorant of all that. He got about him men who were able to sell automobiles in the markets of the world and other men able to sell automobiles in the markets of the world and other men able to make and ship them at a profit—and so his business grew.

When his plant had reached the limit of 5,000 men and he was shipping out about 500 machines a day, there was no kindly scientist to raise a warning hand, and he doubled it to 10,000 men. Still no warning of the impending disaster came, and he doubled it again to 20,000 men—and as a result where does this man Ford find himself?

He has a business organization and a plant that \$200,000,000 world of raw materials on hand. He has many millions of dollars worth of big assembly plants in the larger cities of the country. He has a business organization on hand. He has many millions of dollars worth of big assembly plants in the larger cities of the country. He turns out over \$2,000 automobiles a day and has a personal net noeme of over \$100,000 a day.

Of course there are those who can tell us to a certainty that it was not the brai

over \$20,000,000 in Detroit savings banks. Strange—and Mr. Ford in his ignorance couldn't see that—in becoming home owners they have become very regular in their habits, have become more efficient, and haven't increased his cost of production.

And there is something more about industrial science that Mr. Ford didn't know. The way to keep men contented is to keep them ignorant. Don't let them know too much. It has a tendency to make them dissatisfied with the day's toll and hard to hold in place. Not knowing that, Mr. Ford cleared the machinery out of an entire floor of one wing of his plant and partitioned it off into schoolrooms. He hired about 30 school-teachers, and there 3,000 foreign men of 20, 30, 40, or 50 years, speaking 10 different languages and dialects, are taught the English language.

Of course, paying a Hungarian or other foreigner \$5 a day and

30 school-teachers, and there 3,000 foreign men of 20, 30, 40, or 50 years, speaking 19 different languages and dialects, are taught the English language.

Of course, paying a Hungarian or other foreigner \$5 a day and teaching him the English language, the rudiments of American citizenship, and the love of peace, instead of preparing him for the trenches, is something awful, and Mr. Ford in his ignorance of how these human beings really ought to be treated has done that.

And Mr. Ford, in his lack of understanding, has done another thing. He has adopted a sort of legend for his workers. The words are printed on signs about the schoolrooms in his factory. They are the first in English to be burnt into the brains of these foreigners. They read: "Help the other fellow." Shouldn't any well-informed employer know that such doctrine as this will lead the laborer to expect too much?

Having had no scientific knowledge about business and never having acquired any, and thus having made a complete failure in his efforts to make a fortune for himself and to help his employees at the same time, Mr. Ford now dares to talk to us about war nad peace.

Poor man, he has a simple little notion in his head that the way to keep from getting shot or from shooting anyone is for nobody to carry a gun—man or nation.

When he was tinkering about Detroit with designs for automobiles and later exceeding the scientific limit as to the number of men he should put to work, he should have been reading the magazines and works of scientists as to the one and only sure way to keep the world at peace. If he had, he wouldn't be making himself ridiculous with his peace talk now. In fact, Mr. Ford should take some of the time he spends with the birds and the deer on his place and put it to reading the back numbers of magazines. He should go back 3, 5, or 10 years. There he would find picture after picture in magazine after magazine, printed year after year, of that wonderful organization, the German Army. And above the pictures he would often read

Establishment of a Probation System in the United States.

EXTENSION OF REMARKS

HON. WOODSON R. OGLESBY,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 30, 1916.

Mr. OGLESBY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from Hon. Homer Folks, president of the New York State Probation Commission, on the subject of the establishment of a probation system in the United States district courts.

The letter is as follows:

OWEN-HAYDEN BILL (S. 1092 AND H. R. 42) TO ESTABLISH A PROBATION SYSTEM IN THE UNITED STATES DISTRICT COURTS.

AND II. MALE AND INTEREST CONTROL OF THE PROBATION COMMISSION.

OFFICE OF THE PRESIDENT,

May 25, 1916.

OFFICE OF THE PRESIDENT,

May 25, 1916.

House of Representatives, Washington, D. C.

Dear Sir: The bill above mentioned, to establish a Federal probation system, which is now under consideration by the Judiciary Committee, has been carefully considered and heartily indorsed by the New York State Probation Commission, which has been familiar for some years with the need of such a measure.

The New York State Probation Commission was created in 1907, under an act signed by Gov. Hughes, and its original membership was appointed by him. It has had the general supervision over probation work since that time, and has been actively concerned in its development, both as to legislation and as to administration. Since 1907 the number of persons on probation in this State has increased from about 1,600 to its present total, on April 30, 1916, of 11,722. Of this number, 9,087 are adults and 2,635 are children. One of our chief duties is that of investigating the efficiency of the work as carried on in the various courts of the State. We have been at all times conscious of the fact that under loose administrative methods evils might develop. We have been far from accepting the extraordinary claims made for probation by some of its overenthusiastic advocates. We are convinced, however, by careful supervision and inquiry, that nearly 80 per cent of all persons placed on probation complete their term of probation with a distinct improvement in their conduct and attitude toward society. We are further convinced by the study of the present circumstances, behavior, and social and industrial status of all those placed on probation in a given period several years ago, in one of the large counties

of the State, that a large proportion of those completed their probation satisfactorily, continued in satisfactory progress and conduct, and are, in fact, rehabilitated for a long term of years, if not permanently.

We are convinced from observation of facts and conditions in this State that the principles which have been successfully applied in the courts of this State should also be made applicable to the Federal district courts. Many cases arise—perhaps a smaller proportion than in the local courts—of younger and first offenders, in which it is imperative from the view of protection to society and of the reformation of the individual that the home conditions and the previous character of the convicted offender should be carefully investigated by a probation officer, and that he should be given an opportunity to demonstrate his desire to "make good" by a conditional release under the supervision of a competent probation officer. Incidentally this system is also a source of economy in reducing the number of persons who have to be supported in penal and reformatory institutions.

The bill has been carefully drafted, and we feel sure that it will meet the present needs of the Federal courts in this respect in an economical and practical way. I sincerely hope you will do what you can to secure speedy and favorable report by the Judiciary Committee. I am,

Very truly, yours,

Homer Folks, President.

HOMER FOLKS, President.

The World's Best Battle Cruisers for America.

EXTENSION OF REMARKS

HON. HENRY I. EMERSON. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following article:

[From the Literary Digest, June 3, 1916.]

THE WORLD'S BEST BATTLE CRUISERS FOR AMERICA.

THE WORLD'S BEST BATTLE CRUISERS FOR AMERICA.

The value of the battle cruiser is crisply summed up by one editor in the statement that "no floating thing that can whip her can catch her, and nothing that she can whip can escape her." Far superior in speed to a superdreadausyht, and not inferior in the range and power of her guns, this type of sea fighter "seems destined to dominate the ocean for years to come," says the New York World, and the Syracuse Post-Standard thinks it due to something more than chance that "England's greatest naval losses in the present war have been in the dreadaught or battleship class, while the battle-cruiser fleets are intact." Yet the United States Navy possesses not one of these ships. This explains, perhaps, why all other features of the remarkable naval program laid before the House by its Committee on Naval Affairs are eclipsed in popular interest by the clause providing for the immediate authorization of five monsters of this type that will outsteam and probably outshoot any possible enemy now afloat. The proposed ships, which will cost more than \$20,000,000 each, are to have a speed of \$35 knots, a displacement of \$32,000 tons, and an armament of ten 14-inch or eight 16-inch rifles. "They will be six knots faster than the fastest of their type in the British and German Navies," notes the Brooklyn Eagle, and the Springfield Republican describes them as "nearly 20 per cent larger and 20 per cent faster than any first-class fighting craft known to have been projected up to the opening of the war." In the New York World we read:

"The Moltke and the Seydlitz, the strongest and fastest of the German battle cruisers, are 20-knot ships—one of 52,000 horsepower and the other of 63,000 horsepower. The tiper, which is the most powerful of the British battle cruisers, is a 28-knot ship of 87,000 horsepower. They are to be 6 knots faster than the fastest German battle cruisers and 7 knots faster than the fastest British battle cruiser, with heavier guns and a greater volume of gunfire

out to be the best investment that any Congress has made in many years."

England has 10 of these ships in commission, Germany 9, and Japan 4. Rear Admiral Robert E. Peary, who for nearly a year past has been publicly advocating the building of battle cruisers, thinks that we should provide as quickly as possible for 16—8 for the Atlantic and 8 for the Pacific. In a letter to the New York Times he says:

"With two such fleets in commission, and both coasts protected in addition by a sufficient aerial coast-defense system, we might feel that our sea fences were in fairly good shape.

"The United States is to-day the wealthiest Nation in the world. We have a more extensive available coast line than any other country. We are the only two-ocean naval power in the world. We are the only international creed (the Monroe doctrine) a clear-cut claim to a sphere of influence covering an entire hemisphere.

"We are the only one of the premier world powers not now engaged in a struggle in which force, expressed in terms which the lowest intelligence can understand, is the principal thing that counts. We may be drawn in at any time. We are not ready.

"No other nation has such imperative reasons for a swift, powerful, and far-reaching Navy as has the United States."

And in the Washington Army and Navy Register, a service paper, we find him further quoted as saying:

"A year ago in the hearings before the House Naval Committee the majority testimony was in favor of the battleship. This year, of 10 officers of high rank who testified before the same committee, all advocated battle cruisers, and seven of them advocated battle cruisers to the exclusion af battleships. The Navy Department and the General Wart the majority testimony before the same committee next winter will be " that battle cruisers, submarines, and aeroplanes will give the ideal defense for the United States."

Still another argument for a vigorous policy of battle-cruisers construction of the committee of the

Men Must Not Be Tempted to Think of War and Profit at the Same Time.

EXTENSION OF REMARKS

HON. BENJAMIN C. HILLIARD, OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. HILLIARD. Mr. Speaker, I am grateful for the opportunity to speak to the pending legislation. I could not hope to discuss in detail the many problems presented or the bearing of the measure upon their proper solution in any time that I ought reasonably to occupy.

The necessity, from the standpoint of economy, that the Government shall manufacture at its own factories very largely of its requirements is fast being appreciated, and that, not only for economical but for ethical reasons as well, it must, as rapidly as reasonably may be, arrange to manufacture and construct in Government plants ships, armor, and war munitions of all kinds. By no less reaching and comprehensive legislation will the Government be able ultimately to bear the enormous expense that is rapidly exhausting the taxing ingenuity of the Congress and sapping the energies of the people; and in relation to those things that enter into war, or for defense against possible war, or preparation for war, however stated or limited, there must be such an absence of private profit that, whatever his attitude toward the subject, every man will be known to be giving voice to a judgment quickened with nothing in which there is an element of personal gain. Men must not be allowed to hold such relation to these vital and destroying elements as that they may be tempted to think of war and profit at the same time.

This bill, with its present amendment, recognizes the right principle and goes far toward the realization thereof. A recent letter from one of the best-known of my constituents in private life and my answer to a measurable degree cover a feature of this phase of the situation, so that for brevity and that the time I otherwise would consume may be saved to others I conclude my

remarks by setting forth those letters:

DENVER, COLO., May 25, 1916.

Hon. BEN. HILLIARD, Congressman, State of Colorado, Washington, D. C.

DEAR Sin: I was surprised to receive, under your frank, the other day, a copy of a speech from some backwoods Congressman abusing the Navy League.

I consider this a gross misuse of the Government privilege and an insult to my intelligence and sense of humor.

Very truly, yours,

C. MACA. WILLCOX.

House of Representatives, United States, Washington, D. C., May 31, 1916.

Mr. CHARLES MACALLISTER WILLCOX, Denver, Colo.

Mr. Charles Macallister Willon, D. C., May 31, 1916.

Mr. Charles Macallister Willon, Denver, Colo.

My Drar Mr. Willon: Referring to your note of the 25th instant, I freely express regret that the receipt by you of a copy of Congressman Tayenser's speech under my frank caused you any annoyance whatever. Certainly no such purpose was in my mind.

You refer to Mr. Tayenner as a "backwoods Congressman," and that is the view a few Members of Congress and an unknown number of munitions magnates entertained until they had pressed too close to the saw. Now they know differently; and you would hold other views, too, could you know Mr. Tayenner personally or would trouble to read the speech. I hold no brief for Mr. Tayenner, but for your information I may say that while he is one of the younger Members of Congress he probably is one of the best informed men that ever saw the Halls of the National Legislature. Beyond question he is one of the most traveled of men both at home and abroad. From the beginning he has been consistently watchful of the common weal; and so appreciated is he by the people of his Illinois district that, while politically his party allegiance is at variance with the majority, he has twice been elected to Congress, the second time by an increased vote.

Mr. Willcox, you are one of the successful business men of Denver, and trouble yourself only with transactions of large magnitude, still its true, nevertheless, that you rarely give thought for that your views it is true, nevertheless, that you rarely give thought for the will would be helpful to the average of men. You thought it smart to write me the curt not you did, but it was not. Your dictated lines, on richly engraved stationery written by your salaried help, are not entitled to a tithe of the consideration by me accorded to the more labored and less-practiced efforts of the ordinary man and woman of Denver, written on plain paper and incosed in envelopes of like character—and there are dozens of them coming almost daily. These people do not

patriotism finds fitting expression in unlimited appropriations, with no thought of economy in expenditure.

Your letter indicates that you would have the people agree without question to appropriations advocated by parties directly interested. I believe the people should know who advocate increased taxation and who may profit thereby. You would have the people to know only of a doubtfut half truth; I would have them to know the whole truth. By law a Member of Congress may mail under his frank all or any part of the Congressional Record. From careful examination I pronounced the extract from the Record sent you to be good seed, and sowed some. Only that which fell on the rock, as in the parable, has failed to grow. You relicate that because the seed would not grow under such circumstances I should not have sowed any. I see my duty quite otherwise.

under such circumstances I should not have sowed any. I see my duty quite otherwise.

Personally I have no quarrel with you; but as the Representative of the people of Denver in the Congress of the United States my duty requires that your flippant letter should receive some attention.

Yours, very truly,

R. C. HULLERD

B. C. HILLIARD.

Suggestions to Farmers Who Desire to Use New Rural-Credits Measure.

EXTENSION OF REMARKS

OF

HON, KENNETH D. MCKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. McKELLAR. Mr. Speaker, during the discussion of the rural-credits bill in the House I actively took part in the debate, believing then, as I do now, that a proper rural-credits system will do more for the development and prosperity of our country than any other one measure before the American Congress. I voted for the bill, not because all of its provisions met my approval, but because I believed it was a long step in the right direction toward securing for this country a farm-credits system and believing that we can perfect the measure later on by amendment.

There are three notable provisions in the bill which I opposed, because I did not believe that they were to the best interest of These three provisions are: (1) The cumbersome the farmers. machinery of the act, the expensive system of farm-loan associations, joint-stock land banks, the creation of profit-making middlemen, and the like, and the large amount of red tape necessary for the farmer to secure a loan; (2) the requirement making it necessary for the farmer to subscribe for stock in the farm-land bank to the amount of 5 per cent of his loan before he can obtain a loan; (3) the provision requiring him to become responsible for his fellow members' loan to the extent of 10

per cent of his loan.

I believed then, and believe now that all three of these provislons are unwise and unnecessary. I believe that the Government should have established the 12 land banks and permitted them to establish their own agencies at the smallest possible cost, and loan the money direct to the farmers without red tape and without creating profit-making middlemen. I believe that the formation of farm-loan associations and joint-stock banks will be expensive, cumbersome, and wholly unnecessary; but a majority of the House thought differently about these provisions, though my amendment in the committee striking them out failed by only six votes, and the bill as finally passed contains them. After all, only the future can tell who is right, and so great is my belief in the lasting good of the rural-credits system that I now feel that all friends of rural credits should join heartily in trying to make this system a success, so that

the best results to the farmers of our country may be secured.

With this purpose in view, therefore, Mr. Speaker, it is not my intention to discuss the merits of this legislation in these remarks, but I simply wish to explain in a general way the provisions of the bill and point out how farmers can take advantage of its terms, hoping that it will be helpful to my con-

stituents.

RURAL CREDITS COMPANION LEGISLATION TO FEDERAL RESERVE ACT.

The rural-credits bill which has passed and will become the law, is based on the same general plan followed in the banking and currency system recently enacted by a Democratic Congress, and which has proved such a marvelous success. As the banking and currency act provides for a system to benefit the business, commercial, and industrial needs of our country, so it is believed that the same kind of a system, formed to meet the needs of agriculture, will accomplish a like result. The banking and currency law provides for a central board at Washington, known as the Federal Reserve Board, and divides the United States into 12 districts and establishes a Federal reserve bank in each district. And so, the rural-credits act establishes

a Federal farm-loan board of three members, at Washington, divides the country into 12 districts, if the provisions of the bill are agreed upon in conference, and establishes a Federal farmland bank in each district. Both systems have the backing of the Government and are very similar.

FEDERAL PARM-LOAN BOARD.

The Federal farm-loan board consists of three members to be appointed by the President, with the consent of the Senate, each to receive an annual salary of \$10,000, if the Senate provision is followed, and they can not be officers or directors or own any interest in any other kind of banking business. board is required to appoint a loan registrar in each land-bank district, and it also appoints such appraisers and examiners in each district as may be necessary. All of these are Government officials, and, except appraisers, their salaries and expenses are paid for by the Government. This board has authority also to employ such attorneys, experts, clerks, and the like, as may be necessary, and all these are paid for by the Government. This board organizes and charters the Federal land banks, ultimately fixes the rate of interest, and has general supervision and control of the whole system.

FEDERAL LAND BANKS.

The Federal farm-loan board is required to divide continental United States into 12 districts, if the House bill is followed, and a bank with not less than \$750,000 capital stock is established in each district in a city within said district designated by said board. At first these banks are to be managed by three temporary directors selected by the Federal farm-loan board, but afterwards they are to be selected, in part, three by the board and, in part, six by the farm-loan associations, and in a general way as the directors in the present reserve system are selected. The capital stock of these Federal land banks may be subscribed to by anyone, but if it is not subscribed within 90 days, then the United States Government will subscribe for the stock. Of course, the stock will be subscribed for by the Government. At all events it will be at first.

NATIONAL FARM-LOAN ASSOCIATIONS.

The act provides for the formation of national farm-loan asso-It is most important that the farmer should know about these associations, with which he must come directly in contact. In order for a farmer to secure a loan he must become a member of one of these farm-loan associations. These are formed by 10 or more borrowers, who associate themselves under the act as a corporation, and they select a secretarytreasurer, who manages the affairs of the association. The secretary-treasurer is the business manager of the association, and, of course, will control it. The board of directors' duty in these associations will be largely nominal. As soon as the application for articles of incorporation is forwarded to the Federal land bank the bank sends an appraiser to the locality to appraise the lands included in the application. If he finds them eligible for loans, the charter is granted.

HOW TO OBTAIN A LOAN.

If a farm-loan association has not already been formed, it requires at least 10 farmers who desire to make loans to form one. Each member is to subscribe to an oath saying that he is the owner, or about to become the owner, of farm land, qualified under the act of being the basis of a mortgage loan; that the loan desired by each person is not more than \$10,000, nor less than \$100; and that the aggregate loans of each association are not less than \$20,000. The affidavit is to be accompanied by a subscription to stock in the farm-land bank equal to 5 per cent of the mortgage loan desired. When the land bank gets these affidavits they form a farm-loan association, as above set out. To cite a concrete case, a farmer has a piece of land worth \$1,500, with improvements worth \$500 thereon, in all He becomes a member of the association as above pointed out. He then applies for a loan of not exceeding \$900 on the land and \$100 on the improvements. In other words, he can borrow 60 per cent of the value of his land, and 20 per cent of the value of the improvements. He does not get in cash the whole sum of \$1,000, however, because he is to take 5 per cent of the amount of his loan in stock. He is entitled to whatever profits are made on this stock, if any are made, and when the loan is paid off he is credited with the \$50 stock at all events, and the stock then canceled. In addition to this, he must sign an agreement guaranteeing to the extent of 10 per cent, or \$100, the loans of his fellow members. Under a well-regulated system, supervised by the Government, it is not believed that he will ever have to pay any loss on account of this guaranty, and this amount is not deducted from his loan, and not paid at all unless there is a loss. Of course, when his loan is paid off his stock is canceled and this agreement is at an end.

The result is that a farmer, when the system is organized, will have to apply to the secretary-treasurer of the loan association, have his land appraised and be elected a member, furnish an abstract of title to his property, which will be examined by the attorneys of the system at a figure ultimately fixed by the farm-loan board. He will have to subscribe to the amount of 5 per cent of his loan in the farm-loan association, which will, in turn, subscribe for a like amount of stock in the Federal land bank, which will either be paid for in cash or deducted

from the loan or added to the loan.

The result, so far as it can be estimated ahead of time, will

Security offered: Land Improvements	\$1, 500 500
Total	2,000
Cost: Subscription to stock in land bank Cost of abstract of title, estimated Cost of examining abstract, estimated Cost of appraisement, estimated Cost of recording mortgage, estimated	50 20 10 10 2
Total	92
Total loan	1, 000
Farmer receives in cash	908

It is believed that the Torrens's title system, or some similar system will soon be adopted and that shortly all these initial expenses will be reduced to a minimum. Of course, if the farmer already has an abstract of title and taxes, that cost will not have to be borne again. Even the initial fees may be paid for by the bank and deducted from the loan.

HOW LOAN IS REPAID.

Under the amortization plan provided by the bill the loan will be made on long time, not exceeding 36 years, and to illustrate how the payments are paid the following table showing a loan of \$1,000 for 20 years at 5 per cent is given:

	The state of the s	cent.	principal.	pal still unpaid.
1	\$80.24	\$50.00	\$30, 24	\$969.76
2	80.24	48, 48	31.75	938.00
3		46, 90	33.34	904.67
4	The second second second	45.23	35.01	869.66
5		43.48	36.76	832.90
6	80. 24	41.64	38.59	794.31
7	80. 24	39, 71	40.52	753, 79
8	80.24	37.68	42,55	711.23
ρ		35, 56	44.68	666, 56
10		33.32	46.91	619.64
11		30.98	49.26	570.39
12		28.51	51.72	518.67
13	. 80. 24	25.93	54.31	464.36
14	80. 24	23.21	57.02	407.34
15		20.36	59.87	347.46
16	. 80. 24	17.37	62.87	284.60
17	. 80. 24	14.23	66.01	218.59
18	. 80. 24	10.93	69.31	149.28
19		7.46	72.78	76.50
20	. 80. 24	3.82	76.50	
Total	. 1,604.80	604.80	1,000.00	

In addition, he will get the \$50 stock subscription back in cash, with its earnings, if any; or the same will be credited on his cash payments. Of course, the borrower has the right to pay off the loan at any interest-paying period.

RATE OF INTEREST.

In the above illustration the interest is given at 5 per cent. Under the terms of the bill the rate can not exceed 6 per cent. Of course, the interest payments will be one-sixth larger than those shown in the above table if the farmer is required to pay a 6 per cent rate. In this connection I wish to say that the interest rate depends upon the interest rate of the bonds issued and sold by the farm land banks. It is believed that these bonds will prove such a safe and popular investment that the rate of interest paid by the farmers for their money will not exceed 5 per cent, and may be less than that.

RESTRICTIONS ON LOANS.

A loan may only be made upon duly recorded first mortgages on farm lands. They must be made for the purposes of purchasing land for agricultural uses, or for the purposes of purchasing of equipment and live stock necessary for farming, or to improve farm buildings, or for improvements on farm lands, or to liquidate the indebtedness of owners of lands already mortgaged. These loans shall only be for 60 per cent of the matter of fact, counting commissions and all, farmers in Ten-

value of the land, and 20 per cent of the value of the improvements as fixed by the Government appraisers. The loan can only be made to those who are engaged in the cultivation of the farm mortgaged, or shortly to become so engaged. The amount of any one loan shall never exceed \$10,000. The application must state the purpose for which the money is borrowed. The borrower is to pay all premiums for insurances and taxes.

HOW THE MONEY IS OBTAINED BY THE BANKS.

When the Federal land bank begins operation and secures these farm first mortgages, then it is given the right to issue its own bonds. The security of these bonds is: (1) The capital stock of the bank itself; (2) whatever earnings and reserves the bank may have made; (3) the indorsement of the local farm-loan associations, which will be backed by the guaranty of all members of the association to the extent of 10 per cent of the loan of each; (4) the first mortgages of farm lands at 60 per cent of their value, and on improvements at 20 per cent of their value; (5) the bonds are exempted from local, State, county, and national taxation; (6) the supervision of the Federal farm-loan board; (7) the act makes the bonds lawful investments for all fiduciary and trust funds.

Under these circumstances these bonds ought to be just as good as any United States Government bonds, and ought to sell at a very low rate of interest, and, no doubt, soon after the system gets in good working order the rate of interest at which the farmers will be enabled to obtain money will be low, indeed. From the sale of these bonds the banks will get the money to lend to the farmer.

JOINT-STOCK LAND BANKS.

There is a provision in the bill for joint-stock land banks that ought not to be in it. This provision merely authorizes the organization of private land banks with practically all the privileges of the Federal land banks. The farmers should not obtain their money from these private banks, but should patronize the Federal land banks and make them a success. The Federal land banks, of course, will be interested in reducing interest The private land banks will be interested in increasing interest rates. The farmer should not be misled into borrowing from these private institutions thus authorized. It was a serious mistake to authorize these private land banks, and one that ought to be remedied by amendment. But the farmers can themselves remedy this matter by not patronizing them.

FEDERAL DEPOSITS.

In case of necessity the Government is authorized to deposit as much as \$500,000 in a Federal land bank at any time, so that it may not be unduly hampered in its operations. It will thus be seen that every precaution is taken to make the system a success.

ADVANTAGES OF THIS SYSTEM.

In my judgment the distinct advantages of the system are: (1) It will immeasurably reduce the interest rates now being paid by the farmers, saving them in the aggregate in the United States an enormous sum annually; (2) it will provide farmers with money on long time, with small annual payments, which will not be burdensome; (3) it will cut off the payments of large commissions and further renewal commissions; (4) it will secure the loan at a minimum cost. In other words, the amounts charged for abstracts, title examination, and appraisements will be reduced to a minimum. (5) It will permit the farmers to pay off the whole loan at any interestpaying period; (6) it will make farm first mortgages bank-able assets anywhere; (7) it will be under the supervision of the National Government, which will see to it that the farmer gets his money at the lowest possible cost; (8) it will make money always available to the farmers who has the land.

In my judgment it will prove the greatest impetus ever given agriculture in this country, inasmuch as it will encourage tenant farmers to save and become farmers in their own right, and will cause great numbers of men now engaged in a less profitable business to become farmers.

HOW THE BILL WILL AFFECT TENNESSEE.

In 1910 there were 144,125 farms in Tennessee. Of these only 24,006 were mortgaged, an exceedingly small percentage of them in comparison with those mortgaged in many other States. The total mortgaged indebtedness in Tennessee, as far as it could be ascertained, was \$12,600,000. The average rate of interest paid on these mortgages was 81 per cent, and the total amount paid by these farmers in interest on their mortgaged farms was \$1,071,000. If these mortgages are transferred to the Federal system on a 6 per cent basis the farmers of Tennessee, who now have their farms mortgaged, will save annually nessee most likely pay as much as 10 per cent now, and if these mortgages are transferred to the Federal system on a 5 per cent basis they will save annually \$630,000 in lessened interest charges alone.

The proportion of farms mortgaged in Tennessee is comparatively small. This does not necessarily show a good condition. The proportion of farms mortgaged in 1910 was higher in Wisconsin and Iowa than in any other State, and yet those States are among the most prosperous in the Union from an agricultural standpoint, and the interest rate there is as cheap or cheaper than in any other State, and the value of the farm

lands probably greater.

Mr. Speaker, in my late campaign in Tennessee for the Democratic nomination for United States Senator, one of the chief planks in my platform was national rural credits legislation. I promised the farmers that I would use every effort to obtain such legislation, and I am delighted to be able to say that this promise has been redeemed, and that a workable rural-credits system is now a reality. I am convinced that it will accomplish great good to the farmers of Tennessee and to the farmers of the entire Nation.

Speech of Secretary McAdoo Before the Chamber of Commerce of Raleigh, N. C., May 31, 1916.

EXTENSION OF REMARKS

HON. WILLIAM C. ADAMSON,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. ADAMSON. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include the following abstract of a speech delivered by Secretary McAdoo before the Chamber of Commerce of Raleigh, N. C., Wednesday night, May 31:

THE POLLOWING ABSTRACT OF A SPEECH DELIVERED BY SECRETARY MC-ADOO REPORT THE CHAMBER OF COMMERCE OF RALEIGH, N. C., WED-NESDAY NIGHT, MAY 31.

The United States is enjoying the greatest era of prosperity in its history, and the outlook for the future of the country was never so bright. Unlike all previous periods of great business activity, the present ascendency in all lines of industrial endeavor possesses all the elements of permanence, provided we avail of the opportunities, which are being literally thrust into our hands, with that intelligence, energy, and enterprise so characteristic of the spirit of the American people.

Prosperity has permeated every corner of the country. Every line of business is pulsating with it. Every industry is driving at top speed of profitable activity. Labor is employed throughout the land at the highest wages ever known, and the demand for labor in all parts of the country seems to be in excess of the supply. Never in American history liave conditions been so favorable to American business and American industry. We have not alone the full dinner pail, but the overflowing dinner

pail.

Agriculture, which is the basis of all prosperity, is experiencing a most wholesome growth. The farmers of the United States never in their history have enjoyed such splendid rewards for their toil, and never before have the economic conditions and the laws already enacted by a Democratic administration so justly favored them. The rural credits bill, which will soon be passed and approved by the President, will emancipate the farmer from many of the most serious Ills he has so long endured and provide the long-time credits at low rates of interest so essential to the remunerative and productive development of the farming industry.

Money and credit are abundant; the ghost of panic has been securely laid. In the midst of a war-torn and war-worn world, with adversity crumbling the economic foundation of almost every other great power, the financial, commercial, and industrial conditions in the United States are phenomenally sound and exceptionally strong. This is due not to transitory war orders, or ephemeral trade, but to the amazing economic strength

of the United States.

The Federal reserve act, which is now generally conceded to be the most constructive measure placed upon our statute books in a half century, is the greatest contributing factor in this happy condition. The Federal reserve system has been in operation less than two years, during which time the Nation has

passed through the greatest crisis and strain the world has ever seen. We have successfully withstood the shock of the European cataclysm, and have rebounded into the most unexampled prosperity any nation has ever known. The Federal reserve system has provided the elastic and responsive credit resources required for the expansion and growth of the business and the

development of our country.

The strait-jacket in which the business and industry of the United States have been cramped and limited by the old financial laws of the Republican Party has been shattered and the country may grow without restriction to the full limit of healthful and legitimate expansion. Not only has the reserve system provided ample credit resources and strengthened the financial structure of the country immeasurably, but it has caused a more equitable diffusion of credits; has reduced rates of interest and has mitigated already and in great measure the abuses of usury in those parts of the country where usury has been a serious handleap to business and enterprise. What this means to the business men and all classes of our people is too obvious to describe.

It is a significant fact, and it is an achievement of which the administration may well boast, that when the country was on the verge of appalling panic at the outbreak of the European war in 1914, it was the decisive and adequate measures taken by the Government at Washington that prevented this panic and laid a secure foundation for the great prosperity we are now enjoying. It was the leadership and action of the Government at Washington that saved the country in this great crisis. This is said in no spirit of depreciation of the important cooperation the leading bankers and business men of the country gave to the Government in that critical time.

What a contrast this is to the ineffectiveness of the Republican administration at Washington during the panic of 1907, which left the country prostrate for many years and brought

immeasurable disaster upon the American people.

Nothing is more indicative of the amazing growth of the country than the condition of the banks. The Comptroller of the Currency states that in March, 1916, the resources of the National banks amounted to \$13,838,000,000, exceeding by \$370,000,000 the greatest resources ever shown in the history of the National Banking System. The resources of the National banks were \$2,271,000,000 greater in March, 1916, than in March, 1915.

This marvelous increase in one year exceeds, the comptroller states, the entire resources of the Reichsbank of Germany, as

reported in February, 1916.

The aggregate resources of the National banks of the United States now exceed by approximately \$3,000,000,000 the combined resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan. The total deposits of the National banks in March, 1916, amounted to \$10,700,000,000, an increase in three months of \$411,000,000, and an increase over March, 1915 (one year), of \$2,198,000,000.

These figures are so prodigious as to be almost unbelievable. They reflect infallibly the degree of prosperity as wide and deep as it is amazing and gratifying. One can not speak of this record without superlatives. Even the infallible and sanctified Republican Party could not have done better. Perhaps it is heresy to say this, but may the Democrats not reasonably claim that, since the Republican Party has never done anything like so well for the country when for many years it had control of the Government, it would not have done better than the Democratic Party has shown by these impressive figures and by the results which are visible to every man, woman, and child in America to-day? Has the Republican Party ever done even as well?

Judge Gary, head of the United States Steel Trust and a leading Republican statesman, in a recent speech in New York has bewalled the fact that the high protective tariff, which is the sanctified doctrine and cure-all remedy of the Republican Party, has not been in force at this time, and he almost weeps as he appeals to the country to restore this Republican system of subsidies, conferring upon the great manufacturers of this country the right to tax the people for their own benefit. If this is a sample of Republican statesmanship, then it may well be asked whether or not the Republican Party could have handled the affairs of the country so well as the Democratic Party has during the past three years.

In the face of the greatest prosperity ever known in the history of the iron and steel industry, the prosperity brought about under the Democratic tariff law enacted in 1913, and with the coffers of every iron and steel industry in the country overflowing with plenty, Judge Gary seriously asks the people of this country to restore the high protective policy and subsidy

system of the Republican Party. What is there in the present conditions to justify such an appeal? How can the people be convinced that the iron and steel industry should be given new advantages and additional subsidies in the light of the huge

profits they are now earning?

The present tariff law-the Underwood-Simmons Act-made a reasonable reduction in the customs duties, transferring a part of the burdens of taxation from the backs of the masses of the people to the ample shoulders of wealth, which has never under the Republican system borne its just proportion of the burdens of government. The Democratic system is the just system. The Republican system is the privilege system. The people will not repudiate the former and deliberately readopt the latter in view of the demonstrated fallacy of the claim of protected industries that they need to tax the people for their own benefit in order to make a profit. Every reasonable man wants industry to thrive and prosper, and every reasonable American citizen is willing that enterprise shall have a just and fair opportunity, but, while conceding this to enterprise and business, Democracy claims that like treatment should be accorded to the masses of the American people.

The prosperity of the country is strikingly reflected in the surplus reserves of the national banks. These reserves are now so great that they give the national banks a further loan-ing power of three to four billion dollars. If we add to this the loaning power of the State banks and trust companies of the country, we have an aggregate approximating the astounding total of \$6,000,000,000.

These great resources carry with them both opportunity and responsibility-opportunity to serve the Nation's needs in the highest degree and to extend assistance to our splendid neighbors of South and Central America who are suffering severely for the resources needed for their own development; responsibility to so use these resources that they will be employed in legitimate and wholesome enterprise and development and not for speculation or inflation.

The duty devolves upon the bankers of the United States. because the responsibility rests primarily upon them to curb speculation and to restrain inflationary tendencies. The Federal Reserve Board at Washington will use its great power to assist in the wholesome use of the great credit resources of the country and to prevent unhealthful tendencies, but the banks themselves have the chief power and responsibility. The Federal Reserve Board can only contribute toward this result to the ex-

tent that the law gives it the necessary authority.

When I speak this word of caution about speculation and inflation I must at the same time express my lack of sympathy with the views so strenuously put forward, and, I think, for selfish motives primarily, by some people and by many partisans for political purposes, that the United States must face a period of serious depression, if not possible disaster, upon the concin-sion of peace in Europe. Some people are undoubtedly honestly impressed by these claims and are genuinely apprehensive about the future. Aside from the partisan purpose of this propaganda, unreasonable fear alone seems to me to be at the basis of all honest apprehension on this score.

An analysis of the conditions in the United States and of the possible economic effects of the war in Europe does not, in my opinion, give the slightest justification for any fear for our prosperity. A Democratic Congress, however, out of deference to any honest apprehension that may exist in the minds of business men, will enact legislation against the dumping of cheap European goods in our markets and will prohibit by law unfair competition by foreign competitors with American business men and manufacturers. While I do not believe these measures are essential, I favor them simply as a precaution and as an assur-

ance to the timid and hesitating.

When I contrast the enormous financial and economic strength of the United States and the extraordinary skill and creative genius of its people with the depleted resources and the weakened economic power of the great European nations, and the destruction of so much of their skilled labor and manhood, I feel somewhat ashamed of the fright and timidity manifested by some people of the United States whom we have been accus-

tomed to regard as really strong.

When peace is restored to Europe the belligerent nations will find themselves burdened with an almost insupportable load of debt. Taxation, both oppressive and excessive, must be borne to pay the interest on these debts. Taxation is an important factor in the cost of production and adds materially, and will seriously affect the competitive capacity of Germany, France, England, and the other industrial nations of Europe. Many of their skilled workmen have been lost, and new ones must be created; many of their industries have been destroyed, and must be reconstructed. Their credit resources are seriously im-

paired. Other serious difficulties must be overcome if they are to regain their foreign markets. Against these formidable handicaps and terrible conditions, is it believable that the American people, with their highly developed industries and skilled labor, matchless resources, exceptional creative genius, and productive capacity, are unable to sustain themselves in a fair contest for their share of the world's markets? Can it truthfully be said that our economic safety and prosperity will have to face any real peril? It is almost discreditable to our intelli-

gence to have to argue such a proposition.

There are those who say that the loss of war orders, after peace comes in Europe, will seriously affect the industries of our country. This is absurd. The percentage of war orders as contrasted with the entire domestic and foreign commerce of the United States is insignificant. When war orders cease-and God grant that the necessity for them may cease soon-we shall receive orders, even from Europe, for the restorative purposes of peace, for the reconstruction of ruined industries and cities, and for the relief of the stricken markets of Germany and Austria, which have been closed to us for the full period of the war. Our trade to Austria and Germany alone for the last year prior to the outbreak of the war amounted to \$367,500,000. All this trade will be regained, and in addition to that, if we are in the least intelligent and enterprising, the great markets of South and Central America, which have been clamorously seeking us for the past two years, will more than offset any possible loss of war trade. The total imports of South America alone, ex-clusive of those received from the United States during the last year of available statistics prior to the outbreak of the European war, were something like \$700,000,000. Here is a great field for American enterprise and business—a

field which we would already have securely occupied if it had not been for the disastrous action of the Republican Members of the Senate, aided, I regret to say, by a few Democrats, in filibustering to death the bill introduced by the administration in September, 1914, for the purchase of \$40,000,000 of merchant ships to be used by the Government of the United States for the protection of our commerce with all the nations of the world. The failure to buy these ships was a fatal and irretrievable mistake. It is a striking example of narrow partisanism. If we had bought in the fall of 1914, or the early days of 1915. \$40,000,000 worth of merchant vessels, which could have been had at that time at the low prices of from \$40 to \$60 per gross ton, those same vessels to-day could be sold by the Government for at least \$80,000,000. In one year these same vessels could have earned fifty to one nundred million dollars of net revenue, while at the same time carrying American products for the farmer, the manufacturer, and the business man at one-third of

the existing extortionate ocean freight rates.

When the historian of the future studies this period, he will say that the failure of the United States Government in the fall of 1914 to buy merchant vessels for the protection of American commerce was one of the monumental and inexplicable blunders of the time.

The necessity for the creation of an American merchant marine for the regulation of ocean freight rates and for the establishment of a shipping board is just as imperative now as it was then. A Democratic House has passed such a bill, carrying with it an appropriation of \$50,000,000 for the construction and purchase by the Government of a merchant marine to be utilized both as an essential naval auxiliary in time of war and for the uses of our commerce in time of peace. If we are going to have any genuine preparedness, about which there is so much talk on the part of our Republican friends, how can they be justified in voting against this measure which is just as essential to a strong and effective Navy as the guns on the decks of the battleships or the coal which must be put in the bunkers of our war vessels? And yet most of them have voted against this essential measure.

I believe this bill will soon pass the Senate of the United States and receive the approval of the President. When this appens, another great constructive measure for the prosperity and prestige of our great country, second only in importance to that of the Federal reserve act itself, will have been secured for the American people. The Stars and Stripes will again be seen upon the high seas. The safety of our commerce will no longer be jeopardized by reliance upon foreign flags. of American citizens who must travel upon the high seas will no longer be forced upon the ships of belligerent flags because there are no American ships to protect them; and the efficiency of our Navy will no longer be imperiled for want of the neces-sary naval auxiliary to supply our fighting units with the coal and provisions and ammunition which can not be supplied to them in case of war except through an efficient auxiliary merThe flag of our country, whether we wish it or not, has a meaning beyond our own territorial limits. By the decree of God, and by destiny, we have been thrust into a position of power, carrying with it world-wide responsibilities and forcing upon us, in all probability, a measure at least of world-wide dominance. That flag must never stand for a failure to meet any domestic or world-wide responsibility; that flag must forever continue to represent the true spirit and courage and genius and ideals of the American people, and above all it must stand for truth and justice and fair dealing with all the world. It must stand for peace—peace which reflects the Heaven-given light of truth and justice; a peace we shall never be willing to disturb except in a cause whose shield is truth and honor—emblazoned by a light of such radiance and purity that every American citizen will be eager for the glorious privilege of shedding his blood in defense of it.

Speech of Hon. Ollie M. James, of Kentucky, Before the Democratic State Convention, Held at Lexington, Ky., May 24, 1916.

EXTENSION OF REMARKS

HON. ARTHUR B. ROUSE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 29, 1916.

Mr. ROUSE. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a speech of Senator Ollie M. James, of Kentucky, delivered at Democratic State convention held at Lexington, Ky., May 24, 1916.

The speech is as follows:

SPEECH OF SENATOR OLLIE M. JAMES, OF KENTUCKY, DELIVERED AT DEMOCRATIC STATE CONVENTION, HELD AT LEXINGTON, KY., MAY 24, 1916.

Mr. Chairman and fellow Democrats, I rejoice to meet with my Democratic brethren of Kentucky assembled here, not in faction but in unity, not in discord but in harmony, pointing with pride to the glorious achievements of our party both in the Nation and the State. [Applause.] We are all proud of the administration of Gov. Stanley; it has been clean, honest, and economical. He has in the short space of a few months written into law every promise made by the Democratic Party in our last plat-form—justly proud of all our Democratic administrations of the past. Candor and justice requires me to say this administration has been the most progressive and economical of all of its predecessors. It is no very easy task to write such far-reaching reforms as a workmen's compensation law, a corruptpractice act, a bill to improve our school system and to prevent unnecessary waste and expense in the purchase of textbooks, and write an antipass law; for these reforms are far-reaching and important, and the very presentation of them summons the activities of the very great hostility of privilege itself. When you seek to uproot greed and privilege you have a real job in front of you—all these reforms render a real service to the people of our State. The least of these is not the antipass law. There is nothing in our governmental life that so quickly chloroforms an active and alert conscience as a railroad pass; the legislator, the judge, the juror, the sheriff, and the citizen too quickly become unconscious of the public welfare under its sleep-producing fumes. I am reminded of a story Mr. Bryan tells of the fellow who went into a show on a pass, and it was so bum that all the audience cat-called, hissed, and jeered. so bum that all the audience cat-caned, missed, and jerred. The pass-holding guest sat quiet, seemingly enjoying the performance. Several observed him, and they said, "What do you think of that fellow? He surely never saw a show before." One of them ventured to say to him, "My friend, I don't mean to be offensive, but did you ever see a show before?" He said, "Certainly; why do you ask me?" He said, "Well, you seem to which this retten show, and we all wondered how it could be enjoy this rotten show, and we all wondered how it could be possible." He replied, "Well, you see, I am in here on a pass; I am going to wait until the next act, and if it is no better than the first one I am going out and buy me a ticket and come back and raise hell." [Laughter and applause.] During three years of its national control Democracy has enacted into law more progressive remedial legislation than the Nation has ever had written upon its statute books since its birth. In former national contests, in the last two decades, our party came as a prophet. We could only point out wrongs and promise remedies; but to-day we come with deeds, not words; with performance, not promise. Our deeds in the Nation have been greater than

our words upon the hustings; our performance as the law-maker greater than our promise as the campaigner. [Applause.] In other words, the Democratic Party has kept its word with the American people. We have made good. We have by our conduct of the affairs of this Nation deserved the renewed confidence of its people by proving worthy of the confidence once bestowed. [Applause.]

The Democratic Party rejoices that under this administration for the first time since the Civil War it was enabled to amend the Constitution of the United States in the interest of good government and the masses of the people. We freed the Senate from the control of the great interests by making it elective by the people at the polls. We wrote into the Constitution itself an amendment, susceptible of no dispute, that wealth should bear its proper burden of the taxation necessary to run the Government efficiently, economically, and honestly.

THE LOBBY.

President Wilson drove invisible government out of Washington, and uncovered the mightiest lobby that ever ramified a republic or had its rendezvous in its capital. He drove the lobbyist out; he turned the American people in. [Applause.]

THE TARIFF.

The Democratic Party undertook to enact a new tariff law in keeping with the historic principles of the Democratic Party and justice to all the people. The Democratic Party believes that the right of taxation can only exist for the purpose of raising sufficient revenue to run the Government. Taxation never did justly exist and never will in a free government for the purpose of enriching one class at the expense of all the rest of the people. We undertook the reformation of the tariff with open minds and clean hands, unowned, unpledged to any interest except that of the public welfare, and we are proud of our achievement in writing into law the present Underwood-Sim-Not a schedule in it fosters a monopoly, not mons tariff bill. a rate in it protects a trust. [Applause.] We made as nearly free of taxation as possible the necessities of life, and we sought to obtain as much revenue as they would bear from the luxuries of life. One of the greatest features of this law is the income tax, which raises from the fortunes of the rich, the prosperous, the well-to-do people of the Nation \$120,000,000 per annum, and lifts this burden off the tables and backs of the poor. [Applause.] To my mind, no law is more just than that of an income tax. Those that prosper under the Government ought to be willing to pay taxes to perpetuate it. It is a tax that forecloses no mortgages, forces no sales. It is collected only where riches abound and prosperity smiles. [Applause.]

Would the Republican Party dare to suggest the repeal of this part of the tariff law? Will they be specific in their objections to this legislation? What schedule would they repeal? What rate would they increase? Would they substitute the Dingley rate or the Payne-Aldrich rate? If they were given If they were given control again, would they reenact the tariff law that the Democratic Party repealed, a bill that was repudiated by the Republican Party itself at the polls? Who is it, anyhow, that desires really the repeal of the present law, made by honest men for an honest purpose, that of raising revenue sufficient to defray the expenses of the Government, and substitute in its stead the lobby-made, monopoly-breeding, trust-creating, millionaire-producing Payne-Aldrich bill? [Applause.] Our Republican friends told us when we enacted this bill into law that it would close the factories, fill the streets with idle men, produce a panic, create soup houses, and distress would reign everywhere; but we rejoice to-day to point to an unexampled prosperity in the Nation, with labor more generally employed, at higher rates, shorter hours, and better conditions than ever before. [Apshorter hours, and better conditions than ever before. [Applause.] Our Republican friends tell us that after the war is over that poor, stricken, prostrate, torn, bleeding Europe will take our home market here from us; that this young, virile Republic, with 100,000,000 freemen, that has gone out to take the former markets of the world, must tremble in great fear least these way town countries, with millions of their men—the lest these war-torn countries, with millions of their men-the flower and strength of their manhood-buried in the trenches, with their factories destroyed, their country laid waste, their charred and blood-soaked land filled with widows and orphans and crippled men, and upon them the heaviest debt of all ages, will come here to this happy land, uncursed by war's ravages or its burden of debt, and take our home market from us. gentlemen; I have no such fear; America is going to take the markets of the world; we are going to meet our competitors in the other markets of the earth and take them, and this great people here fears no competitor at home that we are willing to meet away from home. With the freight rate and cost of transportation in our favor here, we certainly have nothing to fear when we are meeting them where the freight rate and transportation and many times adverse tariffs are in their favor. But we shall cut from them the last hope of having even a false issue, for we shall pass a bill creating a tariff board to gather the facts created by the new war conditions or the conditions that may exist after peace is declared, and upon these official facts, obtained by men not interested in enriching themselves by taxing others, and with this gathered information be ready to meet every new condition which may arise.

FEDERAL RESERVE LAW.

Would our Republican opponents repeal the present Federal reserve law that emancipated the credit of a Nation; that made the credit of the country to run in life-giving currents through the avenues of business? Under the old system a few men could create a panic, as the whole Nation witnessed in 1907, when all the world was at peace and enjoying unusual prosperity. A small group of men upon Manhattan Island precipitated overnight one of the greatest panics in the history of the Nation. It toppled values, wrecked fortunes, destroyed holdings, turned out of employment thousands of men, and locked the door of every bank in the country against the depositor who called for his own money. The Republican Partyin control for 40 years of our national life-either did not have the ability or the courage or the desire to remedy this brutal system that lodged the money of a Nation in the control of this heartless group of men. The Democratic Party took control of the Nation and, under the leadership of Woodrow Wilson, met this great problem. We took the money control out of the hands of this oligarchy in New York; we lodged its control in the hands of the Government and created the Federal reserve banks of the country. We rested the finances of the great people of this Nation upon what they own, and not upon what they owe. [Applause.] The output of the factory, the product of the farm, the ore of the mine, the business achievement of the people, was the basis of the money issued under this new system, and not the bonds that were resting upon the What would have been the result if the old Republican system had been in effect when the world's war broke upon us? The stock exchanges in every city in the world were closed. Europe poured its vast holdings in plethargic streams upon our shores. The cry that went up from all the nations of the Old World was, "We want gold." Who thinks that the Re-publican system of finance under the guidance of these patriotic guardians would have been able to withstand this mighty cataclysm in the peace and credit of the world? But what was the result? Not a bank closed its doors; not a laborer was thrown out of employment; not a business was forced into bankruptcy, but there stood strong, serving the masses of mankind, this great legislative achievement of the Democratic [Applause.] Panics no longer are possible. of it is, they have only come, during the history of this Nation, when the Republican Party either was in control of its affairs or the laws that it had enacted were unrepealed upon our

The panic of 1873 is familiar to the older of our citizens. The Republican Party was in control. The panic of 1893 came while the laws written by the Republican Party were unrepealed upon the statute books, and the plates for the issuance of bonds had been prepared by the outgoing Harrison administration. And so we are quite familiar with the panic of 1907; but as the master achievement of Woodrow Wilson, to my mind, next to keeping 100,000,000 people at peace with the world, the historian will record the Federal reserve law that created a democracy of credit in a Republic of freemen and established a currency system controlled by the Government that is quickly responsive to the business needs of the country. Would our Republican friends suggest a repeal of this law? I imagine not, though we enacted it over their intense and bitter opposition. Senator Elihu Root himself stood upon the floor of the Senate and with all the eloquence and logic of which he is a master declared in solemn tones that if we did enact it into law that in 30 days the mightiest panic that ever broke upon a nation would be with us. He said it was but a recrudescence of greenbackism and the old free-silver craze. He declared that the national banks 8,000 strong, would not go into it. We discarded this advice. We weathered these evil forebodings, and in the interest of mankind we wrote the law. [Applause.] No Republican convention from that day to this, no Republican orator upon the hustings with any degree of responsibility, has suggested a word of criticism or uttered a line of condemnation of this law. [Applause.]

INTERNATIONAL PROBLEMS.

No President during the life of this Republic has ever had to deal with so many delicate and dangerous problems as those

which have confronted President Wilson during the last two years of his incumbency in office. With more than half of the world in arms in Europe, with Mexico in revolution at our border, these difficult and complicated international problems have confronted him almost daily, and he has handled them as becomes a patriot and a statesman. When the Lustania was sunken, the militant voice of Theodore Roosevelt cried out for war, and if he had been President of the United States at that time, to-day 500,000 brave American sons would be contending around the fort of Verdun in this mighty maelstrom of blood—thousands would have been buried in the ditches. Our President, patient, patriotic, farsighted, the real statesman, handled this question with the greatest ability, and wrung from the most militant spirit that ever stood upon a battle field an acknowledgment of our contention, an agreement to his demand, which meant the freedom of the seas to neutral life, the protection of Americans everywhere. (Applause.)

Americans everywhere. -[Applause.]

Some gentlemen in Congress undertook to take out of the President's hands the right of handling our foreign situation. Congress met that quickly, decisively, and said that they stood, as every American should stand, back of the President of the United States. [Applause.] When the President sent his ultimatum to Germany, he was criticized by two elements-one that he was seeking to force the country into war, and the other was that he was too cowardly to engage in the conflict. There are happily two kinds of courage, the courage of the man who is willing to undertake the danger himself, and the courage of the man that sends others to the conflict. The courage of the man who wishes himself to enter the conflict may be rash, for he alone is to suffer, but the courage to take a nation into war, where millions of lives may be sacrificed is another kind of courage-it is a courage that must move slowly, act coolly, and strike no blow as long as diplomacy may be employed, honor of the country upheld, the flag respected, and lives of Americans protected. Woodrow Wilson has both kinds of courage—the courage of conflict and the courage to act coolly and sensibly when he is dealing with the lives of others—the fate of a Na-tion. It was no time for divided counsel. The interference of Congress would have created chaos in this country, contempt for our honor and our country abroad, and would have destroyed the power of America to either maintain its honor or protect the rights of the neutrals of the world. [Applause.]

PEACE AND PREPAREDNESS.

For many years as a Representative in Congress I voted against great expenditures for military purposes. I thought the peace of the world was at hand. I attended the great peace conference held in London in 1906, and saw there assembled 26 nations of the earth speaking in different languages, but all of them was the language of peace. But we are confronted today with a stubborn truth, and that is that the millenium of peace has not come, and we have to regretfully admit is far removed from us. I read an old fable once that told of a maiden traveling the dusty highway with an urn of water in one hand and a fagot of fire in the other. The god of the unione nand and a ragot of fire in the other. The god of the un-verse accosted her and said, "My dear maiden, what are you going to do with the water?" She answered, "I am going to quench the flames of hell," and he said, "And what are you going to do with the fire?" and she said, "Burn up heaven." She was asked why she was going to destroy the place of punishment of the wicked and the home of the righteous, and she anment of the wicked and the nome of the righteous, and she all-swered, "So that mankind will do right without the hope of reward or the fear of punishment." But unhappily the spark of Divine love does not yet flame in every heart, nor does it rule all the nations of the earth. Self-defense and preparation for it is as necessary now as ever before. We must not mistake dishonor for peace, as we can not mistake oppression for peace. All Governments love peace—peace with freedom, peace with honor. Without these, all is slavery besides. Woodrow Wilson and the Democratic Party advocate an Army big enough and a Navy large enough to make tyrants think the second time before they strike a blow. Democracy wants an Army and a Navy in keeping with the dignity, preservation, and worth of this great Republic. [Applause.] Such preparedness and ability to defend ourselves, our cities from bombardment, and our soil from invasion, is the purpose of Woodrow Wilson. I want a Navy large enough that it will be impossible for a foreign shell to fall in a single American city. [Applause.] I want an Army strong enough to make it impossible for a tyrant's foot to press American soil. We do not want a foot of anybody else's soil, and by the eternal Gods they shall not take a foot of ours. [Applause.] I do not fear militarism. It has never menaced a free people. In this land of freemen the right to declare war rests with the people themselves. Those who must fight its battles, speaking through their duly accredited Representatives in Congress—the House and the Senate—can alone declare war, and as the people can declare war so they can proclaim peace.

AMERICANISM.

We are all Americans, no matter whence we come. We love our country because it makes us free. Our waving blue grass, our fertile plains, our majestic mountains, our winding rivers, our beautiful landscape can only be enjoyed in their real and matchless beauty through the eyes of a free man. More beautiful than the beauty and splendor of the land is the glory of our Government. The humblest may become the greatest, the weakest may become the strongest, the poorest may become the richest; here no taint of blood, no law of royalty. [Applause.] This freedom is as much the right of the one who comes here as the one who is born here. We are glad of it, and happy to offer this opportunity and this happiness to all. in return loyalty, valor, and love; loyalty to the flag, valor in its defense, and love of our free institutions. We do not care what songs of the old homeland you may sing, or what memories of the country from which you came you may cherish. All we ask is that the song you shall hold dearest to your heart is The Star-Spangled Banner. [Applause.] And the memories you shall cherish most and best are those of America that makes you free. [Applause.] I care nothing for the hyphen. I do not care what you put in front of the hyphen, just so you have after it real Americanism. There are some who seek to destroy this Nation whose freedom and blessings they enjoy. They call themselves anarchists. If I had my way, I would not allow a single man or association of men to bear aloft upon the streets and highways of this Nation a flag or emblem that either questioned the integrity or authority of the Stars and Stripes of the Republic. [Applause.]

ACHIEVEMENTS OF WOODROW WILSON.

The Democratic Party is proud of the achievements of Woodrow Wilson. He has brought prosperity and plenty to 100,000;-000 Americans. He has given work to every willing hand in the Republic. Every toiler has the full dinner pail—full to overflowing.

He has by legislation taken labor out of the brutal category

of inanimate things and treated the toilers as men with hearts that beat and lips that pray [applause], and they are no longer subjected to oppressive injunctions or Federal court manipula-tions; he has dignified the associated toilers of the field and the factory, men seeking by organization and association to brighten and make delightful the lives of the wealth producers and creators of the Nation; he has drawn happily the human distinction between men associated together to feed hungry mouths and men associated together to starve hungry mouths [applause]; he has freed the industries of the Republic [applause]; he has liberated the business of the Nation [applause]; he has provided a Federal Trade Commission whose duty it is he has provided a Federal Trade Commission whose duty it is to destroy favoritism, weed out unfair advantage, and give to industry everywhere an equal opportunity; he has given to individualism high hope and new life; he drove from the Treasury of the Nation a ship monopoly that was enjoying subsidies on the canal tolls of millions of dollars a year, and at the same time proclaimed to the world that a treaty made with America was more than a scrap of paper, but was, indeed, a bond of honor that should be faithfully kept [applause]; he has struggled amid the world's war with the great pations he has struggled amid the world's war with the great nations of the earth for the freedom of the seas and the rights of Americans and of neutrals everywhere; he has stood for the law of neutrality which was written before the war commenced and which was just and humane. [Applause.] With critics all about him, with patience and strength and great foresight, he has kept a nation at peace-peace with honor. He has driven from the control of the finances of the people of this Nation an oligarchy of wealth and substituted in its stead a just government interested only in supplying the legitimate business needs of the country with sufficient currency to meet its demands and requirements. It ought not to be necessary to nominate him in partisan convention. Patriotism in this world's crisis should rise above politics, and all parties should rejoice at an opportunty to acclaim him by unanimity the wholehearted and happy choice of a Republic of peaceful freemen [applause]; and as we can not afford to swap horses in the middle of a stream, who would say that we could afford to swap horses in the middle of a bloody stream? So we can not afford to change leadership during the great cataclysm that shakes the nations of the earth, for to Woodrow Wilson, more than any other citizen in all the world, the Christian people wherever the rain falls or the sun shines, this world around look anxiously, hopefully, and prayerfully that he will bring peace to the struggling armies of Europe. Who is it now that would

dare undertake to discredit this master diplomat, this majestic leader, this great American, for by that you may palsy the hand that may write the peace treaty of the world. [Great applause.]

President Wilson's greatest hope is to return to anxious families brave soldiers, to stop the awful toll of death, to give again to stricken lands a chance to prosper with happy homes and serene, hopeful, and proud of a world returned to the ways of peace, amid the applause of the peoples of all the nations of the earth, he would stand the undisputed, first, best-loved citizen of the world; but dearer yet to him than this earthly applause would be the sweeter approval of divine lips which said, "Blessed are the peacemakers, for they shall be called the children of God." [Applause.]

An Address by Hon. David A. Hollingsworth Delivered at Canton, Ohio, on Memorial Day, to the Mckinley Post, Grand Army of the Republic.

EXTENSION OF REMARKS

HON. S. D. FESS. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. FESS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include an address delivered at Canton, Ohio, on Memorial Day, to the McKinley Post, by my colleague, Representative David A. Hollingsworth.

The address is as follows

Comrades of William McKinley Post, Grand Army of the Republic, and patriotic citizens of Canton and vicinity, I am both proud and pleased to be with you on this memorial occasion. Proud because of the wide fame and distinction of the city in which we are met to do honor to the soldier dead of the Republic-those who came not back with us from the gory fields of henor as well as those who have since been called to join their comrades on the other shore. Proud also of the unique position to-day of your big, growing city, the only one in all the land in which its citizens, native and foreign born, including societies and orders where few of them speak the English language, have all voluntarily agreed to turn out and march in our memorial parade under but one flag—the Stars and Stripes. Old Glory is to-day the only banner or flag to be seen anywhere in Canton.

Pleasant memories also linger with me of a former visit just 20 years ago to your beautiful and interesting city, when as 20 years ago to your beautiful and interesting city, when as spokesman for a large delegation of woolgrowers from Harrison and adjoining counties I came with them to bid Godspeed to our late comrade, William McKinley, then Canton's great citizen and a candidate for the Presidency. I shall never forget his cordial front-porch greeting in response to my introduction of these sturdy men of the soil, especially his anxiety and tender solicitude for the welfare of all his fellow citizens and for the beauty and glowy of the Perublic

honor and glory of the Republic.

A patriot, gentleness and courage marked every feature; a civic statesman, his future renown and leadership were clearly foreshadowed, and his very presence seemed an inspiration as well as an omen of the great historic figure he was soon to

To-day, almost within the shadow of the monument which marks his last resting place, in the church where he worshipped, we do well to meet and recall his memory together with the memory of every one of that vast host of freemen who in the hour of the Nation's deadliest peril left their homes, their fields, and their workshops to defend national honor and the integrity of the American Republic.

In honoring them we honor ourselves; in placing upon their graves to-day the fresh fragrant flowers of spring we but add

to the vernal beauty of our own lives.

This is the one day of all the year sacred to patriotic memo-es. It is set apart in honor of those whose lives were sacrificed upon the altar of God and country, those who went down to death that our country and its flag might live and that "government of the people, by the people, and for the people"

might not perish from the earth.

Doubts and misgivings as to the future may arise. things for which they fought seem to be forgotten; the distinctions between those who wore the blue and those who wore the gray may fade, have faded in fact, but the memorial exercises of to-day as witnessed all over our broad land remain the same as when instituted just after the war and attest the fact that the great loyal heart of the country is still as steady and true in its appreciation of the valor and sacrifices of the Union Armies of 1861–1865 as it was fifty-odd years ago when the white flag of Lee's army went up at Appomattox and anthems of rejoicing and praise to the victors arose in every hamlet and village of the Northland.

There is no mistaking the intense patriotic sentiment of the people. The immortal truths of liberty and justice, vindicated by the War for the Union, are the sacred heritage of freemen and are as fixed and eternal as the ages; registered in heaven, they are beyond the reach of man's undoing. They do not belong exclusively to the few modern enthusiasts who seem to think it a mistake that the world was formed before their coming.

God himself has certainly had the American Continent in His keeping for some wise purpose. The same cloud by day and pillar of fire by night that led the Israelites out of bondage seem to have guided our Pilgrim Fathers to Plymouth Rock, blazed the way as the patriots marched to Lexington and Concord, was seen by Washington at Yorktown, by Jackson at New Orleans, by Scott and Taylor in Mexico, by Grant at Appomattox, by Dewey at Manila, and, let us hope, may in the present crisis guide the hand and steady the purpose of the Nation's Chief Executive in any reasonable efforts he may make to preserve the peace and integrity of the Republic. God reigns and rules in the affairs of men and, as in the past, the American people seem to be the chosen instruments of His power in the evangelization and uplift of the world. An unseen hand so far seems to have guided our destiny.

This is not the time or the place to discuss or criticize socalled "preparedness," the question now uppermost in many
sincere minds, and, also, it is believed, in the minds of a few
who seek only selfish political advantage. Justice and truth
move slowly. It required the firing on Fort Sumter in 1861 to
thoroughly arouse the loyal North, and Spanish inhumanity and
insult in Cuba, notwithstanding American restiveness, continued
until the blowing up of the Maine. Patience and forbearance
are virtues of the strong, not the weak. High officials of the
Government differ in discussing methods of national defense,
scientists differ, educated military and naval experts differ,
and the people themselves differ as to the possibilities of war.
Only a few alarmists assume to know it all, but, in deference
to them, it is perhaps wise, in the present possible crisis between war and peace, to remember the sagelike wisdom of a
famous revolutionary leader who ordered his men to "trust
in God, but keep your powder dry."

in God, but keep your powder dry."

The Civil War, the survivors of which on both sides are still the idols of their respective sections, was a contest of giants. Anglo-Saxon contended with Anglo-Saxon of equal bravery and courage for the triumph of ideas, but to-day such military giants as Grant and Lee, and the patient Godlike wisdom of Lincoln and our own McKinley seem to be in the discard, and instead we have book scientists and politicians, would-be military leaders, imitators, and plagarists of the hero of San Juan, but without either his superb courage or his striking personality; stay-at-home critics, gravely discussing first and second battle lines in imaginary warfare, strategy of a kind too profound for ordinary minds, and, with ill-considered judgment, forgetting the simplicity of our national character, demanding of Congress to hastily organize big standing armies and big navies in times of peace, rivaling as proposed in high quarters the combined military and naval establishments of the world, and so on with miltaristic reasoning until doubt and uncertainty have bred confusion in the minds of patriotic lovers of their country who are anxious only to do their duty as good citizens.

Such men if given leadership would be dangerous. As citizens their excited imagination and violent denunciation of those who do not agree with them only cause innocent speculation as to possible mental conditions.

to possible mental conditions.

And for what? The mere possibility that this Nation may some time in the future be unexpectedly attacked and have to defend itself without time for that complete red-tape preparation which they call "preparedness."

I may be too intensely American, but to my mind a nation of one hundred millions of intelligent freemen, with ample resources, can never be said to be unprepared to defend its honor. The thought of it is repulsive to freemen. It is a monstrous slander to call such a people spineless or helpless, as has been done by the overzealous.

The successful results of every war of the Republic challenge such fears. They are groundless, unless the sons of the men

of the sixties, of both armies, have sadly degenerated in moral fiber and courage.

There are two sides to all questions. Imagine, if you can, what would have been the result if the Nation had been "prepared" in the modern sense of the term at the opening of the Civil War, and all the arms and ammunition of the Government had been quietly transferred by an unfriendly Secretary of War to southern arsenals of his own selection. Clearly Lincoln's inauguration would have been a sectional affair and the splendid American history of half a century could never have been written.

But, my comrades, let us turn to other thoughts, thoughts more in harmony with the tender memories we hold sacred of the boys in blue who no longer answer to our annual roll calls. The real soldiers of the Civil War, of both armies, were satisfied with the results, and always have been willing to abide by the pact of peace made by Grant and Lee at Appomattox. Let no unhallowed suggestions or regrets disturb them or mar the peace between the sections. They, at least, ordinary volunteer soldiery as they were, did their duty as God gave them to see it, in the great crisis of the sixties, and after the war, heroes all, they disbanded, as they should, and returned to civil life to enjoy in peace the blessings of a reunited country. The militaristic seed of discord had not yet taken root in the free soil of America.

Long may the example of such volunteer soldiers inspire in us pure, disinterested, unselfish patriotism and love of American ideals. It is the only kind of "preparedness" which in the long run will count in the exigencies of nations. It has a depth and meaning and sincerity not always appreciated except by those who have drunk from the same canteen and felt the steel of netual fighting.

steel of actual fighting.

The battles of life, however, are not ended for the surviving soldiers of the Civil War. In reality they face to-day more dangerous conditions from age and natural causes than in the most critical hours of their army life, when youth and health and hope were with them. Death as suddenly as from a minnie ball is not uncommon. They are in truth on the firing line all the time, unarmed and helpless against the grim reaper. Their "preparedness" is only of the heart. The average yearly fatality among them based upon the number of survivors is simply appalling. It rivals the deadliest moments of Pickett's charge at Gettysburg or the more recent death struggles at Verdun. It admonishes all who had part in the heroic scenes of the sixties that the final inevitable end of life's campaign draws near. The majority is upon the other shore and only a shallow river divides.

Soldierly courage and manly character are therefore as essential with us now as in 1861–1865. I have no patience with the man or woman, young or old, in or out of official life, or seeking to get in or out, who looks askance or otherwise slights the exsoldiery of the Republic. I have no sympathy with carping critics who begrudge or haggle over the small pension allowances of the Government to its unfortunate defenders, their widows and orphans. I have no patience with a Congress in which "slow-up" orders seem effective in pension legislation and "speed-up" orders are given for big standing armies and big battle fleets in times of peace and which may never be needed

Old men these Civil War veterans may be, uncertain in many of their ways, but in feeling and sentiments of loyalty for the Old Flag they are the same high-stepping boys in blue of fifty-odd years ago.

The right to wear the Grand Army of the Republic button is to them a badge of honor. It means something; it means that in matters of national honor they have been tried in the crucible and not found wanting in either judgment or patriotic devotion to American ideals.

The silent tongues of Grant and Lee were invaluable in comparison with existing methods of publicity as to proposed Army and Navy "preparedness" and the details and strength of the American forces in Mexico and on the border. Silence and senso are military virtues easily realized if we imagine the results which would likely have happened if the orders and proposed movements of Grant and Lee had been printed each morning with scare headlines in the daily newspapers.

But, my comrades of the Grand Army, in the soldierly enthusiam of occasions like this, we must not forget our modesty; we must not imagine that we own the Government merely because our youthful valor helped to save it from dismemberment. Ex-soldiers constitute only a small fraction of the present citizenship of the Republic, and modesty on our part best bespeaks our merit.

Besides, honors were not all along military lines in 1861-1865. Men were not responsible for their environment. Some were too young and some were too old for military service.

The sainted mother also who gave her only boy to her country was as much a heroine in that act as he was a hero in the hour of battle. She did not have as he had the excitement of glorious war to sustain her. Silently and alone her tears were shed; silently, but no less heroicly, like the prophet of old, she placed her young idol on the altar of God and country. A martyr to love and duty, she must be honored as long as war memories last.

Civic heroes also as well as military heroes were needed in 1861-1865. Civic duties detained many good citizens at home while others, freer to act, gladly marched to the front. It was not then a question as it is now of how to get a few volunteers to fill the ranks of the 20,000 troopers called for by President Wilson for his Villa chase in Mexico, but was simply a question of who could not, who would not, go to the front.

Robust Americanism was in demand at home as well as in the Army, and no man who honored the flag was discredited and no invidious distinctions in matters of patriotic duty were attempted as now by self-seeking individuals or interests. Duty and conscience were the only real tests of manly character.

The world has moved forward since then. The McKinley age, with its 20 years of national expansion, has not been in vain. American cvilization has taken on a broader significance. Its rich fruitage, although still in the bloom, is found in the present recognition and world-wide influence of the Republic, seen, as it is, to be advancing to higher and grander heights, and destined, as believed by the best thought of the age, if those in power shall succeed in keeping the ship of state in neutral waters during the European war to become the one great central figure of a future world-wide, universal federation, in which, under American auspices, and possibly under one flag, and that the starry flag of the Republic, civic righteousness and permanent peace shall be exalted among the nations. May God speed the day.

And now, in conclusion, my comrades, a word to you and to myself. We shall not attend many more annual Memorial Day

The evening shadows are lengthening.

Time has set his silver gray mark upon us all, and yet we have duties still to perform in this world before final taps are sounded or we would not be here. He who takes note of the sparrow's fall is not unmindful of His own children, and the gracious lengthening of our days must be for some wise purpose. Personally, I am, as I have no doubt you are, thankful for many, many blessings of good health and strength, I never felt more able to work in my life and never in any year have I done more actual hard work than during the one just past. course, my labors have been somewhat enhanced by being a Member of Congress, but I have not complained, and, as I am out of my district and can not be suspected of attempting here to make a political speech, I do not mind telling you a secret that I am perfectly willing to serve another term. I have felt it a great honor to represent in Congress one of the big Republican counties formerly in the Canton district, long and ably represented by Comrade McKinley, and I have had but one regret in doing so, if it may be called such; that is, that the county has in it so many political good fellows-three in all I am toldwho are willing at the end of my one term; in fact, they are already scrambling for the honor of relieving me of anything that might seem like a burden in representing the people of Columbiana County in the Congress of the United States. I am in sympathy with the ambitions of all three, but really would be pleased if the good people of the county, slightly emphasizing the adjective good, would keep them in "preparedness" training for two years longer. Meantime, "let us have peace."

Seriously speaking, however, and begging pardon for this pleasantry, let us, my comrades, take renewed courage from the exercises of to-day and highly resolve, as we go hence, to mingle again with the outer world, to bravely face again to the front and, for the few remaining years of our active lives, do our whole duty as good citizens in peace as we did our duty as soldiers in war. Let us resolve to ever attend to the holy task of decoration so long as life and memory are vouchsafed to any of us. As the years go by, let us, as we have done on this Memorial Day, place above each soldier's grave those flow-ers which are emblematic of virtue and nobility. Inquire not whether the occupant was in life a chieftain or a private soldier, whether he wore the insignia of rank or the blue blouse of the subaltern, for in the Republic of the dead all are equal. Ask not if he was of this or that political party, of this or that I brigades, divisions, or Army corps.

religious creed or denomination, or whether, in fact, he was of any creed. Remember only his good deeds, trusting if he had faults that the recording angel will in charity drop a forgiving tear upon the record and wash it out forever.

The Military Bill.

EXTENSION OF REMARKS

HON. WILLIAM H. CARTER, OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. CARTER of Massachusetts. Mr. Speaker and gentlemen, I shall vote for the conference report because I believe that it is a step in the right direction.

I believe that it falls far short in meeting the exigencies of the times, and I believe that we should have a much larger Army in time of peace than the bill provides.

I think, as my colleague from California [Mr. KAHN] has said, that we should have at least 220,000 men for the line of the Army in times of peace.

I do not mean that this Army should be increased immediately, but I believe that we should gradually build up the Army as necessities arise to that full minimum strength. voted for the Kahn amendment to increase the Army to 250,000, which represents only one-fourth of 1 per cent of our population, and was very sorry to see that the House defeated this amendment.

Under the provisions of this conference report an Army of 175,000 men as an enlisted force in time of peace is provided for.

If all of the organizations which are provided for in this bill are enlisted to their peace strength, we will have an Army of slightly over 210,000, and if these organizations will enlist to their full strength, we will have an Army of 232,495 enlisted men, exclusive of the Quartermaster Corps, the Hospital Corps, and the Signal Corps.

Add the full strength of these corps to the line of the Army and our total number of enlisted men will be 282,461. Together with the Philippine Scouts, we will have a total of 294,461, or the largest Regular Army force that this country has ever had.

A good many of the provisions regarding the National Guard

and State militia are, in my opinion, very good.

These provisions will no doubt place the State militia on a much higher plane than ever before.

In the future the officers of the State militia will have to pass a set of examinations provided for by a board of officers selected by the Secretary of War.

The old way of appointing these officers, either through political influence or by the members themselves, can no longer continue under the provisions of this new bill.

In the future, every man who receives a commission must pass an examination showing that he is capable of commanding

Under the provision of this conference report, the captain and officers above the rank of captain are to receive full pay and enlisted men are to get one-fourth the pay of the Regular Army.

These men will devote their own time and money toward training, and I believe that it is only just that they should be recompensed by the Government for their work.

Another good provision which refers to the National Guard is one which requires the organization of reserve battalions in every State that sends its National Guard to the front when the President drafts them into service.

The reserve battalions enlisted in the States to which the respective regiments that go to the front belong will be able to fill up the wastage resulting from death or disease and will thus constantly maintain the regiments in the field at full war strength.

Another provision which refers to the National Guard is that the officers and men will be required to pass a physical examination before they can be drafted into the service of the United States. They must pass a physical examination when they are mustered out, and a record of such examination must be on file at the War Department.

Under the provisions of the bill, the Army will be divided into tactical units. Previous to this we had no real legislation on our statute books regarding the organization of the Army in

The conference report provides that hereafter all this shall be done in organizing the Army of the United States.

Our regiments of Infantry have been increased from 30 to 65 and our Cavalry from 15 to 25.

Our Field Artillery is increased from 6 to 21, and we have practically doubled the Coast Artillery forces.

All of these measures are, in my opinion, in the right direc-

Under the new bill there will be 7 medical officers to every 1,000 enlisted men in the Army. In past wars this country has lost great numbers of men owing to the inadequacy of our medical department.

We have also given rank and pay to dental surgeons who will work in harmony with the medical surgeons. The bill also pro-

vides for a splendid veterinarian corps.

It has also created a new grade in the aviation section of the Signal Corps—that of aviator. If it is impossible to secure the requisite number of Army fliers, the Secretary of War can commission civilians as aviators in the forces of the Army

The Coast Artillery has been increased so that we will have a

total of 30,000 men in this service.

Another important feature of the bill provides as to original appointments in the commissioned strength of the Army that, excepting graduates of West Point, the commissions shall be for a temporary period of two years, within which time the commissioned officer must demonstrate his worth and ability as an officer.

If in the lapse of two years it is determined that he is unfit,

he is given a dishonorable discharge.

One of the best features of the new bill is section 54, which provides for summer training camps. These camps, which were inaugurated last year, are commonly known as the Plattsburg iden.

I believe that this section of the bill is so framed that it will enable the Secretary of War, under such terms of enlistment and regulations as he may prescribe, to create a Volunteer Army

The matter of vocational training for enlisted men assumes considerable importance in this bill. It provides that hereafter enlistments in the Army may be made from boys 18 years or over without the consent of their parents.

Anyone over 16 who wants to enlist may do so with the con-

Under this bill, the young man can receive vocational training at the hands of civilian instructors or under such instructors as the Secretary of War may deem necessary.

I believe that this will attract a great many young men who will be glad to combine the military training with vocational training. I believe that this will have a great effect in increas-

ing the number of enlistments for the Regular Army.

The enlisted reserve corps, in addition to the Regular Army reserve, is a very important feature of this legislation. The men who are telegraph and telephone linemen, chauffeurs, railroad trainmen, and those working in factories where flying machines are being constructed, in ammunition factories, automobile factories, hospitals, or drug stores, or the many different industries where men become skilled in duties that will be of inestimable service to their country in time of national danger, will be enrolled under this bill as auxiliary forces. They are to be called out, if the President deems advisable, for 15 days training at any time in 10 years, and while there will receive pay and allowances given to men in the Regular Army.

It is the purpose to drill these men so that if we ever get into a war we will have men in the Engineer, the Quartermaster, and the Signal Corps, and in the Medical and Ordnance Departments, that will enable this Government to perform its work in these various corps and departments as we never at any time in our history have been able to do. These men will be encouraged in every way, under this bill, to become a part of the auxiliary forces of the United States to be called out in case of

national emergency.

The men of the Spanish-American War who served in the Philippines, Hawaii, Porto Rico, or Cuba are entitled to come back to the colors when they are needed.

The bill provides for the purchase by the Government of

military supplies of every character in time of war.

The bill provides for a census of all privately owned plants in the United States equipped to manufacture arms and ammunition or the component parts thereof. To insure a prompt mobilization of these various industries a nonpartisan board on mobilization of industries essential for military preparedness is provided for. There is also a provision for the investigation by two civilians and three Army officers as to the Government's manufacture of arms, ammunition, and equipment. The War Department for the past four years has been manufacturing

practically all of the arms, ammunition, and equipment which it requires, and yet thousands of men and women throughout the Union have been led to believe that the department purchases all its powder and ammunition from private concerns. These private concerns are charged with being responsible for the demand for preparedness in the United States. In view of the fact that they have not been selling their products to the War Department, I do not see what authority those who are opposed to preparedness can have for their assertions that the ammunition manufacturers are responsible for the demand for a larger military force

The bill provides for the protection of the uniform of officers and enlisted men of the United States Army, Navy, and Marine Corps. Exception is made, however, in favor of the organization known as the Boy Scouts of America, the Naval Militia, or such other organizations as the Secretary of War may designate for wearing their prescribed uniforms. This will enable such organizations as have been in existence in many of the States and whose uniforms are very similar to the uniforms worn by some units of the Army, Navy, or Marine Corps to preserve their uniforms through the permission of the Secretary of War.

The bill also provides for the procurement of gauges, dies, jigs, tools, fixtures, and other special aids and appliances, including specifications and detailed drawings, as may be necessary for the immediate manufacture by the Government or private concerns of arms, ammunition, and equipment for our military forces. That provision I consider to be a great step in the path of military preparedness.

I am wholly against the provision of the bill which provides

for a nitrate plant and an expenditure of \$20,000,000.

I understand from the best of authority that there are a great many methods now used for the manufacture of nitrogen which are cheaper than water.

Germany to-day is turning out nitrogen and high explosives

without the use of an ounce of water.

I believe that the proposal to establish this nitrate and fertilizer plant is an affront to the intelligence of the people of this country. I believe that this expenditure is a misuse of the funds of this country.

I believe that these are perilous times and the conditions at home and abroad are of such an unsettled character that we

should be awake and alert.

believe that a large reserve force could be created by the proper military training, under Federal supervision, of our young boys. I believe we should encourage movements such as the Boy Scouts and similar organizations.

High-school cadets should be encouraged, and I believe with correct training that a wonderful reserve force could be brought

into existence.

Speech of Rear Admiral William S. Benson, United States Navy, Chief of Naval Operations, in Response to the Toast, "The Navy," at a Dinner to the Alumni Given by the Naval Academy Graduates' Association on Thursday Evening. June 1, 1916.

EXTENSION OF REMARKS

HON. WILLIAM B. OLIVER, OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. OLIVER. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include a speech of Rear Admiral Benson, Chief of Naval Operations, at the alumni banquet of the Naval Academy, and which contains much informa-tion of value in connection with the provisions of the pending

The speech is as follows:

"Mr. Toastmaster, fellow graduates, and guests, in calling upon me to answer to the toast, 'The Navy,' the object of the graduates' association is, I take it, to satisfy, perhaps, the expectation of the service that I give an account of my stewardship as Chief of Naval Operations.

"I may preface my remarks by saying that, as time has gone on and the work of the office has developed, more distinctly outlining some of the vast problems involved, I have become more and more fully convinced that those who conceived the idea of creating by law a chief of naval operations have, in the establishment of this office, "builded better than they knew." In

speaking on this subject, I do so without any intention of making odious comparisons and without any desire to attempt to enlarge upon the importance of the work or to magnify what has been already accomplished; and, yet, in order to be quite sincere and candid, I must say that upon taking up this work a little over one year ago I started practically from the ground. There were then certain elements of routine being carried out which might in a way be called the fragments of organization, but certainly nothing more. There were no data from which the chief of the office could obtain information at short notice. Only a few hours after assuming office it was necessary that a vessel of a certain class be sent from Hampton Roads to New York, and it took hours to find out just what vessels were available in that vicinity, and particularly what ones were suitable for the duty to be performed. There were no definite data at hand relating to materiel or personnel. In order to find out about matériel it was necessary to send to some other office and get information piecemeal. Information as to personnel, and as to the relation between personnel and materiel, could only be obtained by consulting the several bureaus' files. In fact, no information except what was given in certain regular publications was available to show the relative strength of the various nations of the world. So it was necessary literally to begin at the bottom. It is true there were some efforts at organization which had been carried forward nearly to completion. board for the organization of the radio service had made its report and recommended an organization for adoption, but this report had not been approved and the older unformed system in the radio service was still in vogue. Messages for radio transmission were sent out by telephone to Arlington, if received dur-Ing ordinary office hours, and were given attention by the Arlington operators at their convenience. Messages received at night from Arlington or elsewhere had to await the opening of the office the next morning before being decoded and de-

"Such facts as these serve to indicate the conditions formerly existing, and are recounted simply that the service may know what has been done since the establishment of this office and what is being done now, and I want especially to emphasize them in order that the service may have a true estimate of the situation and not be led astray or unduly influenced by what seems to have been a persistent effort during the past year or so on the part of certain persons and in certain elements of the press to try to create the impression not only in the minds of the public but even in the minds of naval officers themselves that nothing has been done in the department to improve conditions. And let me state here that the conditions which I have found to exist could not in any degree be laid at the door of the Secretary. He has at all times shown the most earnest interest and the most cordial sympathy in all the various features recommended for the development of this office, and he has given particular attention to every measure tending to increase its efficiency and the efficiency of the service in general.

"The report of the board on the organization of communications, which I have already mentioned, has since been approved and is now in operation, and I do not hesitate to express the firm belief that it is the most thorough and efficient organization of its kind to be found either in the service or out of it. The office space occupied by the Chief of Naval Operations and his staff has been expanded from its formerly overcrowded condition to include nine rooms. These rooms have been cleaned, renovated, and equipped, and they are now kept in a condition that leaves little more to be desired. One of these rooms has been fitted up especially to meet the needs of the communication service. A soundproof compartment has been constructed, in which the radio operators are on constant watch day and night, and a space adjoining this compartment has been fitted for the telegraph and telephone operators. A commissioned officer day and night keeps watch to code and decode and to receive and send messages of every character without delay.

"The subject of extending communications throughout the world has been given careful attention and, under the direction of Capt. Bullard, the Superintendent of the Naval Radio Service, phenomenal progress has been made toward the establishment of a system by which communication within our own country may be developed and improved and, in cooperation with the systems in Pan-American countries, expanded throughout the Western Continent. The subject of radiotelephony has, through the cooperation of Capt. Bullard and his men with the telephone companies, reached a development little short of marvelous. At the instance of the Superintendent of Radio, the various companies interested in this question agreed to mobilize their utilities and hold a demonstration which would show to what extent their systems of communications could be used. Some two weeks ago, when this demonstration took

place, I sat in my office and, within the short space of time of less than two hours, transacted business by land wire and radio telephone with the commandant at the Puget Sound Navy Yard, the commanding officer at Yerba Buena, San Francisco, the commandant at the Mare Island Yard, the naval station at New Orleans, the aeronautic station at Pensacola, the commandant of the Charleston Navy Yard, the commanding officer of the New Hampshire, then at sea off the Capes of Virginia, the commandant of the Philadelphia Yard, the president of the War College at Newport, and the commandant of the Boston Yard. Communication was most satisfactory and conversation between myself and the officers with whom I talked was taken down by a stenographer in my office, so that a complete record of all business transacted was available at once.

"Soon after the appointment of the Chief of Naval Operations, the duties of the nid for matériel were transferred, by the order of the Secretary of the Navy, to the cognizance of the Chief of Naval Operations and were placed immediately in the hands of one of his assistants. This change has served to provide positive means for the Chief of Naval Operations constantly to keep in touch with the material condition of the fleet and with the preparedness of individual vessels for active service. Work of the material bureaus is quickly coordinated under the immediate knowledge and assistance of the Office of Operations.

"A plan of organization of the fleet on a large scale has been worked out and is now in operation. This plan is so arranged as to provide an organization for the entire naval force of the United States or for any portion of it in any part of the world. The various elements of the fleet have been given definite organization and flag officers have been detailed to the command of each, so that it may be justly said that the fleet is, for the first time, completely and thoroughly organized.

"One of the first steps taken for the improvement of the organization of the fleet was with a view to the betterment of the submarine service, and to this end an officer of high rank has been detailed to command the submarine flotilla.

"The subject of aviation also has been given especial attention and every effort has been directed toward concentrating the development of aircraft toward a definite service. Aircraft have been placed in the same category as other craft and the various bureaus have been assigned specific duties bearing upon their construction and development and have assumed the responsibility for the work coming within the cognizance of each.

"A thoroughly digested and well-developed plan of mobilization for the entire fleet in the event of war has been submitted to the department and approved. Each bureau and officer in the department has been assigned its particular duties in connection with this plan and reports quarterly to the department giving in detail the progress of each toward preparedness to accomplish its task in mobilization.

"The General Board has deliberated on the list of available merchant vessels useful for naval purposes in case of war, and has determined the characteristics required for the special assignment of each. Guided by these requirements, the board of inspection and survey is now engaged in making a careful inspection of these merchant vessels, reporting for each the necessary alterations and equipment to fulfill the duty to which they have been assigned in the naval auxiliary service. Each merchant vessel inspected is assigned to a certain yard, where, in the event of need, it would be altered and equipped for naval service and where it would be supplied and repaired. The necessary equipment and supplies for such vessels are being sent as rapidly as possible to the yard at which these ships would be outfitted so that in the case of emergency or war this work will be accomplished in the least possible time. Records are being kept at the department in such condition that complete data are immediately available showing just what vessels could be used, what alterations would be necessary, and, in preparation for the event, all details, even to the drawing up of contracts, are being perfected in advance.

"In past years the organization of naval districts has been merely a nominal one. The plan for the organization of naval districts has within the year been taken in hand and has been worked out in every detail. Each naval district will be organized according to a common scheme, and the general plan, together with a sample organization for one district, will be furnished to each naval district for filling in all data as to number and class of vessels, the organization and duty of personnel, etc. The question of mine localities within our ports and along our shores has been studied, and the number of mines for each district and for our outlying defenses has been determined. Officers have been assigned to the various duties in the district for war service, and the distribution of vessels for the district defenses has been made, each vessel being assigned to its well-defined function in the defense,

"Plans have been completed for the mobilization of the Naval Militia, and detailed instructions have been prepared providing that each step in the mobilization shall proceed without interruption and with the utmost expedition. In addition, special attention has been directed to peace-time training of the Naval Militia, and arrangements have been made for sending the naval militia to sea this summer on board nine of the older battleships not attached to the active fleet. Arrangements have also been made for a cruise with citizen volunteers for training, on the general principle of the Plattsburg encampments conducted by the Army, and during four weeks, in the latter part of August and the first half of September, these volunteers will cruise at sea and will exercise during the last week with motor boats in conjunction with the battleships, destroyers, and submarines, working out such problems as would arise in time of war.

"The organization of the ships in reserve has been given special attention. Not only have the complements been increased, but special attention has been paid to the ratings of the men on board, so that the important stations will at all times have a sufficient number of well-trained men properly to break in the additional personnel that would be required to fill the complements. The ships are kept in material readiness, so that it will be necessary only to fill the complements in order that they may be ready to join the active fleet. A system of periodical inspection of every ship belonging to the Navy has been established, and its good results are already apparent.

"Regulations have been drawn up by a joint board for the proper control of the Coast Guard, which automatically comes

under the Navy in time of war.

"In response to the request of the department, the General Board has been indefatigable in making out the plans and selecting the locations for advanced bases, and in determining the location of submarine bases and working out the detailed

plans for their development.

"The annual period of overhaul for vessels has been dis-The old system under which for 3 months-and continued. often for a longer period-in every 15 vessels of the fleet lay at a navy yard unready in material respects and demoralized in personnel has been done away. These demoralizing influences, due to stagnation at navy yards, were well known to every officer, and it will be appreciated that they must have had a very bad effect upon the Navy. It was only natural, under the old system of lengthy overhauls, that spare parts would be used up and important work postponed that could have, and should have, been done at once in order to keep the ships in first-class condition. Such prolonged periods of mactivity at a repair yard during which the unavoidable disorder incident to the pressure of large numbers of workmen on board, and sometimes with the added discomfort of climate, could not help but have a very serious and detrimental influence upon the ships' personnel, besides immensely increasing the expense of maintaining the fleet.

"At the present time practically every vessel of the fleet is ready to perform its designed duty, except possibly the *Georgia*, which is to have new boilers installed, and the *Connecticut*, which is having extended boiler work done, one or two of the earlier submarines now being utilized for experimental pur-

poses, and some of the later destroyers.

"The equipment of my office has been greatly improved and added to. Data on all essential subjects have been collected and kept near at hand and are constantly being added to. Because of this improvement, I was able, when called before the House Naval Committee during the present session, to give full and exact information of our own and the other principal navies of the world, and was able to show not only in figures but graphically to the eye the number and type of ships of each of the principal navies of the world. Photographic silhouettes of the ships of the several navies were made and pinned upon sheets in groups according to type, so that a clear idea of the relative strength of the various fleets could be obtained at a glance. These sheets will eventually be placed upon the walls of one of the offices.

"An annual program of operations of the fleet has been worked out and adopted, and has so far been followed without difficulty. There is no reason to believe that it can not be successfully followed as a standard yearly program. In my office there are kept data and records from which, at a moment's notice, one can determine the whereabouts of every vessel of the service, and within a very few minutes the position of any merchant vessel can be located. On the walls of the office general charts and charts of places of special interest throughout the world are kept on chart rolls in the most convenient manner for easy reference. In another office there is a roll on which are maps showing the interior subdivisions of various countries

and giving almost every kind of desirable information connected with the naval service.

"Cooperation between the various bureaus and offices of the department with the office of the Chief of Naval Operations has been most cordial and complete and the practical result has been all that could be desired. One day in each week the Secretary holds in his office a council composed of the chiefs of bureaus, heads of the various offices, the Assistant Secretary of the Navy, and the Chief of Naval Operations. At these meetings various questions of importance affecting the whole service are considered, the progress of work on ships discussed, new enterprises gone into, and a decision arrived at under the most favorable circumstances for wise action. Through these councils all are kept informed of important work, and a hearty cooperation followed by satisfactory execution of the Secretary's decisions is the result. In addition to this weekly council the Secretary of the Navy, through his own efforts, has organized a naval advisory council, known as the Naval Consulting Board. which, with his approval and sympathy, is collecting vast stores of information regarding the industrial resources of the country, and is perfecting a plan for the utilization of these industries for the support and assistance of the Army and Navy for the defense of the country in time of need.

"A thoughtful consideration of the work that has been accom-

plished will show that all is being done now that could reasonably be expected from a so-called General Staff. In my opinion, the organization that exists in the department, and that is now in successful operation, is accomplishing in a purely American and businesslike manner all that could possibly be expected from the creation of a General Staff, and is, I believe, doing this in a much more satisfactory way. It is folly to talk of or to advocate clothing a Chief of Staff or a Chief of Naval Operations with authority independent of the head of the Navy. Such independent authority would lead only to confusion, and would do great harm. The fact that the bureaus, as now constituted, represent the different sections of the General Staff, that they have their special appropriations and are responsible for the proper expenditure of moneys under their control, and of the proper development and operation of the various parts of the Naval Establishment under their cognizance, gives, in my opinion, to the organization of the Navy Department a distinctive strength and an added efficiency not possible under a socalled General Staff organization. The present organization should be made stable and permanent, and if legislation is necessary to make this absolutely sure, then there can be no doubt that such legislation should be enacted, but in considering any legislation care should be taken that too great restriction is not imposed upon the freedom of action of the head of the Navy.

"I desire to add that all the results I have related have been accomplished with the Secretary's assistance. No new legislation has been necessary and all that has been required of me has been to present the need and desirability of changes and improvements in order to receive the Secretary's sympathetic attention. He does not blindly yield to suggestions, but gives them the most earnest and thoughtful consideration. As the Secretary has often reiterated, his only requirement is that the proposed change shall add to the efficiency of the Navy in order that both the Navy's personnel and matériel may be capable of rendering, and may be made to render, 100 per cent efficiency. This policy of 100 per cent efficient service has been the basic creed of the Office of Operations, and when we shall have fulfilled that policy every unit of the fleet will at all times be ready to perform its functions, whatever the occasion that may

require its service."

Naval Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. GILBERT N. HAUGEN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. HAUGEN. Mr. Speaker, personally, I believe that we should avoid war. If, after exhausting every honorable means to avoid it, it is forced upon us, we should, of course, be prepared. Just to what extent we are unable to say. The European war has fully demonstrated that skill in the art of war is of the greatest importance, and deserves careful study by our best talent.

Much has been said about our Navy and the inactivity of the present administration in not speeding up and carrying out the program authorized by Congress. The committee's report gives a long list of battleships, destroyers, fuel, and other ships authorized, which have not been completed. According to the report, work has not even been begun on the battleships Tennessee and California, 6 destroyers, and 18 submarines. We are told that shippards are running their full capacity and working overtime; they have more orders than they can fill. Evidently it will take years to complete the building and equipping of vessels already authorized.

In view of the inactivity of the administration in making preparations as directed by Congress in the past, and under existing conditions, and now when practically every powerful nation appears to have exhausted her resources, I fail to see the immediate need of an extravagant program, as suggested by some.

Much has been said about the extravagance and waste of money, the building of inaccessible dry docks, the tearing down and building up of new quarters, the excessive salaries and allowances to officers, and so all along the line.

I do not propose to go into detail except to say I believe that by expending the money appropriated in a more prudent manner than has been done in the past, the efficiency of our Army and Navy could be greatly increased without greatly increasing the appropriations.

There is and has been more or less contention as to the size The contention on one hand is that inasmuch as of our Navy. we are among the greatest and strongest of nations we should also have the greatest and strongest Navy. On the other hand, it is contended that a large Navy is expensive; that it is already burdensome beyond endurance. Our military strength, though mighty in its possibilities, is but a part; our strength lies not only in our Navy and Army but in our resources, our material strength; in our position and standing in the world. Therefore many contend rather than to rely altogether upon a great Army and Navy we should join with other nations by more peaceful methods, by arbitration, and by manifestation of reason and good will in an effort in bringing about everlasting peace and good will. Navies are not only expensive to build but short lived. A navy that ranks first class to-day in a few months or years goes out of date and becomes obsolete. Genius is never idle, it never stands still, as human science advances newer types of battleships take the place of older types, and as naval architecture and construction is progressing in point of perfection, upto-date naval powers are compelled to substitute the newer type for the obsolete, and many of them in their mad race for supremacy have taxed themselves almost to a point of bankruptcy. have been besieging the money market of the world, undermining the credit of Europe to get money for all big-gun battleships, and are now staggering under the crushing weight handed down by past and present generations. Early in history navies consisted of a few skiffs and canoes propelled by oars. With them and the then modern instruments of warfare the pirates and men gloriously fought and murdered one another. Later the sails were added. These sailboats, catching a handful of wind, aided by oars, crossed the deep waterways, pursuing or running away from the enemy, as the case might be. Later genius invented the cannon, first loaded with saltpeter, later with powder, shot, and shell. It was then believed that naval construction had reached its highest point of perfection.

The heroes and men skilled in the art of war pursued their enemy with more vigor, slaughtered men, women, and children more successfully and rapidly than ever. Later the Mcrrimac was built, a hull cased in railroad iron. At Hampton Roads the Merrimae met another great battleship, the Monitor-a ship described as a barge with a cheese box on it. The two great ships fought a battle that will be long remembered. That was less than 60 years ago. Later steamships were built with a capacity of from seven to ten thousand tons, cased in armor plate, armed with guns ranging from 4 to 12 inches. We then felt safe and prepared. Our fleet met the enemy at Manila Bay, and in the Harbor of Santiago they fought a great battle. all glorified in heroic deeds of our great men that brought so much fame and luster to America's name. That was about 18 years ago. With the splendid victory won by our Navy, it was believed that science, genius, and naval construction had reached its highest point of perfection. With the inspired enthusiasm we started to build a Navy second to none. We authorized and built battleships of the type then used with the capacity of 10,000 tons, costing on an average of about \$10,000,000. The cost of maintaining these great battleships amounted to about \$1,000,000 a year each. Kaiser William was not to be outdone. Germany and other nations were building ships of 15,000 tons capacity. We found it necessary to authorize and build a dreadnaught, and we have been authorizing until

we have, according to the committee's report, authorized 42 battleships, of which number 33 are reported fit for service. Thirty-two cruisers and in all, 343 vessels, with 1,352,135 tons displacement, are fit for service. We have 50 under construction, with 300,011 tons displacement, and 26 authorized, approximate displacement 70,750 tons, or a grand total of 419 vessels, with 1,723,196 tons displacement.

Recently genius has invented the airship, flying through the air at a speed of 100 miles an hour. I take it before long we will be authorizing the construction of ships of the aerial type, equipping, ironcladding, armoring, officering, and manning these great airships flying through the air in order to successfully keep the enemy away at a proper distance for fear the enemy may some dark night sail into our harbors and destroy our great The majority of the members of the committee recommend an appropriation of \$2,000,000 for the further development of aviation for naval purposes, which has been increased to \$3,500,000 by this committee, and the following ships are to be added to the Navy:

Five battle cruisers, costing \$20,433,431 each, Four scout cruisers, costing \$5,571,900 each. Ten destroyers, costing \$1,325,314 each.

Three submarines of a surface displacement of about 800 tons,

costing \$1,206,302 each. Seventeen smaller submarines, costing \$731,302 each.

One fuel ship, costing \$1,363,272.

One ammunition ship, costing \$2,714,650. One hospital ship, costing \$2,250,000.

The minority recommends an addition of 2 battleships and an increase in the number of submarines to 50, and numerous other increases. The ranking member of the minority of the committee estimates that it will require an expenditure of \$360,000,000 to carry out all the provisions in the bill reported by the majority and \$400,000,000 for those suggested by the minority. Twenty million dollars for 30 additional submarines, \$11,000,000 for a Government armor plant, \$7,000,000 for the enlargement of the navy yards, and \$2,700,000 for increasing the Navy personnel are some of the items that have been added to the bill reported by the committee, which brings the total appropriation up to about \$270,000,000. To this add the many items authorized and we have a total expense of at least \$380,000,000. The question is, "Why this expensive program?" The answer is that we should be second in relative strength. President Wilson said at St. Louis that we should be second to none,

Not long ago it was generally conceded that we were second. Now, no one knows just what our relative strength is or may be in the near future. The Office of Naval Intelligence of the Navy Department reports that owing to the European war that office is unable to give definite information as to the relative strength of the principal navies of the world. As we know, and as was reported by the committee, in many cases the belligerent powers have failed to acknowledge the loss of all the vessels destroyed, nor have they reported all vessels built or acquired; hence, we are in the dark as to our present status, and from all we know we may be closer to the top than is generally believed.

According to the committee's report on the naval losses of the various belligerents since the outbreak of war, corrected to February 1, 1916, France had lost 1 battleship, 1 armored cruiser, and 18 other vessels; Italy, 1 battleship, 2 armored cruisers, and 7 other vessels; Japan, 8 vessels of various types; Russia, 1 battleship, 3 cruisers, and 4 other vessels; Turkey, 2 battleships, 1 cruiser, and 9 other vessels, in addition the report states that other men-of-war may have been destroyed; Austria, 2 cruisers and 9 other vessels; Germany, 34 cruisers, with more than 160,000 tonnage, and 51 other vessels; England, 9 battleships, with 137,950 tonnage, 16 cruisers, with 145,509 tonnage, 2 transports, with 18,174 tonnage, 1 armored boarding vessel, with 6,322 tonnage, the total tonnage of the above 28 vessels being 307,955 tons, besides 24 other vessels of various types. than 200 vessels of various types were reported lost up to February 1, 1916.

To-day's papers report that in last night's battle the German fleet destroyed the British dreadnaught Warspite, five cruisers, destroyers, and a number of torpedo boats; besides this, a large

number of battleships suffered damage.

On the German side the cruiser Wicsbaden and battleship Pommern were sent to the bottom. The fate of others is un-

No one knows definitely how many others were lost prior to that date, or how many have been lost since. One thing is certain, that the loss has been great. Furthermore, we know that if the navies of the belligerent powers ever do get into real action, as their vessels go to the bottom of the sea our relative strength will forge ahead.

In this connection I desire to say a word as to our au-

bill provided for 140,000 men; the Senate bill 250,000; the two Houses finally settled on 175,000 fighting men to serve three years with the colors and four years with the reserves. vides for the development of the National Guard and for the training of young men in our schools, which, in my opinion, is a most wise and important provision, as I believe in that way a powerful and effective reserve can be provided for with less expense and with less inconvenience to the young men who offer their services to their country.

In the light of experience, with the National Guard's record for patriotic and excellent service, with the difficulty encountered in recruiting our standing army in time of peace-especially when recently 20,000 men were called for and so far only enough have joined to take the place of the number going out at the expiration of the term of enlistment-it is due that special attention and encouragement should be given to the National Guard.

Here is what Chairman Hay had to say:

Here is what Chairman Hay had to say:

Mr. Smith of Michigan. You spoke something of the difficulty of recruiting the Army to its full strength. I would like to inquire whether or not now the Army is not being recruited to its full strength for volunteers and what progress is being made—whether or not they are joining freely?

Mr. Hay. I will state to the gentleman that they are not joining freely. We passed that resolution in March, over two months ago, and they have succeeded in getting only 6,000 men, and that number will about take the place of the number going out at the expiration of their term of enlistment.

Mr. Smith of Michigan. How many stations are recruiting?

Mr. Hay. I understand there are 253, although I am not certain about the number.

Mr. HAY, I understand there are 250, arthogal I all about the number.

Mr. MEKKER. Has the gentleman received the report of the enlistments to the Regular Army from Boston of about five weeks?

Mr. HAY, I beard that they got one recruit there. I do not know whether that is true or not. [Laughter.]

Here is what the gentleman from Illinois [Mr. McKenzie], a member of the committee, had to say about the National Guard responding to their country's call when in need of fighting men:

responding to their country's call when in need of fighting men:

Mr. Ferris. I notice that on the call for 4,000 of the National Guard in the State of Texas only 55 falled to respond. I wonder if that is not typical of the way in which the men of our country will respond when they are needed?

Mr. McKenzie. That is the history of our National Guard through all the history of our country, and I am proud of it. [Applause.]

Mr. Kahn. Will the gentleman yield for another question?

Mr. McKenzie. If I have the time. How much time have I?

The Speaker. The gentleman has three minutes.

Mr. Kahn. Did the gentleman also read in this morning's paper that the National Guard of Arizona and New Mexico are so badly equipped that they have not been able to mobilize yet?

Mr. McKenzie. Yes; and I think there is probably something in that, and I will vote to give them the necessary equipment. I think that is the thing we want to look out for—to equip and take care of the boys when they are called into the service of the Government.

Here is what Chairman Hay had to say May 20, page 8396:

Here is what Chairman Hay had to say May 20, page 8396:

Here is what Chairman HAY had to say May 20, page 8396:
It provides for the development of the National Guard, the only volunteer force in this country which is in existence and with which we could work. It provides for their development, and since this law has passed the House it has developed the National Guard to the extent that at least 40,000 new men have applied for membership in the National Guard. [Applause.] That carries out the assertion made that if the National Guard was put on a proper basis we would have at least the number provided for in this bill in a few years—425,000 men as a reserve. It is purely a preparedness measure. It meets the best thought of the two bodies and, in my judgment, merits the support of every man on this floor.

What a contrast; the great city of Boston, with its claim of patriotism, the chief advocate of a large standing army, in response to its country's call for 20,000 men, furnishes one man to the standing army. The State of Texas, in response to its country's call for 4,000 men, responds by sending 3,945 young men of its National Guard. The results speak for themselves; and as the National Guard's efficiency and devotion to duty is generally recognized, no further comment seems neces

With the consent granted, I shall avail myself of the privilege of including in my remarks extracts from Chairman Hay's remarks on the conference report in explanation of the bill passed:

passed:

Mr. Hay. Then, Mr. Speaker, I will take the floor. [Applause.]
This conference report embodies the compromise reached on the part of the conference of the House and Scnate on what is known as the Army reorganization bill
The bill as it passed the House provided for 140,000 men of the line—that is, men who fight. The bill as it was amended by the Senate provided for 250,000 fighting men, and the bill as agreed upon by the conferees provides for 175,000 fighting men.

It has been stated that this bill carries an enlisted force of 206,000 men, and the inference has been drawn that they are all to be put in the Army at once. As a matter of fact, the increase over the number of men now in the Army is to be provided for in five annual increments; and the increase in the officers, with the exception of those officers who are to be used for the purpose of training the National Guard and teaching in military schools, are also to be added in five annual increments. So, as a matter of fact, this bill provides for the next fiscal year an increase of about 12,000 enlisted men and between 3,000 and 4,000 officers. It is entirely within the discretion of Congress, without intringing upon the rights of any officer or man, to cut off next year the increments which are provided for in this bill.

Mr. Gardner. Twelve thousand are the most we can expect up to the 1st of July, 1917?

Mr. Hay. Plus the 20.000 that were authorized in the joint resolution, Mr. Gardner. The filling up to about 109,000.

Mr. Hay. One hundred and nineteen thousand.

Mr. Gardner. I think not.

Mr. Hay. Well, the gentleman probably knows better than anybody else.

Mr. Hay. One hundred and nineteen thousand.

Mr. Garder I think not.

Mr. Hay. Well, the gentleman probably knows better than anybody else.

These increments are wholly within the discretion of Congress in the next five years. When this war in Europe is over, "when the war drums beat no longer and the battle flags are furled." when the hysteria which has been pervading the atmosphere of the country has died away, when the shouting and the tumult are no more, then Congress can cut off these increments and make the standing Army of the United States any number it pleases. [Applause.]

Certain people in the other body were amazed at the attitude of the House of Representatives, and I am amazed at some of the Semators who are trying to couple this legislation with a possible emergency which may exist to-morrow next week, or next month. This is not an emergency bill. It is not intended as an emergency bill, it is not intended to raise an army for the purpose of possible war with Mexico or any other power. It is intended as a peace proposition, as I have often said on this floor, and no man who understands the bill or the situation can couple with it what it must be necessary to do in the event of war breaking out in the next few months.

We have already on the statute books, placed there two years ago, a bill known as the volunteer army bill, which would enable the President, when authorized by Congress, to raise as large an army as he wants if we should be so unfortunate as to go to war. It is useless to try and enlighten these densely ignorant newspaper editors [laughter and applause]

I beg gentlemen to carry that distinction in their minds that this is not an emergency bill but a bill for future preparedness, and it does that. This bill provides a standing army as large as can be recruited in this country under the volunteer system. It provides a larger number of 216,000 men.

It provides for a nitrate plant to manufacture powder; it provides for an officers' reserve corps; it provides for a regular army reserve

In order to ascertain the expenditures because of war, we should add to the proposed program of \$380,000,000 for the Navy, \$300,000,000 for the Army, the additional amounts, \$34, 292,050, reported by the committee for fortifications, \$158,065,-600, reported by the committee for pensions, also appropriations for the Military Academy and numerous other items carried in other appropriation bills, all this being included and increases likely to be made at the other end of the Capitol, we will have a grand total of about \$900,000,000, not as a war or emergency measure, but all as a peace requirement in time of profound peace.

In looking over the appropriation bills for the current year, I find that the Sixty-third Congress made appropriations as fol-

ArmyPortifications	\$101, 974, 195. 87 6, 062, 216, 90
Navy Pensions	149, 661, 864, 88 164, 100, 000, 00
Military Academy	1, 069, 813. 37

422 866 091 02 Total.

Which is an amount less than one half of the amount estimated, and which is likely to be appropriated this session-\$900,000,000—would build a road from the Atlantic to the Pacific Ocean, or 3,000 miles, at the cost of \$3,000 per mile; it is nearly three times the \$303,573,848 salary paid 564,460 teachers, instructing our vast army of 18,523,558 pupils in our public schools. It is nearly twice the \$534,058,580 total expense public schools. It is hearly twice the \$354,035,380 total expense of our public schools; it is nearly a hundred times the \$9,614,221 salary paid 27,432 teachers instructing 488,171 pupils in my State, and nearly 60 times the \$15,642,924 total expenditures of public schools in Iowa for 1913. In amount it is equal to nearly 90 per cent of the total regular appropriation made for the current year. It is within \$68,000,000 of Uncle Sam's total interest beginning debt in 1014. interest-bearing debt in 1914; an amount equal to 85 per cent of the capital stock of our 7,453 national banks; 10 times the capital stock of our 2,100 savings banks; nearly 2 times the capital stock of our 14,512 State banks, and 42 times the capital stock of our 1,064 private banks. It is more than 180 times the value of the 1,619,415,263 pounds of butter produced in the United States; it is equal to about 80 per cent of the reported value of 21,262,000 milch cows in the United States; about 2 times the value of our annual oat crop, and almost equal to the value of our annual wheat or cotton crop produced on Uncle Sam's 6,361,502 farms, farmed by 6,000,000 farmers.

According to the estimated valuation made by the Department of Commerce in 1912, eight and one-half years' expenditures at the rate of \$900,000,000 would equal the estimated true value of all property, real and personal, in Iowa. And six years' appropriations would equal the estimated true value of all property in the following States: Vermont, New Hampshire, Rhode Island, Wyoming, Idaho, New Mexico, Arizona, Nevada, and Utah. Nine hundred million dollars is \$130,000,000 in excess of the estimated true value of all railroads, street railroads, and their equipment in Iowa. It seems unreasonable to give up in hard cash an amount equal to the estimated true value of all the property in these nine States, or on an average one of the nine every eight months.

According to Mr. Spillman, of the office of markets, farmers received on a net average \$142 cash and \$260 worth of food, rent, and fuel for their year's work, which includes the labor of their families, averaging 4.6 persons, or each member an average of \$31 cash. It seems to me that to impose an annual tax averaging more than \$40 for war purposes on each family, for whom so much admiration is professed around election time, or to appropriate \$360 for every dollar appropriated for the Department of Agriculture to aid the farmer, ought to be sufficient. But you say that the plutocrat is to pay the bill. His millions have come from, and with his power to levy tribute always will come from, those of small income, so in the end the tax will fall upon them.

When we stop to consider that the proposed program is not to meet an emergency but as a peace requirement, and generally styled as a "little Navy and war program." It seems to me that we are going at a high speed; that it is well to consider the cost and burdens which it will inflict. To me it seems a high rate of insurance at a time when there seems to be less need of a large Navy than ever, when our shipyards are crowded to their full capacity with the large number of fighting ships under construction, the work on many not even begun, and when it will take years to complete those already authorized, not mentioning those authorized in this bill. Considering it all, I can not see my way clear to vote to recommit the bill with instructions to add over \$100,000,000 to it, as it is proposed to do.

I have believed and still believe that by clinging to our traditional policy, the great moral and political principle of justice to all, equality of man, which has made this country what it is and given us the position which we so justly occupy under these principles we have advanced along the lines of accumulation of wealth, morality, intelligence, happiness, power, and influence; for we have obtained the world's confidence in our impartiality and justice, not by a strong Army or Navy, but by our position and conduct. In my opinion these ideals are stronger than armies and navies, and I believe that along these lines lie our destiny and glory, and I believe that if we continue these great moral and political principles and refrain from quarreling or "butting in" and strictly attend to our own affairs, as we have in the past, we can conserve all the influence in the past and continue to have the confidence, good will, and cooperation of all the nations of the world.

Another thing to be taken into consideration if our aim and ambition is to become the greatest naval power on earth, the peacemaker of the world, and the police of the sea, how much of a navy is required? Great Britain's policy has been to have a navy as great as any two nations. Great Britain, unless forced into bankruptcy, is not likely to abandon her policy. So when we build two ships Great Britain will build four, and if we build four battleships Great Britain will build eight, and so If so, we will find ourselves in a mad race with naval expansion and expedition beyond comprehension. If we are to be the peacemaker of the world, how much of a navy is then required and what does it involve? We will wake up some morning and find two nations quarreling; it may be over religion, territory, or whatever it may be. It then becomes our duty to step in and suggest and demand that difference be adjusted according to our ideas. If differences can not be adjusted in a peaceful manner, we serve notice upon them that we have a great Navy, strong enough to destroy their towns, blockade and capture their ports and harbors, and couple it with a suggestion that they had better accept of our terms, whatever they may be, or the worst may come to them. If either one fails may be, or the worst may come to them. If either one fails to accept our terms, we find ourselves in a conflict with one or the other. What then? War. What does war mean? The giving up of flesh, blood, and property. A conflict of not only one or two conflicting nations, but it may involve all nations of the earth. Hence if our policy is to become the police of the sea, the peacemaker of the world, the construction of two or four battleships a year will not meet the requirements, but possibly many times that. We must then have a Navy strong and great enough to successfully conquer and subdue

not one nation, but all the nations of the earth. If so, what will its cost and consequences be? In this age of progress, enlight-enment, civilization, and Christianity may we not in this land, where liberty, truth, progress, intelligence, morality, honor, dignity, and equal opportunities prevail, hope to maintain peace, their good will, and our exalted position with the nations of the world without resorting to extraordinary war measure and unnecessary expenditures?

Achievements of the Democratic Administration.

EXTENSION OF REMARKS

HON, WILLIAM P. BORLAND.

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, June 1, 1916.

Mr. BORLAND. Mr. Speaker, under leave granted to extend my remarks in the Record I will insert an address made by me before the Democratic State convention of Iowa, at Clinton, Iowa, May 9, 1916.

The address is as follows:

ACHIEVEMENTS OF THE DEMOCRATIC ADMINISTRATION.

[An address by Hon. WILLIAM P. BORLAND, Member of Congress, before the Democratic State convention of Iowa, at Clinton, Iowa, May 9, 1916.]

The Democratic Party is to-day in control of both branches of the National Legislature and of the National Executive. is interesting to inquire into the causes and reasons which impelled the American people to drive the Republican Party from power so completely as was done at the last national election. When I first came to Congress, nearly eight years ago, the fortunes of the Democratic Party were at a low ebb. We had suffered a series of crushing defeats such as no party has ever suffered and survived. In the election of 1908 the Republican Party, arrogant in its power, had carried the national election. found that there was a Republican majority of nearly 50 in the House of Representatives, a Republican majority of 2 to 1 in the Senate, and a Republican President in the White House supposed to be the most able and popular statesman in his party. Even my own State of Missouri had gone Republican and had given its electoral vote to Taft. The fifth district of Missourl, which I have the honor to represent, was the only district in that State-and one of the few districts in the United States where a Democrat defeated a Republican in the congressional elections.

When the Sixty-first Congress organized the honorable Joseph G. CANNON, of Illinois, was reelected Speaker and the "old guard" of the Republican machine were in undisputed control. The situation looked so hopeless that there were those among the Democrats who believed that the time had come to indulge in guerrilla warfare, each man for himself, without regard to party organization. At that juncture, however, we were fortunate enough to choose as our leader in the lower House of Congress that old lion of Democracy who had never faltered in his allegiance to Democratic principles in the darkest days of party

disaster, the honorable Champ Clark, of Missouri.

We Democrats were like an unarmed mob attempting to assall the intrenched and well-equipped hosts of special privilege. We found that misgovernment was rife in every department of our national life; the Treasury was facing an enormous deficit, even under the operation of the highest and most oppressive tariff law ever enacted. The remedial legislation demanded by the American people was bottled up in the committees of the House. The trusts and monopolies had never been so numerous, so powerful, or so secure. We found that the keystone of the arch of Republican rule was the power of the Speaker over the committees and rules of the House.

Then and there we began a fight against the evil which you citizens afterwards came to call by the name of "Cannonism," to restore freedom of debate and representative government to the American people. We found that under Republican rule a Republican Representative in Congress, who was supposed to speak the voice and vote the vote of 200,000 American citizens, was more helpless, if possible, than a Democratic Representa-tive. We at least had power to appeal from the tyranny of the machine to the great common sense of the American people. But a Republican Member, unless he was one of the feudal lords, was voiceless in his grief. You taxpayers had no need for a Member of Congress at all under such a system, where freedom of debate was absolutely suppressed. There was a bachelor girl down in our neighborhood who was being teased one day by the married ladies about not having any husband. She said: "What do I need with a husband? I have three pets over at my house. I have a dog over there that growls all morning; I have a parrot that swears all afternoon; and I have a cat that stays out all night. So what do I need with a husband?" And what did you, my friends, need with a Congressman under the rule of Cannonism? We determined to correct this abuse and to restore representative government to the American people.

A few honest and conscientious Republican Members joined with us. We called them Insurgents, and they afterwards developed into the progressive wing of the Republican Party.

On a sudden a proposition came up from an insurgent Republican to change the ironclad rules of the House. After a hasty consultation the Democrats to a man swung behind the insurgent movement, and enough insurgents voted with us to establish a temporary majority on the floor of the House. By that time the whole country was aflame. The people saw that the real power of the special privilege was intrenched behind the Speaker's chair. When the standpatters found that they had lost control of the popular branch they began to filibuster to gain time and weaken or demoralize the forces of the combination against them.

For three days and three nights we held possession of the House, while the country watched the spectacle of a powerful party in control of all three branches of a great Government filibustering against a minority supported only by a handful of conscientious Republicans. They telegraphed madly for standpatters who were absent to come back to Congress and we telegraphed for Democrats. On every roll call the majority was unshaken. Finally, on the last day of the fight, the old guard saw themselves facing certain defeat. As Uncle Joe Cannon, from his place on the Speaker's stand, looked down the aisle on the Democratic side his eye fell upon the shaggy head and clear blue eye of the great Missourian, Champ Clark, and just behind the curly locks and stalwart frame of the young giant from Alabama, Oscar Underwood. Then he knew that standpat Republicanism had met its match at last and that the leadership had come to the Democratic Party, which could and would restore free government to the American people.

We went into the congressional elections of 1910 a different

We went into the congressional elections of 1910 a different set of Democrats, animated by a different spirit from that with which we had emerged from the defeat of 1908. Instead of an unorganized mob we were a trained and well-disciplined army of veterans. We went from end to end of this great country denouncing Cannonism and the evils of machine rule. When the smoke of battle cleared away on the night of the first Tuesday in November the Democrats had swept the country and elected the first Democratic House of Representatives in 16 years.

The first act of that House was to choose Champ Clark Speaker and to reform the rules so as to permit important remedial legislation to see the light of day upon the floor of the people's Congress. The effect was apparent at once. Great measures in which the people were interested began to come out of the committees, and Members who wanted to vote for them had a chance to do so and those who would prefer to dodge them were compelled to go on record. It was a political revolution, the far-

reaching effect of which is just beginning to be felt.

In the election of 1908 the Republican Party had promised the people to revise the tariff, in response to overwhelming demand in both parties. They failed to say in their platform whether they intended to revise the tariff up or to revise it down, but left themselves at liberty to pretend to the men in the manufacturing districts that they intended to revise the tariff up, while to the great agricultural population of the West they assuredly promised to revise the tariff down. When they were again clothed with power they drafted and put through the House of Representatives, under the whip and spur of Republican discipline, the infamous Payne-Aldrich tariff bill. In that great revenue measure of more than 900 separate items they refused to allow amendment or debate except upon 5 items—lumber, oil, hides, barley, and barley malt—all of them raw material for the manufacturer and not one of them finished product for the consumer. The consumer's rights were ruthlessly trampled upon. The tariff was made so high that in most cases it was prohibitive and failed to produce any revenue. It should have been entitled "A bill to permit taxation by the trusts," for all of the revenue raised under it went into the pockets of the manufacturers and left the Federal Treasury still facing a deficit.

It was this iniquity against which Cummins fought and against which the great Dolliver thundered, but it was the measure which Taft signed. Not only did Taft sign it, but he went to Winona,

Minn., and made a speech in which he pronounced it the best tariff bill ever written. The next morning when that speech was published in the metropolitan press the great Republican Party found itself split from Hell Gate to Yuba Dam.

When the election of 1912 approached, the standpatters who had control of the destiny of the Republican Party had so completely wrecked that great organization that they succeeded in carrying but two States in the Union—Vermont and Utah.

I was not originally for the great governor of New Jersey as a nominee for President. I spent my time, work, and noney in an earnest effort to nominate and elect that great citizen of my own State, Hon. Champ Clark of Missouri, but when the convention at Baltimore had spoken and had placed the banner of victory in the hands of the governor of New Jersey, the first man to take the stump for the national ticket was Champ Clark of Missouri, and every Missourian followed in his footsteps.

The record of the Democratic Members of the Sixty-second Congress had so inspired the people with confidence in the sincerity of purpose and power for united action of the Democratic Party that it became apparent a national victory was in sight for Democracy.

When the votes were counted in November it was found that we had carried the House of Representatives again, that we had captured that citadel of special privilege, the Senate of the United States; and that we had placed in the White House a fearless friend of the American people, the Hon. Woodrow Wilson, of New Jersey.

As we approach the period of another national election we have the right, which is also a duty which we owe to the American people, to cast our eyes over the achievements of the Democratic administration since it came into power. Even a brief review of these achievements will show that more important constructive legislation has been passed by the Democratic Congress and approved by the Democratic President, in the interest of the American people, during the brief space of three years that this party has been in power, than in any previous 30 under Republican rule. Some of the most fundamental problems affecting the industrial, social, and political life of our Nation have been solved, and solved successfully. These questions have been approached by our party from the standpoint of the interest of the average citizen. As each great question presented itself for solution our partisan opponents were not slow to point out the dangers and difficulties which lay in the way of fundamental changes in the interest of the people. They sought to discourage and embarrass the steady, onward march of popular Government, but in each case when the Democratic measure had been framed and placed successfully before the people these same partisan opponents, lacking the courage to make good their opposition, broke ranks and joined with the triumphant Democratic majority in voting for

We may safely challenge these timid reactionaries who are now seeking under cover of the same reckless and indiscriminate criticism to get back once more into office to face us in the political arena and say to the American people which of these measures that the Democratic administration has given them will the Republicans pledge themselves to repeal if they are once more restored to power. If they decline to promise to repeal any of these measures, they might follow that by explaining to the American people why with 16 years of unbroken and undisputed power they failed to enact any one of them into law. Let us, in this campaign, draw squarely the line between those who are on the side of the people and those who seek the support of special interests.

Let us enumerate some of these sweeping reforms: The Democratic Party has for years pledged itself to the principle of the direct election of United States Senators by the people. The seventeenth amendment to the Constitution originated in the Democratic Congress. The work of legislating for its enforcement was committed to a Democratic administration, and two years ago the first senatorial elections were held under its terms. This year it applies universally to all of the States electing Senators. What has become of the timid prophecies of our Republican friends that it would undermine the foundations of the Constitution? If they still think so, let them go before the American people and pledge themselves to its repeal. The spread of direct primaries has also been the advancement of a recognized Democratic doctrine, until to-day the people have a direct voice in the selection of their candidates, which means the selection of their public officials.

The purification of politics and the elimination of corruption and machine rule have been well begun by the corrupt-practice acts passed by the Democratic Congress, stretching the strong arm of the law between the rights of the people, on the one hand, and the corrupt contributions of favor-seeking corporations on the other.

Abraham Lincoln spoke for a government "of the people, by the people, and for the people." We have long had a government "of the people." Under Democratic rule we are at length securing government "by the people," which means that we shall at

last have government "for the people."

Our fiscal policy, which under the Republican rule had remained unchanged since the Civil War and which had three times since that period prostrated the great and growing West by disastrous panics brought on by the speculation of stock gamblers of Wall Street, against which evil the Republican Party never dared to raise its hand, was left as a heritage to the Democratic administration to reform. We met the most determined opposition of the money power of Wall Street, with its great ramifications through all of the banking centers of the Nation and holding within its toils the great industrial and transportation corporations, which fought openly and secretly against any reform in the currency. They sought to keep the country in the condition which would precipitate the business and banking interests of the Nation into disastrous panics, which a shortage of currency and a contraction of credits under our antiquated system might at any time cause. Only the money lender and stock gambler profited by such a condition. The Democratic Party enacted the Federal reserve banking law. which created 12 great reservoir's of credit so located throughout the producing area of the Nation that a centralized control of the money power in the hands of Wall Street bankers was no longer possible. That great law has banished panics from America. There will be no bread lines in the great manufacturing centers of the country while the grain is rotting in the fields in the agricultural districts for lack of money to move the crops, as was the case in the bitter winter of 1907-8 under the last Republican panic this country will ever see. The farmers and business men of our Nation have been freed from the speculation of Wall Street. Under the Democratic measure, the man who is doing the business, producing the goods, and adding to the wealth of the Nation is assured of a legitimate credit based upon his solvency and business standing.

Perhaps our Republican friends will promise the American people to repeal the Federal reserve bank act. Perhaps they will attempt to substitute for it the Aldrich bill, providing for a centralization of the money power, sanctioned by law, which they had offered to the people prior to the election of 1912. We charge them with having left this country for years in a condition of financial dependency with an outgrown, outworn currency system utterly inadequate in normal times, and a sure breeder of panic in any case of stringency. We charge them with leaving our country under the control of the financial interests, and that they did not dare reform this condition.

The standpatters claim that they can produce prosperity by a wave of the legislative wand. If they can produce prosperity, why have they produced panics? In my lifetime there have been three disastrous panics, all caused by frenzied finance and stock gambling in Wall Street, which grew out of the centralized system of bank reserves. These panics bankrupted the business man and threw the laborer out of work. The people who suffered most from them did not cause them and could not control them. The first panic was in 1873, upon the failure of Jay Cooke & Co., which came after 12 years of Republican rule. That panic found the West in the position of a barefooted boy, homeless and friendless, who must pick up his living the best he could. Of course, the panic brought destitution and suffering to the West.

The next great panic was in 1893, which came after four years of Republican rule and 30 days before the inauguration of a Democratic President. That panic found the West in the posi-tion of a young man just starting out to establish his home and his business on borrowed capital, and it was not difficult for the panic to sweep away such slender resources. The last great panic was that of 1907, which came after 10 years of Republican rule—another stock gambiers' panic, for which there was no excuse. That panic failed to wreck the West. The panic makers had made a mistake. The West had grown to stalwart manhad made a mistake. The West had grown to stalwart man-hood. It had paid for its land, it had money in the bank, fat eattle in the pens, and grain in the bins. The panic closed our biggest banks, it stopped the circulation of money. The business man could not draw his own money out of bank because it was tied up in the inflated credits of Wall Street. We had to do. business on cashiers' checks, slips of paper, chips, and whetstones-trading jackknives and plugs of tobacco, all during the winter of 1907-8; but we kept on doing business because we had the goods. Though the panic did not wreck the West, it did prostrate the East. In those centers of protected industry the workmen were rioting for bread—bread lines in New York, the metropolis of the richest Nation in the world, while in the West the pens were full of cattle and the bins were full of grain that could not get to market because of a disgraceful financial system. There never was a Democratic panic, and there never will be a Democratic panic. We have banished panic from the land by divorcing legitimate business from speculation and by keeping the banking reserves in 12 great reservoirs of credit.

The Republican Party can not make prosperity. The people make prosperity, if they are given a fair chance. We hold that prosperity comes up from the people and not down from the rulers. The aim of Democracy is to keep the biggest end of the dollar in the pocket of the man who earns the dollar and not

take it from him under the guise of taxation.

Why, the standpatters have even tried to tell the farmer that they produce prosperity for him. The farmer, of all men, knows who fills his dinner pail. He fills it himself, with his own strong right arm and clear brain and the blessing of Almighty God, who sends "the seedtime and the harvest, the early and the later rain," The farmer goes out and plants the time seed in the The farmer goes out and plants the tiny seed in the ground. It lies there in the cold and in the wet and in the darkness, until by and by, at just the right time, in obedience to some divine law that no man of us has been pure enough to understand, it begins to germinate. It sends down its little roots in just the right direction. It sends up its tiny shoots in just the right direction to reach the sunlight by the nearest road. It lies under its blanket of snow until it is swept by the winds of March and wept over by the showers of April; until it is kissed by the suns of May and caressed in its growing beauty by the soft zephyrs of June. So it grows in strength and beauty and into the promise of the golden harvest: Then the farmer goes out and reaps his grain. He shocks it, and he stacks it, and he thrashes it. He hauls it to the siding, and he loads it on the cars. He sends it singing on its way to bless the homes and fill the dinner pails of countless thousands of his fellow citizens. Then he goes back to the old home place and, leaning on the fence, he thinks of the result of his year's work. He thinks that now the boy is assured of another year at the State university. He thinks that now, perhaps, the oldest girl will have a chance. He sees his good wife rocking to and fro on the front porch, resting from the toil of cooking for the hands, and he thinks that he will fix up the old house a bit, or perhaps take a little trip to town to make life pleasanter for the faithful companion of his toil. And thus his heart begins to swell with the joys of the harvest home. But about that time in the fall some jackleg politician comes dancing down the pike and salutes the old farmer with a wave of his hat and says, "Look at all this wonderful prosperity that the Republican Party has given you.' It is a wonder to me that the old farmer does not climb over the fence and beat him to death.

We had an old preacher down in our county who wanted to make political speeches. He was on the right side; he was a Democrat; so we started him out. He arose before his first audience and began, "Dearly beloved brethren." We thought that was a pretty good start. Then he continued, "In the beginning God created the heavens and the earth." He looked around solemnly and repeated, "In the beginning God created the heavens and the earth." Then he took a fresh start and said, "In the beginning God created the heavens and the earth." At that point some man in the front row of the crowd who was getting a little impatient said, "Oh, go on and tell us something else. We all know that." "Yes, my friend," said the preacher, "you think you know it, but it won't be a week before some windjamming office seeker is out here telling you the Republican Party did it."

The Democratic Party is the father of the income tax, but the Republican standpatters fought it for years, because it means

taxation of the trusts and not taxation by the trusts.

Our Republican friends could think of no better way to raise the revenues to run the Government than a tariff so adjusted as to reward protected manufacturers at the expense of the American consumer. They promised to revise the tariff downward and deliberately broke their promise after the election of President Taft. Present world conditions demonstrate that the tariff can not be relied upon as a source of revenue. It fails us at the very time when we need it most. The Democratic Party pledged itself to an income tax, by which a portion of the burdens of government would fail upon accumulated wealth rather than to be borne entirely by the wage earner and the consumer. We believe in taxing wealth, not want. It was necessary to enact a constitutional amendment to express the views of the American people in favor of an income tax. If this country were now under the old tariff system left us by the Republican Party, it would be impossible to raise enough revenue to run our Government. Only the income tax has saved us from a disastrous

and complete financial failure. But I take it that no Republican partisan will be bold enough to promise the people to repeal the income tax

In the present condition of chaos in which the civilized world finds itself we are utterly unable to determine what will be our industrial relations with other countries after the close of this great war. No man is wise enough to know. We do not know whether there will be more goods or less goods imported to the United States after the nations of Europe have resumed the walks of peace. How do the two great parties meet this problem, which we know to be inevitable? The Republican Party promises you only the certainty of business disturbances growing out of a threatened and general revision of the tariff. They promise you only a tariff made in the old way by the logrolling and trading of special interests, who are able to keep their representatives in Washington and to urge their claims before Republican committees of Congress. They promise you only a flood of pretended or real lobbyists, promoters, and schemers to descend upon the National Capitol and with a clamor of interests drown out the voice of the plain people and the average The Democratic Party promises you a scientific tariff commission to investigate the needs of every industry and all of the elements of production and consumption. Before such a commission every business man, big or little, will have a fair opportunity to be heard. Our Republican friends have repeatedly announced themselves as in favor of a commission, but have never seen fit to actually create one. We will give them an opportunity to meet this view freely before the American people.

The Democratic Party has been true also to its historic friend-ship for labor. The wage workers of the Nation recognize that their day of justice has come with the advent of the present administration. I need only mention, in passing, the bill passed by the Democratic Congress providing conciliation and mediation in labor disputes, as a result of which many threatened strikes have been avoided and much loss saved to wage earners, employers, and the public. You are familiar also with the minesafety law, which has almost put an end to disastrous mine accidents; the extension of the laws providing for the safety of trainmen and railroad employees, which have reduced the percentage of accidents and injuries from that cause. But the greatest triumph of labor was the passage of the Clayton Antitrust Act, which has been aptly described as the Magna Charta of American labor. Its important provision is "that the labor of a human being is not an article of commerce" and can not be

monopolized.

The farmers throughout the Nation have come into their own under the Democratic administration. Not only have they been treated fairly on the question of tariff duties by the breaking of the monopoly of the great Harvester Trust, the Binding Twine Trust, and other exactions which had been laid upon them as consumers under the Republican tariff, but measures for their advantage and relief have been passed by the Democratic Con-The most conspicuous of these is the Lever agriculture extension bill, by which farm demonstration work is being carried directly into every county of the United States and under the personal observation of every farmer, so that he may learn from actual tests the most improved methods of scientific agriculture. Congress also provided liberally for the stamping out of hog cholera. Within the last few days the Democratic House has passed the grain-grading bill and the public-warehouse bill, to give the farmer an opportunity to market his products to the best advantage. The live-stock interests are also receiving attention in the resolution now being considered to curtail the rapacity of the Packers' Trust, as advocated by all the live-stock interests of the country. The Democratic administration has promised the farmers of the country a rural-credit law, by which the agricultural producer, who has the best asset of the Nation in his hands, will be able to borrow a working capital upon as liberal terms as his city cousin, the merchant of the towns, who now borrows from the commercial banks. The Democratic Party stands sponsor for good roads. The Democratic House has twice passed a good-roads bill, which will probably pass the Senate at the present session of Congress. In this bill provision will be made for opening up every section of the great West with better means of transportation.

Conservation has taken on a definite meaning under the Democratic administration. It means not a destruction of the country's resources or their exploitation by great combines of capital, but their use in development for the public interest. Thousands of acres of public lands have been restored to homestead entry, thus furnishing homes for the young farmers of the Nation. The great coal deposits of the West are being leased on terms which preserve the public right to the profits growing out of this wealth which belongs to the Nation at large. The Water Power Trust has not been permitted to seize all power

sites on the public lands, but legislation is now pending providing for the leasing of such power upon conditions that are fair to the public. The great Territory of Alaska—the treasure house of the Union—has been wrested from the control of the Morgan-Guggenheim syndicate, and under the Democratic administration is being developed by Government constructed railroads, to be paid for out of the proceeds of the public lands of Alaska. The coal and other mineral deposits are not permitted to be taken up by fraudulent entries by great combinations of capital but are to be operated wholly under conditions fixed by the Federal Government.

Oil lands worth millions in value have been wrested from the Pacific railroads in Oregon and California and restored to their

rightful owners, the American people.

The Democratic Party believes that this is a great commercial Nation able to reach out and control the commerce of the world. We must break the shackles of provincialism in which the robber tariff has so long bound us and put our products into all neutral markets by wise trade agreements and encouragement of foreign The development of American business has been commerce. the special care of the Democratic administration, and the Nation was never more prosperous than it is to-day. The first Nation was never more prosperous than it is to-day. The first great step in the improvement of foreign trade was the reserve bank law, which permitted the establishment of American banks in foreign countries. Under its provisions banks have already been established in a number of South American countries, which will open up channels of trade for American goods. When the great war cloud broke on the 1st of August, 1914, every commercial nation in the world was brought to the verge of bankruptcy except the United States. The prompt and firm action of the Democratic administration withstood the shock and placed American business upon a sound and solvent basis. With foreign exchange demoralized we nevertheless put into operation the new Federal banking system, and not a bank in the United States closed its doors, thus silencing forever the calamity howlers of the Republican Party.

For the first two months after the war started foreign commerce was demoralized and American wheat and American cotton could not leave American ports because shipping was not safe on the ocean. The Democratic Congress passed the warrisk insurance bill, and wheat and cotton began to move abroad. This War Risk Insurance Bureau has paid a handsome profit from the day it was opened, and is a monument to the business judgment and statesmanship of the Democratic administration. We broke loose from the Ship Trust at once by providing that any foreign vessel might register under the American flag, and our merchant marine grew 100 per cent in 90 days.

The great trade-commission bill was passed providing that combinations of capital engaged in industrial pursuits should be regulated and controlled in the same way as the Interstate Commerce Commission controls the great transportation lines of the country. As a result, the honest business man has been free to use his highest efforts in promoting business, while the trusts have had to abandon many of the methods which had crushed out competition and destroyed the freedom of trade. Under the long years of Republican rule the merchant marine was allowed to die and the American flag was driven from the seas. To-day under the Democratic rule the Stars and Stripes are being restored to the trade routes of the world, and the Democratic Congress will soon pass the shipping bill providing for Government-controlled lines of vessels, especially to our markets in South

The greatest achievement of the Democratic administration has been to preserve peace and prosperity in the midst of a world torn and desolated by a frenzied war. No greater strain has fallen upon any President since the days of Lincoln than has been borne by the present Democratic occupant of the White There are those who clamor for war and who seem to regret that our boys are not stretched upon the bloody battle fields of Europe in the name of military glory. There are others in our country, equally sincere and more humane, who believe that we ought to sacrifice everything rather than to engage in hostilities. Between these two elements the administration has pursued a steady and consistent course of maintaining with firmness and patience the rights of American citizens and in defending the principles of international law until to-day this country is recognized as the one powerful and rightful spokesman for The President, assailed by the conflicting advice of friends and the mistaken or venomous criticism of foes, has held in his grasp as a sacred trust the peace and safety of the American people and the honor and dignity of the American Nation. Under other circumstances and with a less wise leadership our Nation might to-day be plunged in the horrors of war, but in-stead we are meeting in peace and safety, in the midst of plenty, surrounded by the unbroken homes and undesolated firesides of

a free and independent people. To-day all over this vast land of ours wherever the American citizen labors and produces, wherever industry is making the wealth to add to our country's greatness, wherever firesides are welcoming home the toller after his day's labor, wherever the honest workman knows the value of his own work and demands a just reward for his toll, there is going up a great song of confidence which will swell into an anthem of triumph. On the farm, in the factory, at the forge, in the mines, behind the counter of the country store, on all of the countless railroad trains that fly like busy shuttles through the warp and woof of American commerce, wherever the myriad activities of American life are carrying forward the arts of peace and civilization there is going up the hope of the Nation for the continued success and prosperity of our great Democratic President, Woodrow Wilson, and for the work of the Democratic Congress.

Discussion of Senate Amendment to Indian Appropriation Bill Providing for the Cutting of Timber on Lands Belonging to the Red Lake Band of Chippewa Indians and Authorizing Other Uses to be Made of Such Lands.

EXTENSION OF REMARKS

BURNETT M. CHIPERFIELD. HON.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 12, 1916.

Mr. CHIPERFIELD. Mr. Speaker, I desire to leave in the RECORD as an extension of my remarks my most earnest protest against the adoption of a policy that I believe will work a marked injustice to the Red Lake Band of Chippewa Indians in the State of Minnesota.

I am very well aware in doing this it is the pleading of an

unpopular cause.

One who speaks for the protection of the property and rights of the Indians now remaining in the State of Minnesota can not ordinarily find a sympathetic ear to listen.

I have thought, and still think, that in this House such is

yet believe it, although I am frank to say because of the kindly reception given the Senate amendment to House bill 10385 upon this subject my faith that the rights of these Indians will be sufficiently protected in this body is considerably shaken.

When the Indian appropriation bill passed the House of Representatives it contained no feature that could or would work a marked injustice to the Red Lake Band of Indians of Minne-

When it returned from the Senate it was changed by an amendment offered by Senator Nelson, of Minnesota, and con-

tained the provisions of which I complain, as follows:

amendment offered by Senator Nelson, of Minnesota, and contained the provisions of which I complain, as follows:

(61) To carry into effect the act entitled "An act for the relief and civilization of the Chippewa Indians in the State of Minnesota, approved January 14, 1889, to provide for the establishment and administration of a forest reserve and for the sale of timber within the Red Lake Indian Reservation, Minn., be, and the same hereby are, created into a forest reserve, to be known as the Red Lake Indian Forest: Townships 150 and 151 north, ranges 32, 33, and 34 west of the fifth principal meridian, except the lands in townships 151 and 153 north, ranges 32, 33, and 34 west of the fifth principal meridian, except the lands in townships 151 north, range 36 west, which lie north of the north line of sections 26 to 30, inclusive, and except all lands within sections 4, 5, 6, 7, 8, 9, and 18, in township 153 north, range 34 west. The provisions of this paragraph shall not apply to any lands which have heretofore been reserved for school, agency, church, or town-site purposes or granted to private parties or corporations within the area described, nor to the town site of Red Lake, for the creation of which provision is made herein: Provided, That when any of said lands are no longer needed for the purpose for which they are reserved the Secretary of the Interior may declare such lands to be a part of the Red Lake Indian Forest.

(62) That lands within said Red Lake Indian Forest which are not covered with standing and growing merchantable pine timber and which are suited for the production of agricultural crops and which are fronting upon a lake shore may be allotted to individual Red Lake Indians: Provided, That no such allotment shall exceed 80 acres nor have more than 80 rods fronting upon a lake shore: Provided further, That in case ah Indian has improved and cultivated more than 80 acres his allotment may embrace his improvements to the extent of 160 acres.

That said forest shall be administered by the S

of the foregoing provisions, including the establishment of nurseries and the purchase of seeds, seedlings, and transplants when needed for reforestation purposes: Provided, That all timber sold under the provisions herein shall be sold on what is known as the bank scale: Provided further, That no contract shall be made for the establishment of any mill, or to carry on any logging or lumbering operations which shall constitute a charge upon the proceeds of the timber, until an estimate of the costs thereof shall have first been submitted to and approved by Congress.

(63) That the Secretary of the Interior may issue permits or grant leases on such lands for camping or farming. No permit shall be issued for a longer term than one year and no lease shall be executed for a longer term than five years. Every permit or lease issued under authority of this act to Indians, or to other persons or corporations, and every patent for an allotment within the limits of the forest created by section 1, shall reserve to the United States the right to cross the land covered thereby with logging roads or railroads, to use the shore line, or to erect thereon and use such structures as shall be necessary to the proper and economical management of the Indian Forest created by this act; and the Secretary of the Interior may reserve from allotment tracts considered necessary for such administration.

After the payment of all expenses connected with the administration of these lands as herein provided the prevented therefore.

may reserve from allotment tracts considered necessary for such administration.

After the payment of all expenses connected with the administration of these lands as herein provided, the net proceeds therefrom shall be covered into the Treasury of the United States to the credit of the Red Lake Indians and draw interest at the rate of 4 per cent per annum. The interest on this fund may be used by the Secretary of the Interior in such manner as he shall consider most advantageous and beneficial to the Red Lake Indians. Expenditure from the principal shall be made only after the approval by Congress of estimates submitted by the said Secretary.

(64) That the Secretary of the Interior shall select and set apart an area not exceeding 200 acres, in sections 20, 21, 28, and 29, township 151 north, range 34 west, cause the lands thus selected to be surveyed and platted into suitable lots, streets, and alleys, and dedicate said streets and alleys and such lots and parcels as he may consider necessary to public uses. The lands thus selected shall not be allotted, but held as an Indian town site subject to further legislation by Congress.

allotted, but held as an instance by Congress.

(65) That the timber on lands of the Red Lake Indian Reservation outside the boundaries of the forest created by section 1 may be sold under regulations prescribed by the Secretary of the Interior, and the proceeds administered under the provisions of the general deficiency act of March 3, 1883 (22 Stat. L., p. 590), and the Indian appropriation act of March 2, 1887 (24 Stat. L., p. 463).

The effect of these provisions contained in the Senate amendment is as follows:

1. There is taken from the use of these Red Lake Indians substantially 90,000 acres of land, and which, against the wish and desire of these Indians, is made into a forest reservation for the sale of timber.

The rights of the Indians in this forest reserve are taken from them except, that the lands which are not covered with standing and growing timber, may be allotted to the Indians entitled thereto.

2. In this forest reserve the Secretary of the Interior is given unrestricted power of control and is authorized to conduct the same with a view to reforestation and is given authority to sell the pine and oak timber which is maturely growing thereon, and likewise to sell such other timber that is marketable as he may deem advisable.

The Secretary of the Interior is also authorized to manufacture this timber. This power places the control of the timber belonging to this band of Indians entirely in the hands of the Secretary of the Interior, giving him full power to make such use of it within the limitations above stated, as he may deem advisable.

3. The Secretary of the Interior, with reference to these lands, is authorized to issue permits and leases for camping and farming, thus placing it in his power to take the use of such lands entirely away from those who own them.

The matter of compensation is left wholly to the Secretary of the Interior.

4. A costly system of administration of the provisions of this act is made possible by the loose terms in which the Senate amendment is drawn, and I think it is no unfair criticism to say that it is thus loosely drawn with the design that the Secretary of the Interior shall have the widest scope possible for the exercise of such power and authority.

All the cost of administration of this unwelcome and selfimposed trust in connection with such lands is to be met and paid from the receipts, and the balance, if any, is to be paid into the Treasury to the credit of the Red Lake Indians, and afterwards to draw interest at the rate of 4 per cent.

5. Even the interest which is to be derived from this fund is put at the disposal of the Secretary of the Interior and is to

be used by him in such manner as he shall consider most advantageous and beneficial to the Red Lake Indians.

6. Two hundred acres of the Red Lake Indian land is to be taken, without consulting the wishes of the Indians, for a The purpose which animates the taking of these town site. last-mentioned lands is not apparent at this time, but I venture to predict that in the future it will be found that these 200 acres of land will be diverted by some future act of Congress from the use of the Indians to some use which is inconsistent with their best interest.

7. In thus ruthlessly dealing with the lands of these Indians, power is given to the Secretary of the Interior to sell all the balance of the timber on lands of the Red Lake Indian Resparance of the timber on lands of the Red Lake Indian Reservation in accordance with the general-deficiency act of March 3, 1883 (22 Stat. L., p. 590), and the Indian appropriation act of March 2, 1887 (24 Stat. L., p. 463).

This amendment is along substantially the same lines as a similar amendment proposed at a previous session of this House by Representative Steenerson, of Minnesota.

It is very apparent from an inspection of this amendment that the general purpose is to place all of the timber on the Red Lake Indian Reservation which has any value upon the market, and it becomes equally apparent that the principal beneficiary under the Senate amendment will be the lumber companies of Minnesota, and I much fear that the major part of benefits gained by them will be at the expense of this band of Indians.

In similar situations with reference to the other Indian bands or tribes in the past, the lumber companies have prospered, and the Indian has been deprived of his property with but meager compensation and less consideration, and I fear that this amendment is the foundation for similar acts so far

as the Red Lake Indian Reservation is concerned.

It will not do to say that the Secretary of the Interior will adequately protect the rights of these Indians, because experience shows us that former Secretaries of the Interior have not protected the rights of other Indians in previous transactions of this kind and I do not imagine or anticipate that there is any more reason to expect more considerate treatment than has prevailed in the past.

After this bill was returned to the House, with amendments, from the Senate I appeared before the House Committee on Indian Affairs when it was considering the Senate amendments,

and the following hearing took place:

Mr. Carter. Mr. Chiperfield, do you want to be heard on this matter? Mr. Chiperfield. Yes; I do. Mr. Carter Very well, you may proceed now.

STATEMENT OF HON. BURNETT M. CHIPERFIELD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS.

STATEMENT OF HON. BURNETT M. CHIPERFIELD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS.

Mr. CHIPERFIELD. Mr. Chairman, if this committee knew the poverty-stricken condition of those Indians, if you knew the injustice that has been inflicted upon them, multiplied and remultiplied, and now going on to-day, until if the department does not change its course they are going to be exterminated, you would not want to add a dollar to the expenses for which this tribe is primarily answerable. Somebody, somewhere, somehow, ought to speak for these Indians. They are as sorry a spectacle as exists in the United States to-day. I have taken the matter up with the department time after time. Somebody ought to be their friend somewhere, and the situation simply fills me with indignation and sympathy for them.

Now, I have not a particle of interest in this matter, any more than any other humane individual would have.

These people have \$6,000,000 in the Treasury, and the expenses of everything that can be put upon them is taken from their funds. That may be the rule with reference to other Indians, I do not know about that, where they have tribal property. There are about 7,000 or \$,000 of these Indians, I do not know the exact number—

Mr. Hayden (interposing). The Indians desire to have this roll made promptly, and it is only going to cost \$5,000. They have \$6,000,000 to their credit. It is the custom of the committee in a case of that kind to pay for such work from the tribal funds.

Mr. Chiperfield. I am not making any criticism of the committee or anyone else. I am simply speaking of the condition of these Indians, so that in view of that fact you may apply your judgment concerning this item.

Mr. Chiperfield. They are absolutely poverty stricken. They have a lot of forest land up there, part of which they are trying to take away from them—land upon which no farmer could or would even try to make a living.

Mr. Carter. Who is trying to take it away from them?

MI. CAITER. Are they povery stricken, You say!

MI. CHIPREFIELD. They are absolutely poverty stricken, They have a do of forest land up there, part of which they are trying to take it you make a living.

Mr. CHIPREFIELD. Servybody, I think, including the Indian Department. I believe in speaking plainly about these matters, Mr. CHIPREFIELD. I will make my statement and give the facts upon which I base it. These Indians have not been protected in getting a fair price for their timber. They are not going to be protected; it is not the purpose to protect them, and there is not a proper regard for their rights; and it is strange—It is passing strange—that a man base to come from outside the State of Minnesotta, a man who has no possible connection with these Indians, and speak of this injustice.

Mr. CHIPREFIELD. I there is a conservative man in this House, I am conservative. I have gone through these tribes, and I have seen these people in their suffering and sickness, and it is enough to touch the heart of any man to see their unfortunate condition.

Mr. Dill. What do you think ought to be done, Mr. CHIPREFIELD. I will tell you what I think ought to be done, and I wish it would be done. I wish this committee would fafter a resolution to the suppose of protecting and ministered. Then you would not have to take the word of any man for it. You would know for yourselves.

Mr. TILLBAS. Are they capable of hands the word of any man for it. You would know for yourselves.

Mr. TILLBAS. Are they capable of the manner in which their affairs are being administered. Then you would not have to take the word of any man for it. You would know for yourselves.

Mr. TILLBAS. Are they capable of mainty their were capable of making a treaty that took from them the greater part of everything they possessed on earth. The Government did not deal with them at arm's length then, although they are so solicitous and careful at the present time. These people are suffering from tubercurles and the provision in section 4 for the secure of part

I got a letter a few days ago from a couple of these Indians. One was an Indian by the name of Little Frenchman. The other was an Indian by the name of John Scott, and they told me how their people are hungering and praying for spring Now, that is not merely a term they are using in the way of allegorical speech or anything of that kind. These people are suffering and they are praying for the coming of spring, because that means a little relief.

Mr. Cabter. What percentage of them are mixed bloods?

Mr. Chipersfield. I could not tell you; but the percentage is quite large, and the mixed bloods, up to a certain point, are more degraded than the full-bloods.

Mr. Hayden. Now, as to sections 61 to 65, to which you object, had we not better read these through and get the opinion of Mr. Meritt and then hear Mr. Chiperfield further?

Mr. Meritt. I do not want to make any extensive reply; but I do know that the statement made that the Indian Bureau is trying to take this timber away from the Indians is absolutely not in accordance with the facts.

Mr. Chiperfield. But are you protesting against this section?

Mr. Meritt. No, sir.

Mr. Chiperfield. You are approving it, are you not?

Mr. Meritt. The department has submitted a favorable report on similar legislation.

Mr. Chiperfield. And the Indian Bureau are approving it, are you not?

Mr. Meritt. Yes, sir.

Mr. Chiperfield. Then, as I say, you are a party to it.

Mr. Chipperfield. And the Indian Bureau are approving it, are you not?

Mr. Meritt. Yes, sir.

Mr. Chipperfield. Then, as I say, you are a party to it.

Mr. Meritt. May I add just one statement?

Mr. Carfer, Yes.

Mr. Meritt. The Chippewa situation must be studied a little bit in order to appreciate the conditions prevailing among these Indians.

The act of Congress, passed without the recommendation of the Interior Department, removed the restrictions on all the adult mixed bloods in the White Earth country. I will concede that as a result of that legislation a large number of those Indians have been deprived of that legislation a large number of those Indians have been deprived of their property. But that was not the fault of the Indian Bureau, and we have had nothing to do with it. The jurisdiction of the department was removed by legislation. We could not help that condition.

Mr. Carter, Let me ask you about that legislation, Mr. Meritt, Didn't Congress pass an act removing the restrictions on mixed-blood Indians without making any roll whatever of the Indians as to the degree of blood?

Mr. Meritt. Yes, sir.

Mr. Carter, So that the question was left simply to the statement of the man who wanted to sell his land with reference to whether he was full-blood or a mixed blood. In other words, if a man wanted to sell his land, in order to allenate that land all be had to do was to come to court and testify that he was a mixed-blood Indian.

Mr. Meritt. Yes, sir. Then he would give a title to his land. And there is considerable litigation now going on in the courts, and we are trying to protect those full-blood Indians who disposed of their land under that legislation.

Mr. Carter, Now, is the purpose of making this roll to determine the degree of blood, that wrongs can be corrected?

Mr. Meritt. We would like to have the status of those Indians definitely determined, so that we can better protect the interests of the full-bloods.

Mr. Carter, Now, is this \$5,000 to be used to make a roll whereby the status of

Mr. CARTER. Now, is this \$5,000 to be used to make a roll whereby the status of the blood of an Indian can be determined? Is that the

Mr. Carter. Now, is this \$5,000 to be used to make a roll whereby the status of the blood of an Indian can be determined? Is that the purpose?

Mr. Meritt. That is the purpose. Now, as to the funds in the Treasury, we admit that those Chippewa Indians have \$6,000,000 to their credit at this time, but under the treaty and under the laws enacted by Congress we can not pay out a dollar of those funds now to those Chippewa Indians until the expiration of 50 years from the date of that act of Congress. We are trying to get that remedied by legislation submitted at this session of Congress, and we have that item of legislation before Congress now.

Mr. Carter. You mean you are trying to get it so you can pay the money now?

Mr. Meritt. So that we can pay money to those Indians and relieve any suffering on those reservations.

Mr. Carter. Now, suppose you should get legislation to pay out this \$6,000.000 now, which was not to be paid out until 50 years, would that eventuate in the possibility of a claim against the Federal Government by some of those Indians who are born after this payment is made?

Mr. Meritt. No, sir; the legislation in the Indian bill does not authorize the payment of the entire \$6,000,000. We simply ask to pay about one-fourth of that amount to the Indians.

Mr. Carter. The next amendments are Nos. 61, 62, 63, 64, and 65, page 41, line 3:

allotment in agricultural land within the forest reserve, omits the provisions as to the issuance of 10-year permits to Indians, and contains in section 7 an authorization for the sale of timber on those portions of the Red Lake Reservation which are not included within the proposed Indian forest reserve. It also reserves from allotment an Indian town site. I should be pleased to see the legislation enacted in the amended form.

Cordially, yours,

Franklin K. Lane,

FRANLIN K. LANE, Secretary.

Mr. Meritt. This item now in the Indian bill follows very largely the recommendations of the department.

Mr. Konop. Right in that connection, Mr. Meritt, are you going to follow the same proceeding that was followed in the Menominee Indian Reservation in Wisconsin about the building of these mills?

Mr. Meritt. It is not intended to establish such a large milling operation on this reservation as we have at Menominee. That feature has not been worked out as yet. This legislation here will simply enable us to sell the mature timber on that reservation. Under the existing law we can sell only the dead and down timber on the reservation, and there is quite an amount of ripe timber on that reservation that should be sold if the Indians are to get the full benefit of their property. their property.

Mr. Chiperfield. Would the chairman object if I ask the gentle-

enable us to sell the mature timber on that reservation. Under the existing law we can sell only the dead and down timber on the reservation that should be sold if the Indians are to get the full benefit of their property.

Mr. CHIPERTIELD. Would the chairman object if I ask the gentleman a question?

Mr. CHIPERTIELD. What do you mean by "ripe"?

Mr. MERITT. Timber that has ceased to grow and is deteriorating and should be cut and manufactured into lumber.

Mr. CHIPERTIELD. What do you mean by "ripe"?

Mr. MERITT. Timber that has ceased to grow and is deteriorating and should be cut and manufactured into lumber.

Mr. CHIPERTIELD. What price have you gotten for the timber, the pline on the stump, under the contracts that have been entered into on the White Earth Reservation. The Indians who had restrictions removed by Congress have sold their timber.

Mr. CHIPERTIELD. Don't you know, Mr. Meritt, that the lumber companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies have been contracting with your department, with the appearance of the companies of the compan

Mr. Harden, it applies only to Red Lake?

Mr. Mentr. Yes, sir

Mr. Cautra. Your statement is that the only purpose of section GI is to permit you to sell timber that is not dead and down?

Mr. Mentr. To course, the various amendments cover more than that. Mr. Mentr. That enables us to sell both dead and down, as well as matured timber. Under existing law we can not sell green timber, but only deed and down there.

Mr. Mentr. Yes, sir.

Mr. Chiptenpield, Why do you say that the Reel Lake Reservation is not part of the White Earth Reservation? It is true, is the not, that the Mr. Mentr. Yes, sir.

Mr. Chiptenpield, And that while the different bands have different saltenetis, and this is given to the Red Lake Indians, it is all a part of the White Earth Indians do not share in any way.

Mr. Chiptenpield, No, sir.

Mr. Chiptenpield, With that distinction?

Mr. Mentr. Yes, sir; but only Red Lake Indians will be affected by Mr. Mentr. No, sp. that they all came from the tribal lands originally.

Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Mentre, Yes, sir; but only Red Lake Indians will be affected by Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Mighten, Yes, sir; but only Red Lake Indians will be affected by Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Mighten, Yes, sir; but only Red Lake Indians will be affected by Mr. Chiptenpield, No; but they all came from the tribal lands originally.

Mr. Mighten, Yes, sir; but only Red Lake Indians, while have a self-declared by the chiptenpield, while they have a self-declared by the chiptenpield or the lamber or many in the salt is a self-declared by the chiptenp

It is idle to talk about any forest reserve. It is idle to talk about these Indians being benefited by anything of this sort. It means that under the guise of this law the lumber companies are going to go in there and they are going to pick out the timber that is profitable for them, and this amendment is going to allow the lumber companies to take this timber for a song.

Now, so far as the sawmills that are intended to furnish timber for the agencies or for the schools, or for hospitals, or for the individual use of the Indians, that is all right as long as it is done that way and as long as it is properly operated. But this is simply saying, gentlemen, that these tracts of timber that are now standing, including the matured timber and the dead-and-down timber, and all the forest reserves and other timber, is to be cut and is to be sold at an insignificant figure.

Mr. Hayden. If this lumber was sold at a fair price would you object?

ject?
Mr. Chiperfield. If these Indians were guaranteed, gentlemen, that they were to get the fair valuation of what is coming to them—which

they never have gotten in all the world, I do not care who makes the statement to the contrary—If these Indians were to receive fair values for this timber there would be a very much different situation presented and a very much less objectionable situation.

Mr. Hayden. Would you think it better to have the matured timber cut and the proceeds turned into money for the benefit of the Indians than to leave it standing there?

Mr. Chiperfild. They are going into this timber, and not clear up the land in any sense of the word. They will simply pick out the timber as they come to it. I have not quite been able to get the significance of the "bank scale," unless that means the bank lumber is to be measured and paid for, notwithstanding the real scale of what is cut. But they are going in there and cut out the timber that appeals to them.

timber as they come to it. I have not quite been able to get the significance of the "bank scale," unless that means the bank lumber is to be measured and paid for, notwithstanding the real scale of what is cett. But they are going in there and cut out the timber that appeals to them.

Now, there isn't any such thing as getting a fair price for the timber, gentlemen. You figure the stumpage price of this timber, and it would not compare with the price that private individuals would pay or that private individuals would secure.

Mr. Carter. Why couldn't a fair price be had for it? I am asking for information now.

Mr. Chiperbield. I know you are; and I certainly would feel humiliated if I did not respond in precisely the same spirit. It is just for this reason—for the reason that no Indian in this section of the country has ever gotten a fair price for anything. He has been the legitimate prey of every man who could defraud him.

Mr. Dill. You say they are in such need. Now, here is this timber. They can not eat that; they can not wear that. What are you going to do for them? That is what I would like to get at.

Mr. Chiperbield. Let me answer that in just another way: I know Indians that have as much as \$2,000 or \$3,000 in the hands of the Interior Department, and the Interior Department is saying to those Indians, "We will allow you enough to keep life in your body; we will give you an order that says you can go to such and such a store and buy those precise things that you need, but you can not have the benefit of your own money."

And there may be some who are not competent to receive their money. I am not here to say they are not. But these Indians have funds—they have their tribual funds—and every expense of their agency, their hospitals, of their schools, of everything else, is taken from these funds. And if any man doubts my statement—although they have been cutting this timber on the Leech Lake Indian Reservation—if any man doubts my statement—although they have been cutting this timber on the Leech Lak

It certainly seems to me, gentlemen, that there ought to be some desire on the part of this tribe that this be done. This is their land.

Mr. Hayden, The Chippewa Indians had a delegation here who appeared before the Senate committee. They also appeared before this committee, but they did not talk about this forestry business to us. Whatever statement they made will undoubtedly appear in the Senate bearings.

committee, but they did not talk about this forestry business to us. Whatever statement they made will undoubtedly appear in the Senate hearings.

Mr. Chiperfield. Let me say this to you gentlemen, if you please, that there will come before these committees Indians who will present various views that are not the views of their tribe. They bring them down here; they bring them here for a purpose.

Mr. Chiperfield. I am not charging any particular man. I am saying those who have objects to serve will bring these Indians here, and they are influenced more or less to take the view of those who bring them here; else they would not be produced. But this affects the Red Lake Tribe of Indians.

They have their responsible heads; they have their ordinary methods of communication, of conveying their wishes; but, gentlemen, you have got to know them. They are as innocent as children. They have no business capacity to protect themselves against an act of Congress, because they do not understand it; they do not comprehend it. I have sat in their councils with them. I know their methods, and they have only sent for me because I am their friend. I have never been an attorney; I have never sustained such a relation to them, but it seems to me that before you dispose of the timber of these Indians you ought to know what their wishes are. They can, as a tribe or band, express their wishes in a way that would move this committee one way or the other.

Mr. Handen, It appears from the expenses that they ask us to now.

me to be present, and they presented their views on these questions that pertain to their welfare, and I will say there is not 5 per cent of the Red Lake Band of Indians, progressives or nonprogressives, who would be in favor of cutring this timber or making this forest reserve,. The Red Lake Band of Indians are the least civilized of any of the Chippewas. They live the most natural life, from an Indian standpoint, of any of the Chippewa Indians in Minnesota. They are thoroughly opposed to this thing. Now, I do not think solely that their own desire or situation ought to control, but I do think that before this thing is done the committee ought to have more information. I think perhaps they ought to have the information that Mr. Meritt says he will furnish, of the amount of money these Indians have been receiving, the amount they have been getting for this stumpage or for their logs.

Now, this is not a philanthropic enterprise for the sake of the Red Lake Indians. It was not recommended by the Interior Department until it was put in the shape of a bill. The Indians have not taken any such step, and I have no hesitancy in saying to you that it comes from those who desire to profit by dealing in this timber.

Now, I think I will not weary the committee or take your time any further. I understand Mr. ELLSWORTH, of Minnesota, wished to be heard on that matter. I do not know whether the gentleman has come or not. Of course his statement would be entitled to much consideration. I do not know how pressed you are for time, but I think the wishes of this tribe of Indians ought to be considered. If their color was not red, we would be very anxious to know their desires. If they were an equal number of white men, we would be very anxious to know what were the wishes of the people affected; and it seems to me you should have an equal desire under the facts in this case. I do not intend to reflect upon this committee, but these Indians are wards of the Nation, and they are helpless and destitute and suffering, and somethin

giad to hear you, if you get anything further from Minnesota in the meantime.

Mr. Chiperfield. If they can do it, I think they ought to have their representatives here. I think it ought to be disagreed to in this committee, and then taken care of in the conference committee, because I feel just as surely as we are here together that this is a rank injustice to these people.

I say to you frankly I am not their spokesman, except that several of them have written to me to protest against making this reservation and cutting this timber.

Mr. Konop. Now, Mr. Chiperfield, at the bottom of page 42, amendment No. 62, the provision reads as follows:

"That said forest shall be administered by the Secretary of the Interior in accordance with the principles of scientific forestry, with a view to the production of successive timber crops thereon, and he is hereby authorized to sell and manufacture only such standing and growing pine and oak timber as is mature and has ceased to grow, and he is also authorized to sell and manufacture from time to time such other mature and marketable timber as he may deem advisable."

And so forth. Now, as I understand it, what they propose to do here is to have the Secretary of the Interior build sawmills up there.

Mr. Chiperfield. That is one of the things.

Mr. Konop. And cut down this timber and saw it into lumber and then sell the lumber.

Mr. Chiperfield. Ses, sir.

Mr. Konop. Now, you claim that what has been going on there up to now is that the lumber companies have gone up there and that they had bought these logs there from these Indians for a song—practically nothing.

Mr. Chiperfield. For an insufficient price, I wish to say.

Mr. Konop. Now, you claim that what has been going on there up to now is that the lumber companies have gone up there and that they had bought these logs there from these Indians for a song—practically nothing.

Mr. Chiperfield. For an insufficient price, I wish to say.

Mr. Konop. For an insufficient price. Now, do you think that this kind of a provision, by providing that the Government should build the mills and then sell the tumber—not the timber, but the lumber—manufactured in these mills, wouldn't you think that that was for the purpose of doing just what you are objecting to now?

Mr. Chiperfield, It depends, of course, a great deal on the way in which the law is administered. If this timber was going to be cut and manufactured purely for the purposes of these Indians and for their needs, that would be one thing. But it is not done that way. And then the first part of this section authorizes the Secretary of the Interior and the people under his jurisdiction to sell and manufacture. Now it gives them the right to sell it.

Mr. Konop. You object to selling it?

Mr. Konop. You object to selling it?

Mr. Konop. Yes—well, not way up there.

Mr. Chiperfield. You know these lumber companies, don't you?

Mr. Konop. Yes—well, not way up there.

Mr. Chiperfield. You know them in your own State. You know what a lumberman's designation of a mature tree would be—any tree that suited him. When he says a matured tree is one that has an unsound place in it, that was not going to live much longer, it means stripping the forest. That is not only an injustice, but here is the question of reforestation. It means practically that they could take this and keep it forever if they so desired.

Mr. Konop. Now, the reason I asked those question so that has an unsound place in it, that was not only an injustice, but here is the question of reforestation. It means practically that they could take this and keep it forever if they so desired.

Mr. Konop. Now, the reason I asked those question so that has a condition up in my country

their wishes in a way that would move this committee one way or the other.

Mr. Hayden. It appears from the expenses that they ask us to pay that a general council of the Chippewa Indians was held at Bemidil. Minn., last July; that they sent a delegation down here, and they are asking us to pay the expenses of that delegation.

Mr. Chiperfield. I would not be surprised if they did.

Mr. Hayden, If they were duly elected delegates from a general council of the tribe, what better representation could we have here asking for legislation of this kind?

Mr. Chiperfield. If they were an accredited delegation from their tribe, instructed to speak on these points, unquestionably they would convey the desire of their tribe.

Mr. Konop. On page 543 of the Senate hearings, Mr. Head—I do not know whether he is the agent or not—appears before the Senate committee on this proposition. He stated in here:

"All through the ribe.

"All through the ribe.

"All through the summer we tried to get the people together on this, but they will not listen to the progressive faction, as we call them, to any proposition they may put up.

From that I would conclude that there are several factions of Indians over there.

Mr. Chiperfield. Now, the Government bullt a large saw-mill over there and spent about a million and half dollars—Mr. Kenterposing), About \$1,000,000 to put up their plant over there, and they are asking to the page of the mill over there and spent about a million and half dollars—Mr. Kenterposing), About \$1,000,000 to put up their plant over there, and mill over there and spent about a million and half dollars—Mr. Kenterposing), About \$1,000,000 to put up their plant over there, and mill over there and spent about a million and half dollars—Mr. Kenterposing), About \$1,000,000 to put up their plant over there, and they are asking to the page of the summer.

Mr. Chiperfield. Now the few and not returned anything. But I understand that within the last couple of years ago they had not returned anything of years they have been

Mr. CHIPERFIELD. As I say, it would be a question purely of administration. If there was timber there that should be cut, and it was cut for the real benefit of the Indians, I would say yes. But anybody knows that when you operate a mill of a certain capacity and provide for its operation that you have got to run things on a large scale before there can be any profit. The Government can not run a mill as can a lumber manufacturer. It may be a rather peculiar thing to say, but it is true that they can not, and they do not. They have not the facilities for bringing down vast quantities of logs to the mill; they have not the facilities of organization; and they do not make the same showing.

Mr. KONOP, I asked a very experienced lumberman, who has a big

Mr. Konop. I asked a very experienced lumberman, who has a big sawmill up in the northern part of Wisconsin—I asked him what the reason was that the Menominee Indian mill was not doing as well as other privately cwned mills, and he told me that the reason was that under the Menominee act they were required to employ Indian labor under the at the mill.

at the mill.

Mr. CHIPERFIELD. That is not high-class labor, of course.

Mr. KONOP. And for that reason the mill could not make as good a showing as a privately owned mill could.

Mr. CHIPERFIELD. There is only a small per cent—I will not attempt to say what—but they are not the equal of a trained millman by any means.

Mr. KONOP. There are some of those Indians, of course, who are good millman in the same of t

millmen.

Mr. Chiperfield. Now, I thank you, gentlemen, very much for your consideration. I feel that I have discharged my duty in this matter, and I certainly will rest a little easier for having spoken for these people. And I believe, gentlemen, that you will do very well to scan this transaction with the utmost care and protect the interests of these wards of the Government. I am very much obliged to you.

Mr. Carter. Mr. Ellsworth, we have been speaking of amendments of the 65.

Mr. CARTER. Mr. ELLSWORTH, we have been speaking of amendments 61 to 65.

Mr. Chiperfield. I have just been taking the position that this transaction should be scrutinized with the utmost care, and I very seriously question if it is fer the benefit of this Red Lake Tribe of

Mr. ELLSWORTH. I have had some doubts about that myself.
Mr. CHIPERFIELD. I think it is very obvious that it is in the interest
of others than the Indians.
Mr. ELLSWORTH. It is Senator Nelson's amendment.
Mr. CHIPERFIELD. Yes; and I think it is in the interest of the
lumber concerns.
Mr. CARTER. Have you anything to say about it now, Mr. ELLSWORTH I

Mr. ELLSWORTH. Nothing whatever.
Mr. GANDY. Mr. Meritt, if you carry out this proposition of reforestation, and all the provisions in this bill, is there any danger of the Indians owing the Government anything after they get this timber

Mr. Meritt. No: I think not, Mr. Gandy. I think if this term of legislation is studied carefully it will be found that there are no "jokers" in it; that it has been submitted in good faith by Senator Nelson. I have never known Senator Nelson to submit or endeavor to procure any legislation that had "jokers" in it against the interest of the Indians.

procure any legislation that had "jokers" in it against the interest of the Indians.

Mr. Gandy. Is the land embraced in what is purported, or what is proposed, to be this timber reserve all covered with timber?

Mr. Meritt. Yes, sir.

Mr. Gandy. And you say that at this time you only have permission by law to sell the dead and down timber?

Mr. Meritt. That is true.

Mr. Gandy. Now, would it clear the situation, from your standpoint, if you just had permission to sell matured timber, as well as dead and down timber, without going into all this reforestation proposition?

Mr. Meritt. That would help the situation materially.

Mr. Gandy. Do you think that is necessary, in order to secure the greatest amount of money possible for this timber, that the Government embark upon the proposition of building sawmills up there?

Mr. Meritt. I doubt if the Government will enter into any extensive sawmill operations under this legislation if it were enacted.

Mr. Carter. They could not, without coming to Congress.

Mr. Chiperfield. I have omitted one point which I would like to ask. Is it not true, Mr. Meritt, that when you make a forest reserve here that you do not allow the Indians to make their allotments in the forest reserve?

Mr. Meritt. There are certain Indians who have taken up allotments within this proposed reserve. They will be protected in the possession of that land.

Mr CHIPERFIELD. They had them before it was made a forest reserve; but is it not true that after it is made a forest reserve you do not allow Indians to make allotments in the forest reserve. If this legislation is enacted.

Mr. Chiperfield. I may be that that is a direct answer, but is it not true that you prohibit the Indians from making any allotments in the forest—from taking their allotments in the forest reserve? That can be answered directly.

Mr. Meritt. I would say, in answer to that, that Indians who do not now have allotments within that forest reserve after the legislation is enacted.

Mr. Chiperfield. And those who do have allotment

Mr. Chipperfield. And those who do have allotments now in the for-t reserve are not permitted to sell them, are they? Mr. Meritt. This legislation will not permit any Indian to sell his

Mr. Meritt. This legislation will not permit any Indian to sell his allotment.

Mr. Chiperfield. The practice of your department is not to allow Indians to sell any lands in the forest reserve whatever, is it not?

Mr. Meritt. If the Indian has been allotted land in a forest reserve and has a title to it, we will permit him to sell it.

Mr. Chiperfield. You require him to exchange it, do you not?

Mr. Meritt. Not in all cases.

Mr. Chiperfield. Do you know of a single place in the White Earth Forest Reserve where an Indian has been permitted to sell any part of his land?

Mr. Meritt. Have you in mind White Earth or Leech Lake?

Mr. Chiperfield. Well, I do not know just where that reserve comes in there. But the forest reserve that it there now, do you permit any Indian to sell any land that he may own in fee simple there?

Mr. Meritt. Yes, sir; we will permit such Indians to sell their lands.

Mr. CHIPERFIELD. To whom? I do not mean the name of the man, but the class of men.

Mr. MERITT. Anybody who wants to buy it.

Mr. CHIPERFIELD. Well, I certainly think you make your answer in good faith. I will not question that, but I decidedly doubt the correct-

Mr. Chiperfield. Well, I certainly think you make your answer in good faith. I will not question that, but I decidedly doubt the correctness of it.

Mr. Meritt. I know two years ago the department encouraged the Indians who had allotments within the forest reserve on the Leech Lake Reservation to give up those allotments and take lands outside the forest reserve. That was the policy of the department.

Mr. Chiperfield You required them to do it?

Mr. Meritt. We encouraged them to do it.

Mr. Chiperfield. Because you could not take it away from them; but you required them to do it as far as you could.

Mr. Meritt. That was at the request of the Forest Service who wanted the reserve held intact, so that there would not be any fires in the forest reserve.

Mr. Chiperfield. Most of this forest reserve is along lakes, ideal places for the Indian. When they create a forest reserve they say to the Indians, "Although this is your own land, you can not have any allotments in it."

Mr. Konop. Now, Mr. Meritt, I understand you to say that if this legislation is enacted you do not propose to build any mills up there?

Mr. Meritt. We do not propose to build mils on a large scale, such as we have at Menominee.

Mr. Konop. You intend to build small mills?

Mr. Meritt. Yes, sir.

Mr. Carter. Could you do that under the language of this bill?

Mr. Meritt. We would have to come back to Congress and submit estimates.

Mr. Carter. I notice, beginning in line 10, you say:

Mr. Meritt. Yes, sit.

Mr. Carter. Could you do that under the language of this bill?

Mr. Meritt. We would have to come back to Congress and submit estimates.

Mr. Carter. I notice, beginning in line 10, you say:

"Provided further, That no contract shall be made for the establishment of any mill, or to carry on any logging or lumbering operations which shall constitute a charge upon the proceeds of the timber, until an estimate of the cost thereof shall have first been submitted to and approved by Congress."

Mr. Meritt. Yes, sir. That leaves it absolutely in the hands of Congress as to the future policy regarding milling operations on that reservation; but, in view of our experience at Menominee, I think the department is opposed to building large milling plants.

Mr. Konop. I would say in defense of the mill at Menominee when I first came here, five or six years ago—from what I was able to gather—the thing was a bad proposition; but I understand that within the last two years they have been making some money and turning some money back into the Treasury. Isn't that a fact?

Mr. Meritt. We have been gradually improving the conditions on that reservation.

Mr. Konop. Now, my own opinion would be that I would oppose a large milling establishment, something like that at Menominee.

Mr. Meritt. That would be my attitude. The Indians have been here this winter, two delegations from the Red Lake Reservation, one delegation headed by the full bloods and one delegation headed by the mixed blood. The full bloods on that reservation are, as a rule, opposed to any change whatever. They do not want the lands allotted; they do not want the timber sold; they want conditions to remain exactly as they are. They are opposed, even, to the draining of the swamp lands. It is shown that we can drain a good deal of land up there at less than \$2.50 an acre. These full-blood indians are proposed to that. They want conditions to remain exactly as they are. The mixed-blood indians are progressive and want to improve conditions, and t

Because of that provision we are without authority of this timber.

Mr. KONOP. That is why you are asking for special legislation?

Mr. GANDY. Doesn't that say "mature timber "?

Mr. MERITT. Yes, sir; we can not sell mature timber in Minnesota, though, because there is a proviso here which excepts the States of Wisconsin and Minnesota from this act.

Mr. KONOP. Now, aren't they cutting mature timber only on the Menominee Reservation?

Mr. MERITT. They are doing that under a special act—the Menominee act.

Mr. Gandy. Suppose those two exceptions you speak of there were to be removed and let the general-sale provisions apply. Wouldn't that answer the situation?

Mr. Meritt. That would meet the situation very largely.

Mr. Carter. The next amendment is No. 66, page 45, line 1:

I did not have at that time opportunity to revise these remarks, and consequently what I there desired to say does not appear with the same degree of precision as if there had been an opportunity to revise my statements, but I have since considered with care the statements then made, and I stand upon

such statements in their entirety.

The views which I there presented I here reiterate in connection with the proposed adoption of the Senate amendments.

The Red Lake Band of Indians is entitled to much consideration at the hands of the Government. It has meekly and obediently submitted to all the wishes of the Government at all

With reference to their status and conduct, I quote from the report of the Secretary of the Interior, under date of January 30, 1890,

A commission has been formed under an act entitled "An act for the relief and civilization of the Chippewa Indians in the State of Minnesota."

This commission reported to the Secretary of the Interior. From this report of the commissioners to the Secretary of

the Interior the following extracts are made:

This commission reported to the Secretary of the Interior.

From this report of the commissioners to the Secretary of the Interior the following extracts are made:

The first council was held at Red Lake June 29, where we remained until July 8. We found them intelligent, dignified, and controons, but followed the control of the contro

By the acceptance of this diminished reservation about 1,000,000 acres of land was relinquished by the Red Lake Band of Indians. This was done by them voluntarily at the behest of the Government of the United States.

By the Nelson Act, March 3, 1908, which was advocated and supported by Mr. Steenerson, of Minnesota, in the House, it was provided that the diminished Indian reservation should be held by the Red Lake Indians independently of other bands of Chippewa Indians. The act by its terms provided that the Indians should be removed to the diminished Indian reservation. It also authorized the sale of 250,000 acres of their land.

It also provided for an allotment of 160 acres each among

commission by this act 250,000 acres were sold and the funds

derived from such sale placed to their credit.

Now, it is proposed that substantially 90,000 acres of land shall again be diverted from their use and that all of their merchantable timber shall be placed upon the market.

I have personally a considerable acquaintance among these

Indians. A number of them are my friends.

They inform me that they are bitterly opposed to the creation of the forest reserve and to the sale and manufacture of their timber other than so much as is required for their own industrial purpose

By this amendment the land of these Indians will be stripped of timber wherever it is of any value to the lumber companies.

The compensation, if the future can be judged by the past, will be utterly insufficient, and they will be paid far less for the timber than would be paid to private landowning companies competent to protect their own interests.

The Red Lake Band of Indians is not asking for this legisla-

tion, but, on the contrary, they are protesting against it.

If they are not asking for it, a pertinent question arises—
Who is? And it seems to me the only answer can be the lumber companies that are interested in securing this lumber.

I am aware that there are two views that prevail in the

State of Minnesota.

One is that these Indian reservations should be opened up to white settlement and exploited for the benefit of the whites at as early a day as is possible.

In this program there is entirely too little consideration given

to the rights of the Indian.

The other view is that these lands should be used for the benefit exclusively of their Indian owners and their descendants, and that they should be protected and safeguarded in all of their rights for all time to come.

In this latter view I share.

I confess I can not see the difference, so far as a moral question is involved, between protection of the rights of these Indian owners and the protection of the rights of white land-

Each one should be equally safeguarded, and when I observe legislation that is absolutely prejudicial to the rights of the Indian owners of these lands I would be utterly recreant to my duty if I did not respond to the dictates of my own conscience and raise my voice in protest.

These Indians are not competent to protect themselves. They

are a long way removed from Washington.

The Government of the United States is something very distant, as they conceive, from themselves, and wholly indefinite and but little understood.

They feel that they are not being protected as they should be protected, and yet they do not have a sufficient understand-

ing of the question to properly present their views.

Knowing this situation I can not remain silent in this record, and hence I present what I believe to be a just and a fair statement in connection with this amendment, the adoption of which I believe will prove to be in every way injurious to these people and to many generations of their children, and will be found to hamper the future opportunity of these people to be self-sustaining.

This is their right. Against anything which interferes with

such rights I protest.

Roosevelt and the Navy.

EXTENSION OF REMARKS

Yet nothing was done, unless a suit to dissolve the Powder Trust is to be considered.

USED JAPANESE SHIPS.

"During the five years that I was at the head of a Cabinet department of the Government I was cognizant of the fact that we were compelled to send every pound of food consumed by our troops in the Philippine Islands in Japanese bottoms, because we had no ships. Yet nothing was done or has been done to create a mercantile marine.

"Twice in the last 10 years war has seemed sufficiently imminent to justify shipping inland the gold and sliver from the vaults of the subtreasury at San Francisco. Yet nothing has been done."

Naval Appropriations-How Coercion Aids Preparedness.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. BAILEY. Mr. Speaker, while I have previously referred at some length to the bill making heavily increased appropriations for the Navy and have indicated as clearly as I knew how my feeling that the measure is a concession to greed, working through hysteria, and not a response to the needs of the country, it is my desire in this connection to point out the nature of some of the forces which have been busy in creating the sentiment which we have undertaken to crystallize into law. I first desire to introduce a letter which reached me the other day from an anonymous correspondent. Ordinarily the writer of an unsigned letter is entitled to little consideration. As a newspaper man, I have been trained to disregard the communication which is not accompanied by the name of the writer, not necessarily for publication, but as an evidence of good faith. However, at times I have found it worth while to give some weight even to unsigned communications; and the letter previously referred to is of such a character and was written under such circumstances as to arrest attention. I am appending it for the purpose of letting a little light in on the facts attending the pressure which has been brought upon Congress in support of what I deem a runaway policy with reference to the national defenses:

[Confidential.]

PHILADELPHIA, PA., Man 22, 1916.

Hon. WARREN WORTH BAILEY, Congressman.

Congressman.

Dear Sir: I am writing this to inform you that the Pennsylvania Railroad Co are distributing post cards to the employees with instructions to address them to their Congressmen and sign them and return them to the heads of the departments in which they are employed in order that such head may see to it that they are mailed. To refuse to sign these cards would be to bring upon the employees the wrath of the officers of the company, so that many who are coerced into signing through the fear of the result for a refusal to do so, are not at all in sympathy with the matter contained on the cards.

These cards read on the face:

POST CARD.

Hon. -House of Representatives, Washington, D. C.

and on the reserve side:

DEAR SIR: As one of your constituents, I urge you to vote for such legislation as will restore our Navy to second place, substantially increase the Regular Army, and create an adequate reserve trained and equipped and provided for the organization of the Federal Militia.

Yours, truly,

(Name) (Address) -

This is the most glaring interference with the rights and privileges of citizens that could well be imagined and I have for the reason stated been forced to sign one of these cards addressed to the Congressman from my district, while my own wish is that he would do all that he can to prevent just such legislation.

I think you will understand the difficulty and that these cards do not represent the sentiments of very many who have been forced to sign them.

I would send this to Mr. Biyan did I know where to address him, but as I do not know where he is at the present time and I know that you can reach him, I think best to send it to you in order that you may do something to present the matter in its true light before Congress.

I can not sign my name to this, but I will promise that in the future I will inform you who I am, and because this is anonymous, you need not disregard the truth of what it contains, because you can verify the fact, and it may be that you yourself may receive some of these

cards from persons from your district who are not in sympathy with the matter as presented but who are strongly opposed to this action.

Trusting that you may be able to do something to stem the tendency to have any such legislation passed,

Yours, truly,

A FRIEND.

It should be perfectly obvious, even to the least discerning, that my anonymous correspondent has correctly interpreted the design of the railroad company. It is practically coercing its employees into the support of a policy which some of them at least have looked upon with extreme disfavor. Had the company wished to leave its employees free to act it would not have called upon them to sign and return the cards to the head of the department in which they are employed. It would have contented itself with asking them to send the card direct to their Member of Congress. But this, of course, would have given the company no line on the action of its employees. It would not have known whether they had sent in the cards or not. But under the plan which is said to have been adopted every employee is spotted. His failure to sign and return the card to the head of his department will be notice to the corporation which it will hardly overlook. And corporations know how to apply disciplinary influence to recalcitrant employees. The latter know from experience what this sort of coercion means. It means a doubtful tenure. It means unaccountable lay offs. It means double-crossing. It means too often actual loss of jobs. And hence it is a powerful instrument in the hands of the employer. It gives him the power of life or death over his luckless employee.

But other letters not of an anonymous character have come under my observation. The Chicago Public has printed one written by Samuel M. Hastings, president of the Illinois Manufacturers' Association. It is quite in line in its suggestiveness with the note and instructions sent by the Pennsylvania Railroad Co. to its thousands of employees throughout the country. The Public incorporates the letter of President Hastings in an editorial on "A Conscript Parade," which I beg to present here-

with:

A CONSCRIPT PARADE.

Recruits for Chicago's preparedness parade are to be procured as they were obtained in 1896 for McKinley parades. The Illinois Manufacturers' Association is sending to business men a circular containing the following instructions:

"Following up its action in sending a delegation to Washington two weeks ago to advocate preparedness the Illinois Manufacturers' Association has joined with other organizations in Chicago to make the great parade June 3 a big success. The officers, clerical staff, and men of every plant in Chicago should be in line.

"In order to facilitate the organization of the industrial division of the parade which has been placed in the hands of the Illinois Manufacturers' Association, you are requested to promptly fill out the inclosed card, giving the details as to the number of men you will furnish and the name of the particular officer of the company who will be in command.

mand. "Please act promptly.

"SAMUEL M. HASTINGS, President."

In other words, employers are urged to ask each employee whether or not he will march. And prudent employees, whatever their inclinations may be, will make no hazardous experiments with negative replies. A foreign conquest could scarcely leave them less freedom of choice in such matters. However little they may believe the bogey tales of hostile invasion, they feel that a very real danger menaces their jobs. To avert this real danger, not the imaginary one, they will help to swell the parade. And the preparationist press, with little regard for the facts, will report the affair as a spontaneous and voluntary movement.

Doubtless many similar evidences of what is going on in connection with these great demonstrations intended to force the hand of Congress and to inflame public sentiment in favor of warlike preparations against an imaginary danger might be produced. But it is hardly necessary. The proofs that this whole propaganda is manufactured are visible on every hand. There is nothing spontaneous in the so-called "preparedness" movement. It had its inspiration in Wall Street; it has drawn its resources from the coffers of big business; it has been given a marvelous publicity through the organs of special privilege; and there is every reason to believe that whatever popular sentiment there may be among the masses of the plain people in favor of piling Ossa on Pelion in this mad business of military and naval expansion has been produced by the spread of false information and by deceptive appeals to ignorance, prejudice, and fear.

In my judgment the "preparedness" parades which have In my judgment the "preparedness" parades which have been worked up or which are about to be staged in the cities of the country are akin to those far-famed "prosperity" parades, back in 1896. The latter were conceived by Mark Hanna and faithfully executed by the protected manufacturers and their Big Business allies. Millmen and miners, railroad employees and small tradesmen, bricklayers and carpenters, painters and hod carriers, blacksmiths and day laborers were alike dragooned into marching in the ranks of the miracle workers who were to close the mints and open the mills and thus bring plenty on a smiling land. It was all hand wrought. It was not more spontaneous than a circus parade. It was made possible only by the coercion which was implied in the activities of employers in making the parades impressive in numbers. The employee who failed to march perfectly understood that his failure would be set down as a black mark against his name: that back of the invitation to march was the threat of his employer that his failure or refusal to march would mean

the loss of his job.

And here we are having 1896 over again, but under a different aspect and for a very different purpose. At this time a "prosperity" parade would excite laughter and derision. Employers would not have the hardihood to repeat the Mark Hanna performance at a moment when every branch of production is flourishing. But they can cooperate with Wall Street in organizing "preparedness" parades which are designed to in organizing "preparedness" parades which are designed to influence Congress and drive it into making vast appropriations of which Wall Street will be the chief beneficiary. And that is what this all comes to. It is a matter of profits. And patriotism is the string upon which the war traffickers are playing. They are filling the air with their demands for more and more "preparedness," and by every means at their command they are dragooning the plain people of the land into the support of their sordid program.

Is it not time for the burden bearers to wake up and ask themselves what it is all about and why they should have their backs still more heavily laden? What progress can they hope to make in the hard race of life with a soldier astride them

and a battleship dragging at their heels?

Speech of Secretary of War Baker at Columbus, Ohio.

EXTENSION OF REMARKS

HON. WILLIAM GORDON. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 3, 1916.

Mr. GORDON. Mr. Speaker, under leave granted to extend my remarks in the Record, I insert an address of Hon. Newton D. Baker, Secretary of War, at the Democratic State convention at Columbus, Ohio, June 1, 1916.

The address is as follows:

ADDRESS OF NEWTON D. BAKER, SECRETARY OF WAR, AT THE DEMOCRATIC STATE CONVENTION AT COLUMBUS, OHIO, JUNE 1, 1916.

Gentlemen of the convention, before I turn to a discussion of the issues in the approaching campaign, I want to give you greeting and a message from the President of the United States. To you and through you to the Democrats of Ohio he sends a cordial message of greeting and fellowship, and he au-thorizes me to say for him that were he here he would express his appreciation of the confidence of the people of Ohio, and his especial appreciation of the unswerving loyalty, the steady support and assistance he has received from Senator Pomerene. In all the long and busy months of this administration there has been no representative in either branch of Congress whom the President has relied with more confidence and affection than our distinguished Senator. And coming from Washington, where the services of these men are best known, I am happy to be able to assure you that he is honored by his associates as an honest, able, and fearless champion of the principles of true Democracy.

There have been times when men called to the temporary chairmanship of Democratic conventions were obliged to rely upon an enthusiastic expression of their hopes as material for their speeches. In this year of grace, we who are called upon to make such addresses can look back upon years of significant

achievement as well as forward to years of promise of high service, all parts of a matured national policy.

It used to be said that the Democratic Party was the party of opposition, that it was made up of all sorts and conditions of men whose only common interest was opposition to the party in power, and that therefore when called into brief moments of responsibility it exhibted the weaknesses necessarily inherent in such accidental political aggregations.

On the other hand, it was said that the Republican Party was

a coherent body, that it had pursued steadily a single national policy, and that its occupancy of the places of power was always characterized by definite advances toward the enactment of its program into law. It is, of course, true that at its origin the Republican Party did have a great original purpose

which it successfully and gloriously accomplished. But when this original initiative was exhausted and the party began to live upon its traditions, I am frank to confess that its leaders seem to me to have become a highly organized body of men who apparently knew what they wanted and how to get it.

Whatever may have been the past character of these great

organizations, however, the present situation is entirely clear. The Republican Party no longer presents a solid front. It is no longer held together by a consistent and single theory of national policy. To speak of a man as a Republican to-day national policy. identifies him with no cause, ascribes to him no opinion; and whether it affiliates him with progressives or reactionaries or both, can not be told until after the national convention in Chicago next week has adjourned.

Among the leaders of that party there is at present confusion of counsel both upon the question of candidates and upon principles. Senator Harding, for instance, who is to preside at the Chicago convention, says that the tariff is to be the issue in the next campaign; but numerous and eminent Republicans throughout the country have replied that they would not be foolhardy enough to menace the present prosperous condition of the country by suggesting another tariff agitation. To their mind, the real issue in the next campaign must be an attack upon the foreign policy of the national administration. Unhappily, however, those who desire to attack the foreign policy are again divided into confused groups. There are those who think the foreign policy has been too peace loving, that it ought to have had more strenuousness, been more bellicose and provocative, and they affect to feel a sense of shame that with all our size, wealth, and general greatness, the people of the United States have been mere passive spectators of the greatest armed struggle in the history of the race. This party is again subdivided into those who would have had us enter the foreign quarrel on one side and those who would have preferred to see us enter on the other. And then there is a third group, headed by the Great Detractor, who, shifting from position to position on the Nation's foreign policy, selects at each time apparently whatever vantage point seems to offer an opportunity for making difficult the position of the President and the Congress. The motive of this group seems to be critical rather than constructive, and, guided by selfish ambition, it ignores consistency and duty alike in agitating that we should stay out when the tension of events seems likely to draw us in, and that we should go in when such recognitions of our rights have been secured as enable us with dignity and honor to stay out.

Over against all these there is still another faction of the party which believes that the administration has been too bellicose, that it has lent some ear to the abomination of preparedness, and that it therefore ought to be replaced—by Mr. Ford, if possible, as an eminently peaceable candidate, but if not by Mr. Ford, then by anybody else who will espouse the nonresisting attitude-run on the platform of peace at any price, and forget that the Nation either has any duty to its own citizens or to mankind at large in the maintenance of those principles for the protection of neutral rights which have been won through centuries of conflict against the contentions of belligerents.

In other words, what used to be the strong, coherent, logical organization known as the Republican Party, is now, so far as its leaders are concerned, an aggregation of factions, agreeing upon no set of principles, advocating no national policy, numbering of course many wise but many foolish persons, some guided by selfishness, some unselfish, some patriotic, some thoughtless, the only common bond of union being a willingness to pool issues to win. And this party is about to meet in convention at Chicago to select whatever candidate looks best at the last moment and whatever principles seem to promise to

weather the storm until November.

In contrast with this the Democratic Party, having lived through years of doubt and hesitation, with a central philosophy sometimes more a yearning than a program, now presents a matured policy, evolved by a great leader, welcomed by his party associates as the real expression of their political ideals, and already in the full tide of demonstrating its justice and its wisdom as applied both to the domestic problems of the country and to our interests involved in the conflicts of arms that rage in the world.

Contemporary judgments of great events and persons are rarely sufficiently detached. Time discounts the fervor of the advocate and reduces the partisan estimate. I am warned, therefore, that in what I am about to say I must avoid the language of exultation and restrain at least a part of the praise which seems to me to be merited by the events to be described. And yet I may with propriety point to the fact that from the date of the adoption of the last national platform of the Democratic Party there has been definiteness and certainty about the

party's program which admitted of no doubt or misunderstanding; and to the equally important fact that from the hour of his inauguration President Wilson has pursued steadily that policy, cooperating with the Congress to secure measures of vast importance to the business, industry, and life of the Nation-a program so comprehensive that in the very nature of the case it is as yet only partially carried out; and a policy, to judge by the beginnings already made, so sound and beneficial that it ought to be continued and given an opportunity to bring to full maturity its great promises.

I shall not attempt to discuss with statistics and in detail the great constructive measures which have already been enacted or are under present consideration in Congress. As the campaign goes on, literature and speeches will impress the merits of these measures upon the mind of the country, and the questionings of all will be satisfied as to the results which have been attained. There are, however, several of these laws to which I desire to draw for a few minutes your attention, and

of these I take the largest first.

Four years ago the Democratic Party declared in its national platform:

We oppose the so-called Aldrich bill or the establishment of a central bank, and we believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or domination by what is known as the Money Trust.

For long years the Republican Party had proclaimed itself the especial guardian of the financial institutions of the country. Most of the financial legislation on the statute books was of its making. It called to its council tables men of large affairs. Legislators of its persuasion rubbed elbows with the doctors of high finance. And yet, with deadly regularity there came over the industry and the commerce of this Nation blighting panics which seemed to arise, like the typhoons on the China Sea, unexplained, unavoidable, disastrous. They concurred with no failures of crops; they were unrelated to excitement in our international relations; and when they were gone the prostrated business and industry of the country could get no better explanation from those who assumed to know than "glutted markets" or fantastic theories of depressions in financial cycles, which neither repaired the damage nor much enlightened the

The Republican Party, realizing the necessity of action, had, in the Sixty-first Congress, put the whole matter in the hands of its chief financial doctor, and he, having once more consulted the oracles, presented as the Republican remedy for financial panics and depressions the theory of a central bank. In favor of his plan were the combined interests of the country; some voluntary, because they understood; others hypnotized into sympathy with the plan by the great weight of the names which

approved it.

But the steady common sense of the country saw that in this age of credit the control of the credit system of the Nation meant the mastery of the Nation's life. It saw that a central bank not managed by the Government would manage the Government. It named this menace the "Money Trust," and in the election it commissioned the Democratic Party to save the country from the domination of its business and its life by the concentration of financial power into the hands of a few bankers

in a single street in a single city.

Neither the fear nor the peril was unreal. The tendency of events had been as sure and relentless as the force of gravity. Year after year the small merchant and the artisan in remote and outlying places and the farmer in lonely hills found their fate bound up by influences which they could neither see nor understand, with determinations made by boards of directors whose names they never heard. An invisible government took toll of their earnings; and however fertile the earth or arduous their toil, presperity was but a temporary and delusive prelude

to recurring periods of ruin and despair.

The Glass-Owen Federal reserve bank law was the answer of the Democratic Congress and President to this situation. It rests upon this fundamental principle—that any power which controls the economic and financial destiny of all the people of the United States can be safely trusted only to the Government of the people of the United States. I shall not undertake to review the terms of that law nor dwell long upon the struggle to secure its enactment. It was bitterly opposed. Distinguished Members of both the Senate and the House prophesied financial ruin for the country should it become law. All the forces of centralized finance were brought to bear to obstruct its consideration. Before the committees of Congress, in newspapers, in pamphlets, and in books the old way was defended and the new way attacked. The measure had been drawn before President Wilson's inauguration and had been considered by him upon the invitation of the committee having its preparation in hand. The new President threw aside the cold formalities of a written address, personally appeared in the House of Representatives, and before the assembled legislators of the Nation gave the bill the weight of his convincing advocacy. It was a long and hard struggle, but ultimately, so convincing was the demonstration, the bill was adopted in the House by a vote of 298 to 60 and in the Senate by 43 to 25. Thirty-four Republicans, 11 Progressives, and 1 Independent in the House voted for it, and in the Senate 1 Progressive Senator and 3 Republicans sided with the

The law was immediately put into operation, the Federal reserve bank organized, and from that hour to this, under conditions which might well have shaken any less stable financial structure, the bank has steadied the business and commerce of the country. There has been no cornering of the money market since the establishment of the bank. There has been elasticity in the currency-shrinking where there was no need for a large volume, and expansion when and where the transportation and financing of crops and industries were necessary. The measure has faced profound disturbances in our international trade, but it has ridden safely through the storm and blessed every section of this whole Nation with the assurance of a scientific monetary system. To-day there is no respectable opinion in the United States which does not admit this act to be one of our great historic pieces of constructive legislation.

No plank will be adopted at Chicago to repeal the Federal

reserve bank law; no candidate will be found willing to break

a lance in that vain fight.

If there were no other great achievement of the Wilson administration, this act alone would set the seal of statesmanship upon it and would afford a record for courage and wisdom upon which the party could confidently appeal to the country.

Nor have we yet seen the full measure of the benefit of this law. We used to know the names of unofficial individuals whose whim could cause a panic, and reports of whose illness would cause a riot in the stock exchange. To-day there are no such individuals. The Federal Reserve Board, a creature of the Government, having the public welfare as its only interest, dominates the financial situation, and the mobilized financial resources of the Nation are available to sustain the trade and industry of the powerful and the weak alike.

But if there should ever come a demand upon this Nation such as has come upon the nations of the Old World-if the supreme test of our strength is ever made—this great institution, freed from every selfish impulse, open to no suspicion of private gain, related to no industry, will take its place in the preparedness program, mobilizing the financial strength of the Nation back of its fighting forces, sustaining our industry and our commerce upon which, in the last analysis, our defensive strength must rest.

There has been much talk on the subject of preparedness, and many sound and patriotic suggestions have been made with a view to rendering the great strength of the United States available in the hour of need. But this act of legislation has done for the strengthening of America more than is contemplated by any of the proposals. We are now ready to finance the defense of America, no matter what the demand.

In the national Democratic platform there was another provision which said, "Of equal importance with the question of currency reform is the question of rural credits or agricultural finance." The farmer owns land. He sows in the fall and reaps in the summer. He turns his capital over but once a year, and he requires credit to sustain him during the long period of work and watching before his crops can be marketed. As compared with bonds and stocks, land is relatively less easily converted into money. It can not be listed in a stock exchange and have a market price which can be found by consulting the daily newspapers. The farmer's lands produce the ultimate necessi-Their value, therefore, is stable and sure. But ties of life. the credit of the United States has hitherto flowed to the manufacturer and the merchant, because of the superior fluidity of the securities he could offer, and credit for the farmer has been both difficult to obtain and costly out of all proportion to the solidity of the security upon which it rests.

Steadily pursuing the policy upon which it entered into power, the Democratic Party has now matured a rural credits bill which devises a system of credit for the farmer, based upon the value of his lands, rendered convertible by the issuance of land bonds which will be one of the ultimate stable securities in our financial system. This act will place the farmer on an equality with the merchant and the captain of industry in commanding the credit necessary to his enterprises, and is the first comprehensive recognition by the Nation of the needs and rights of those who till the soil as the foundation of our entire economic structure.

This act and the Federal reserve bank act are a complete performance of the financial promises of the Democratic platform, and they invite comparison with the feeble failures of the Republican Party, in its long retention of the Federal power, to meet this great need. The marvel of it all is that in so brief a time so much has been accomplished. I challenge the critics of this administration to select out of the whole reach of Republican history two acts which will compare with these in con-

structive statesmanship.

The report of the Comptroller of the Currency for the 7th of March of this year shows that the resources of the national banks of the United States amounted to nearly fourteen thousand million dollars—greater by three thousand million dollars than the aggregate resources of the Bank of England, the Bank of France, the Imperial Bank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan; greater by two thousand million dollars than the aggregate resources of all of our own national banks as shown by the report for 1915. It is this great force that has been harnessed and made to serve not merely our own domestic, industrial, and commercial needs but, placed under our growing international trade, and as the financial supremacy of the world has passed across the seas and come to us, we now have the instrumentality through which American credit can be made to finance our sister Republics in South America disinterestedly and unselfishly, thus serving a great world purpose and cementing the tie of business and of friendship between the peoples of the Western Hemisphere.

The tariff legislation of the United States prior to 1912 had gone from bad to worse. Starting with the theory of infant industries, the Republican doctrine had come to be that an increase in the tariff was a panacea for almost any economic ill. It had been pointed out time and again that too high a tariff enfeebled the industrial initiative of our people; that wastefulness and inertia resulted from tariff rates which pre-cluded competition; that behind the tariff wall consolidations inevitably monopolized industry and substituted for the rule of a fair competitive return prices based upon the rule "all that the traffic will bear." Disinterested scholars made elab-orate statistical investigations and demonstrated that the benefit of a high tariff went to the tariff barons and not to the wageearning class. But by one of those subtle fallacies which sometimes erects a coincidence into a relation of cause and effect many people in this country had come to believe that a high protective tariff and a full dinner pail bore the direct relation of father and son. Of course, the dinner pail was not always full when we had a high protective tariff, but in a country of boundless natural resources, filled with an energetic, hard-working people, freed from many of the evils which older and more congested populations suffered, it was easy to instance a better average condition for our people. were directly enriched by high protective duties, being happy in their estate, and knowing the cause, found it easy to extol to others the virtues of the schedules by which they so clearly throve.

The absence of tariff duties between the States of the Union, the abundant prosperity of a tariffless country like England, the occasional depression in industries protected by prohibitive tariffs, the slow attrition of truth upon error, all conspired, however, to let light in on this subject, and in 1908 the Republican Party was forced to promise a revision of the tariff, a promise which was interpreted by the standard bearer of that

party to mean a revision down.

When the Payne-Aldrich tariff law was made, it was made as all other Republican tariffs had been for many years. It was the only way the Republicans knew how to make a tariff. The Ways and Means Committee of the House called in the men who were interested in tariff schedules and asked them to write down the rates which they desired for the protection of their industries. I do not mean to complain that they heard these gentlemen, but I do complain that they turned over to them their legislative discretion; that they treated one interest as the only interest; that they made of these captains of industry judges in their own cause. And when the Payne-Aldrich tariff bill was finally passed, it was a palpable fraud upon the promise of the party which passed it. It was a violation of the platform upon which that party had to secure its return to power, was a disappointment of the just hope and expectation of the people of the United States, and an added incentive to the growth of oppressive monopolies among us.

Doubtless there were many, after the election in 1912, who feared a revolutionary tariff adjustment. But the Underwood

tariff was the work of statesmen; it added to the free list, reduced many of the schedules, removed buildens from many of the necessaries of life, stimulated our manufacturers to the installation of more economical methods and better machinery, reduced in some part at least the high cost of living, and made a conservative and promising start toward more sympathetic commercial relations between us and the other nations of the earth. And it introduced as its novel gift to our institutions the income tax. This tax lays its burden upon the wealth of the country rather than upon the necessities of the people, and opens up a source of revenue, scientific and equitable, which may yet save this Nation should there be an interruption of our foreign trade of such a character as to cut off income from those duties upon imports upon which for so many years the maintenance of our Government has had to depend. This, too, is a signal achievement, and there will be at Chicago no plank adopted to repeal the income tax, nor will there be any very noticeable call for an increase in the schedule of the Underwood tariff.

But perhaps the most conspicuous result of the passage of this bill has been the utter and eternal divorce between high protective duties and the full dinner pail. To the amazement of the faithful the duties have gone down, but the dinner pail is not only not empty, but full to overflowing. Where emptiness was expected, there is a horn of plenty. The smokestack of every mill in the country is black with prosperity. The wages of labor have advanced in every craft and in every trade. America has never known greater prosperity. The riches of the earth and the fullness thereof are poured into the lap of our people. The young men have approached and broken the clay feet of the idol of protection! The high protective duty has passed to the hall of fame, where it is placed with Dr. Cook and Cagliostro, venerable only because of the length of time men rendered it hom-

age for virtues which it did not possess.

The breaking out of the European war entailed an enormous reduction in our revenues from imports. Had the income tax not been included in the Underwood tariff bill, the deficit would have been very great. As it was, however, the ordinary receipts of the Government in 1914—the first year of the Underwood law amounted to \$734,343,700, which was \$10,232,471 more than the aggregate revenue in 1913 under the Payne law and \$43,565,235 more than in 1912 under the Payne law. . So the Democratic administration has not merely provided a new and scientific element in our fiscal system, but it has produced revenues necessary for the expanding needs of the Nation under difficult and disturbed conditions, and by the proposal which is now before Congress for the creation of a tariff commission the uncertain situation which will come with the close of the European war has been anticipated and an instrument suggested which will protect our markets and our people in any contingency that can arise. The President's definition of the purpose of this commission is that "It would have nothing to do with theories of policy; it would deal only with the facts of industry and conditions of economic change prevailing in the world, so that legislation of every kind that touches these matters might be guided by the circumstances disclosed by its inquiry."

I can not take time for more than mention of other great elements in this program of accomplishment. The Democratic Party forced the passage of the constitutional amendment providing for the direct election of Senators of the United States. It has created the Federal Trade Commission. It is now dealing with the shipping question in a bill which seeks to restore the lost American merchant marine and to reopen the arteries by which our products can flow in exchange to nations from which we are now cut off by the absorption of the shipping of the world into the business of the belligerents. The Congress is now considering measures for the conservation of the natural resources of the Nation, the development under suitable safeguard of water power upon navigable streams and streams on the public land and in the national forests. This Congress will

pass the first national child-labor law.

Such, in brief, are some of the elements of the Democratic Party's program for the development and conservation of the natural and human resources of the United States. To have carried out such a program in times of peace, undisturbed by the conditions presented by the greatest war in history, would have been a remarkable record. Considered as these laws have been, however, with the times such as they are, and men's minds filled with the destructive horrors of the history of the last two years, they constitute a record of persistence, courage, and success without parallel in American history.

success without parallel in American history.

The war in Europe is teaching us many lessons. For one thing, we have learned that the whole art of war has changed in character. The forces involved are more extensive, the instruments used more deadly, their preparation involving more

time. The spectacle in Europe to-day is that of millions of men fighting underground—a war in which machinery is king. ingenuity and the inventiveness of these people has been long busy with their preparation. And one lesson for us is that any degree of preparation requires more forethought than was formerly necessary. If America should ever be called upon to defend the rights of her citizens in any such contest as is now being waged, it would mean either our destruction or the summoning of every vital energy of our people to our defense,

I have no hysterical notion that war is like the plague, and that we are going to catch it from mere proximity; nor have I the slightest fear that the great people of this Nation are going to lose their heads and embark upon a career of combat and conquest out of a mere desire to be heroic or to attain glory. As a matter of fact, the glory of war has largely disappeared, and the magnitude of the sacrifices entailed make of it a stern business, to be entered upon only as an alternative to impossi-ble conditions of peace. This administration has taken note, ble conditions of peace. This administration has taken note, however, of the fact that this is an age in which the principles of mechanics, the output of the workshops and the preparation made by industry and commerce are a part-a necessary partof the preparation for national security. The Congress has now passed an Army reorganization bill, creating no great standing Army, enforcing by no compulsion a universal sacrifice from the manhood of the Nation of years out of careers devoted to industry and commerce, but providing a first line of defense. The bill will give us a national force large enough to maintain order in those outlying places where we have assumed responsibilities, and to protect our own borders against any aggression. It provides an experiment in federalizing the militia of the States, making it a safer reliance for the national defense and recognizing the sacrifice and patriotism of those who prepare to serve their country by enlistment in these State forces. Some increases in the Navy are also authorized. And by a measure now under consideration, suggested by the President, a council of executive information is proposed which will bring the Government into such intimate relations of knowledge and sympathy with labor and business and industry as to make possible, should it ever be necessary, an instant mobilization of the great resources of this Nation for the common defense.

I am persuaded that the additions to the Army and the Navy were necessary, and that common prudence requires and justifies the expenditures and reorganizations here proposed. But I delight to think that the Democratic administration has recognized that true preparedness involves far higher considerations than a mere multiplication of soldiers or ships, and that by its internal policies the Democratic party is seeking to make of this a Nation so just to its citizens, a Nation so full of equal opportunity, so free from oppression of the weak by the strong, that our preparation is equally available for the happiness and well-being of our people in times of peace and their safety in times of war; and that by these constructive measures we are making of America not merely a Nation strong enough to de-fend itself, but a Nation so dear to its people that no sacrifice would be regarded as too great which was necessary to preserve this heritage of freedom and opportunity for us to leave to our

children.
Upon the foreign policy of the administration I must be brief. There are two elements of it which need a word of discussion-

Mexico and the European war.

In order to have any just view of a nation's foreign policy, we must first ask ourselves, What are the nation's ideals? If, for instance, it be agreed that America, being great and strong, ought to use its strength and its greatness to enlarge its boundaries and bring under subjection alien and weaker peoples, then it would be easy to find fault with an administration which might have summoned its Armies and its Navy to wars of con-quest and has failed so to do. But if your ideal for America is that it should be a Nation happy at home, doing unto others as it would be done by, respecting the aspirations of other peoples for freedoms of their own kind and choosing, willing to inspire by example to higher levels of culture and civilization, but unwilling to civilize by the sword—if that be in some sense your thought of what our national ideals should be, then I tender you the performances of the present administration as your ideal concretely expressed in acts.

The Republic of Mexico, lying south of us, was for years ruled by a dictator who operated the country in the interest of a class and left 90 per cent of the people of the nation unable to read or write. The concessions of the rich were largely privileged to enslave the poor. And finally, as in France at the time of the great revolution, the plain people of Mexico resolved that there was nothing divine about the order which fattened the few at the cost of the many. They revolted. Deprived of education, untrained in the arts of government making, the

people of Mexico have struggled to express in institutions their idea of the rights of man. It has been very disordered, some-times very wrong-headed, frequently characterized by counter revolution, its leading spirits apparently suspicious of one an-The gross ambitions of individuals have sometimes perverted their fidelity to the common cause. But no great revolutions of the kind there in progress can be unattended by these Our misfortune has been that between us and misfortunes. these struggling people there was a border 1,800 miles long, Some American owners of Mexican mines, some American proprietors of Mexican concessions, some Americans who look with longing eyes on Mexico as Naboth's vineyard, have urged that we should intervene, that we should add the destructiveness of our force to the desolation which has gone on there for years,

Sometimes there has seemed to be no stable government in Mexico to wnich we could turn to maintain the peace of our border cities; and at present an armed force of American soldiers is on Mexican soil solely to protect the people and property of the United States from lawless aggressions until the Mexican Government can perform that duty which it owes as a neighboring nation. I can not tell what the future may bring forth in this situation, but for my part I shall be most happy if the necessary security of our people can be obtained without the killing of another Mexican, man, woman, or child, by American arms. And those who criticize the Mexican policy of the adarms. And those who criticize the alcarcait point, of the amministration must be prepared to accept the alternative and say that their choice is to make war upon these people who have willed no act of aggression upon us, to invade their country, and to spend years in the occupation of a foreign soll, and, in a tollsome effort, expensive of life and treasure, to impress

our allen civilization upon these people.

Upon the European situation I shall say but a word. The great war, the most devastating in history, is filling the most civilized portion of the globe with disabled and dead. All the normal arts of life are forgotten. The energy of madness now dedicates the lives and property of these people to mutual destruction. Perhaps it is the last war that will ever be fought for such reasons as have caused this one. When it is over, the people of these countries are going to demand preventive states-manship, and new arrangements will in all likelihood result which will bring nearer the ideal of permanent peace. Whether or not that result is reached, two things at least are true: It is better for the people of the United States not to be involved in that vast destruction if it can be honorably avoided; and, second, it is better for humanity for the United States not to be involved, in order that when the end of the struggle comes there will be one great and persuasive power in friendly rela-tions with all of the belligerents, inspired only by high motives of humanity and friendship, to aid as adviser and counselor in the terms of readjustment necessary.

The course of any administration in such circumstances would be difficult. Not only is this the greatest war in history, but it is a war involving new agencies of attack and defense-a war in which one set of countries are isolated and not unnaturally seek new means to equalize the disadvantage of that isolation. Our situation is further changed by the fact that our own relations to foreign countries, industrial and commercial, are infinitely more intimate and complicated than they were at any previous time, and our traditional isolation from European systems of politics is less insured by geographical considerations

than it used to be.

The course of the administration has been to regard itself as, in the nature of the case, a trustee, for the time being, of the rights of neutrals. It has, in the language of Senator Root, refused to concede that the invention of new ways of committing forbidden acts changed the law with relation to them. And so where mere property was involved, every violation of the rights of neutrals has been followed by protest; and where life was involved-the life of our citizens-a firm demand has been made for immediate recognition of our plain and undisputed rights. In our most difficult and threatening negotiations it ought to be remembered that the country with which they were conducted did not deny the legality of our position, and that the negotiation was upon a question of fact, which by the admission of that Government, was decided finally in favor of our contention.

We are too near to attempt final judgment. Our thinking is clouded by momentous events happening with daily frequency, and we can not with certainty select out even those which will be deemed most conspicuous by historians of the future. But if there be any assurance of judgment possible for us now, it is that when the history of this age comes to be written, the great fortune of the American people and of the world will appear to have been that our destinles were in the hands of a man patient, wise, and just, who saw past all the minor amoyances and through all the cross-currents of feeling, who resisted every impulse toward impetuous judgment, and thereby accomplished these great things: First, that he saved the lives of countless Americans who by any other course would have been devoted to death in battle; second, that he preserved the civilization of the twentieth century against the last great assault which would have been made had our country, too, been swept into the general catastrophe; third, that he vindicated and preserved unimpaired the rights of neutrals and restrained the zeal of belligerents from sacrificing international law to the supposed necessities of their military plans; and fourth, that he saved up the moral energies of a great and free people to place them at the disposal of mankind when they rested from their work of destruction and began to reconsider the possibilities of national life.

His has been the one sane and serene spirit which will redeem this age; and when the election comes it will be found that the people of America, whatever their sympathies in the European struggle, realize that the one indispensable exponent of the mind, the friendliness and the ideals of America in the remaking of the old order in the Old World, is the finest type produced in this age by the new order in the New World—Woodrow Wilson.

I must say a brief word to you on the subject of our State sues in Ohio. The adoption in 1912 of two score amendments issues in Ohio. to our constitution meant a popular demand for a redress of old The adoption of these amendments was, in large part, due to their advocacy by the Democratic candidate for governor. Before the mind of the people was known upon the subjects they presented, he fearlessly espoused the cause of progress and debated the amendments throughout the State. As a consequence the Democratic platform, upon which he was nominated, laid out a program of progressive legislation wider and more varied than had ever been adopted in any political convention in this State. The newly elected governor took his commission to office as a command from the people, and the legislature which sat during his term made a record under his leadership which placed Ohio in the advance column of progressive Commonwealths. laws passed were too numerous to admit of individual mention in the time at my disposal here, but farmer and merchant, industrial worker and captain of industry, were all caught up in the network of helpful and remedial provisions; rural education was brought into harmony with modern conditions of living; childhood, motherhood, and widowhood were protected; court procedures were simplified; municipal governments given elasticity, public utilities brought under salutary control, and the efficiency of the administration by the State of its agencies for the care of the dependent and delinquent classes greatly increased; the liquor traffic which had been a constant source of agitation was brought under wise and reasonable control by laws which carried out the spirit and the purpose of the constitutional amendment dealing with that subject, and some start was made in the reorganization of the taxation machinery of the State. Performances so extensive as these necessarily united for the moment opposition groups into a temporary majority against the man who had done all this, and, as a consequence, we have had the present interregnum characterized by the feebleness and uncertainty which always attends an administration brought into power by such causes, but the time has come when other things must be done in Ohio. The program already begun must be pressed forward, and very especial attention must be given to the condition of the municipalities, the counties, and the townships of the State from a financial point of view.

The sphere of governmental activity is constantly widening, not so much from the zeal of public officers who wish to extend the limits of their authority as from the change in the very nature of our social organization itself. More and more people are coming to realize that there are functions of the common life which can be performed better and more economically by community activity. There is a daily quickening of the sense of responsibility of the community for the well-being of its members. We grow less patient daily with the neglects whereby society permits some of its members to be weakened and deprived of opportunity, and as a consequence of this most wholesome change in feeling there is a constant demand that the city shall do for the citizen things which aforetime were not either done at all or else were done by individuals or by private charity and philanthropy. In this mechanical age aids to the ease of community life are constantly being devised; their installation and operation entails expense, but their result is a saving of effort, of money, and of life itself. As a consequence the municipal expenditures must increase, municipal functions must enlarge. The family is constantly outgrowing its house. New and better streets must be built, larger and more modern institutions for the conservation of the morality and energy of the community are needed. An attempt by arbi-

trary rule to restrict this development either dams up powers which will ultimately overthrow the entire system or else it dwarfs our better impulses, arrests the progress of our growth, and discourages and disheartens our people. The great task now to be done in the State of Ohio is to recognize that under modern conditions old and simple restraints of a rule-of-thumb character are dangerous, and it is the special mission of the Democratic Party to be intrusted with this recognition, for it is our party that believes in the rule of the people. We believe in home rule. From the very foundation of our party its cardinal doctrine has been local self-government; that each unit of population should be given power to determine the affairs that affect that unit: and we have believed this not merely because of our confidence in the ability of people to govern themselves better than anybody else could govern them, but because we have believed that the practice of the art of self-government was in itself strengthening and educational, and that we build better for the future when we look ahead and see as our ideal a citizenship wise through training, strong and sane through bearing responsibility.

The next governor and Legislature of Ohio must deal with this question. By constitutional amendment the cities of Ohio have been freed as to their form of government. They must now be freed as to the substance of government, and the laws by which this is accomplished must be equal laws giving freedom to the cities without taking it from the rural districts, giving our municipalities the power to determine affairs that concern them alone, but without imposing burdens upon others not members of the municipal unit. The task demands wisdom and fidelity and courage. I ask those of you who believe this to be a task of paramount importance whether the people of Ohio can look for its performance with better expectation to the present State administration or to a return of the administration of James M. Cox? Surely there can be but one answer to this question. All the virtues needed for its accomplishment were shown in the two great constructive years 1912-1914. We ask the people of Ohio to try no experiment, to instrust their great concerns to no unfamiliar hand, to take nothing on faith, but, having stood still and rested now for two years, to take up under the old leader and under the tried and proved administration a continuance of the march which is necessary to keep us in the vanguard in this sisterhood of States.

I have encroached upon your time more than I should have done, but I have felt a great responsibility in the task which I am here attempting to perform. As a people we have been much bound by party names and party traditions, sometimes to our harm and hindrance. A candid mind is obliged to admit that any great party in its history shows moments of departure from fidelity to its central principles, and it is not always that a party man, unless he be overcome by party enthusiasm, can claim that the welfare of his party is bound up with the welfare of the State, but to-day in State and Nation, under leadership which seems providential, the interests of the people of Ohio, of the people of the United States, perhaps even the welfare of the people of the world, is inextricably associated with a continuance of the Democratic Party in power. And, believing, as I do, in the profound common sense of the American people, I look forward to a verdict at their hands which will continue this great constructive program, in which so much has already been accomplished, with a new impulse toward even higher and larger achievements.

The Ship-Purchase Bill.

EXTENSION OF REMARKS

HON. WM. ELZA WILLIAMS,

In the House of Representatives,

Friday, May 19, 1916.

Mr. WM. ELZA WILLIAMS. Mr. Speaker, no more important piece of legislation has been proposed during this administration than the ship-purchase bill. Briefly stated, the bill authorizes the Government to invest \$50,000,000 in merchant ships for the carrying of passengers and freight from American ports to Europe and to South America, where a splendid trade, heretofore enjoyed by Europe, but lapsed since the beginning of the European war, awaits us. We have no merchant marine and have not had since the ascendency of the Republican Party, more than 50 years ago. Private capital has refused to invest in ships of American registry, flying the American flag, but has

preferred to invest in foreign shipping companies, which have no interest in America except to exploit our trade.

When the European war broke out and foreign commerce was paralyzed more than a 100 German and Austrian ships, with a total net tonnage of 400,000, took refuge and were interned in American ports, where they have been idle since the outbreak of hostilities. This fact alone materially reduced the carrying capacity of trans-Atlantic companies carrying American products to the markets of the world, and placed American exporters at the mercy of English and American shipowners who operated vessels flying the English flag. As a consequence freight charges went up from a hundred to 400 per cent, and in many known instances charges were made for a single cargo in an amount greater than the actual cost of the vessel. It was to meet this condition, which private capital refused to meet, and provide facilities for sending the products of American farm and factory to the markets of the world that the President proposed to Congress that authority be given for the purchase and construction of merchant ships to enter the carrying trade in competition with the Shippers Trust, which has relentlessly exploited the American producer, whose profits are being consumed in extortionate freight charges. The only opposition to the bill comes from those who are interested in the business, and who throw up their hands in holy horror at the spectacle of the Federal Government entering into trade and transportation in competition with private enterprise.

One of the strongest arguments in favor of this bill lies in the fact that our Navy is in need of auxiliary ships, and in case of war with any naval power would be seriously handicapped. This bill provides that the ships constructed and purchased shall be of a type suitable for use in the Navy, and that the President may in case of war take these ships out of the carrying trade and place them in the Navy where they will be required. This bill is in line with our program of preparedness, and is a step toward placing our Navy in the second place among the great navies of the world. I heartly favor the bill and

shall vote for it.

Rural Credits.

REMARKS.

HON. OTIS WINGO.

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (8. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to cqualize rates of interest upon farm loans, to furnish a market for United States bonds, to provide for the investment of postal savings deposits, to create Government depositaries and financial agents for the United States, and for other purposes.

Mr. WINGO. Mr. Chairman, if I may have the attention of the committee.

Mr. FIELDS. Mr. Chairman, a point of order. My colleague, Mr. Barkley, has the floor, and he yielded the balance of his time to me.

The CHAIRMAN. The time has just expired, and the committee demanded recognition. That is the reason the Chair recognized the gentleman from Arkansas.

Mr. WINGO. Now, Mr. Chairman, the gentleman from Kentucky has raised a question of importance. I agree with him in his contentions. I raised this same question in the Committee on Banking and Currency, and I think if the gentleman will read the other provisions of the bill, he will see that I succeeded in having the committee embody in the bill the very thing for which he contends. By referring to page 122, you will find that we have provided a special reserve fund. This special reserve fund is provided for by the last paragraph on that page, lines 16 to 22, inclusive. You will find in the next paragraph the provisions governing the use of this reserve fund, which is provided for in the following language:

Each Federal land bank shall supply, as far as practicable from this special reserve fund all payments of interest and amortization installments on all mortgage loans where defaults are carried to suspense account, as provided in this section.

Then take the paragraph that follows, and you will see that no national farm-loan association can be declared insolvent until the elapse of a period of two years after the default of the mortgagor, because that is specifically provided for, as the payments on the defaulted mortgage will be made and carried by this special reserve fund. This provision is as follows:

No national farm-loan association shall be declared insolvent by the Federal farm-loan board during the period in which all of the installments of interest and amortization on its indorsed mortzage loans are fully paid from this special reserve fund: Provided, That payments from such special reserve fund shall not be made on any one loan for a longer period than two years. The special reserve fund provided in this section shall be used for no purpose other than to make such payments as are herein specifically authorized, and when recovery is made by any land bank of any moneys paid from its special reserve fund the total amount of said moneys so recovered shall be paid into the special reserve fund. If the full amount is not recovered and it is debited to reserve as provided in this section, full reimbursement to the special reserve fund shall be made from the fund so debited.

By anying those installments as they fall due out of the

By paying these installments as they fall due out of the reserve fund these loans would not be in default, and a local association certainly would not foreclose upon one of its own members if he was not in actual default.

Mr. FIELDS. But it could do it if it saw fit to do it.
Mr. WINGO. I submit that under the language of the bill it could not be done, because any defaults in the payments of the borrower would have been paid during the two-year period out of the reserve fund and carried to the suspense account. I can not believe a local association will want to declare a default where the members thereof were themselves liable under the stock-liability provisions. They would be enforcing a liability against themselves

Mr. FIELDS. But suppose one of them should want his

farm?

Mr. WINGO. I do not think that would happen. Mr. FIELDS. Oh, there are all kinds of people in the coun-

Mr. BARKLEY. There is a conflict between the provisions on page 102 and the section I attempted to amend, because the any of the conditions of the mortgage is violated the mortgage

becomes due and payable.

Mr. WINGO. The text of the bill originally did not contain the language "at the option of the bank holding the same." Now, with this language which I succeeded in putting in the bill, together with the other provisions providing for carrying the defaulted payments for two years to the suspense account and paying the same out of the reserve, they are not compelled to declare the mortgage in default and payable. But suppose there should be a willfull default by a borrower—one who makes no effort to meet his obligations and whose default is not caused by some misfortune beyond his control. Then in such an instance, I think, the holder of the mortgage should be permitted to declare the debt due and payable and foreclose. But in the consideration of the bill in the committee it early occurred to me that a situation might arise where, by reason of flood, drouth, fire, continued sickness, or other misfortune or casualty beyond the control of the borrower for which he was not to blame, he might not be able to meet the annual payment on his loan, and for that reason the committee, at my suggestion, provided for the carrying of his payments for a period of two years. Under the bill as now written, if the board finds such a condition exists and that the default is occa-sioned without fault upon the part of the borrower, it can carry his payments for two years from the reserve fund as provided. Of course, some one has got to have authority to deter-

mine this question.

Mr. BARKLEY. But it is optional with the bank.

Mr. WINGO. I think not. I think the gentleman has overlooked another provision, on page 122 of the bill, which was put in the bill on my motion, and which reads as follows:

For the period of two years from the date when any default occurs in the payment of the interest, amortization installments, or principal on any first mortgage by both mortgager and indorser, the amount so defaulted shall be carried to a suspense account, and at the end of the two-year period specified, unless collected, shall be debited to reserve account.

Gasoline.

EXTENSION OF REMARKS

HON. MARTIN D. FOSTER.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 3, 1916.

Mr. FOSTER. Mr. Speaker, under leave granted me to extend my remarks I beg to submit a letter from Mr. Van. H. Manning, Director of the Bureau of Mines, giving some data as to the extraction and approximate yield and cost of gasoline from crude oil by the Rittman process.

Some 20 factories to date of May 26 have been licensed to use this process in the United States. Some of these factories are not yet fully established and operating under the license given and those which have been in operation have hardly gone far enough yet to be able to determine definitely in reference to the per cent of gasoline secured in this way or the expenses connected with this process. But the data given here is approximately accurate. It is to be hoped that this new process will prove to be all that it is believed at this time, and the manufacturers will be able to secure much more gasoline from crude oil than now getting by the old process, and it is to be hoped that as a result the price will be reduced.

DEPARTMENT OF THE INTERIOR.

BUREAU OF MINES.

Washington, May 26, 1916.

My Dear Dr. Foster: Up to the present time 20 different companies have taken out licenses for the installation of the Rittman process for the manufacture of gasoline. Attached list gives the names of the different licensees, except one which was requested the name be not given Two of these licensees are already producing gasoline by the Rittman process, and I inclose herewith an estimate of the cost of producing gasoline, as based on the results secured from a five days' run of a Rittman furnace at one of these plants.

You will note that using fuel oil from which the gasoline had already been removed by ordinary methods, and paying for this fuel oil as high a price as \$2.10 per barrel, the cost of producing a gallon of gasoline by the Rittman process is 12.8 cents, while with a cost for fuel oil of 50 cents per barrel, the cost of producing a gallon of gasoline by the Rittman process is 6.9 cents. In other words, results obtained in this five days' run indicate not only that the Rittman process can be operated with financial success at the present high price of crude oil and gasoline, but that its use will bring profitable results with the lower crude oil and gasoline prices prevailing in the past.

Cordially, yours,

Van. II. Manning.

VAN. II. MANNING.

Hon. M. D. Foster, House of Representatives.

House of Representatives.

Estimates based on five-tube plant and the results of five-day run of single-tube furnace at Pittsburgh Refining Co.'s plant at Coraopolis, Pa., run on fuel oil from which gasoline content had already been extracted by ordinary methods:

The capacity of a single tube was 1.55 per hour, or 37.2 barrels per 24 hours, the loss 10 per cent, with a yield of 22 per cent gasoline, the balance being fuel oil. Estimated cost of a five-tube plant, \$15,000. Estimated cost of building to house plant, \$5,000. Total cost, \$20,000. Monthly capacity, 5,580 barrels. Deducting 10 per cent for shutdowns, leaves net capacity slightly more than 5,000 barrels. Assuming yield of gasoline at 20 instead of 22 per cent, gives 1,000 barrels (42,000 gallons). Loss of 10 per cent equals 500 barrels. Residuum, 70 per cent, or 3,500 barrels.

An Imperative Necessity-A National Archives Building.

EXTENSION OF REMARKS

HON. S. D. FESS.

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 3, 1916.

Mr. FESS. Mr. Speaker, among the most valuable possession of the country the various public documents which make up the records of the Government's titles, the documentary evidence of the Government's official activities, are among the most important. These documents, many of them, were they destroyed, could not be replaced at any cost. Up to date the United States has not taken steps to preserve them. There is no archives building, although its importance has been urgent and the project has been urged for years.

Dr. J. Franklin Jameson, director of the department of historical research of the Carnegie Institution of Washington, has been one of the most recent and active in attempting to induce the Government to take the necessary steps. In 1914, addressing the American Library Association in Washington, he

duce the Government to take the necessary steps. In 1914, addressing the American Library Association in Washington, he said:

England, Scotland, Ireland, France, Beigium, the Netherlands, Spain, Portugal, Prussia, Austria, Hungary, Switzerland, Italy, Denmark, Sweden, Norway, Russia, Roumania, Canada, Mexico, Cuba Colombia—every one of these countries has a national archive, in which all or most of its older records and papers are stored. The presumption must be that there is some merit in the idea of a national archive building, Apparently the burden of proof is on anyone who says that the United States, not the poorest of these countries and we fondly imagine not the least enterprising, ought not to have one. In reality, no one says this, The obstacle is not opposition, but negligence and inertia, only to be over the continuous of the movement toward such a consummation.

The continuous activities are all influential societies of the need the movement toward such a consummation.

The evolution of national archives has in most cases a definite and regular natural history. At first, each Government office preserves its own papers. By and by the space available for such documents becomes crowded. The oldest of them, seldom referred to, are sent away, to attics or cellars or vacant rooms in the same or other buildings, it matters little where, in order to make room for the transaction of current business. By and by historians arise. They insist that these dead like are third of historical information, that they are a valuable administrators discover that whenever administration dependent of careful study of previous experience it is inconvenient to have the papers recording that experience scattered through many unsuitable repositories, neglected and unarranged. Then begins a movement for a national archive building, a determination to erect a structure ideally adapted for the storage of documents and their preservation in accessible order and to gather into that one fit place the records which inheritation, the

cles, that of not having penalect.

In Washington the results of what may be called the bureau system of archive management have been exceedingly unhappy. In the first place, it has produced an excessive number of systems of management. To keep a bureau's papers in an order that he who devised it has thought suitable to its business may not seem to be an evil. But the business of bureaus change, and bureaus are divided and consolidated and extinguished and shifted from department to department, and the result is sometimes an awkward mixture of systems, some of which were

amateurish when devised, many of which have become antiquated since that time. But a greater cult that of have become antiquated since that time. But a greater cult that of have a control to the solution of the control papers of the control of the control papers of the control of the control papers of the control control of the control papers of the control papers of the control of the control of the control of the cont

To me, and to many of those who hear me, the main reason for interesting ourselves in the problems of a national archive building is that present conditions interpose almost intolerable obstacles to the progress of history. We may reasonably expect that this should also seem to legislators a serious matter. An enlightened Government, a Government of the control of

Not so many years ago, 10 tons of Confederate records were barely rescued from the paper mill, and the schedules of the earlier censuses, though since then the latter have formed the basis of valued historical publications.

Another expedient that has been occasionally suggested has been the transfer of "dead files" to the Library of Congress. It needs but a little thought upon considerations of space to show the futility of such a plan. Where should the Library of Congress find space for two or three million cubic feet of archive material? Some might say that at least such papers as are historically important might be sent to the library. But, quite apart from the fact that this offers no relief to the Government, which as we have seen is the greatest sufferer from the present conditions, it is impossible to accept the underlying assumption that there is a small and perfectly distinguishable portion of the Government archives which is historically important, while the rest is not. A jury of the most experienced historians would be the first to declare that no one can tell what the historians of the next age will value as materials, and the first to protest against a process of fearing away certain papers, assumed to be historieal, from the remaining series with which they have been associated and which help to explain their origin. Moreover, library administration is one thing, and archive administration, especially for purposes of Government business as distinguished from purposes of history, is a quite different thing. The present Librarian of Congress could administra an archive alongside his library, indeed, could administrater 40 archives, because he could administer any arthing. But that hardly covers the point. Essentially a librarian's business is different from an archivist's business; no national government combines the two, and, anyhow, a makeshift transference of a small part of the Government's archives to the Library of Congress would be no real solution of the difficulties.

The only satisfactor

than to try his hand on a national archive building. At a cost well inside 50 cents a cubic foot, or \$1,500,000 for a building of the dimensions I have described, it should be possible for the United States to have the finest archive building in the world, perfect in every appointment, based on the best experience of Europe, and adequate for every purpose of the immediate future. This is the end toward which we ought to aspire and labor.

Into the details of the construction of such a building and of the organization of an archive establishment there is no time to enter. They are abundantly set forth in Mr. W. G. Leland's masterly article entitled "Our national archives; a program," in the American Historical Review for October, 1912.

Efforts to secure such a building as I have in general terms described have not been lacking, nor are they a thing of yesterday. As far back as 1878, the Quartermaster General of the Army recommended the erection of a "hall of records" for preservation of the records of the executive departments not required for daily reference, and drafted a plan for the proposed structure. That was 36 years ago. Since then there has perhaps been only one year in which the erection of a national archive building has not been pressed upon the attention of Congress, with greater or less urgency, by one or other members of the Cabinet. At least 50 bills on the subject have been introduced in Congress, Nearly all have found permanent resting places in the pigeonholes of committees. On two occasions, in 1881 and in 1902, the Senate passed bills providing for an archive building; but the House took no action on them. Finally, in 1903, after an agitation covering a quarter of a century, Congress authorized the purchase of a site for such a building. The site was purchased, but has sirce been assigned to another building, Meanwhile, within the 36 years during which this agitation by executive departments has been going on, Congress has expended at least \$250,000,000 for public buildings, and \$200,000,00

going on, Congress has expended at rest \$250,000,000 for plante binds, and customhouses.

In recent years, the agitation has been taken up by various societies of patriotic intention.

Nearly six years ago the American Historical Association addressed Congress on the subject, appointed a committee, arranged for useful hearings, and has continued to press the matter upon successive Congresses. Many chapters of the Daughters of the American Revolution have taken part in the endeavor. Recently the National Society of the Sons of the American Revolution has taken it up with much energy. The public-buildings act of March 3, 1913, authorized the Secretary of the Treasury to make plans for an archive building, but Congress made no appropriation of money for the planning, and without it nothing could be done. The result of 36 years of agitation can be summed up by saying that an item of \$5,000 for the making of such plans, in the provisional manner in which alone they can be made before a site is selected, is now before the House Committee on Appropriations as a part of the sundry civil appropriation bill. Its fate will be known in a few days. This result, after 36 years of entreaty and appeal along lines of argument which were obvious 36 years ago and in 36 years have not been confuted, seems somewhat meager. But I remember that it was about 1616 when one Francis Bacon recommended the establishment of a general record office for the Kingdom of England and about 1856 when the first section of that building was creeted. Two hundred and forty years for a thing for which that capacious mind foresaw all the convincing arguments in 1616! We have still some time. Two hundred and forty years from 1878 would bring us only to 2118 A. D. But can we not beat the English record? Can we not, by keeping public opinion alive on a subject of so much importance from the historical and the governmental points of view, carry this great national undertaking along steadily through the stages of making plans, acquiring a site, and construct

It is apparent from the frequent fires which occur in Government buildings that these documents are in constant danger of total destruction. I here append the evidence that is authorita-

STATEMENT SHOWING NUMBER OF FIRES OCCURRING IN BUILDINGS OWNED AND OCCUPIED BY THE UNITED STATES GOVERNMENT IN THE DISTRICT OF COLUMBIA EACH YEAR FROM 1873.

OF COLUMBIA EACH YEAR FROM 1873.

and Printing, Post Office, Census Office, Treasury Department, Government Printing Office.

1901.—Government reservation. Post Office, Treasury Department, United States arsenal, Bureau of Engraving and Printing, United States Soldiers' Home.

1902.—Department of Agriculture (3), United States pumping station, Twelfth and Water Streets SW. (icehouse), Twelfth, Thirteenth, and Water Streets SW. (two boathouses and planing mills), Bureau of Engraving and Printing, public buildings and grounds office, United States ars and Printing, United States Post Office.

1903.—Department of Agriculture, United States arsenal, Bureau of Engraving and Printing.

1904.—Bureau of Engraving and Printing, United States Capitol (2), United States arsenal (2), United States Post Office, United States Census Office.

1905.—Marine barracks, Freedmen's Hospital (stable), 219 Delaware Avenue (office), office building (Maitby), United States Capitol, Bureau of Engraving and Printing (2), Executive Mansion (office building), 331 Nineteenth Street NW., United States navy yard.

1906.—Department of Agriculture, Washington Barracks (formerly arsenal, United States Senate stables, 1111 Little B Street NW., Department of Commerce and Labor.

1907.—1111 Little B Street NW.; Washington Barracks (formerly called arsenal), United States Pension Office; Freedmen's Hospital; stable, Sixth Street Wharf; dlining room, Eleventh Street Wharf (2); techouse, Water between H and I Streets SW.; Washington Barracks, academic building; Washington Barracks, officers' residence; marine barracks; kindling-wood mill, Water between Twelfth and Thirteenth Streets SW.; Bureau of Agriculture; Interstate Commerce Commission; Washington Barracks, Hospital Corps, Company C. Treasury Department; United States navy yard (2); fish house, Eleventh and Water Streets SW.; 216 Eleventh Street NW.; Government Hospital for the Insane; Department of Agriculture; Executive Mansion office; United States Daylor, 1030 Spourteenth Street NW., 1110 C Street NW., garage; United States n

insane asylum; 222 and 224 Eleventh Street NW., stable; Ohio Avenue, between Twelfth and Thirteenth Streets NW.; 506 and 508 Fourteenth Street NW., engraving; 400 to 410 Fourteenth Street NW., stable; 1404 Pennsylvania Avenue NW., lunch room.

1912.—United States navy yard, steamer Mayflower; 1110 and 1112 C Street NW., garage; 506 and 508 Fourteenth Street NW., engraving; 1420 Pennsylvania Avenue NW., plano repairing; United States navy yard (2); 1406 D Street NW., factory; Fifteenth and C Streets NW., storage; 506 and 508 Fourteenth Street NW., electrotype; 222 and 224 Fourteenth Street NW., garage; 1110 and 1112 C Street NW., garage; Seventeenth Breet NW., garage; Seventeenth Breet NW., International Hygiene Congress; Freedmen's Hospital, coal bunkers; Government Hospital for the Insane; Deaf and Dumb Asylum; Rock Creek Park, barn and stable; Washington Barracks, Quartermaster Department; Washington Barracks, trade school.

ton Barracks, Quartermaster Department; Washington Barracks, trade school.

1913.—Deaf and Dumb Asylum, now known as Gallaudet College; 1432 C Street NW., dwelling; Department of Agriculture (3); 504 Fourteenth Street NW., 566 and 508 Fourteenth Street NW., electrotype foundry; Rock Creek Park, dwelling; 222 and 224 Fourteenth Street NW., garage; Highway Bridge; Senate Office Building, Maltby; Geological Survey (3); 1417 D Street NW., dwelling; 213 North Capitol Street NW., dwelling; 14 C Street NW., lunch room; 531 Nineteenth Street NW., the Little B Street NW., lunch room; 531 Nineteenth Street NW., W; 1109 Little B Street NW., lunch shop.

1914.—Fifteenth and E Streets NW., Poll's Theater; 216 Fourteenth Street NW., lumber yard; United States Senate stables; United States Pension Office; Department of Agriculture; 1406 Pennsylvania Avenue NW., barber shop; boathouse, Water and O Streets SW.; Engineer Department boat, foot of Fourteenth Street SW.; Columbia Hospital; 1107 and 1109 Little B Street NW., junk shop; Water and O Streets SW., storage; United States Lighthouse Service; Engineer Department, Aqueduct Bridge.

1915.—Bureau of Engraving and Printing (2); 515 Nineteenth Street NW., stable; United States Patent Office; Columbia Hospital; public comfort station; United States Washington Barracks; 300 Fourteenth Street NW., dwelling; Bridge, Calvert Street NW., 334 Delaware Avenue NE., dwelling; 317 Delaware Avenue NE., building collapsing; Washington Barracks (2); Department of Agriculture.

Very respectfully, P. W. Nicholson, Fire Marshal.

SOME OF THE MOST NOTABLE FIRES IN BUILDINGS BELONGING TO THE UNITED STATES IN THE DISTRICT OF COLUMBIA FROM 1800 TO 1865.

1801.—Treasury Department, Fifteenth and F Streets NW., two rooms burned out.

1833.—Treasury Department destroyed. 1836.—Building of General Post Office, city post office, and Patent fice, located on Seventh Street between E and F Streets NW.,

1836.—Building of General Post Chart, Chart, Coffice, located on Seventh Street between E and F Streets NW., destroyed.

1843.—Powder house, navy yard, destroyed.
1851.—Congressional Library, burned out, entire collection of books together with valuable marble busts of statesmen and a collection of medals and other relics were destroyed.

1861.—Hospital, in Judiciary Square, destroyed.
1864.—United States arsenal, explosion in one of the buildings, 29 lives lost by same and by fire which followed, and building destroyed.
1865.—Smithsonian Institute, central portion of building burned out and many valuable exhibits, paintings, etc., destroyed.

I append a recent editorial of the Washington Star occasioned by the most recent fire:

THE GOVERNMENT'S FIRE RISK.

by the most recent fire:

THE GOVERNMENT'S FIRE RISK.

More Government records have been endangered and some destroyed by a fire that occurred in one of the buildings rented for the public service in this city the other day. The building is comparatively modern and fireproof, but it was not designed for the storage of important documents. The papers injured and in part ruined are of value, as are supposedly all Government records.

If the Government intends to keep its paper files indefinitely it should have a proper place in which to store them. If it does not think enough of its documents to give them proper housing it should have a clearance and make a bonfire. It would be far less expensive to burn the files that are not deemed worthy of fireproof filing than to continue to store them in rented buildings at high rates.

A hall of archives has been proved again and again to be necessary for the public service in this city. Fires have occurred in practically all of the large offices, and by the greatest good fortune have in most cases been extinguished with comparatively small loss. But this good fortune can not continue indefinitely. Even in the business world, where there is every incentive to the maintenance of the most effective means of fire protection and prevention, losses occur from time to time. The Government's only safeguard to-day is practically that its great offices are not mechanical establishments, and that fire-making elements are lacking in most cases. But even in the most carefully watched office buildings fires do occur and they do get headway, and it there is anything in the law of chances a Government fire is fairly certain to come which will, in the present conditions, wipe out of existence immense quantities of records that can never be replaced.

The commonest business prudence suggests the necessity of early action to correct this condition. The State, War, and Navy Building fire attest to the grave risk that is run by the Government every day that passes without the legislation nece

My conviction of the almost criminal neglect on the part of the Government to insure against not only destruction by fire but against mold due to damp basements into which many of our valuable documents are stored has been deepened by viewing several photographs graphically displaying the frightful possibilities. I am convinced that tardiness of Congress to meet this situation is most largely due to an unacquaintance of the Congress with the real situation. There has been an intermittent effort to secure the needed building as was established by the research of Dr. C. O. Paullin of the Carnegie Research Institution in 1912 in collaboration with others, which I here append:

HISTORY OF THE MOVEMENT FOR A NATIONAL ARCHIVE BUILDING IN WASHINGTON.

tion in 1912 in collaboration with others, which I here append:

HISTORY OF THE MOVEMENT FOR A NATIONAL ARCHIVE BUILDING IN

WASHINGTON.

Before 1878 the construction of a national archive building was frequently proposed, but not until that year was it formally brought to the attention of Congress. In a report to Secretary of War George W. McCrary, dated October 9, 1878, the Quartermaster General of the Army, Maj. Gen. Montgomery C. Meigs, recommended the erection of a "hall of records for preservation of the records of the executive departments not required for daily reference," and he drafted a design for the proposed structure. (Annual Report of the Secretary of War for 1878, pp. 257-258.) Secretary McCrary heartly approved Meigs's project and earnestly recommended its adoption. Concerning it he wrote in part as follows:

"The Quartermaster General calls attention to this danger of destruction of records of great value to the Government and to its citiens, " and urges that a cheap building be constructed as a hall of records convenient to the more elaborate and costly buildings occupied by the executive departments, one which, while inexpensive, should be perfectly fireproof, and not expose its contents to such losses as lately occurred at the Patent Office and Interior Department. He submits a plan of such a building, to cost about \$200,000, to be built quickly of brick." " in this he proposes that the records not in daily use of the several executive departments be stored, under charge of competent superintendents and watchmen, to be properly fleed and easy of access; from it, on telephonic order, any document needed in any public office could be quickly sent to that office.

It is estimated that it would relieve, of unused but valuable records not he executive departments which have cost many millions and which are now urgently needed for the transaction of the daily buse of the server of the recording of the preservation of Gongress the recommendation of the Secretary of War for first, leaving the sense

chase of a site for an archive building near the War Department and for the erection thereon of a brite in metal increptor of building to be used for the safe-keeping of the ck and metal increptor of building to be not required in the executive offices. The bill was referred to the send to required in the executive offices. The bill was referred to the Senate Committee on Public Buildings and Grounds, and was reported by Mr. Morrill, without amendment, on December 17. On February 8 another Ire occurred in the War Department, and two days later, after it was not considered by the House. Consensational Brooms, 46th. Line of the Congresses bills similar to that of Mr. Morrill were introduced by Senator George W. Vest, of Missouri, a converse introduced by Senator George W. Vest, of Missouri, a on Public Buildings and Grounds. All of these bills passed the Senate and all of them, nothwithstanding favorable recommendations of Presidents Arthur and Cleveland, failed of passage in the House—partly because of the rival interests of local real estate men. The bills carried an appropriation varying from \$200,000 of \$300,000. Several of supervision and direction of the Supervising Architect of the Treasury, the Secretary of War, and the Secretary of State." The site of the building was not definitely specified. During the discussion of one of the bills in January, 1890, Senators Morrill and Reagan for the bounding was not definitely specified. During the discussion of one of the bills in January, 1890, Senators Worrill and Reagan in a subsequent discussion in August, 1893, Senator Vilas proposed a site on the south side of Pennsylvania Avenue between First and Fifteenth Streets, and Senator Mills suggested the Botanic Gardens bordering on the Avenue, 47th Cong., 1st sess., Senate bill 1817, Congressional Recomp, pp. 24, 1430, 809, 1501, 1971–1972, 6805 48th, 1672–1675, 49th Cong., 1st sess., Senate bill 1817, Congressional Recomp, pp. 209, 881–884, 1858; 53d Cong., 2d sess., H. Rept. No. 483, 1840, 1850, 1850, 1850, 1850,

this is a matter which should have the attention of Congress at this session."

In his annual report for 1884 (p. 59) the Secretary repeated his recommendation; and in December, 1885, his successor, Daniel Manning, said that, in his judgment, Congress should make provision for the erection of a fireproof building for the storage of the files and records of the department at the earliest possible date. (Ann. Rept. of the Secretary of the Treasury for 1885, p. 56.) In 1884, 1885, and 1886 the Supervising Architect of the Treasury recommended the erection of an archive building. A report on the subject that he made on March 20, 1886, was communicated by Acting Secretary of the Treasury C. S. Fairchild to the Speaker of the House of Representatives. (H. Ex. Doc. No. 143, 49th Cong., 1st sess.)

The Secretary of the Treasury in his annual reports for 1887 (p. 55), 1888 (p. 58), 1890, (p. 82), and 1891 (p. 79) urged Congress to provide for an archive building. In his report for 1890 he said that he had recently sold 400 tons of official papers for \$8,070.76. He then added:

"The files space gained by the removal of said papers is of great value to the department, but files are accumulating so rapidly that it

"The files space gained by the removal of said papers is of great value to the department, but files are accumulating so rapidly that it seems the only feasible plan for permanent relief in connection with files space will be the erection of a building devoted exclusively to the storage of papers which it is deemed necessary to preserve but which are seldom referred to." (Ann. Rept. of the Secretary of the Treasury for 1890, pp. 81-82.)

For the years 1893-1902 many recommendations for the erection of an archive building are found in the annual reports (and occasionally in other papers) of the Secretary of the Treasury, the Secretary of the Secretary of the Secretary of the Secretary of the Treasury for 1897, p. 49; for 1898, pp. 52-53; for 1899, p. 47; for 1900, p. 47; for 1901, pp. 37-38; for 1902, pp. 29-30. Ann. Repts. of the Sec

retary of War for 1893, p. 223; for 1894, pp. 256-257; for 1895, pp. 35-36, 279-280; for 1897, pp. 19, 25, 26, 223, 327; for 1898, pp. 220-221; for 1901, p. 30. Ann. Repts. of the Secretary of the Interior for 1899, p. 108; for 1900, p. 154; for 1901, p. 183. Ann. Repts. of the Postmaster General for 1898, p. 802; for 1900, pp. 22-23. Ann. Rept. of the Secretary of the Navy for 1900, p. 26.)

An extract from a single annual report of each of these heads of departments will be sufficient to show their views upon the erection of a national archive building.

From the Annual Report of the Postmaster General for 1900 (pp. 22-23):

"I most heartily indorse the proposition to erect, in a locality which

From the Annual Report of the Postmaster General for 1900 (pp. 22-23):

"I most heartily indorse the proposition to erect, in a locality which shall be convenient to all the executive departments, a suitable building for the storage of the enormous mass of files which necessarily accumulate from the operations of the Government. The volume of such documents, most of them uncurrent and never consulted, stored in the Post Office Department Building is even now so large that it has been found necessary to devote the entire upper floor to such use, including all the corridors on that floor, and, to a somewhat less extent, on the two floors next below. This department must afford storage room not only for the accumulations of its own service but also for those of the auditor for the department, an officer of the Treasury Department, whose files are, of necessity, very voluminous and rapid in growth. The results of this congested condition are already shown in the dangerous overtaxing of the capacity of the only space that can now be given to files and the marring of the architectural beauty of the interior of the building. If allowed to continue, it will very soon necessitate the crowding of the elerical force to such an extent as to seriously affect the efficiency of the service. I sincerely trust that some action will be taken by Congress which will afford the relief in this direction which is becoming daily more and more urgent."

From the Annual Report of the Secretary of the Interior for 1901 (p. 183):

"In nevious annual reports comment has been made on the lack of

(p. 183):

"In previous annual reports comment has been made on the lack of room available for the accommodation of the permanent records and files of the department and its bureaus. Each year adds to the accumulation of important records requiring preservation, and in providing space therefor it is frequently necessary to se lously encroach upon room which is badly needed for clerical purposes. The remedy heretofure suggested, that of providing a special building for the accommodation of the surplus records and files of all the departments of the Government, is equally applicable at this time. I renew my previous recommendation that Congress make suitable appropriation at an early date for the construction of a hall of records."

From the Annual Report of the Secretary of War for 1898 (pp. 220–221):

From the Annual Report of the Secretary of War for 1898 (pp. 220-221):

"There will soon be a large increase in the records and files of this department, and the need for additional office room is very urgent. Immediate provision to meet the needs of the department is necessary, and in this connection the statement on this subject contained in my last annual report is repeated:

"'The departments are crowded with files of official papers to the detriment of the working force and the serious inconvenience of the public business. Costly public buildings erected for office purposes should not be used for storage. The files not in curent use should be stored elsewhere. A hall of records becomes more and more necessary each year.'"

"The superintendent of the State, War, and Navy Department Build-

The superintendent of the State, War, and Navy Department Build-in his report for 1896, submitted the following remarks on this

"The superintendent of the State, War, and Navy Department Building, in his report for 1896, submitted the following remarks on this subject:

"The accumulation of records in this building not only displaces space needed by clerks, but adds considerable weight upon the floors. Some of these records are rarely referred to, while others may be frequently called for All are too valuable to be destroyed. The corridors of the State Department are stacked with records, not only in a comparatively exposed place, but obstructing the corridor. The logbooks and other records of the Navy Department, most of which have only a historic value, have already filled the space allotted and are still accumulating. The records of the War Department are quite as bulky as those above mentioned."

From the Annual Report of the Secretary of the Navy for 1900 (p. 26):

"The Navy Department, in common with other departments, suffers inconvenience from the accumulation of public records. In consequence of its growth during recent years, the office space allotted when the Navy was small and its business inconsiderable is now insufficient to satisfactorily accommodate the official force, and its rooms are much overcrowded. When the records began to overflow, lining the walls of rooms with shelving was first resorted to. When this was found insufficient, the middle floor space of some of the rooms was utilized to accommodate cases of flies and records, while in other instances completed flies and records were placed in garret or basement rooms never intended for their accommodation.

"The inconvenience, loss of time, injury to the records themselves, and possible danger from their weight or from fire are matters worthy of consideration; but the real urgency of the case arises from the fact, which will soon render action imperative, that, so far at least as this department is concerped, available basement and garret space is practically exhausted and further relief can not be had through these temporary and unsatisfactory expedients.

"As th

(p. xlvii):

"The earnest consideration of Congress is again invited to the necessity for providing a hall of records in this city in which the uncurrent files of the various executive departments and other branches of the

illes of the various executive departments and other branches of the Government may be stored.

"This matter has been the subject of agitation for many years past, but with no practical results. The growth of the Government's business is so rapid, and the accumulation of the files so great as a consequence, that all of the executive departments are cramped for room in which to store the files which by law must be preserved. The destruction by fire of any one of the executive departments would cause almost irreparable injury, confusion, and delay in the transaction of its business, and this is specially true of the Treasury. This department is the great clearing house of the Government. Here all its debts are paid, and here are preserved the evidences of such payment. The files stored

in this building are in such condition that a fire may ensue at any time, and in the event of their destruction, numberless claims against the Government would at once arise to embarrass it.

"In the Secretary's opinion, there is no public improvement more needed for the welfare of the Nation than a hall of records in this city, and the matter is presented for the careful consideration of Congress, with the hope that action will be taken at this session looking to the erection of such building."

In this connection the following extract from the Annual Property.

with the hope that action will be taken at this session looking to the erection of such building."

In this connection the following extract from the Annual Report of the Attorney General for 1903 (pp. iii-iv) may be quoted.

"Much inconvenience and annoyance are experienced owing to the lack of room and facilities for proper arrangement of the various offices [of the Department of Justice].

"The buildings are not fireproof. There is not a vault in any of the buildings occupied by the department, and all office records, documents, papers, and books are exposed to the ravages of a fire."

From the Fifty-fourth to the Fifty-seventh Congress 25 bills were introduced in Congress relating to an archive building. (54th Cong., 1st sess., Senate bill 2607, House bill 7614, Congressional Record, pp. 3072, 3207; 55th Cong., 1st sess., Senate bills 421, House bill 3515, Congressional Record, pp. 42, 1996; 55th Cong., 2d sess., Senate bills 2795 and 3796, House bills 5363 and 7211, Congressional Record, pp. 150, 286, 1011, 1818; 55th Cong., 3d sess., House bill 11760, Congressional Record, pp. 1013, 1520; 56th Cong., 1st sess., Senate bills 3546, 4227, and 4599, House bills 7083, 7655, 8022, and 10042. Congressional Record, pp. 1106, 1287, 1483, 2761, 3409, 4210, 5262; 56th Cong., 2d sess., Senate bills 18313, House bills 2078, 7460, and 10786, Congressional Record, pp. 96, 310, 428, 1313.)

These bills were regularly referred to the Committee on Public Buildings and Grounds, from which they rarely emerged. One bill (S. 5113, 57th Cong., 1st sess.), however, was passed by the Senate, and one (H. R. 11769, 55th Cong., 3d sess.) The bills generally authorized either the purchase of a site and the erection thereon of a building, or merely the purchase of a site and the erection thereon of a building, or merely the purchase of a site and the erection thereon of a building, or merely the purchase of a site and the erection thereon of a building, or merely the purchase of a site and the erection thereon of a building, or merely

purchase of a site and the erection thereon of a building, or merely the purchase of a site.

Two concurrent resolutions respecting an archive building were introduced in the Senate by Mr. Charles W. Fairbanks, of Indiana, one in 1900 and the other in 1902. The first of these provided for a joint committee, composed of eight members of the Senate and House Committees on Public Buildings and Grounds, which was ordered to report on a site for a hall of records and the approximate cost of a building. The second resolution was of a similar character. They were agreed to by the Senate but not by the House. (56th Cong., 2d sess., Congressional Record, pp. 265, 330, 1874, H. Rept. 2649; 57th Cong., 1st sess., Congressional Record, pp. 539, 647, 679.)

On April 9, 1902, Mr. Fairbanks introduced Senate bill No. 5113, providing for the purchase of a site and the erection thereon of a building to be used for an archive building. It passed the Senate on April 24, and two days later was referred to the House Committee on Public Buildings and Grounds. On May 2 Mr. Fairbanks submitted an amendment to the Senate embodying the chief provisions of the bill and intended to be proposed by him as an amendment to the sundry civil appropriation bill. It was referred to the Committee on Appropriations. During the first session of the Fifty-seventh Congress neither the bill nor the amendment was reported by the committee to which it was referred. (57th Cong., 1st sess., Congressional Record, pp. 3872, 3923, 4429, 4610, 4723, 4963.)

During the discussion of Senate bill 5113 Senator Vest spoke in part as follows:

"This bill has been before Congress for 20 years. Every department."

meither the bill nor the amendment was reported by the committee to which it was referred. (57th Cong., 1st sess., Congressional Record, pp. 3872, 3923, 4429, 4610, 4723, 4963.)

During the discussion of Senate bill 5113 Senator Vest spoke in part as follows:

"This bill has been before Congress for 20 years. Every department of the Government, and especially the Treasury Department, I had almost said, begged that it might be passed; but at any rate has suggested again and again the necessity for a hall of records. If a fire should take place to-morrow, as it has occurred twice in the Quartermaster General's Bureau, the papers destroyed would involve the Government in the loss of millions of dollars. Three Presidents have recommended the erection of this building, as have half a dozen Cabinet officers, and yet it seems impossible to get any legislation upon the subject." (Congress again took measures to obtain information respecting sites and plans for an archive building, as may be seen from the following clause of the sundry civil appropriation bill approved June 11 of that year:

"That the Secretary of the Treasury be directed to submit to Congress a plan giving the size and general characteristics of a public building to be used for a hall of records in the city of Washington, suitable for the storage of papers, documents, and other records which have accumulated in the various departments and are needed only for occasional use. and also for the storage and distribution of books and other publications issued by order of Congress; and said Secretary is directed, before making his report, to consult with the heads of the other departments and the proper officers of the Senate and House of Representatives; and he is also directed to consider and report upon the suitableness for a site for such a building on the public reservation at their present and turner requirements of space in an archive building. On January 7, 1897, the Secretary of the Treasury John G. Carlisle addressed a letter to the heads of departm

appearance, to an approximate capacity of 4,000,000 cubic feet. A third plan for an archive building was prepared in 1897 by Mr. R. H. Hood, engineer and contractor. (See S. Doc. No. 122, 54th Cong., 2d sess.)

Mr. Gage's estimate of the space needed—"approximately 4,000,000 cubic feet"—was based on the figures given by the heads of departments in reply to the letter of Secretary Carlisle of August 25, 1896. From these figures he compiled the table following (published in S. Doc. No. 236, p. 7, 57th Cong., 1st sess.):

Hall of records—Canacity required is such a feet.

Hall of records—Capacity required in cubic feet as reported by the sec-eral departments to the Secretary of the Treasury in response to his letter of Aug. 25, 1886.

	Present requirements.		Future requirements.

Total20 per cent additional for walls, etc				3, 582, 000 718, 000
Gross capacity				4, 300, 000

On May 5, 1900, in response to a request of the Secretary of the Treasury, the Supervising Architect of the Treasury made a report respecting several sites for an archive building, one of which was "powerhouse square No 255," the site of the present Municipal Building. He estimated the cost of this square and of a suitable building of a capacity of 5,000,000 cubic feet at \$3,025,000. Such a structure, he said, would be about the size of the Washington post office and would have to be erected at one time. (See S. Doc. No. 236, pp. 5, 6, 57th Cong., 1st sess.)

On March 3, 1902, Secretary of the Treasury L. M. Shaw made a report to the chairman of the Senate Committee on Public Buildings and Grounds, in which he briefly reviewed the history of the movement for an archive building. Respecting size of building he wrote as follows:

for an archive building. Respecting size of building he wrote as follows:

"Appreciating the importance of making a right beginning in a matter of such magnitude, the department has given very careful consideration to the proper size of the building. It will be observed that the estimate of about 4,000,000 cubic feet, made January 14, 1898, was based upon the tabular statement (copy attached) received in reply to the request of the Secretary of the Treasury dated August 25, 1896, and was increased to 5,000,000 cubic feet May 5, 1900. The events of the year 1898 had already begun to exhibit a marked effect upon the growth of the files, which indicated that there was more probability of underestimating than of overestimating the space required in the half of records.

"The figures from other departments and Congress are not in my possession, but it is possible to state the increase in the files of this department. Since 1896 it has proved necessary to rent two buildings for the storage of records containing a space of 225,000 cubic feet, which is now practically filled, and yet the Treasury Building is still as crowded with files as it was in 1896, at which time 228,000 cubic feet were occupied by files, so it is clear that the records have almost precisely doubled in bulk in six years." (S. Doc. No. 236, p. 6, 57th Cong., 1st sess.)

cisely doubled in bulk in six years." (S. Doc. No. 236, p. 6, 57th Cong., 1st sess.)

In the second session of the Fifty-seventh Congress the subject of an archive building was again brought to the attention of the National Legislature. In February, 1903, Mr. Fairbanks and Mr. Burrows, each submitted an amendment to the sundry civil appropriation bill respecting the acquirement of a site. (Congressional Record, 57th Cong., 2d sess., pp. 2544, 2690.) Finally, after an agitation covering a quarter of a century—from 1878 to 1903—Congress authorized the purchase of a site for a "hall of records." This legislation is found in the omnibus public buildings act, approved March 3, 1903, the sixteenth section of which reads as follows:

"That the Secretary of the Treasury be, and he hereby is, authorized and directed in his discretion, to purchase or cause to be taken for public use, by condemnation or otherwise, as a site for a hall of records, the whole of the land embraced in square 143 in the city of Washington, D. C., containing 157,711.35 square feet of ground, having a frontage of 402.08 feet on F Street, the same on E Street, and 392 feet frontage on Nineteenth Street, and the same on Eighteenth Street, and the Secretary of the Treasury shall report to Congress a full statement showing size and public cost of building to be erected upon said square as a hall of records." (U. S. Stat. L., Vol. XXXII, pt. 1, p. 1212.)

The deficiency appropriation act of the same date, March 3, 1903,

square as a hait of records." (U. S. Stat. L., Vol. XXXII, pt. 1, p. 1212.)

The deficiency appropriation act of the same date, March 3, 1903, contains the following clauses respecting an archive building:

"For the acquisition of square No. 143 in the city of Washington, D. C., as a site for the hall of records, \$400,000, or so much thereof as may be necessary.

"To enable the Secretary of the Treasury to have preliminary plans prepared for a hall of records, \$5,000; said plans shall not be upon a basis of construction of a building involving a total cost exceeding \$2,000,000, and no plan shall be adopted unless authorized by legislation hereafter to be enacted, and said plan or any compensation connected therewith shall only be preliminary and shall not in any way run with the construction of the building, and no obligation for such preliminary plans shall be incurred to cost in excess of \$5,000 herein appropriated." (U. S. Stat. L., Vol. XXXII, pt. 1, pp. 1039-1040.)

In his annual report for 1903 (p. 47) the Secretary of the Treasury reported that the title of the United States to "square 143" would soon be perfected. In 1904 tentative plans for an archive building were prepared by the Supervising Architect of the Treasury, and were submitted to Congress by the Secretary. It is believed that these have not been published. In December, 1904, Secretary Shaw said that the site

for the hall of records (with the exception of a small part of the square which was in litigation) had been secured, and he recommended that the plans submitted to Congress be approved and that an appropriation of \$150,000 for the preliminary work in the construction of the building be made. (Annual Report of the Secretary of the Treasury for 1904, p. 27.) In his annual reports for 1905 (p. 22) and 1906 (p. 50) he renewed his recommendation, and in a letter to the President of the Senate, dated June 25, 1906, he called attention to the importance of an appropriation for a hall of records. (S. Doc. No. 508, 59th Cong., 1st sess) Since the acquirement of the site the Treasury Department has had control of it and has collecter rents from the buildings thereon, such rentals being deposited in the Treasury as "Miscellaneous receipts." (Treasury Department, memorandum relating to the erection of a hall of records, Dec. 23, 1907; H. Doc. No. 698, 59th Cong., 2d sess.)

of a hall of records, Dec. 23, 1907; H. Doc. No. 698, 59th Cong., 2d sess.)

On February 8, 1904, Mr. Fairbanks introduced a bill (S. 4181) in the Senate which authorized the apprporiation of \$500,000 toward the construction of an archive building, in accordance with the preliminary plans; provided the limit of cost should not exceed \$2,000,000. The bill was referred to the Committee on Public Buildings and Grounds, and was not reported by that committee. (58th Cong. 2d sess., Senate bill 4181; Congressional Record, p. 1700.)

On June 29, 1906, the House of Representatives requested the Secretary of the Treasury "to cause an inquiry to be made and report at the next session of Congress as follows:

"First. How much floor space available for office purposes would be gained in buildings owned be the United States and occupied by the executive departments and other governmental establishments at Washington if there should be removed therefrom all records and files not necessary for daily or current reference by said departments or establishments, and have the same stored in a suitably constructed building for such purposes, and,

"Second. What buildings are rented in Washington for purposes of storage of files or records of the Government that could be relinquished if a suitable building for storage of records were constructed, and the amount of rent the Government is paying therefor."

On December 5, 1906, the Secretary addressed a letter to the House giving the desired information in the form of a table, a copy of which is here given (H. Doc. No. 196, 59th Cong., 2d sess.):

	Reply to question 1.	Reply to question 2.
State Department	Sq. ft.	
Treasury Department	6,100	1709 New York Avenue NW., at rental of \$3,000 per annum. Third and fourth floors and two sections on fifth floor, 920-922 E Street NW., at rental of \$8,000 per annum.
War Department ¹	8,930	One floor, 920-922 E Street NW., at rental of \$1.500 per annum.
Department of Justice Post Office Department		Sixth floor, 920 922 E Street NW., at rental of \$3,000 per annum.
Navy Department	1,422 5,345	Portion of Union Building (64,002 square feet), at rental of \$10,800 per annum. Premises First and B Streets SW (22,100 square feet), at rental of \$3,600 per annum Fremises on L Street NE. (28,200 square feet), at rental of \$5,000 per annum.
Department of Agriculture Department of Commerce and Labor.	1,000	One section in basement, 920-922 E Street NW., at rental of \$1,500 per annum.
Smithsonian Institution Interstate Commerce Commission. Government Printing Office	1,789	Basement, 1334 F Street NW., at rental of \$1,200 per annum.
Total	24,536	\$37,600 rental per annum.

¹ A considerable number of records and files are stored in buildings and warehouses at Fort Meyer, Va., and Philadelphia, Pa., under the jurisdiction of the Quartermaster's Department, but are not occupying space which would become available for office purposes. It would be more satisfactory if these records, which now occupy approximately 3,548 square feet could be stored in a suitably constructed Government building in Washington.
¹ The premises at First and B Streets SW, and on L Street NE, are leased for storage purposes by the Superintendent of the United States Capitol Building and Grounds. It is but proper to add that 1,922 square feet of floor space in buildings rented for bureaus of the Interior Department could be made available for clerical forces if the records and files occupying such space were removed therefrom and a building constructed for such purpose and set forth more in detail as follows:

Sq. ft.

	Sq. ft.
Bureau of Education	1,000
Geological Survey Geological Survey (Reclamation Service)	450 250
Total	. 1,922

On December 5, 1906, Mr. Longs introduced a bill (8, 6728) in the Senate to establish a "record office." It provided for the appointment of a record keeper and of a first and second deputy record keeper, and it contemplated the purchase of a site and the erection of a building thereon. The functions of the "record office" were similar to those of the "hall of records," as may be seen from the following extract from the first two sections of the bill:

"That the Vice President (or the President of the Senate for the time belng), the Speaker of the House of Representatives, the Secretary of State, the Secretary of the Trensury, the Attorney General, a justice of the Supreme Court designated by the Chief Justice of the United States, a justice of the district courts designated by the Chief Justice of the Court, an associate justice of the circuit courts of the United States, and such members of a joint committee on records as the Senate and House of Representatives choose to elect shall form a board of record commissioners, who shall from the passage of this act have the sole legal custody of all books of records and filed papers in which the latest date of record is upward of 80 years belonging to the executive offices, the embassies and consulates of the United States in foreign countries, the customhouses and

revenue offices of the United States, land offices, post offices of district attorneys, and all other offices and bureaus of the various executive departments; also all similar records in the office of the clerk of the Supreme Court of the United States and in the offices of all clerks of the courts of the Federal judiciary; and also similar records in the offices of the clerks of the Senate and House of Representatives.

"That to the custody of the board of record commissioners shall also be intrusted such books and files of less than 80 years in date as shall be so ordered by the President of the United States, the heads of the various executive departments, the chief justices of the courts, the President of the Senate, and the Speaker of the House of Representatives." (59th Cong., 1st sess., Senate bill 6728.)

On December 14, 1907, President Roosevelt, by Executive order, requested the chief officers of the several departments and offices of the Government to furnish estimates in cubic feet of the amount of space which each would require in the proposed national archives and of the annual growth of future requirements. The following figures show in tabular form the chief data sent in response to his order:

TERROTAL PALITAGE A. G.	Present require- ments (1902).	Future require- ments, per aunum (1908).
Treasury Department War Department Interior Repartment Navy Department Post Office Department Department of Commerce and Labor Government Printing Office Department of Austice Department of Ariculture Smithsonian Institution Interstate Commerce Commission	Cubic feet, 453,000 279,680 225,520 138,960 111,600 75,000 20,000 4,000 None, None,	Cubic feet. 25,000 3,505 2,255 9,880 12,500
Total.	1, 317, 760	

On March 7, 1908, Secretary of the Treasury George B. Cortelyou addressed a letter to the Speaker of the House of Representatives urging the erection of an archive building. He said:

"The necessity for some structure of the character described grows constantly. An investigation made in 1906 showed that the files then on hand in all the buildings under the control of the Treasury Department in Washington and in space rented exclusively therefor occupied over a million cubic feet of space, and that they were accumulating at the rate of 25,000 cubical feet per annum.

"The condition of these uncurrent files is precarious in the extreme. In many instances they occupy space which is frequented by the public and are unprotected in any way from depredation. Some of them are stored in rented buildings which are not fireproof and are liable at any moment to be destroyed by fire. All of the available space in the different buildings under the control of this department is now occupied, as well as two and one-half floors in a large storage building, for which the department pays an annual rental of \$8,000, and, in addition, the department is compelled to use corridors and other valuable space which is badly needed for the transaction of current buildings.

"While these files are referent to as "weenvent" it must be borned.

dition, the department is compelled to use corridors and other valuable space which is badly needed for the transaction of current business.

"While these files are referrent to as 'uncurrent,' it must be borno in mind that reference is made to them almost constantly; that in most instances they pertain to questions of great importance; that they have been accumulating since the organization of the Government; and that their destruction by fire would cause almost irreparable injury, confusion, and delay in the transaction of the public business. It is therefore absolutely necessary that sufficient space be provided to assemble them in such a manner that they may be of ready access. They are now inaccessible for reference, except with great labor, on account of insufficient space, and at the same time are daily exposed to loss, decay, and accidents which may at any time destroy them in whole or in part.

"While there is no recent data covering the other executive departments and governmental establishments, it is believed that similar conditions prevail in all

"In my opinion there are few, if any, public improvements here for which there is greater need than for a hall of records, and the matter is presented with the carnest hope that action will be taken at this session looking to the erection of such a building." (H. Doc. No. 756, 60th Cong., 1st sess.)

This recommendation Secretary Cortelyou repeated, quoting the above passage, in his annual report for 1908 (pp. 88, 89).

On November 27, 1908, the executive council of the American Historical Association passed the following vote:

"Whereas several heads of executive departments of the Federal Gov-

On November 27, 1908, the executive council of the American Historical Association passed the following vote:

"Whereas several heads of executive departments of the Federal Government have in recent years made representations to Congress of the need of a hall of recents in which may be stored the great masses of manuscript papers no longer needed for frequent references, which have accumulated in their departments; and
"Whereas besides the want of such a provision for the safety and orderly keeping of these public documents the present situation of many of them makes them unavailable for historical work:

"Resolved, That the executive council of the American Historical Association desires respectfully to draw the attention of the President and of Congress to the importance which such a hall of records, preserving and making available the Government's earlier materials, would have for researchs in American history, and to express the hope that Congress may see fit during the present session to take some steps toward creating such a repository.

"Voted that a committee of three be appointed to present the above resolution to the President and to present an appropriate memorial upon the subject to Congress."

The committee appointed consisted of Dr. J. Franklin Jameson, of the Carnegie Institution of Washington, Rear Admiral Alfred T. Mahan, United States Navy, retired, and Prof. John B. Mednater, of the University of Pennsylvania. To the same committee the council referred the following resolution adopted by the American Historical Association at its annual meeting at Indianapolis on December 31, 1910:

"The American Historical Association, concerned for the preserva-

Association at its annual meeting at Indianapoles on December 22, 1910;

"The American Historical Association, concerned for the preservation of the records of the National Government as muniments of our national advancement and as material which historians must use in order to ascertain the truth; and aware that the records are in many

cases now stored where they are in danger of destruction from fire and in places which are not adapted to their preservation, and where they are inaccessible for administrative and historical purposes; and knowing that many of the records of the Government have in the past been lost or destroyed because suitable provision for their care and preservation was not made, do respectfully petition the Congress of the United States to take such steps as may be necessary to erect in the city of Washington a national archive depository, where the records of the Government may be concentrated, properly cared for, and preserved."

A memorial prepared by the account of the structure of the contract of the

A memorial prepared by the committee was presented in the Senate on February 25, 1911, by Senator Lodge, and was referred to the Committee on Public Buildings and Grounds and ordered to be printed. (S. Doc. No. 838, 61st Cong., 3d sess.) A similar memorial was presented in the House by Mr. Lawrence, of Massachusetts, and referred to the corresponding committee of the House.

Meanwhile, by a prevision of the public buildings act of June 25, 1910 (61st Cong., 2d sess., ch. 383), the Secretary of the Treasury has been authorized and directed to prepare designs and estimates for a building to be erected on square No. 143 to house the Geological Survey, the Office of Indian Affairs, the Office of the Reclamation Service, the General Land Office, and the Bureau of Mines; and it may therefore be presumed that square No. 143 is no longer to be considered as specially devoted to the desired archive building.

The national archives interest took definite shape recently in the appointment of a commission, of which the Vice President and Speaker of the House are members. One provision of the resolution creating the commission which required an investigation of archive buildings in Europe before any definite plan could be acted upon, and which investigation was thwarted by the outbreak of the war, is cause for no progress in the last Congress. It is the hope of the country that the greatly needed building will soon be a reality.

Rural Credits.

EXTENSION OF REMARKS

HON. WM. ELZA WILLIAMS.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 9, 1916.

Mr. WM. ELZA WILLIAMS. Mr. Speaker, this administration is pledged to give the country a system of rural credits. The Federal reserve act, which authorized national banks to loan on real estate, was a step in this direction, but it was not practical to create a system for the promotion and extension of agriculture that could be operated extensively through commercial banks. It is therefore necessary, if the demand throughout the country is to be met and the Democratic platform is to be redeemed, to provide a system of rural credits that will enable farmers and those buying lands for agricultural uses to secure loans at a more uniform and moderate rate of interest than can be had through commercial banks or from private sources. There can be no uniformity in rates of interest so long as different rates may be fixed in 48 separate States, and this condition necessarily results in very high and exorbitant rates of interest in different sections of the country, and in the absence of some Federal provision by which farmers may secure money at all times at fair rates of interest, extortion is practiced on the farmer, development is retarded, and the agricultural interests of the country suffer.

The rural-credits bill, now before us, provides for the creation of a Federal farm-loan board, which shall divide the United States into 12 farm-loan districts and organize 12 land banks. with a capital stock of \$750,000 each, to be subscribed by the Federal Government, if not otherwise subscribed, which banks shall be operated exclusively for the furnishing of money and making farm loans. It is provided in the bill that the board shall have the power to name the directors of the land banks, to regulate rates of interest, and fix the maximum rate which may be charged in the respective districts. The Government shall at all times remain in control to the exclusion of all persons excepting borrowers, who shall organize farm-loan associations through which agency loans may be procured. These farm-loan associations shall consist of at least 10 borrowers of not less than \$100 nor more than \$10,000 each, that being the limit provided in the bill. Any farmer desiring to borrow money shall apply for membership in a farm-loan association, and the directors of that association shall approve his character, indorse his application, and recommend the loan to the Federal land bank, providing he is a man of good character and the loan does not exceed 60 per cent of the value of the security. The land bank will thereupon send an appraiser, who has been duly authorized by the Federal board to act in that capacity, to view and appraise the land. If the security is found sufficient and the

title good, the loan will be made without charge, at the rate of interest fixed by the Federal board. If the loan is rejected, there is no expense to the applicant. These loans are to be made for long terms, to suit the borrower, and will provide for the payment of a portion of the principal on each interest-paying date, so that the borrower may in the course of a long-term loan fully discharge his indebtedness on easy payments. The land banks are authorized to marshal these mortgage loans and issue and float nontaxable bonds thereon to the extent of their face value, at a rate of interest less than the rate provided for in the mortgages, and to correspond in size and quantity with the several mortgage loans, and to mature with the maturity of the mortgage indebtedness. In this way an endless chain will be created and continuous funds flow into the land banks with which to supply applications for loans from time to time sufficient to meet all demands.

To insure that the control and operation of the land banks shall remain exclusively with the borrowers themselves, without any interference beyond the supervision of the Federal board, each borrower is required to subscribe for stock in the land bank in an amount equal to 5 per cent of his loan, and stock to that amount will be issued to him, on which he will receive dividends to be applied toward the payment of his interest. When his loan is paid, he ceases to be a member of the association, the stock will be canceled, and the face value thereof refunded. Twenty-five per cent of the earnings of the land banks is to be set aside and constitute a reserve fund for the redemption of the stock subscribed by the Federal Government, and 75 per cent of the earnings will be paid to the individual stockholders or borrowers as dividends. When an amount of stock shall be subscribed by borrowers to the extent of \$750,000, the 25 per cent reserve fund will be applied to the redemption of the stock subscribed by the Government and continue until all stock subscribed by the Government is retired.

The entire expense of operating the system, including the salaries of the members of the board and its employees, is to be paid out of the Federal Treasury and will constitute no charge against the borrower. The purpose of this provision is to relieve the officers charged with the administration of the law from obligation and to guard against favoritism, that the law

may be impartially administered.

Mr. Speaker, I have given some thought and study to this question and am in entire accord with the principles of this proposed legislation. Men may differ as to the best system of rural credits and have expressed their differences in this debate. This may or may not be the best system that could be devised and may be defective in many respects, but the objects and pur-poses of the bill are commendable and should be given speedy effect. The farm is the foundation of all development and the basis of all prosperity. Congress has legislated for every conceivable interest, but until the present administration the farmer has been sadly neglected.

During this administration a fund has been appropriated and provision made for the stamping out of hog cholera, which annually destroys millions of dollars in property, exceeding, in the year 1913, \$60,000,000. The agricultural-extension act, passed last year, provides a means for cooperation between the Agricultural Department and State agricultural societies and colleges in the work of soil treatment, fertilization, crop rotation, and marketing, by means of which information may be disseminated and the farmer receive the direct result of the research work and scientific investigation conducted on the part of the Federal Government.

Both Houses of Congress have passed at this session a bill providing Federal aid for the building and construction of roads and highways in the country in cooperation with State and local authorities.

The Federal reserve act has provided for the expansion of farm credit, by means of which the farmer can secure funds on the credit of his stock and crops for temporary use in his stock and farming operations, as well as secure farm loans through the national banks, heretofore prohibited.

Congress has created a Bureau of Markets in the Department of Agriculture for the investigation and adoption of the best and most economical methods of crop distribution, and the House has passed a bill for the standardization of grain and the restriction of the operation of boards of trade, by means of which the farmer has been fleeced and his profits absorbed in gambling speculation and market manipulation.

These measures all have been dictated by the highest motives of patriotism and hailed with delight by the agricultural com-munities. But however necessary and beneficial they may be, none are of as great importance as this bill providing ready money at low rates of interest for the farm borrower. I regard this as one of the most important pieces of legislation proposed in Congress in many years, and voted for it on its passage in the House. A similar bill passed the Senate, and the two bills were referred to conference. The conferees have agreed to the bill as it passed the House, with very little change or amendment, and it will be reported back to the two Houses and become a law at an early day. I congratulate the Democratic Party, the administration, and the country on the success of this most important and invaluable piece of legislation.

Naval Expenditures.

EXTENSION OF REMARKS

HON. DAVID A. HOLLINGSWORTH, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. HOLLINGSWORTH. Mr. Speaker, I do not wish to discuss in detail the merits of the pending Naval appropriation bill. I am concerned more in opposing certain radical amendments offered on the floor of the House, and which I do not fully understand and, in common with the great body of the membership, have not had opportunity to study or fully consider.

When the bill was reported to the House, May 24, from the Committee on Naval Affairs, it covered 103 printed pages and was accompanied by a majority report explanatory of its pro-visions covering 67 pages and giving the reasoning of the committee for its passage. It carried the colossal sum of \$98,859,378 as an addition to the usual annual naval expenditures of the Government. It was further accompanied by a minority report covering nine pages, signed by eight members of the committee and urging that this naval increase was inadequate and should be very largely increased with provision for future progressive increases without the action of Congress,

Being classed as a conservative, that is, one who favors pre-paredness for defense, not offense, I was startled at the colossal proposals of the bill, and especially by the attitude of the minority; and, according to my ideas of duty to my constituents, I at once obtained copies of the bill and reports, together with such of the evidence as was available to me, taken by the committee at the exhaustive hearings which it has held, and began as careful a study thereof as was possible for a Member not on the committee and having other official duties of his own to attend to.

As showing the radical differences of opinion among members

of the committee, the following excerpts are quoted from each:

REPORT.

REPORT.

The Committee on Naval Affairs, to whom was referred so much of the President's annual message as related to the Naval Establishment, together with the annual and supplemental estimates of the Navy Department, the annual report of, and subsequent communications from, the Secretary of the Navy, submit herewith H. R. 15947, making appropriations for the naval service for the fiscal year ending June 30, 1917, with the following statement:

The committee held exhaustive hearings with a view to determining the fighting efficiency of the existing Naval Establishment as regards its personnel and matériel; the means to be adopted to increase the efficiency of the existing personnel and matériel; and the necessary legislation to provide additional personnel and matériel to render the Naval Establishment more nearly adequate to defend the interests of the United States and render the entire Naval Establishment in a greater state of preparedness.

VIEWS OF THE MINORITY.

The undersigned members of the Committee on Naval Affairs dissent from the recommendations of the committee in respect to the increase of the Navy, and in other particulars, for the following reasons:

The building program submitted by the committee for the increase of the Navy is inadequate for the defense of the country. It is not the product, in any degree, of expert naval opinion and disregards every plan suggested by naval authorities for the development of the Navy. It ignores the recommendations of the Secretary of the Navy and sets aside expert opinion, as expressed by the General Board of the Navy, the Chief of Operations of the Navy, the admirals in command of the fleets, and every other naval officer appearing before the Committee on Naval Affairs.

It soon became apparent to me as I studied the details and reasoning, knowing the temper of the House, that the bill as reported from the committee covered as low a minimum of increase as could be expected by conservative Members like myself, and, giving due weight to the favorable report of the committee, I resolved to vote for the bill as reported, if not too radically changed in the House. Some additions have already been made to it, some which I would prefer had not been made, but still, deferring to some extent to those who ought to know more about the necessities and conditions of the country than a Member not on the committee or connected with the executive department in some way, I still expect to vote for it, unless a most radical

and far-reaching pending amendment offered under the rules of the House and which, under operation of the previous question, can not be discussed or amended, shall prevail and be made a part of the bill.

I shall vote against this amendment for two reasons: First, because no opportunity is given to the average Member to study or understand its provisions in detail, and, second, because it would in principle work a total change in the policy of the Government. It is suggestive of a monarchy, not a republic.

As showing the character and extent of this amendment, it is here quoted in full, with the additions caused by each change:

Mr. Browning. Mr. Speaker, I move to recommit the bill to the Committee on Naval Affairs with instructions to report the same back to the House forthwith with the following amendments:

Page 6, line 2: Strike out the figures "\$2,000,000" and insert in lieu thereof the figures "\$3,500,000." Increase, \$1,500,000.

Page 8, line 19: Strike out the figures "\$862,000" and insert in lieu thereof the figures "\$94,000." Increase, \$42,000.

"To secure the speedy completion of all ships authorized in this act and to cover the additional expense incidental to the employment of more than one shift of men a day the Secretary of the Navy is authorized to increase the limit of cost of each of said ships not to exceed 10 per cent."

Like dumb-driven cattle, we are expected, without opportunity

Like dumb-driven cattle, we are expected, without opportunity to study or understand the details and necessity for these proposed additions to the bill as it was reported by one of the regular committees of the House, after months of consideration by it, to vote for them as an entirety, thus adding immensely to the burdens of taxation already mounting skyward under the present administration. I am one of the novices who hesitate and ask for more light before voting for such a tax-consuming uncertainty. In this I do not cast the slightest reflection on the ability and patriotic purpose of the minority members of the commit-They were no doubt appointed for their special fitness for the position and with rare discernment which comes only when the power of appointment is placed in the hands of a single individual.

But at the same time I can not concede that this condition absolves individual Members not on the committee from doing a little thinking for themselves in matters of grave public concern. There is no place for living automatoms in the public life of America.

Rural Credits.

SPEECH

HON. THOMAS L. RUBEY.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to provide for the investment of postal savings deposits, to create Government depositaries and financial agents for the United States, and for other purposes.

Mr. RUBEY. Mr. Chairman, the passage of the pending rural-credits bill will mark another milestone in the progress of legislation of real and lasting benefit to agriculture. This bill may not be all that its proponents claim for it. It does not, in all its details, meet the approval even of every member of the Banking and Currency Committee which reported it. There are provisions in the bill which I should like to see either modified or stricken out, and there are provisions not in the measure which I should like to see inserted in it. We must remember that all legislation is the result of compromise. The Constitution of the United States was the result of compromise, yet it has met the test and stands to-day the greatest instrument of its kind in all the history of the world. I predict that the rural-credits bill, which we are considering and perfecting to-day, when finally enacted into law will stand as the greatest piece of constructive legislation for the promotion of agriculture ever placed upon the statute books by the American Congress. It may contain faults and imperfections; if so, they will quickly develop when the act is put into operation and future Congresses can and will

correct them. The important thing is that we are making a beginning, and without further delay we are going to give to the farmers a system of credits designed for them and for them alone, which will enable them to borrow money upon land for long periods of time and at a low rate of interest.

ONE CLASS OF OBJECTORS HINT AT FAVORITISM.

Those who object to this kind of legislation do so mainly upon the ground that it is special legislation for the benefit of the farmer. We are told when we seek to give real Government nid in the formulation of a rural-credits system that we are showing favoritism to the farmers. Well, I hope we are showing favoritism to the farmers—my principal objection to this bill is that we are not showing enough favoritism; that is, we are not giving enough Government aid. Mr. Chairman, I want for just a moment to direct my remarks to that class of objectors who seem to fear that we may show too much favoritism to the farmers. I ask them to read once again a few brief pages of the glorious history of this Republic, and as they read I ask them to note the important part that has been played by the American farmer in its formation, progress, and development.

THE FARMER IN COLONIAL DAYS.

In the early settlements it was the farmer who was the important factor; he cleared the land, built the cabin to shelter his family, and cultivated the soil that they might have food and clothing. It was the farmer who, throughout those trying days of privations and hardships, with rude implements of warfare, protected the people from the attacks of wild beasts and defended them from the assaults of the Indians. It was he who made possible the founding of this Republic. Is there one among us whose breast does not swell with pride and whose heart does not beat with patriotic emotion as are recounted the brave deeds of our forefathers in their struggle for liberty and independence? The author of the Declaration of Independence was a farmer, and long before he became President he withdrew from public life to his estate at Monticello and devoted his time to agriculture and to his favorite literary and scientific studies.

THE FARMER IN TIMES OF WAR.

Read the history of the first battle of the Revolution.

There the embattled farmers stood and fired the shot heard round the world.

It was a farmer—Israel Putnam—who left his plow standing in the field and went forth to die, if need be, for liberty. It was the farmers of the American Colonies who won the Revolution. It was only because of their bravery and their sturdy and rugged characteristics that they were enabled to endure the hardships and win victory against such fearful odds. It was to an American farmer—the great Washington—that Cornwallis surrendered at Yorktown.

It was the farmers, poorly armed and equipped, who stood with Jackson at New Orleans and repelled the British invaders

more than a hundred years ago.

From the fields came the bulk of our Army that marched into Mexico, carried our flag to victory, and planted it triumphantly upon the battlements of the Montezumas. That was many, many years ago. To-day it gives me pleasure to call your attention to the fact that the general in charge of the troops sent into Mexico to capture or disperse the bandits led by Villa, Gen. John J. Pershing, was a farmer boy, born in my own State, Missouri.

It was the boys from off the farm who made up a large part of our Army in the Spanish-American War, and in that contest it was a farmer boy, another Missouri boy, if you please, who

first planted the Stars and Stripes on Cuban soil.

As it has been in the past, so it will be in the future. In the years to come it will be the farmer boys upon whom we must largely depend, and it will be they who will stand ever ready to defend their country should a foreign foe darken our borders.

THE FARMER IN TIMES OF PEACE.

I have recounted briefly the part the farmer has played in war. If I had the time I feel sure I could convince you that he has been no less renowned in peace than in war. Read the lives of our Presidents and you will find that many of them were born upon the farm, and owe much of their success in life to their early training and the environments of country life. The career of Abraham Lincoln is familiar to you all; it was only a few weeks ago that this House passed a bill to accept the Lincoln homestead, care for it, and preserve the log cabin in which he was born. Grant was not only born on a farm, but after his return from the Mexican War he resigned his commission as captain and settled on a farm near St. Louis, in my own State. Garfield, McKinley, and many others of our Presidents came from the farm. All of our great men, however, have not become Presidents; some of the most renowned men in the history of this country never attained to that high office. Many of them came

from the farm; let me name just a few—Patrick Henry, Daniel Webster, Henry Clay, Thomas H. Benton, Alexander H. Stephens, John Marshall, and there are scores of others. Our own beloved Speaker, Champ Clark, was born on a Kentucky farm. A very large number of the Members of this House and of the Senate were once farmer boys, and every one of them is proud of it.

THE PARMER IN OTHER FIELDS OF LABOR.

The scope of the influence of farmers and their sons is not confined to service of country either in the Army, in time of war, or in positions of honor and trust, in time of peace. They have made their influence felt in every walk of life and in every industry in the land. The boys from the farm have become merchants, mechanics, inventors, bankers, doctors, lawyers, teachers, and captains of industry in the great business world. In every avocation, trade, or profession they have become great leaders and have won for themselves fame and distinction.

CONGRESS HAS LEGISLATED FOR CERTAIN INDUSTRIES.

Replying further to those who oppose this legislation because it shows favoritism to the farmers, I would ask, Has Congress in the past ever legislated in the interest of any particular industry? Let us see. Many years ago, with a view of encouraging the building of railroads, Congress made large grants of land to railroad corporations. These grants of land contained millions of acres, the value of which has been variously esti-mated at from two to five billion dollars. Very early in our history, it became the policy of Congress to place high tariff duties upon imports for the purpose of encouraging and protecting the manufacturing industries. More than half a century ago Congress passed the national-bank act, giving to those financial institutions special rights and privileges from which great profits have accrued to them. For the purpose of encouraging trade and commerce the Panama Canal was built at a cost of nearly \$400,000,000, and in a few days this House will pass the shipping bill, in order that we may have a merchant marine so that American ships, flying American flags, may once again sail the seas carrying American commerce to all the world. These are some of the acts which in a sense may be termed special legislation, yet no one doubts that those who legislated when these various acts were passed were seeking the benefit of the whole people and were endeavoring to do that, which to their minds at least, seemed to be for the general welfare.

TIME TO LEGISLATE FOR AGRICULTURE.

In view of what the farmer has done for America, in view of the salutary influence which the farm and farm life has had upon the progress and development of our country, and in view of this array of legislation, enacted for the benefit of other industries, is there anyone here to-day who is going to oppose this rural-credits bill because it is in the interest of the farmer? Congress has legislated for the manufacturers, for the railronds, for the bankers, for commercial interests, and now at last, after the passing of many years, it is going to legislate for the special financial interest of the farmer. For the first time in all our country's history, Congress is going to provide a system of rural credits which will give to the farmer long-time loans at low rates of interest and with a plan for amortization payments.

FEDERAL RESERVE ACT FOR COMMERCIAL INTERESTS.

In 1913 Congress passed the Federal reserve act. It has now been in full operation for a little more than two years and its success has exceeded the expectations of even its most ardent supporters. During the consideration of the Federal reserve act, Congress, for the first time in the history of banking legislation, gave consideration to the needs of the farmer. Up to that time national banks had been prohibited from making loans on real estate.

The Federal reserve act authorized the banks to make loans on real estate for terms of five years. That act also made liberal provisions for extending personal credit to those engaged in agriculture, and these provisions have, in certain sections of the country, been of great benefit to the farmers and have given to them sources of personal credit which they have never heretofore enjoyed, and that, too, at a much lower rate of interest than they have had in the past. The Federal reserve act was intended primarily to regulate banking institutions, to promote the commercial interest of the country. It has done that; it has freed the commercial interests of the United States from the operations of Wall Street, has made the banks panic-proof, and has given to the people a financial system the equal of which is not to be found in any country on earth.

RURAL-CREDITS BILL FOR AGRICULTURAL INTERESTS.

As the Federal reserve act was intended to promote the commercial interests, so this rural-credits bill is intended to promote the agricultural interests of the country. It will enable the farmers to mobilize their credit and will insure reasonable rates

of interest. Like the Federal reserve act, the system of rural credits will be under the control and supervision of the Govern-When the rural-credits bill is passed and put into full operation the farmers of America will no longer be compelled to pay tribute to the loan shark nor submit to the exorbitant demands of the money lender. Men who till the soil and feed the world will be able to obtain credit on equal terms with merchants, manufacturers, railroads, and corporations whose interests were provided for when the Federal reserve act was Under laws passed by both State and Nation, corporations have been organized, and these institutions have acquired certain rights and privileges not possessed by the individual citizen. In the exercise of those rights they are enabled to issue bonds and upon those bonds as security they are enabled to go into the money markets and borrow money at extremely low They issue commercial paper, which is nothrates of interest. ing more nor less than notes, which bear an average rate of interest of from 41 to 5 per cent.

AGRICULTURAL INTEREST RATES V. RAILROAD INTEREST RATES.

Let us compare the rates paid by the farmers with those paid by one of our other great industries, the railroads. The farms of the United States are valued at \$41,000,000,000, their annual production is \$10,000,000,000, the indebtedness of the farmers is about \$6,000,000,000, and they pay from 6 to 10 per cent interest. The railroads are valued at \$20,000,000,000, their annual income is \$3,000,000.000, their indebtedness is \$11,000,000,000, and they pay from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent interest. Thus it is seen that the farmers with property valued at twice that of the railroads and with an indebtedness of a little more than half, pay more than twice as much interest. We do not object to the low rate of interest which the railroads pay on borrowed money, but we do object to the discrimination against the farmers and the fact that they are compelled under present conditions to pay such high rates.

PRESENT SOURCES OF CREDIT FOR THE FARMER.

Under conditions as they exist to-day farmers must secure their loans, in the main, from the following three sources:

(1) From the banks in their respective communities; (2) from the capitalists or money lenders, who loan their own funds; (3) from the big insurance companies or large loan companies, who have their agents in various parts of the country,

Let us consider each of these sources separately:

(1) The banker, no matter how much he may desire to accommodate the farmer, can not make long-time loans to him. The banker is dependent upon his depositors for the money he loans and he must at all times be ready to pay those depositors their money upon demand. He must of necessity, therefore, loan the money given into his keeping for short periods of time and as a rule upon personal security. Every banker who is a real and true friend of the farmer will welcome the passage of a ruralcredits bill.

(2) The capitalist or money lender of the community who must depend upon his own resources for his supply of funds can not begin to meet the demands of the farmers in his locality. The capitalist or local money lender is dependent as a rule upon the interest he gets from his loans as his source of income, and while he may be generous and public spirited, it can not be expected that he will make loans at a very low rate of interest.

(3) There are in the United States many great insurance com-

panies, loan companies, and other organizations which have been supplying money to the farmers for many years. These concerns have their State agents, their county agents, their examiners and The expense of such a system is of necessity very great, and that expense must, of course, fall upon the borrower. The State agents and the local agents must have their commission, and the result is that the rate of interest paid by the farmer

These sources of credit will not at all meet his requirements or give to him the kind of credit he desires and must have. The main fault with all sources of credit which the farmer has under present conditions is that the time is too short, the rate of interest too high, and no provision is made for amortization-that is, the gradual paying off of the loan. The result is that the farmer borrows for a period of 5 years, once in a while 10, pays his interest annually or semiannually, as the case may be, and at the end of the period he still owes the debt and must at great expense either renew the loan or seek credit from other sources.

ADVANTAGES UNDER THIS BILL-INTEREST RATES.

Under the provisions of this bill the farmers will secure four important advantages-ample funds from which loans may be secured, a long period of time in which to make repayment, an

mum rate which can be charged, but it is thought that the rate will not be as much as 6 per cent. After the system is in full operation the amount of interest charged will depend upon the rate of interest at which the land-bank bonds can be sold. The bill specifically states that the rate charged the farmer shall not be more than 1 per cent above the rate which these bonds bear. If the land-bank bonds bear 5 per cent interest, the rate to the farmer can not exceed 6 per cent; if they bear 4½ per cent, the rate to the farmer can not exceed 5½ per cent; if 4 per cent, the farmer's rate will be 5 per cent; if 3 or 3½ per cent, the farmer's rate will be 4 or 4½ per cent. Every effort has been made in the formulation of this bill to make these bonds desirable investments; in fact, it is thought that these bonds will be as desirable as Government bonds, and in that event the farmer will be able to get money at a very low rate of interest.

THE AMORTIZATION PLAN-AN ILLUSTRATION.

Under the amortization plan the farmer, in addition to the interest he pays, will at the same time make small payments to reduce the principal of his loan. For information I shall append to my remarks some amortization tables which have been carefully prepared showing what the annual payments will be on a loan of \$1,000 for different periods of time and at different rates of interest.

I can best illustrate the advantages which will accrue to the farmers from a system of rural credits providing a low rate of interest and amortization by the following statement: The mortgage indebtedness of this country is \$4,000,000,000. mating the average rate of interest paid at 7½ per cent—I think it is greater than that—but estimating it at 7½ per cent, the farmers pay annually \$300,000,000 interest alone, with no reduction of principal. Now, under a rural-credits bill such as we are considering, with the rate of interest fixed at 5 per cent, if the farmers were to continue to pay \$300,000,000 annuallyidentically the same sum they are now paying-in 22 years and 6 months, they would pay off their entire mortgage indebtedness, principal and interest. In other words, the farmers of America can, under such a bill as this, pay off their entire indebtedness in 221 years, without paying out one cent more than they are now paying to meet their interest charges. Do you not think this is "a consummation devoutly to be wished"?

SOME IMPORTANT PROVISIONS OF THE BILL.

I desire as briefly as I can to outline some of the principal and important features of this bill. The entire system is under the control and supervision of the Government through a Federal farm-loan board that consists of three members to be appointed by the President, by and with the advice and consent of the Senate. The board, within the limits prescribed by this bill, fixes the rate of interest to be charged to farmers, also the rate of interest of the land bonds which are sold from time to time. This board will divide the United States into 12 landbank districts, in each of which there shall be established a Federal land bank, with a capital stock of \$750,000. In the organization of each Federal land bank all the stock not subscribed by individuals shall be taken by the Government, thus the Government may be, and in all probability will be, called upon to aid the system to the extent of \$9,000,000. The stock of these Federal land banks will be divided into shares of \$5 each and every borrower, under the terms of this bill, through his local national farm-loan association, must become a stock-holder in the Federal land bank of the district in which he resides. Eventually all of the stock owned by individuals, as well as by the Government, will be retired and the entire stock of each Federal land bank will be owned by the borrowers themselves, and all dividends accruing will be divided among them. Each Federal land bank shall be managed by a board of nine directors, six of whom are elected by the national farm-loan associations and three who are appointed by the Federal farmloan board.

NATIONAL FARM-LOAN ASSOCIATIONS.

The national farm-loan associations, which, in my opinion, will become the bulwark of the entire system, are organized among the farmers and by the farmers themselves. It is intended that the great bulk of the loans made by the Federal land banks will be made through these associations. In any community 10 or more farmers desiring loans may join together to form one of these associations; while this is the minimum number required to organize, it is expected that their membership will rapidly increase and that they will become strong local farm-loan organizations. Each association elects its own board of directors to manage its affairs. Every member of the national farm-loan amortization plan by which the loan will be paid off in small association must be a borrower, and he must take stock in the annual or semiannual payments, and a low rate of interest.

The rate of interest can not exceed 6 per cent; that is the maxieral land bank in the district in which the association is organized. Every application for a loan must first be passed upon by the loan committee of the local association, which makes a written report, together with an appraisal of the land to the Federal land bank from which the loan is to be secured. These local national farm-loan associations will in time become not only organizations for the purpose of securing loans on their land, but will become great cooperative organizations for the marketing of farm products, the improvement of roads and schools, and for the general advancement and upbuilding of the agricultural communities of the country.

LOANS-TO WHOM MADE, PURPOSES, TIME, AMOUNT.

Under the provisions of this act loans will be made only to landowners, or to anyone who is about to become a landowner, and who is either living upon the land or who intends to live upon the land; in other words, this act is intended to give aid to bona fide farmers and not to land speculators. The borrower must use the money for the following purposes: For the purchase of land, to pay off indebtedness already upon the land, to erect buildings and other improvements, to purchase farm implements or live stock, or for other purposes purely agricultural, No loan will be made for a shorter period than 5 years or for a longer period than 36 years, or for a sum of less than \$100 or more than \$10,000. No loan shall exceed 60 per cent of the appraised value of the land and 20 per cent of the appraised value of the permanent improvements.

PROVISION FOR MAKING LOANS DIRECT TO FARMERS.

It may be that in some sections of the country the farmers may not for one reason or another organize these national farm-loan associations. In such localities this bill gives the Federal farm-loan board power to authorize the Federal land banks to make loans to the farmers through banks, trust companies, mortgage companies, or savings banks as agents. That provision of the bill as embodied in section 15 of this act and as reported to the House by the committee, was admitted by all to be impractical and unworkable for the reason that it required agents to indorse the notes and to become liable for their payment. Under the laws of many of the States the banks could not assume such a liability, notwithstanding the fact that the loans would be unquestionably good. Hence banks could not, under the requirements as reported, become agents for the making of loans to the farmers in their respective localities. In order to correct the situation I offered an amendment to that section of the bill, authorizing the making of loans direct to farmers through local banks, as agents. My amendment will enable the farmer, where there are no organized associations, through his local bank, as agent, to obtain a loan direct from the Federal land bank. My amendment, which was adopted by the House to-day by a vote of 2 to 1, inserted the following language in section 15 of the act:

Every agent negotiating any such loan shall make a report and an appraisal of the land upon which application is made for the loan on blanks furnished by the Federal land bank, and such report and appraisal shall be referred to an appraiser as required in section 10 of this act, and no loan shall be made by the land bank unless the report of the appraiser is favorable. Every loan made under the provisions of this section shall be made to the applicant upon such forms and under such regulations as shall be prescribed by the Federal farm-loan board.

I consider this a most important amendment, and I hope that the conferees on the part of the House will see that it is retained in the bill.

LAND-BANK BONDS.

Whenever any Federal land bank has accumulated farm mortgages to the amount of \$50,000, it shall deposit these mortgages with the farm-loan board, where they shall be registered, examined, and approved. Land-bank bonds may then be issued upon these mortgages as security, and the money obtained from the sale of these bonds will be used by the Federal land bank to accommodate other farmers in that land-bank district. These bonds, as I have already stated, backed by such excellent security, will sell readily in the money markets of the country. It is a recognized fact that the success of a rural-credits system depends upon the marketability of its bonds. I wish that this bill had gone a step further and provided that the Government should guarantee these bonds. The bonds are a safe and secure investment. There can be no doubt about that, but with the guaranty of the Government back of them the rate of interest which the bonds bear would be reduced and that, in turn, would reduce the rate of interest to the farmer.

BILL CAREFULLY CONSIDERED-MANY AMENDMENTS OFFERED.

This House has now been considering this bill for several days. I have followed very closely the debate and have paid careful attention to all the amendments proposed. I have given my support to a number of amendments which I thought would improve the bill, and especially to those seeking to bring more

aid to the system from the Government. One of the most important amendments adopted was that offered by the gentleman from South Carolina [Mr. Lever]. It authorizes the Secretary of the Treasury to deposit Government funds to the amount of \$500,000 with a Federal land bank, to aid it in meeting its obligations with respect to the payment of either the principal or the interest of its bonds. This deposit of Government funds will only be made when it is shown by the Federal land-bank board that the Federal land bank is solvent and that the deposit is needed to enable the bank to meet its bond obligations, either principal or interest. Many other amendments have been offered and given careful and serious consideration. I congratulate this House on its earnest and sincere efforts to perfect and improve this great measure. I most heartily congratulate the Committee on Banking and Currency which, after so many months of laborious consideration, has unanimously reported this rural-credits bill.

IT WILL REQUIRE TIME TO DEVELOP THE SYSTEM.

No great advance movement was ever accomplished in a short period of time. It took years to inaugurate and perfect the Rural Delivery System and the Parcel Post, and it will take time to inaugurate and to perfect a rural-credits system. This measure may not be all that the farmers expect and hope for; it may not at first meet the approval of all. It will take time to inaugurate the system and to get it into full and complete operation, but I feel sure that the rural-credits system here sought to be enacted will grow in popularity as its terms are understood and as its workings are seen in actual demonstration. This bill will place agriculture upon equal terms in the financial world with every industry in the land. It will give to the American farmer advantages the farmers of other lands have enjoyed for more than 50 years. It will lighten the burden of the borrower, give him hope, and insure to him a greater share of the fruits of his toil; it will enable him to provide a home for his loved ones and care for and educate those dependent upon him; it will give him new life and new inspiration, and encourage him to renewed energy.

IT WILL HELP THE TENANT AND THE SMALL FARMER.

It will open the door of opportunity to thousands of poor men, who are now compelled to rent land and who must move from place to place, and who now have no place of permanent abode; indeed, no place they can truly call a home.

I wish that every farmer were a landowner. Increase the number of landowners who till the soil and you add to the strength and increase the security of the Nation. Realizing this great truth, all the great countries of the world are striving to decrease tenant farming, and are contributing from their treasuries in one way and another to enable the tenant to become the owner of the land he cultivates.

There are hundreds of thousands of farmers in this broad land living upon small farms, striving earnestly to make a living, with large families to care for and educate, who are borne down by excessive rates of interest. They are striving hard to pay their debts and to save and accumulate something to tide them over periods of crop failure and to meet other incidental misfortunes which are sure to come. I am ready to cast my vote for any rural-credits bill, which I think will help and encourage this class of farmers, whose whole life is one great struggle from beginning to end.

THE WEST THE GREAT STOREHOUSE OF THE REPUBLIC.

I point this House to-day to the West. Beyond the banks of the great father of waters, the Mississippi River, lies the future agricultural empire of this Nation. There, indeed, the need of this kind of legislation is known and felt more than in any other part of the country. Statistics show that in the East, the old, settled part of the United States, the rates of interest are low, while in the West, in that new and undeveloped part of the country, the rates of interest are high, excessively high. From out the fertile valleys and from off the broad extended plains of the western world of this great Republic will in the future years come the wheat and the corn, the cattle, the sheep, and the hogs that will furnish the bread and meat which will feed this entire Nation.

THE OZARKS.

I have the honor to represent a district which lies within that great western empire. My people dwell among the hills and dales of the Ozarks in good old Missouri; I have lived among them all my life, I know of their successes and their failures, of their fortunes and misfortunes, of their advantages and disadvantages. The Ozarks are famed for their healthful climate, for the variety of their soils suitable to diversified agriculture; for their great orchards of peaches, pears, and big red apples; for their hillsides, furnishing pasture land for growing herds of cattle; for their fertile valleys producing abundant harvests

of wheat, oats, hay, and corn; for their rippling streams of clearest water, abounding in fish of every kind; for their beautiful scenery, unexcelled anywhere in all the world, and, above all, for the honest, rugged, sterling characteristics of their citizenship—"a bold peasantry, their country's pride." I have seen my people happy and prosperous, their granaries filled with grain, their barns filled with corn and hay, the result of abundant crops, following a seasonable year. On the other hand, I have seen their crops wither and die before the awful droughts. I have seen their matured crops in the valleys swept away by the floods extending from hill to hill. Farmers in the Ozarks, like farmers elsewhere, are dependent upon the seasons for their crops. If the sunshine and rain come in due proportion, they are blessed with abundant harvests; if not, they are compelled to face a crop failure. But whether they succeed or whether they fail, they must be ready to meet their obligations; they must pay their interest charges. I appeal to you to-day in behalf of the Ozarks; I appeal to you to be pople. Let us encourage agriculture through all that country. Let us bring to pass as speedily as possible that much-desired condition so beautifully described by the poet:

Where a man is a man, if he is willing to toil,
And the humblest may gather the fruits of the soil;
Where children are blessings and he who has most
Has aid in his fortune and riches to boast;
Where the young may enjoy and the aged may rest,
Away, far away, to the land of the West.

AMORTIZATION TABLES.

For information a few amortization tables are here appended showing the amounts of annual payments on a loan of \$1,000 for certain periods of time and at various rates of interest:

Amount of loan, \$1,000; length of term, 16 years; rate of interest, 6 per cent; annual payment, \$100.

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount of prin- cipal still un- paid.
1	\$100.00 100,00	\$60,00 57,60	\$40.00 42,40	\$960, 00 917, 60
4	100,00 100,00 100,00	55, 06 52, 36 49, 50	44.94 47.64	872, 66 825, 02
6	100,00 100,00	46.47 43.26	50.50 - 58.53 56.74	774, 52 720, 99 664, 25
8 9	100.00 100.00 100.00	39. 85 36. 25 32. 42	60. 15 63. 75 67. 58	604. 10 540. 35 472. 77
11 12	100.00 100.00	28.37 24.07	71, 63 75, 93	401, 13 325, 20
13 14 15	100,00 100,00 100,00	19.61 14.68 9.56	80, 49 85, 32 90, 44	244. 71 159. 40 68. 96
16	73, 10	4. 14	68.96	
Total	1,573.10	573. 10	1,000.00	

This table shows that a loan of \$1,000 bearing 6 per cent interest can be paid off in 16 years by paying \$100 annually, the last payment being \$73.10, a little less than \$100. Under present conditions if a farmer secured a loan at 6 per cent, he would pay, during 16 years, \$960 interest, and at the end of the time would still owe the principal, \$1,000.

Amount of loan, \$1,900; length of term, 20 years; rate of interest, 6 per cent; annual payment, \$87.19.

Annual periods.	Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount on prin- cipal un- paid.

Revising and Amending the Statutes Relative to Trade-Marks.

EXTENSION OF REMARKS

HON. HENRY W. WATSON. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 7, 1916.

Mr. WATSON of Pennsylvania. Mr. Speaker, I am in favor of the bill revising and amending the statutes relative to trademarks now pending in the Committee on Patents. This measure amends the act entitled "An act to authorize the registration

of trade-marks," and so forth, by inserting the following-amend-

ment:

SEC, 5. That no mark by which goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade-mark on account of the nature of such mark, unless such mark—

(b) Consists of or comprises the flag or coat of arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation, or of any design or picture that has been or may hereafter be adopted by any fraternal society as its emblem; or of the name of any church, religious denomination, or society, or the name by which any church, religious denomination, or society is commonly known or called; or of any name, distinguishing mark, character, emblem, colors, flag, or banner adopted by any institution, organization, club, or society which was incorporated in any State in the United States prior to the date of the adoption and use by the applicant.

The Society of Friends, commonly called Onakers, of which

The Society of Friends, commonly called Quakers, of which there are about 130,000 in the United States, asks Congress through this measure to prevent the name of their church, as well as other religious orders, from being registered as a trade-mark, in the interchange of commerce.

Everyone reverences his place of worship with the highest inspiration which he is capable of receiving. The association of the church—through which we invoke for the Divine blessings, and plead for strength in times of sorrow and death and for mercy when we sin—with commercialism, is repugnant to the sacred feelings of the human soul.

the sacred feelings of the human soul.

The Quakers rightfully maintain that the public should be restrained from indicating a grade of whisky, a brand of food, or a quality of a textile by the name of any religious sect. The church is a holy institution, and is sacred to those who are baptized therein, and it should be so held by the State. It was contended in the hearings that the word "Quaker" is one of derision, and not the name of a religious sect. The Society of Friends was founded by George Fox in 1630, and it has been Friends was founded by George Fox in 1630, and it has been a continuous organization since that period. Fox constantly applied the name Quaker to his association. In one publication he mentions "The progress of Quakerism in Monmouthshire." In another, entitled "A chief upholder of the Quaker sect," he states that the Quakers are not a sect but are "In ye power of God before sects was." He also wrote an essay on "The Quaker challenge to the Papists" and "The Quaker testimony concerning magistracy," in which appears the following sentence: "All you that call yourselves Christians who have been so angry, Independents, Presbyterians, we have not forgot your so angry, Independents, Presbyterians, we have not forgot your anger against the Quakers." The journal of George Fox, by Norman Penny, records:

When George Fox breathed his last in the house of Henry Gouldney, the good, Gracechurch Street merchant, the Quaker Society, which he started on its voyage, amidst the storm of persecution, had already passed into quieter waters.

The toleration act gave relief to the Quakers by permitting "this harmless sect to hold their assemblies in peace." William Penn affiliated himself with the Quakers, and Janney, in his Life of Penn, states:

William Penn, the only son of the famous admiral, much to the annoyance of his family, had embraced the principles of George Fox, the founder of the sect of Quakers.

Penn appealed to King James to use his influence to procure some remission of the persecution of the Quakers. In 1772 the people called Quakers petitioned to Parliament that they be permitted to affirm when an oath was required of them. Whittier, who was a member of the Society of Friends, commonly called Quakers, wrote many poems in which the word "Quaker" appeared. One is entitled "The Quaker of the olden times"; another, "The Quaker Alumni," four lines of which are as follows:

The Word which the reason of Plato discerned; The truth, as whose symbol the Mithra-fire burned; The soul of the world which the Stoic but guessed, In the Light Universal the Quaker confessed!

The above facts seem to be self-evident proof that the Society of Friends have been and are commonly called Quakers in all parts of the world where they are universally known. These people always maintained the right of religious liberty and expression, and for these reasons were imprisoned and persecuted. They greatly helped, through their perseverance, to establish that liberty which all religious associations now enjoy. William Penn brought these Quaker principles to America and upheld them in his Province of Pennsylvania. This society, commonly called Quakers, did as much, if not more, than any other people to bring about the conditions which caused Congress to add the first amendment to the Constitution, which guarantees to the "citizens of the United States freedom of religion, of speech, and the right of petition."

The members of the Society of Friends having testified that their Christian sect is commonly called Quakers, they should have the legal protection of the name of their society, that it may not be used as a trade-mark in the course of commerce.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. CHARLES LIEB. OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 6, 1916.

Mr. LIEB. Mr. Speaker, it is proposed to spend approximately \$25,000,000 for carrying on the work of the Department of Agriculture in the ensuing fiscal year. This amount seems small when we consider what is being spent by other branches of the Federal Government. The farmer to-day is prosperous. In late years he has been getting good prices for his crops. In this day and age when the country is enjoying prosperity in every branch of endeavor it seems to me to continue our Federal appropriations on a larger scale than heretofore known is but

It is impossible to give a comprehensive idea of the scope of the activities of the Department of Agriculture, but generally speaking these activities may be divided into three classes.

1. Research work, which includes the scientific study of the fundamental problems of agriculture.

2. Educational or extension work, which aims to make available to the rural population the results of the department's experiments and discoveries.

3. Regulatory work, which includes the administration of the following statutes: Meat-inspection act, cattle-quarantine act, diseased-animal transportation acts, 28-hour act, virus-serumtoxin act, food and drugs act, insecticide and fungicide act, plant-quarantine act, seed-importation act, Lacey game act, and cotton-futures act.

All of these activities can not be made available to every section of the United States, but it is the endeavor in the passage of Federal appropriation acts to bestow the greatest amount of good possible in each section.

For the Bureau of Animal Industry there is appropriated \$2.222,000. A large portion of this is to be set aside for the detection, prevention, treatment, and cure of diseases of animals of the farm. According to statistics kept by the Department of Agriculture the farmers of the United States animals of the farm. lost approximately \$75,000,000 from the disease of holera during the year 1915. Of this amount I am informed the State of Indiana sustained a loss of \$3,281,620. Indiana ranks fourth in the United States in hog production, and to show that the in the United States in hog production, and to show that the ravages of hog cholera were severe I have the authority of the Bureau of Animal Industry that only Iowa and Illinois sustained greater losses from this disease. Reports show that a serum has been found which when properly used in the vaccination of hogs prevents their taking the cholera. The question of hog cholera is but one of the great many items under the heading of this bureau. Among other items of appropriations are for the investigation and study of diseases of horses,

mules, and cattle.

To the Bureau of Plant Industry is apportioned \$2.511,620. This bureau studies every disease of plant life and disseminates much valuable information to the farmers over the country. I will not go into detail in regard to activities of this burenu, but it is a well-known fact that it plays a most vital part in educating and helping the farmers. One item I wish to lay stress upon is that providing for congressional seed distribution. I have been sending seed to my constituents for four years, and I believe that the system I have adopted in sending them out has been productive of a great amount of good in the way of stimulating vegetable growing. It certainly does not seem to me extravagance to send a little package of seed to a constituent who shows no hesitancy in paying taxes to help maintain the Federal Government. It is a popular custom, and I hope it will always survive. As evidence of the popularity of this system, I want to say that at certain periods of the year my mails have been flooded with letters of thanks from constituents who report good results from the planting of the seed I have sent them.

It is proposed to appropriate \$328,735 for the use of the Bureau of Soils. This bureau studies the different kind of soils and has done much in recent years to educate the farmers along these lines. They are finding the best source of fertilizer including potash and nitrate. The people of Indiana are beginning to pay attention to enriching the soils. The Government is doing much to educate farmers in building up weak soils.

Two years have passed since the cooperative agricultural extension act of May 8, 1914, commonly known as the Smith-Lever Extension Act, went into effect. In fact, much has been accomplished in creating and perfecting the administrative bureau for carrying on the extension work in agriculture and home economics in the department and the several States.

All the States have assented to the provisions of the act either through their governors or through their legislatures. A single agricultural college from each State has been designated as a beneficiary of this act, thus providing for the unified administration of the act within the State.

Not many years ago a farmer wishing to receive highly scientific information in regard to farming had to travel in some cases hundreds of miles to some distant college to gather information that would enable him to keep pace with the growth of the agricultural industry. But now, particularly since the operation of the Smith-Lever Act under the present administration, the education is brought to the door of the farmer through an intricate system, in which the county agent conducts missionary work with the Federal and State Governments as the principal functions. The county agent acts as a general representative of the local community, the State through its agri-cultural college, and the Nation through its Department of Agriculture. I herewith quote a letter which I received from Hon. C. F. Marvin, Acting Secretary of the Department of Agriculture, which gives somewhat of a conception of the actual work being done by the department to help the farmer:

DEPARTMENT OF AGRICULTURE, Washington, October 12, 1915.

Work being done by the department to help the farmer:

Department of Agriculature,
Washington, October 12, 1915.

House of Representatives.

Dear Mr. Lieb: Your letter of October 1, requesting information regarding the operation of the Smith-Lever Act in Indiana, has been received.

For the fiscal year 1914—15 Indiana received under the provisions of this act \$10,000 from the Federal Government, and for 1915—16 will receive \$28,931. To offset the latter sum the State has made available \$18,931. In addition, \$15,261 has been set aside from the appropriations made directly to this Department for the farmers' cooperative demonstration work and \$3,650 from appropriations for other demonstration purposes. The Director of Extension Work reports that the State legislature has appropriated \$46,089 and county authorities \$65,000 for cooperative agricultural extension work. The total amount available for extension purposes, therefore, is \$182,382, of which \$110,571 is to be used for county agent work.

During the past year a strong administrative organization has been developed under Prof. G. I. Christie. Thirty-one counties now have county agents and, together with a number of trained specialists, to assist with technical advice in regard to the more difficult problems presented to the county agent.

The more important demonstrations by county agents include 494 in the selection of seed corn, 260 on orchard management, 172 on the control of out smut, 241 on liming, 418 on the growing of alfalfa, and 539 farmers grew 5 acres of corn from selected seed. The yields of these 5-acre plats were practically twice the average for the State. These acres also showed a higher net profit than the average.

In connection with the out-smut demonstrations it was found that the treated oats contained less than 0.5 per cent of smut, while the untreated oats contained sproximately 12; per cent. The cost of treating the oats was but 4 cents per acre, and it was estimated that the treated oats gave an increased yield of 5 bushels per acre.

C. F. Maryin, Acting Secretary.

C. F. MARVIN, Acting Secretary.

The pending appropriation bill fully provides for the continuance of this work which is carried on in the Department of Agriculture by the States Relation Service. The amount appropriated is \$720,000, which is in addition to the annual appropriation provided in the Smith-Lever Act passed one year ago. The Secretary of Agriculture has stated to the Committee on Agriculture that \$100,000 is to be used profitably during the next fiscal year to meet the demands for the enlargement of the extension work in the Northern and Western States. With this money available it will be possible to inaugurate the following: (1) Extension work among farm women, \$15,400. (2) Boys' and girls' club work, \$30,000. (3) Farm-management demonstrations, \$19,500. (4) County agent work, \$35,100.

The States Relations Service also takes care of farmers' institutes and home-economics investigations,

I have voted for every item in this appropriation bill which appeals to me as being of importance to the welfare of the Taking my congressional district as a whole, it is about one-half city and one-half agricultural, but I venture to say the agricultural industry wields more or less influence in the subsistence of nine-tenths of the population of the city districts. The vocation of farming is getting to be more potential in the Nation's development every day, and for that reason none of us can begrudge the liberal appropriations provided for in this bill.

Rural Credits.

EXTENSION OF REMARKS

HON. JOHN M. EVANS,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. EVANS. Mr. Speaker, legislation affording farmers the opportunity to borrow money at lower rates of interest for long periods, paying it back in small installments, has been deferred for many months in the hope that through exhaustive and care ful investigation the best and most economical plan could be ascertained. Volumes of such reports are now available, and I am glad to know that a thorough discussion is to be had on it

and action taken without delay.

I have had many objections to the pending bill which is now under discussion, but I still have hopes that before we pass it we will remedy the objectionable features by amendment. bill is a compromise between the advocates of governmental aid and those who think private capital should be employed. makes the Government a surety for the purchasers of the bonds to be sold, and undoubtedly will be a great success. I am glad to know the Democratic Party has taken this initial step for the farmer's benefit.

I sincerely hope, however, before this bill passes we will write more liberal aid by the Government into it. I believe many Members of the House favor it, and I shall vote for all such amendments with that provision predominating.

With the adoption of the Federal reserve act everybody was confident the farmer would be able to borrow money on the same footing as the merchant. The banker wants short-time loans and stocks and bonds, not land, for security. He wants to make loans of short duration so they can be called in on short notice. The farmer is far away and he can not keep in touch with him. The banker wants to trade with a man having an established business or a regular income. We can not say this about the It is a conceded fact that a farmer even with good security finds it almost impossible to get a loan when money can be put to other uses by the bank.

To meet this situation the farmer has asked for the assistance of the Government in some way, and we as his sponsors are obliged to give him the relief he merits. I know of no class of people that deserves more liberal treatment at the hands of our Government. The farmer is seeking no charity—he asks only for what is due him.

All lasting prosperity of a nation depends upon the success of the tiliers of the soil. If the agricultural districts prosper, history shows that all other classes equally find times good. Our Government should come to the relief of the farmer and do all it can to make his undertaking easier and to aid him in his uphill climb. The farming element provide subsistence for our millions in the cities, and yet we are prone to forget about them until hard times come upon us. Even the rain is often unwelcome when we know he needs it.

A successful farmer without money to assist him is a thought of the past. He must now be a business man and a bookkeeper. He has to purchase machinery, have plenty of stock, provide suitable buildings for storage purposes, and sow the best grain. Without an attractive home he can not keep his children on the farm, for the call of the city now offers better wages, advantages, and opportunities. In many parts of the country to be a farmer only subjects him to ridicule. People have long realized that farming is not a paying business unless conducted on a large scale, and then many "go broke" for lack of funds to get a good start.

According to the last census report we find that about half the normal increase in the rural districts went to the city, time loans, was introduced. This flourished in Germany, and making the rate of increase in the city three times that of the enabled the peasant proprietors to borrow money at low rates

rural sections. The reason for this is apparent. Greater opportunities, more attractions, modern conveniences, and higher salaries all add to a desire to leave the farm. The call to the city has been heard, and our boys are leaving the farm, and unless we do something to make the farm life more attractive—give him some inducement—I fear we will eventually be the victim of the same circumstances that caused the fall of the great nations we now only read about. We must make farming more pros-perous, and I know of no step lending more aid in that direction than that about to be taken now.

Some boldly assert that the farmer is entitled to no more aid than any other class of people. It may be true that the "butcher, the baker, and the candlestick maker" have the same right to governmental aid, but they do not have the same need. There is no aid that will universally help the people more and advance the general welfare than assistance to agriculture. President Wilson, in urging farm credits, in a comparison said of the farmer, "They do not stand on the same footing." We must curtail this mad rush to the factories, the high cost of living, the armies of unemployed, and the necessity for our young-the coming generation of our land-to work in our mills to provide for themselves and dependents.

In the State I represent a man, to build up a home, with the land given to him, must have ample funds. Many conservatively spend all their savings, and on account of unforeseen circumstances are forced to leave their land just at the time their labor would be most remunerative.

With good land, good buildings, and prospective crops, they are often unable to borrow money on their land to tide them over until they get some return for their toil. They are forced to go to the larger cities to work until they have earned enough to take them back and keep them and their families until they are able to get enough ahead.

I have had letters from hundreds of my constituents asking where they might borrow money on their land and valuable improvements, stating the local banks refused to make any loan to them. Need for such legislation was recognized by the Montana Legislature, which passed a measure which, to a limited extent, we hope, will aid our people.

The farmer has no set income. His life, property, and the reward of his year's labor is exposed to the vicissitudes of the weather. His success is a matter of chance and hope with him. Loss of horses and delay on account of sickness are not merely drawbacks to him but they are very expensive. If he has already negotiated a loan, the interest charges hobble him so that he is unable to purchase additional machinery or other necessities for fear of immediate foreclosure.

If the farmer is able to get a loan on his land and improve-ments, before it is over with he pays anywhere from 5 to 20 per cent interest charges. He has to pay for the title being searched, the preparation of the mortgage, the attorney's fee, the notary, and a recording fee. It may be more accurate to put it in the form of the old adage, "Fifteen minutes to get in, 15 per cent to stay in, and 15 years to get out."

For a period of over 50 years the national banks were permitted to enjoy the use of Government money, paying an interest charge of but one-half of 1 per cent. The charge now is a little higher, and the amount so loaned aggregates \$735,000,000. The banks buy Government bonds, deposit the bonds with the Government, are given national-bank currency in return, and then loan this money to the people for what they can get for it. In addition to this they get interest from the Government for their bonds.

We have appropriated about \$400,000,000 for the building of the Panama Canal, the Philippines have had the use and benefit of about \$700,000,000 of our money, we have appropriated large sums for Federal bridges, highways, harbors, and other good causes. Why not an equal governmental interest in the welfare of our farming industry by helping it prosper and indirectly aid

every class of people, advancing our home-market production?

We are the last of all Governments to help turn the wheel of agricultural advancement. We have stood back for years and have seen other countries prosper, while our rural populations in the less productive districts have been struggling for a mere existence.

Frederick the Great, that eminent soldier and statesman, in 1769, after little Prussia had fought all Europe, realizing the impoverished condition of her lands, inaugurated a system of loans called the Landschaft, which proved a wonderful success. This system obligated all borrowers for the debts of each, and it was not long until their lands were again fertile and produc-tive. But conditions in Germany are different, and this would not apply to America.

Also, in 1848, the Reiffeisen system, providing for short-time loans, was introduced. This flourished in Germany, and

of interest. The Government bought many of the bonds and gave security to the scheme.

So in France we have the Credit Foncier system, whereby the Government advances large sums to a central organization, which, in turn, has a lottery feature to promote the sale of bonds, and the profits are distributed to the members. The interest rates are as low as 4½ per cent.

Our farmers owe a colossal sum, estimated from \$4,000,000,000 to \$5,000,000,000, paying an average interest rate of 7½ per cent, exclusive of commissions, lawyers' fees, and recording charges.

It has been estimated if this indebtedness could be refunded under the provisions of this bill at the rate of 5 per cent per annum, and the farmers would engage to pay annually \$300,000,000, the same as is now being paid for interest alone, the entire debt, principal and interest, would be paid in about 25 years. This would mean a net saving of more than \$175,000,000 a year. It would also mean the extinguishment in 25 years of the entire existing farm-mortgage debt by the operation of the system provided for in the bill without increasing the annual payment over that now made to meet interest charges alone.

Under this bill we will appropriate approximately \$9,000,000, or \$750,000 to each of the 12 Federal land banks which will be established in various parts of the United States. Ten persons anywhere in these districts may come together and form "local associations" for the purpose of borrowing money from the Federal land banks. Each member must subscribe for stock in the association equal to 5 per cent of his loan, become liable for 10 per cent of his loan, but, on the other hand, gets dividends if any profit is made. The interest rate is not to be over 5 per cent and an administration charge of not more than 1 per cent on the loan. The minimum loan is \$100 and the maximum The money must be borrowed for productive purposes, to liquidate existing indebtedness, or to acquire ownership of farm lands. Amortization payments are annually made, which include the interest and a small part of the principal. The loans extend from 5 to 36 years. Members of the local associations appraise the land, and no loan shall be made for more than 60 per cent of the value of the land and 20 per cent of the value of the improvements. Agents for the Federal land banks are permitted in localities where the borrowers are far apart, and they receive a small commission for their work, banks, mortgage companies, and other chartered organizations acting in this

Personally I favor more direct governmental aid to the farmer, having the Government issue bonds to meet the amount, just the same as they issued bonds for the building of the Panama Canal. This would give the farmer money at a rate as low as 4 per cent.

I know of no bonds that would serve as a better investment for the trustee, executor, and for the investment of persons who wish a fair income from their money with sound security. The demand for such bonds would be very great.

I voted for the amendment just under consideration providing for more direct governmental aid, but it was defeated. This bill is a broad step in the right direction and will be received with gratitude by the farmer, but I would like to see him get more. This is somewhat of an experiment with us, but I do not look for any failure. We are permitted to amend it any time we see fit, and if it does not serve the purpose Congress can make any additions or changes needed. On the whole, this bill gives the farmer what he wants—low rate of interest, a long time to pay his loan, with no embarrassment in meeting the payments.

But should he be unable to meet the annual payments, what then? I favored an amendment that was offered appropriating money from the Treasury to loan to the Federal land banks to temporarily meet the obligations of the farmers in case they could not meet these payments. Droughts, floods, climatic conditions, and many of the other hardships and misfortunes that frequently visit a farmer make it doubtful whether he could comply. In such cases I feel that he should be temporarily relieved. I would like to see this amendment attached to the bill.

This morning I voted for the amendment offered by the gentleman from Oklahoma [Mr. Hastings], which failed. I then voted for the amendment offered by the gentleman from Missouri [Mr. Rubey]. I am glad that amendment carried. I believe it will cut out some of the red tape and facilitate the operations of this bill. I hope when that amendment comes from this committee to the whole House it will be retained in the bill.

As suggested above, there are some features of the bill I do not like, but I think on the whole it is a step in the right direc-

tion and a good bill, and my vote shall be cast for its enactment into law.

My sympathy and interest goes out to the farmer. I am familiar with his difficulties and problems. He faces what often seems an insurmountable undertaking. Through his untiring toil and persistence he has reclaimed the dry deserts and transformed the rugged mountain sides into fertile soil. Since the time our Pilgrim Fathers landed on our rock-bound coasts of New England he has worked unceasingly, not even stopping to demand his rights or complain. Let us now make a good bill out of this measure and show our appreciation, and thereby strengthen the backbone of our Nation.

Rural Credits.

SPEECH

OF

HON. J. THOMAS HEFLIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 6, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to provide for the investment of postal savings deposits, to create Government depositaries and financial agents for the United States, and for other purposes.

Mr. HEFLIN. Mr. Chairman, a little more than two years ago we enacted into law the Federal reserve banking act, and with its enactment gave to the country the greatest constructive banking system ever inaugurated. While that legislation was pending here Republican leaders in various sections of the country denounced it and they threw every obstacle possible in its way. They predicted that it would create financial disturbances throughout the country and produce a panic. Their opposition to its passage proved futile and their predictions untrue. It has benefited every section of the country and its successful operation has prevented, what no doubt in its absence would have been, the greatest panic ever witnessed in the world. [Applause.] This great banking system has deprived eastern money lords of their power to produce a panic. It has taken from them control of the money supply of the country, and this wonderful piece of legislation, Mr. Chairman, is the fruit of a Democratic administration. [Applause.] The author of that splendid banking system is a Democrat, the superb and able chairman of the Committee on Banking and Currency, Carter Glass of Virginia. [Applause.]

In giving to his country this wonderful law he has contributed to the prosperity and happiness of his countrymen everywhere and won for himself the lasting gratitude of a hundred millions of people. [Applause.] His statesmanship and his patriotism are of the highest order and his genius for constructing banking and currency laws is simply marvelous. This Democratic administration is fulfilling its promises to the American people. Realizing that the agricultural interests of the country have been embarrassed and handicapped because the commercial banking system has not and does not meet their requirements, the Democratic Party proclaimed in its platform its intention to provide a farm-credit system in the United States, and, Mr. Chairman, I rejoice that the day for making good that promise has arrived. [Applause.] The Senate has just passed the Hollis bill, which provides a system of farm credits, and here we are in the House considering the farmcredit bill reported by the Committee on Banking and Currency, and it will not be long until that law will be upon the statute books. The millions of farmers in this country, with billions of dollars invested in farm property, could get no farm-credit legislation from the Republican Party, in control of every branch of the Government for 16 years. [Applause.] When that party was in power a few men in Wall Street could produce a panic in 48 hours. Not only did that party refuse to provide a farmcredit system for the agricultural business of the country, but it refused to inaugurate a commercial banking system that would meet the requirements of American commerce and put an end to panics. I am surprised that the gentleman from Oklahoma [Mr. Morgan] is opposed to a measure that puts into operation a banking system that will greatly benefit the farmers of the country.

Mr. MORGAN of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. HEFLIN. I have but little time. Mr. MORGAN of Oklahoma. The gentleman does not wish to misrepresent me?

Mr. HEFLIN. I do not. Mr. MORGAN of Oklahoma. The gentleman says that I am opposing this bill.

Mr. HEFLIN. I got my impression from the gentleman's

Mr. MORGAN of Oklahoma. I was only criticizing certain features of the bill.

Mr. HEFLIN. So the gentleman is going to vote for it? Mr. MORGAN of Oklahoma. I do not know how much it is going to be amended, but I think it is unfair for the gentleman to say that everyone who criticizes the bill is opposing it.

Mr. HEFLIN. I heard the gentleman's speech, and I understood from his remarks that he was opposed to this bill, and I feared that he would vote against it. I trust that he will see his way clear to support it. I hope to see the bill amended in several particulars. I think that it ought to be amended, but I do not want to see it defeated because it is not entirely to the liking of every man who has views on the subject. And I want to say to the real friends of farm-credit legislation that the enemies of this measure are working in various ways to defeat any and all legislation of this character. One form of opposition is that which says, "If you can not get a certain bill, vote against every other bill." Another form of opposition is that which says, "This bill does not go far enough, and I would wait until I could get one that does go far enough." Well, Mr. Chairman, we have no farm-credit system now at all and the thing for us to do is to put one into operation just as soon as possible, and after the system has been inaugurated and is in actual operation we can amend the law and improve it in whatever way we think necessary. [Applause.] We are about to put into a new field an agricultural banking system. In the United States it is something new under the sun and is in a sense an experiment, and I do not expect the system in the outset to please everybody, nor do I expect to see it contain every provision that I think should be in it. I feel safe in saying that the committee which presented to our consideration the greatest commercial banking system ever written has given to us the machinery through which will be inaugurated a great and beneficial agricultural banking system. [Applause.] I have not the time to discuss it in detail. We have already had a masterful discussion of it by a member of the committee, Mr. Moss, a Democrat from Indiana. He has been all over the Old World studying the workings of farm-credit banks, and for three years he has been aiding in working

out the system submitted to us to-day. [Applause.]

Mr. Chairman, I want to say just here that there are three provisions in this bill that would cause me to support it. First. this farm-credit system is to be controlled separate and apart from the commercial banking system by a Federal farm-loan board, to be appointed by the President; second, the rate of interest on loans shall not be more than 6 per cent; and, third, the money loaned shall be for farm operations and agricultural business purely. This bill provides money for agricultural purposes and inaugurates a system of long-time loans at a low rate of interest. Mr. Chairman, agriculture is the corner stone on which all other industries rest, and the great mass of people engaged in agricultural pursuits in the United States are entitled to a banking system that will meet the requirements of their busi-The 60 and 90 day loan, with its high rate of interest, may, and does in a way, meet the requirements of commercial transactions, but it does not furnish the accommodations needed by the farmer in his business. [Applause.]

Let me illustrate the situation. Here are three men. of them owns a coal mine, one owns a factory, and the other owns a farm. The mine owner is ready to place coal on the market every day in the year. The manufacturer places products of his factory upon the market all along through the year, and both the mine owner and the manufacturer are selling goods and receiving money all during the year, but the farmer is engaged in a different kind of business. It takes him 12 months to make a crop and market it. The coal-mine owner and the manufacturer borrow money for 30, 60, and 90 days, but the farmer must have his loan for at least 12 months. And then, if the condition of the market is such that he does not desire to sell his produce, he ought not to be forced to place that which he has labored 12 months to produce upon a market, where to do so means a sacrifice and loss instead of a living profit. [Applause.] The laborer is worthy of his hire, and the great agricultural army of the United States is entitled to a banking system that will meet the peculiar demands of the agricultural business. The commercial banking system, instead of helping the farmer, has in too many instances taken advantage of his condition, and by refusing him the accommodation desired profited in the purchase of his produce forced upon the market. Instead of helping him to hold his produce for a good price, it has too often been the means, by withholding aid, of compelling him to sell in an unsatisfactory market. failed utterly to supply him with money at a reasonable rate to carry on his farm operations and to enable him to buy farms and improve them. [Applause.] This failure of the commercial banking system to meet the demands of agriculture shows clearly that the agricultural business needs and must have an agricultural banking system. One that will encourage and aid agricultural pursuits and furnish for a long time and at a low rate of interest money to those who want to buy farms and operate them. [Applause.] This banking system is being inaugurated for the special purpose of serving the business of agri-This banking system has a mission to perform, sepaculture. rate and distinct from that of the commercial banking system. The short-time loan, with its high rate of interest, has stood too long between the farmer and successful business. When I consider that the farmer, for all these years, has been carrying on his farm operations and conducting his business without banking facilities suited to his needs, I marvel at the measure of success that he has achieved. [Applause.] Thousands and hundreds of thousands of farmers have failed in business because they could not get from time to time the financial accommodations needed. This is the dawning of a new day in the business of the farmer.

The Democratic Party is recognizing the rights of agriculture to have a banking system suited to its needs, and our party proposes to see to it that the farmers of America are no longer dependent upon a system not at all suited to their business. [Applause.] And we are now inaugurating a system peculiarly suited to the business of agriculture. We are serving that army of industrious workers who, in the sweat of their faces, produce

that which feeds and clothes the world. [Applause.]

No credit is better or more fundamentally sound than farm credit when the power behind that credit can be expressed through a practical agricultural banking system. [Applause.] Mr. Chairman, there are many people in this country with large sums of money who had rather lend it on farm notes and mortgages for a period of 15 and 20 and 30 years at a low interest rate than to make a short-time loan at a higher rate of interest on securities of a speculative nature. I was talking with a gentleman from New York last year, and he said, "I know of several large estates where the heirs are anxious to invest their money or lend it at 4 per cent and for 25 or 30 years' time. They had rather place this money in an agricultural banking system at a low rate of interest and for a long period of time than to lend it to men who speculate on the exchanges, for there is too much uncertainty and risk in that kind of business." Continuing, he said: "You will find that after your farm-credit banks are established many of the people of the character that I have mentioned will place their money with these agricultural banking institutions.

Mr. Chairman, as I said here on a former occasion, Germany and France both have farm-credit banks, and they have been of great benefit to the farmers in those countries, and I believe that this farm-credit system that we are establishing here will be of incalculable benefit to the farmers of the United States, and I believe that within 10 years we will have in this country the greatest agricultural banking system in the world.

Mr. Chairman, but for the farmer and the farm the mine and the factory would go out of business, the merchant would have nothing to do, and banks would be no more. Then the most important business, the one on which all classes and conditions are dependent, is the business of the farmer, and in spite of the handicaps and hindrances which that business has encountered it has grown until to-day its value in dollars runs into billions, I repeat that a business of that magnitude is entitled to and must have a banking system suited to its needs. [Applause.] I rejoice that my party is providing an agricultural banking system that will place the farmers' business upon a sound financial basis. [Applause.]

Hundreds of thousands of our people desire to buy farms. This bill opens the door of opportunity to the man who wants to provide a home for himself and family on a farm. It will increase and multiply the number of home-owning people in our

country. [Applause.]

To own a home and a farm is the dream and fond ambition of thousands of American boys. To be able to call some spot of earth his home and bring from its soil subsistence for himself and family is the longing of thousands of worthy young men in America, and, Mr. Chairman, I believe that this farm-credit system will be the doorway to that splendid accomplish-ment. [Applause.] The Stupendous Naval Bill-A Nation Gone War Mad.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL. OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 9, 1916.

Mr. RANDALL. Mr. Speaker, I voted against the naval appropriation bill which passed this House carrying a total of over \$269,000,000. I voted against the Army reorganization bill which has now become a law, and which will cost the peo-ple \$250,000,000 annually as soon as its minimum provisions are Here is a grand total of \$519,000,000 soon to become an annual charge against the taxpayers; and the fortifications measure and others are to come yet, with their millions. Last year's naval bill appropriated one hundred and forty millions, year's naval bill appropriated one nundred and forty familions, and it provided the largest building program, by 25 per cent, in the history of this country. We have jumped the naval bill in one year from one hundred and forty millions to two hundred and sixty-nine millions, and the Senate threatens to add nearly another hundred millions! Then we have swelled the Army appropriation from one hundred millions last year to two hundred millions. dred and fifty millions this year—just as soon as the federalized National Guard companies are organized. They will be ready before the December session adjourns next March.

We are a Nation gone war crazy. All this in the name of pre-paredness; but that is an alias. The man behind the gun (maker) is coining hysteria into millions overnight. Wall Street runs riot in fabulous riches because Americans fear a foe who exists only in fevered brains.

Navies are strong or weak only in a relative way. Their strength is found by comparison with the size of other navies. Under this analysis the American Navy has grown amazingly in 22 months. Three hundred and sixty-two thousand fighting tonnage of the German Navy has gone to the bottom of the sea in that time, and England has lost far more. On that basis our timid victims of a jingo press and the agitation propaganda of conscienceless makers of war munitions should recover their equilibrium. The American Navy grows in tonnage in exact ratio as other navies lose tonnage, without our expending a dollar.

Then let me say to our palpitating preparedness friends that cool judgment calls for discrimination in the purchase of future protection—if protection can only be had on the theory that war is the only court of protection. This naval bill rushes along the old lines of naval construction. It puts over a hundred million dollars into five battle cruisers, where the profits of gun-makers and armor-plate patriots run into fabulous sums. These five battle cruisers would last about 20 minutes if they should incautiously become entangled in a nest of submarines.

The submarine provision of this bill calls for about thirty millions, the cost of one and one-half of a battle cruiser; yet 50

submarines are secured.

Thirty years ago the naval appropriations were twenty millions annually; to-day they have reached the staggering total of two hundred and sixty-nine millions. The influence of profit makers is responsible. If the entire duty of manufacturing war supplies were assumed by the Government, the country would be unable to find the post-office address of the Navy League.

It is a time when the people should pack their fevered brows in ice and do a little real thinking.

Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. CHARLES H. SLOAN.

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. SLOAN. Mr. Speaker, one of the especially important features of the 1917 naval appropriation bill is the provision for building and equipping an armor-plate plant.

Nearly three years ago Hon. S. R. Barton, then representing the fifth congressional district of Nebraska, became deeply impressed with the need and propriety of such an enterprise on the part of the Government. It has taken the majority of this

House nearly three years to reach the point of putting into effect the views so well expressed by him on the floor of the House on October 10, 1913. On that occasion he said:

"Mr. Barron. Mr. Speaker, the word 'economy' is the watchword of every platform orator and is preached to the people in the platforms of the several political parties. This word seems to admit of so many interpretations when applied to State and governmental business that a retrospective view of the work that is now and has been done convinces one that Webster made an error when he wrote his definition.

'I look out of the window of my office and can see one definition of economy in the destruction of expensive and useful buildings now being razed to the ground. To do this costs the Government practically \$4,000,000, and while the work has just commenced it will take much more of the public fund to fulfill

the object of this devastation and build a park.

No one on earth appreciates a park more than I. The green grass, the green trees, and the open air add to the many comforts afforded, and were it not for the fact that the city of Washington already has scattered throughout her confines many beautiful parks, built mostly by the United States Government. I would feel that such action is economy, as it provides for the rich and poor alike a haven of rest.

"But as the United States Government is now paying to the property owners of Washington approximately \$600,000 per annum in rent for buildings in which are housed various Government offices, and in which are contained many of our valuable and precious records in unsafe quarters, it seems to me that a better definition of the word 'economy' would be to cease building parks and build for the various branches of the Gov-ernment buildings and homes and thereby furnish a safe place for keeping the records and valuable papers of the departments.

"Right here let me call attention to our main thoroughfare—

Pennsylvania Avenue. Would it not have been far better for the Government to have purchased the unsightly buildings, especially those adjacent to the Capitol Building, and razed them and have erected in their stead imposing structures to house the various offices of the different departments that costs the Government an annual rental of \$600,000? This, in my mind, would be more in keeping with the plan to beautify Washington and at the same time be a saving to the Government.

"ARMOR PLATE AND ARMOR PLANTS.

"Since 1887 we have been contributing to the Steel Trust more than a million dollars' profit annually. While it seems impossible to ascertain the exact cost of producing armor plate, gun forgings, and building an armor plant, for at all times has our Government investigators been baffled by this monopoly; yet throughout the various reports issued by the investigators we have gained enough information and sufficient light to enable us to know without a doubt that we are being systematically robbed.

"The problem of a Navy is a big one and involves one of the great expenditures of the Government, and while the American people as a whole desire that we be in a position to protect our country, they do not desire that we pay tribute to the trusts and moneyed interests in securing this protection, especially to those that have from time immemorial fattened on war, war

scares, and the necessities of the public.

"The building of a Navy is like Tennyson's Brook, it goes on forever; and it may also be likened to fashions for women, as it seems but a short time when a woman's skirt or hat becomes oldfashioned; and thus it is with an armored cruiser, they soon become obsolete and are relegated to the scrap heap of 'has beens.' In proof of this statement I insert a statement from the Navy Department showing a list of vessels stricken from the Navy Register during the past three years:

"LIST OF NAVAL VESSELS STRICKEN FROM THE NAVY REGISTER DURING THE FISCAL YEAR 1911. "Alliance, sailing ship.
"Hist, converted yacht.
"Mist, converted yacht.
"Mindoro, gunboat.
"Paragua, gunboat.
"Pensacola, receiving ship.
"Stiletto, wooden torpedo boat.
"DURING THE FISCAL YEAR 1912.

San Marcos, ex-Texas, old battieship.

"San Marcos, ex-Texas, old battleship.
"Locust, tug.
"Yosemite, ex-Ingalls, old Army transport.
"McKee, torpedo boat.
"Evicsson, torpedo boat.
"Fankce, transport; lost.
"Atlanta, old cruiser.
"Talbot, torpedo boat.
"Isla De Cuba, captured Spanish gunboat.
"Alvarado, captured Spanish gunboat.
"Dubing the fiscal year 1913.

Jamestown, returned to Navy by Marine Hospital Service.

"Rowan, torpedo boat.
"Porter, torpedo boat.
"Wabash, receiving ship.
"Nipsic, prison ship.

"Puritan, old monitor.
"A-I, old submarine.
"Chickasaw, tug.
"Manila, prison ship.
"Newark, old cruiser.

"A constant warfare is waged by the manufacturers of armor and the manufacturers of projectiles to pierce it, so that a ship that to-day may be a first-class battleship, which costs us millions, next year may be useless. A most powerful influence is back of the building of battleships—patriotism; the trusts, that furnish the material to build them; the ambitious naval officer seeking promotion, are the most potent-so that until all nations a tree to cease building battleships and leave their destinies and differences to a board of arbitration the building will

"The Bureau of Corporations have been making an extensive investigation of the steel industry, and quite naturally one would think that in this inquiry some attention would be devoted to the production of armor plate and gun forgings. Thinking that possibly some information had been gleaned along this line I communicated with the department which brought forth

the following letter:

DEPARTMENT OF COMMERCE,
BUREAU OF CORPORATIONS,
Washington, January 14, 1913.

Hou. Silas R. Barton, House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

DEAR SIR: Your letter of the 12th instant making inquiry whether this bureau's report on the steel industry discusses the cost of armor plate is duly received.

All data regarding cost of production are contained in part 3 of the above-mentioned report, which you have apparently already received. Part 2, which also discusses cost of production, was merely a preliminary report on the subject. The costs of armor plate are not shown or discussed in either of these reports, and no investigation was made by the bureau on this subject

Practically all the armor plate produced in the United States is made at three plants, and the United States Government is the only important purchaser. The Navy Department has from time to time made investigations as to the cost of armor plate and the prices. For these reasons the bureau did not deem it necessary to include this product, especially as it was not practicable to cover the entire field of the steel industry.

especially as it was not provided industry.

In compliance with your request, I have directed that there be sent to you the two previous volumes of the report on the steel industry, namely, parts 1 and 2.

Very respectfully,

Francis Walker,

Acting Commissioner.

"The only reason given for not making inquiry concerning this branch of the steel industry is that the Navy Department has from time to time made investigations as to the cost of armor plate and prices. Let us examine these reports of the naval investigators and see if they have given us dependable data on which to base definite conclusions:

"On December 31, 1895, the United States Senate passed a resolution inquiring into the increase of the price of armor; whether same is fair and reasonable; whether the issuance of any patents was expedited at the request of the Navy Department, and who were the owners of said patents; and whether any legislation is necessary to cheapen the price of armor for vessels. On February 11, 1897, the Senate Committee on Naval Affairs submitted a report in conformity with this resolution, and which report was confined principally to recommendations providing for legislation to regulate the action of naval officers and Government officials who had patents issued to them as well as to regulate the employment of naval officers by Government contractors. But the report shows that the Government was paying, and had paid, to the Carnegie Co. and the Bethlehem Steel Co. under Secretaries Herbert, Whitney, and Tracy, hem Steel Co. under Secretaries Herbert, Whitney, and Tracy, sums for armor plate ranging from \$500 per ton for the lowest to \$600 for the highest, the Cleveland Rolling Mill Co. being the only other bidder. The same report shows that the Bethlehem Iron Co. sold to England this same armor for sums ranging from \$413 to \$438 per ton. While it was impossible for the Government to secure any information from the companies direct regarding the cost of the manufacture of armor plate, naval officers acting in the capacity of Government inspectors reported that in their opinion the average cost of labor and material to produce a ton of armor plate would amount to \$250. The report further states 'this sum now appears excessive,' and the committee reached the conclusion that until further inquiry is made \$350 per ton ought to be the limit for armor purchased by the United States. However, in 1896, when this sum was specified by amendment to the naval appropriation bill for the year end-ing June 30, 1897, the House disagreed and the matter went to conference, and in the disagreement a clause was inserted in its stead directing the Secretary of the Navy to examine into the actual cost of armor plate and the price for same which should be equitably paid.

"In compliance with the instructions given in this clause Secretary Herbert caused an investigation to be made, and issued a voluminous report in House Document No. 151, Fifty-

fourth Congress, second session, which tells the difficulty of securing information from the officials of the armor plants, but through Government inspectors, naval officers, and others detailed by the Government various estimates were submitted. giving the value of armor plants, and so forth; also an English and French estimate of the cost of the erection and establishing of an armor plant. The English estimated cost of establishing an armor plant, exclusive of the cost of land, is \$1,590,074, and the French estimate 3,500,000 francs. A board consisting of Lieut. Karl Roher, Lieut. Kossuth Niles, and Lieut. A. A. Ackerman, which was called the 'Roher Board,' reported that a complete plant, including land and everything, can be built for the sum of \$3,537,000, and while the Roher Board reported the components of the cost of 3,000 tons of armor amounted to a sum sufficient to make 1 ton cost \$423.41 they included in their estimate every possible expense and contingency that they could think of, thus giving the manufacturers the benefit of their estimate. Lieut. Commander Rogers, inspector of ordnance, Bethlehem Iron Works, reports his estimate as follows: Reforged armor, \$227.63; single-forged armor, \$215.24.

"However, these prices may vary some, and the variation depends upon the output per annum. This confirms the state-

ment in the previous report that the estimated cost of \$250 per ton made at that time was excessive. In this same report, on page 21, the Secretary of the Navy states that the Bethlehem and Carnegie companies were in sharp competition for the Russian trade, and that the Bethlehem Co. secured the contract for armor for one ship at the low price of \$249 per ton, at the same time agreeing to manufacture armor for two other ships, if required, at the same price, but in the same report, in Exhibit

No. 7, the following statement was noted:

"It is known that after the first Bethlehem contract with the Russian Government there was a meeting in Paris of representatives of nearly all, if not all, the armor makers of the world. Whether any definite arrangements were made as to the price to be paid for armor in the future is not known. It would seem, however, that some general arrangement was reached fixing the minimum price of nickel-steel face-hardened armor of superior quality at not less than about \$520 per ton.

"On February 8, 1898, Mr. Hale, chairman of the Committee on Naval Affairs, United States Senate, issued a report and hearings before the committee relative to the construction of an armor-plate plant, and in which Hon. John D. Long, Secretary of the Navy, stated that bids were received and opened by the Navy Department for the con truction of an armor plant, but that he was not authorized by Congress to contract for same, thus placing the blame direct on Congress. (S. Doc. No. 127, 2d sess. 55th Cong.)

"Pursuant to the requirements of the clause in the naval appropriation bill of March 3, 1905, making appropriations for the naval service for the year ending June 30, 1906, for making a thorough inquiry as to the cost of armor plate and armor plant, the Acting Secretary of the Navy, Hon. Truman H. Newberry, issued a report (H. R. Doc. No. 193, 59th Cong., 2d sess.),

in which the following statement is made:

"From both the Bethlehem and Carnegie companies the board received much interesting information covering the value of investments in their armor plants and the scale of wages at present prevailing therein. Beyond a broad statement of the amount of the capital invested in its armor plant the Midvale company, for reasons of policy, declined to furnish the board with any detailed information along the line of its inquiry; all the companies declined, as violating a proper business secrecy and as contrary to their interests, to submit to the board a detailed statement of the cost of armor production as determined by them.

"This same report refers to part 2, House Document No. 151, Fifty-fourth Congress, second session, in which Secretary Herbert makes a supplementary report on the price of armor and the cost of an armor plant. It was deduced that the Carnegie plant was worth \$3,000,000; however, Prof. Philip R. Alger and Mr. A. S. Dunham, who were appointed by the Secretary of the Navy to make this appaisement, made a report of their estimate, which was \$3,376,000.

"On page 32, House Document No. 193, the board again calls attention to the difficulty in securing information from the

manufacturers, and goes on to say that-

"for obvious reasons each armor-making company has declined to give the board figures showing what it estimates as the actual cost to it of armor production.

"However, thus handicapped, they continue on with their investigation, and after having gone over and revised their esti-mate as given in House Document No. 151, so as to agree with the present cost of labor and material, come to the conclusion that the production cost per ton amounts to \$244.27 and the full cost from \$273.38 to \$295.89.

"On May 27, 1913, the Senate passed a resolution requesting information from the Secretary of the Navy with reference to armor plate and its manufacture; and on July 12, 1913, the Secretary of the Navy, through Senate Document No. 129, Sixty-

third Congress, states two important things, namely: First, the present situation in regard to armor plate and the reasons which have convinced him that the question of a Government manufactory should be taken up at the earliest possible moment; second, the practical problem that must be solved before the determination as to the wisdom of constructing a Government plant. No figures sufficiently accurate to base an actual appropriation for the construction of an armor-plate factory are at present available, nor can any such figures be obtained until an investigation has been made by some committee or agent given power by Congress to go over the books of steel corporations now making Government armor.

"It appears also from this report that the foreign Governments are awakening to the fact that they are being overcharged by the manufacturers of armor plate, which bears out the statement given in Exhibit No. 7, House Document No. 151, that there is a world-wide understanding among the manufacturers to keep up the price. However, France, Russia, Japan, and other countries have built, or are building, plants of their own, while Italy is buying abroad to break up the monopoly there.

"This report further states that the last investigation, made at the beginning of President Roosevelt's second term, recommended that a plant be erected; and the appropriation of the year following gave the Secretary money and authority to build such a plant, but for some reason the administration failed to construct a Government plant after authority was given. Later on the armor-plate manufacturers raised their prices from \$346 per ton in 1906 to \$420 per ton in 1907, and last year they advanced it to \$454 per ton.

I have read with considerable amusement editorial comment declaring the idea of the Government building and operating an armor plant revolutionary and impractical, and that a plant operated by the Government would not be a success. No doubt the same argument was used when a powder plant was proposed, but the plant was erected and is now and has been since 1901 operated by the Government. The tables following will disprove by actual application those editorial comments:

Smokeless powder ordered by the Navy from private manufacturers since the establishment of the powder factory at Indianhead, Md.

"The Secretary of the Navy is deeply interested in establishing an armor plant, and gives as his reason that it will break up the combination of the steel interests and give us this necessity at cost. I hereby insert a letter addressed to me September 29, which gives you his opinion and the benefit of his researches:

SEPTEMBER 29, 1913.

My Dear Mr. Congressman: I am deeply interested to know from you that the Navy Department is to have your earnest support in the effort to secure a Government armor-plate factory, and in view of your advocacy of such a plant I take the liberty of saying to you that I do not believe any permanent relief from prices which are too high and fixed without competition can be had unless such a factory is established. Because this is my absolute conviction, I sent to Congress on July 12 last a letter in response to a resolution of the Senate of May 27 asking for information relative to the cost and manufacture of armor plate. In this letter I earnestly recommended that Congress make a thorough investigation of the cost of a Government armor-plate factory as well as the cost of manufacturing armor plate in private concerns dependent upon Government patronage. There is scant data available at present upon which to base an estimate, but I requested the Chief of the Bureau of Ordnance to make an estimate, which was, in substance, as follows:

at present upon which to base an estimate, but I requested the Chief of the Bureau of Ordnance to make an estimate, which was, in substance, as follows:

"The cost of a plant capable of turning out 10,000 tons a year, which is enough to build one battleship every year, is estimated at \$5,466,000, and the cost of the armor at \$314 a ton. This estimated is considerably in excess of the figures given the Government by the last board which investigated the subject. But even at this estimated cost of the plant and the cost of \$314 per ton of armor plate there would be effected a saving of \$140 a ton over the price now paid, i. e., \$454. On 10,000 tons the Government would save \$1,400,000 per annum. Deducting 4 per cent as the interest on the money used in building the plant, there still remains a net saving to the Government of \$1,061,360."

This is a saving well worth the consideration of Congress.

The three companies equipped for turning out armor plate—Carnegic, Bethlehem, and Midvale—have for years been getting the Government contracts at practically their own figures. There has been but the slightest variation in their bids—a few dollars one way or the other. I hoped it would be different this year, but when bids for the armor of battleship Na. 39, now building, were opened during the latter part of August it became more than ever apparent that if the Government is to secure the benefits of competition additional responsible sources of supply must be secured even if it is necessary for the Government tastle to go into the business of erecting an armor plant. In response to the department's luvitation for bids the prices named by the Carnegie, Bethlehem, and Midvale companies on armor were precisely the same, viz: On class A-1, \$454 a ton; on class C (turnet armor), \$518 a ton; on class A-1, \$454 a ton; on class A-2 (turnet armor), \$518 a ton; on class B, \$496 a ton; on class C (bronze), \$1,875 a ton. On class C armor the Carbon Steel Co., of Pittsburgh, put in a bid of \$448 a tom \$8100 a ton lower than any of

Any information given me must be open to Members of Congress and the public.

I feel sure that Congress will not fail to back up the department in whatever steps seem best to obtain armor at a fair price. The untold possibilities for saving in a Government armor plant are indicated by the fact that the Government is now manufacturing a good part of its own guns for the armament of its ships, and also a large part of its own powder, at greatly reduced prices over those formerly paid to private concerns. The output of the Indianhead powder factory, operated by the Government, is about 3,000,000 pounds of powder, new and reworked, per year, and it is estimated by the Bureau of Ordnance that the saving over powder bought on contract is 23 cents a pound, which makes the annual saving to the Government by its own manufacture \$690,000. It is estimated that, considering the building program for this year, the annual requirements for the next four years would be 6,650,000 pounds, and at a cost of 23 cents per pound the annual saving to the Government would amount to \$1,529,500. As to the saving on guns, it is estimated that fifteen 14-inch guns would cost by contract \$1,188,000 and by Government manufacture \$25,800, representing a saving of \$364,000; of twenty-eight 5-inch guns, by contract \$299,800, and by Government manufacture \$212,800, a saving of \$77,000. The battleship building program for 1914 contemplates one battleship, six destroyers, one transport, and one supply ship. It is estimated that the armament for these vessels would cost the Government \$1,556,550 if bought in open market and \$1,274,110 if manufactured at a Government gun factory. The saving in the latter case would be \$582,440. If we can save so much by manufacturing a part of our powder and guns, it stands to reason that we could save more by manufacturing our own armor.

As a matter of fact, within the past few weeks the hospitality of the Navy Department to competition has resulted in the saving, in round

guns, it stands to reason that we could save more by manufacturing our own armor.

As a matter of fact, within the past few weeks the hospitality of the Navy Department to competition has resulted in the saving, in round figures, of half a million dollars on the equipment of battleship No. 39.

The Government has saved this much on a comparatively small part of what goes into the battleship. If we can reduce the price on structural steel, medium steel plates, casings for turbines, etc., why not on armor plate? The old identical price of Bethlehem and Midvale on structural steel plates had been set at about \$284 at on. There was a welcome newcomer which ventured in when the bids were opened, on August 22—the Carbon Steel Co.—and its bid was \$187.04 a ton, a saving on the 3,900 tons required of \$387.261. This was 34 per cent less than the previous prices. Bids on other material, with outside competition, resulted in a saving of \$19,000 on medium steel plates and of over \$3.000 on angles, irons, and similar small parts. When it came to the casings for the enormous turbines of No. 39, Bethlehem and Midvale, apparently feeling safe in their conviction that they were the only plants capable of tackling the manufacture of these huge forgings, submitted bids of \$160,272 and \$169,568, respectively. But the new policy of the depart-

ment had attracted the attention of a great foreign firm which instructed its New York agents to put in a really competitive bid. Its price was only one-third of that offered by the two American firms. It was against the desire of the department to go abroad for anything that could be purchased at home, but the situation demanded heroic treatment, and the bid of the English firm was accepted at a saving of \$102.000 on this item alone. Thus, on the turbine forgings, the structural steel, etc., the saving has run over the half million dollar mark, thanks to competition.

Of course I recognize that there are difficulties in the way of any

Of course I recognize that there are difficulties in the way of any new departure, and it is not my desire that the Government should make all the armor plate needed, if private concerns shall meet us on a competitive basis. But this is too great a Government to sit still and allow any two or three companies to fix identical prices. Unless something is done they have the Government at their mercy.

Thanking you for your cooperation, I am,
Faithfully, yours,
Hon, S. R. Bapton.

JOSEPHUS DANIELS.

Hon. S. R. Barton, House of Representatives, Washington, D. C.

"The first investigating committee, like a new-born calf, wended its wabbly way through the meadow and emerged at the starting place without gathering much substance, and each subsequent investigation has followed the same winding trail with the same result. We have not secured enough reliable data on which to base a plan for introducing a bill for the erection of an armor plant. While we know that it would be a great saving to the Government, to be businesslike, we should know the cost of erecting a plant and the cost of producing the different grades of armor plate.

"The Secretary in his letter of July 12, Senate Document 129, recommended that Congress make full, thorough, and early investigation of the cost of an armor-plate factory and the cost of manufacturing armor plate in concerns dependent upon Gov-

ernment patronage.

"Promptly responding to his recommendation, I introduced House resolution 204, July 18, which reads as follows:

"Resolved, That the Commissioner of Corporations be directed, and he is hereby authorized, to make a full and complete report of the cost of an armor-plate factory and the cost of armor plate and gun forging in factories owned by concerns dependent on Government patronage, and that he report his findings to this body within four months after the adoption of this resolution.

This resolution is now in the hands of the Naval Committee,

and I plead for an early and favorable report.

"Coming from a purely agricultural country, I am deeply interested in this subject and can see great future possibility in the development of semiarid sections of our great country; but to secure results Government assistance is necessary, and Government funds could not be turned into more profitable channels

for the benefit of the people as a whole.

"In the last 17 years, or dating from the Forty-sixth Congress, when the first agricultural appropriation was made as a separate and distinct item, we have appropriated for agriculture \$146,151,999.06. At the same time and for the same period we have appropriated to the Naval Department \$1,718,759,451.97. These appropriations tell more than pages of record. desire to be understood as opposing adequate appropriation for the Army and Navy, but I do desire to be understood in standing for economy in the conduct of these great departments, to the end that the great savings that it is possible to make may be turned into the agricultural development of this great

"The Secretary has told you in his letter about the savings of our powder plant. The actions of Congress in the years past proves that they were convinced that an armor plant would be a great saving to this country. The fact that other countries a great saving to this country. have installed plants prove their conviction. Why should we longer delay? We have bureaus empowered to go to the very theart of all other business of this country; we have done what the world proclaimed was impossible—built the Panama Canal. Must we, with all our power, all our strength, and all our intelligence, again run up the white flag for the steel barons?

"This temporary saving spoken of by our Secretary only comes when the trusts are threatened. Just as soon as danger clouds disappear they again, like Shylock, demand their last pound of flesh. The great majority of this Congress has declared that they were in favor of economy in Government, and I feel sure that with me they will plead for early action on this resolution, so that we can free ourselves from the tremendous selfish power of this trust-a power exercised so potently when our Nation is at peace and so arbitrarily when our Nation is involved in war. In taking this action and saving our country over a million dollars annually, we at the same time deal a tremendous blow to the mother of trusts—the Steel Trust."

Ex-Congressman Barton can view with pride the action of this House in the passage of this bill in its present form, so far as the armor plant is concerned, and point to it as one of the many creditable acts of service performed by him for his country while a Member of the Sixty-third Congress

Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1916.

Mr. BORLAND. Mr. Speaker, I desire to give my approval in the strongest possible terms to the following clause in the naval appropriation bill:

Lyon the conclusion of the war in Europe, or as soon thereafter as it may be done, the President of the United States is authorized to invite all the great Governments of the world to send representatives to a conference which shall be charged with the duty of suggesting an organization, court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament, and submit their recommendation to their respective Governments for approval. The President is hereby authorized to appoint nine citizens of the United States, who shall be qualified for the mission by eminence in the law and by devotion to the cause of peace, to be representatives of the United States in such a conference. The President shall fix the compensation of said representatives and such secretaries and other employees as may be necessary, is hereby appropriated and set aside and placed at the disposal of the President to carry into effect the provisions of this paragraph.

This proposition, I am proud to say, originated with my colleague from Missouri, Representative Hensley, member of the Naval Affairs Committee. It will receive the approval of every American citizen except that comparatively small group who are interested in war from the standpoint of commercial profit. I am, myself, a believer in national defense, adequate, complete, and efficient in its character, as long as present international conditions continue. I think it would be criminal negligence for an officer of the Federal Government, charged with the maintenance of the safety and dignity of this Nation, to permit our homes and our firesides to be left defenseless on account of some private theory he might hold as to the desirability of universal peace. I wish I could believe that a failure on our part to prepare for defense would be a sufficient guaranty of peace, but in the present condition of world politics I can not so believe.

I have no fear of militarism in this Republic, and especially in connection with the maintenance of an adequate Navy, but I do think that it is my duty as a sworn officer of the Federal Government, charged with the heavy responsibility, which I have no desire to shirk, to see that the ordinary and usual precautions are taken to protect the Nation against a violation of its rights. The neglect of such precautions can not be remedied at the last minute by any amount of enthusiasm or loyalty to the flag. In common, however, with all those who regard war as almost the greatest evil that can happen, I look forward to the time, which I believe is coming, "when the battle flags are furled in the parliament of nations, the federation of the world; when the common sense of most holds the fitful world in awe, and the universe reposes lapped in universal law." That time may be far off, as some think, or it may be nearer at hand than we believe. At all events, we should stand for the principle itself and strive to bring about its realization.

The highest honor that can come to our country is to have a part in the restoration of peace in the present world war. highest destiny which we can fulfill as a Republic is to impress upon the world our democratic theory of equal rights and of government founded upon justice and not upon force. The broadest thinkers of our Nation are to-day engaged upon the problem of international arbitration in some form which may be effective in preventing appeals to arms and yet preserve to the smaller and weaker nations the right to follow their own na-tional aspirations and preserve their own national integrity. There is a tremendous difference in our minds between the doctrine of "America first" and that of "America over all."

The first is patriotism, the second military jingoism.

Let us invite, therefore, the nations of the earth, who are weary of this horrible struggle, who realize that it is a mere contest of endurance and brute strength, who have learned through bitter experience that there is no Christianity in war, who must take up again after the close of the struggle the burden of national life with a crippled and decimated population filled with widows and orphans, and with desolated homes, ruined cities, and blighted fields; with a crushing burden of war debt to be paid by generations yet unborn; with all of the arts of peace, progress, and civilization twisted and strained

into the channels of war; with false conceptions of military glory and the value of the service of military heroes to their country; with the pages of their history written in blood and brutality, let us invite these people to share America's ideal of peace by international agreement, where respect shall be paid to right and not to might.

Even a small beginning in this direction is a mighty conception and worthy of the great Congress of the United States. It will mark an epoch in the world's history and will show that America is truly a world power, but a power for good and not

for greed.

Resolution Urging Support of the Smith-Hughes Bill for Advancing Vocational Education.

EXTENSION OF REMARKS

HON. JAMES B. ASWELL.

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 5, 1916.

Mr. ASWELL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a short resolu-tion indorsing vocational education.

The resolution is as follows:

RESOLUTION URGING SUPPORT OF THE SMITH-HUGHES BILL FOR AD-VANCING VOCATIONAL EDUCATION.

At its recent session in New Orleans, April 17-20, the following resolution moved by J. W. Brister, president of the State Normal School, Memphis, Tenn., were adopted by the Southern Conference for Education and Industry:

"Be it resolved, That we commend the Smith-Hughes bill for advancing vocational education to the Members of both the House of Representatives and the Senate of the United States, urging its speedy passage to the end that a more practical vocational training may be provided by the normal and high schools of the country.

"We furthermore urge the necessary cooperative legislation by the different States, and to this end we recommend that the provisions of the bill be studied and discussed by State teachers' associations and all other organizations interested in education and industry."

Unanimously adopted, New Orleans, April 18, 1916.

Respectfully submitted.

SIDNEY G. GILBREATH, President. A. P. BOURLAND, Executive Secretary.

The Juvenile Court Bill of the District of Columbia.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 8, 1916.

Mr. RANDALL. Mr. Speaker, under the consent given to extend my remarks in the Record on the juvenile court bill, I desire to print the following letter, which I have written to a resident of Los Angeles, Cal.:

WASHINGTON, D. C., June 8, 1916.

Mrs. J. A. Johnson, 464 East Adams Street, Los Angeles, Cal.

MY DEAR MRS. JOHNSON: I have your letter of May 29, in which you say, "I was very much surprised to find your name among those who voted for the juvenile court bill. H. R. 1304S. This, of course, is a bill introduced by the Catholics, and is one of the most infamous and barbarous bills ever introduced into Congress. Was so surprised at such a large vote; surely the Members did not understand it."

Well now, my dear Mrs. Johnson, you surely have been misled, for upon the final passage of the bill only seven Members who live north of the Mason and Dixon line voted against it. Seventy-eight southern Members voted against it because an amendment was defeated which proposed that "the white and negro shall be kept entirely separate."

The bill was surely not introduced by the Catholics, for only about 16 Catholics voted for it, and more than 20 either voted against it or did not vote at all.

Now, the fact of the matter is, that the committee who drew up the bill was composed of well-known ministerial and other members of the various Protestant churches, one member was of the Jewish race, and one was a Catholic.

The provisions of secrecy of which you complain are also found in the juvenile court laws of 14 States, including Iowa, Kansas, and North Dakota.

You complain of the provision that children may be committeed to private institutions. It is the law of 44 States that children may be

You complain of the provision that children may be committed to private institutions. It is the law of 44 States that children may be committed to private institutions in the discretion of the court. This

law specifically requires that they shall be placed as far as practicable in an institution having the same religious belief as that of the child's

in an institution naving the same rengious contents.

Notwithstanding the fact that papers of the character which condemns this bill have standered the American Congress most vilely. I agree with you that no legislation must be placed upon our statutes which shall curb liberty of speech or press. The only injunction I would make is that readers of our free press shall make sure of their facts before concluding that their Representatives have betrayed them.

Very cordially,

Charles H. Randall.

Agriculture Appropriation Bill.

SPEECH

HON. DENVER S. CHURCH.

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. CHURCH. Mr. Chairman, I am very much in favor of H. R. 8040, a bill providing for the inspection and licensing of warehouses by the Secretary of Agriculture. I am, however, sorry the term "agricultural products," as used in this bill, can not have its meaning enlarged so as to include oranges among the products which may be standardized by the Secretary of Agriculture.

The Bureau of Chemistry, by scientific experiments, has come to the conclusion, as set forth in service and regulatory announcement, Chemistry 11, information 28, page 752, that oranges are immature if the juice does not contain soluble solids equal to or in excess of eight parts to every part of acid

contained in the juice.

Mr. Chairman, many carloads of oranges are shipped each year to the open markets which do not come up to this standard of ripeness, and therefore immature, as declared by the highest Governmental experts. The consumers can not tell by the looks of an orange whether it is ripe or not. The beautiful orange yellow is not always caused by maturity. Some of the orange growers, eager to place their fruit in an early market, resort to heating and sweating the oranges in order to bring about the coloring. Others bring about the same result at a certain time i.. the development of the orange by withholding the accustomed Irrigation waters, thus causing the orange to hastily color and apparently mature. It matters not which of these methods is employed, a fraud is perpetrated upon all who purchase or consume such fruit. Generally there are several methods of determining, without tasting, when fruit is ripe, but the orange is an exception to the rule; and for the producers and shippers of oranges to be permitted to cover up a sour, unwholesome, and immature orange with an apparent ripe skin produced by artificial means is a fraud and should be prevented by law. Such a law is demanded not only by the defrauded consuming public, who are the helpless victims of such a scheme, but by the legitimate orange producer who is selling ripe and wholesome fruit and whose markets are being demoralized and rendered unstable by the temporary advantage to some about which I complain.

Not only is the fraud that I am calling your attention to prac-

ticed for the purpose of producing early shipments of oranges, but it is resorted to by many who are endeavoring to produce oranges in a soil and climate not adapted to the growing of the same. Instead of growers in such sections being permitted to work their unwholesome and immature fruit upon the markets to the injury of the consumer and to the financial loss of those engaged in the industry in sections of the country adapted to the same, they should grow a crop congenial to the section, soil, and climate or else locate in a citrus belt where nature will enable them to produce the desired result.

I hope to see the evil I complain of remedied, not only for the benefit of the legitimate orange growers in the State of California but for the benefit of the great consuming public of the

country at large. I am sorry the great Committee on Agriculture, to the attention of which I have frequently brought this matter, as yet does not see its way clear to support a separate bill calculated to cure the evil. I say again it is a shame for the consumers and legitimate growers of oranges to be imposed upon by those who are engaged in the legitimate industry by handling it in an illegitimate manner.

Speech of Senator Harding, Chairman of the Republican Convention.

EXTENSION OF REMARKS

HON. JAMES R. MANN, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 9, 1916.

Mr. MANN. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a speech of Senator Harding, chairman of the Republican convention.

The speech is as follows:

Speech of Senator Harding, Chairman of the Republican Con-vention, at Chicago, Ill., June 7, 1916.

It is good to greet this representative body of that American republicanism on which are centered the high hopes of the Republic. I can believe—nay, I know—that a vast majority of the people of our United States is expecting the party sponsors here assembled to write anew the sacred covenant of republicanism and reconsecrate the party to the Nation's service and the people's advancement. That same majority expects you to select a standard bearer who shall not only typify our expression of faith but shall so enlist the confidence and trust of our American citizenship that the work of this convention will be confirmed overwhelmingly at the ballot box next November.

The country, wearied afresh by a disappointing and distressing Democratic administration, is calling for Republican relief, and there is every inspiration, every encouragement, every confidence that the light of Republican conscience, set aflame in this convention, will illumine the way to the country's restora-

SAYS PARTY SHOULD FORGET 1912.

We did not do very well in making for harmony the last time we met. The country has regretted, let us forget—and make amends to our country. We did not divide over fundamental principles, we did not disagree over a national policy. We split over methods of party procedure and preferred personalities. Let us forget the differences, and find new inspiration and new compensation in a united endeavor to restore the country.

The essential principles of republicanism are unchanged and unchanging; the lofty intent, the indestructible soul and the undying spirit of republicanism are as dominant to-day as in the destined beginning 60 years ago, or at any time during the intervening years, and they are emphasized to-day by the proof recorded to Republican credit in the matchless chapter of American progress.

SHOULD BE GENUINELY AMERICAN.

No political party ever has builded or ever can build permanently except in conscientious devotion to abiding principles. Time never alters a fundamental truth. Conditions do change, popular interest is self-asserting, and "paramounting" has its perils, as the Democratic Party will bear witness, but the essentials of constructive government and attending progress are abiding and unchanging. For example, we ought to be as genuinely American to-day as when the founding fathers flung their immortal defiance in the face of Old World oppressions and dedicated a new Republic to liberty and justice. to be as prepared for defense as Washington urged amid the anxieties of our national beginning, and Grant confirmed amid the calm reflection of union restored.

It is not my understanding that the remarks of the temporary chairman are to be taken as an expression of the party faith. Such expression must come from this convention, made up of delegates who believe in popular, representative government through the agency of political parties. You come directly from the people, commissioned to speak their hopes and aspirations, to utter their patriotic desires and pledge their abiding faith. Out of the convictions and judgment and wisdom as expressed by the majority will come the sacred and sincere covenant of the Republican Party.

LET WILL OF MAJORITY BULE.

We are a voluntary organization and must find our strength in the enlistment of volunteers who find the nearest or best expression of their individual convictions in our party declarations, and there can be no treason in withdrawal if our declarations fall short in their appeal. But I am old fashioned enough to believe that in popular government party success and party capacity for service to the Nation must lie in making the will of a righteous majority the willing pledge of all.

Gentlemen of the convention, the first and foremost wish in my mind is to say that which will contribute to harmony of effort and add to the assurance of victory next November. I wish that because we believe Republican success to be for the best interests of our common country. The allied hosts of the believers in Republican principles are in a vast majority in this country-when the banners of harmony are unfurled. We have witnessed the comeback of our party in various States. seen the reenlistment of those who believe in Itepublican doctrines, and victory has followed and rejoicing has attended. No apology has been asked, no forswearing required. This is not the time for recrimination; it is the day of reconsecration.

LET US BURY PARTY PREFIXES.

Rededicating here and now the Republican Party to the progress and glory of the Republic, let us bury party prefixes with the administration which our differences put in power. I do not believe there is a really reactionary Republican bearing credentials to this convention. If there is, he will depart, after our de-liberations, solely and proudly a Republican, with heart aglow with the party spirit of 1916. And the welcome delegate who emphasizes his progressivism is expected to do his part in making our party a reflex of the best thought and best intent of sincere committal to the uplift and progress of the American people, thereby strengthening party purpose instead of magnifying in-dividual belief, and he, too, will find new rejoicing in being a Republican. No party can endure which is not progressive. I know the Republican Party is genuinely progressive as well as effective, else it would not rivet the expectations of the American people to-day on the most important convention held since the party formulated a new political decalogue and gave to Union and nationality the immortal Abraham Lincoln.

REPRESENTATIVE PLAN VINDICATED.

In building the surpassing temple of the Republic, which we have been doing to the astonishment, sometimes the envy, sometimes the admiration, of the world, and ofttimes inspiring others by our example, there ever will be modifications and additions to meet the public need and conform to popular ideals. We do not fear to imitate nor fail to originate, but there can be no discord about underlying foundations or essential walls or proven arches or stately columns. Mine is a deep conviction that the founding fathers were divinely inspired, and the wisdom of representative popular government is proven in the surpassing achievement.

It is not alone the miracle of accomplishment which deepens our reverence; it is not alone the convictions that we have builded the first seemingly dependable popular government on the earth and exalted all its citizenship, which adds to our faith; but we are the oldest of existing civilized nations, with one passing exception, continued under one form of government, and under that form we have developed the highest standard of living in all the world. Surely we must be right.

Recalling that the mightier forward strides have been taken

under a half century of Republican control, after we led in fixing the indissoluble ties of union, the retrospection, the contemplation, and the anticipation combine to fill the Republican breast with pride and hope and trust and faith, and magnify our obligations in this crucial year of our national life.

WORLD WAR TOPIC OF THE HOUR.

Much of the discussion of the hour is hinged upon a world at war. We need not wonder thereat, because the enormity of the conflict and the influences of its horrors have set mankind in upheaval. The traditions of civilization have been broken and international laws have been ignored. There is a tidal wave of distress and disaster; there are violent emotions and magnified fears. There are the extremes of incalculable sacrifices and measurcless new fortunes—not all American. There are new wonders and new hindrances in commerce, changed balances of trade, new marvels in finance, and utterly changed economic con-These have attended embarrassments in our foreign relations as difficult as those which the individual citizen experiences whose every neighbor is involved in deadly quarrel. Everything is abnormal except the depleted condition of the Federal Treasury, which is characteristic of Democratic control, and the facility of the administration for writing varied notes without effective notice.

AMERICA NEUTRAL AND SANE.

Amid these conditions has stood this unarmed giant, typifying the American Republic, neutral and sane, to whom the neutral nations have turned for leadership. Our national unselfishness has been proven, our devotion to humanity had been estab-lished, our committal to international justice had long been proclaimed. The world had previously heard the voice of American fearlessness, and all the conditions single us out for leadership among the neutral powers. But the administration at Washington spoke with more rhetoric than resolution, and we came to realize what the warring powers soon came to know, that the official American voice lacked the volume of determined expression that once demanded international heed, and we lacked the

strength of confidence in our own defenses.

It is too early to estimate the debit and credit account of the European war with civilization. Out of measureless cost and inestimable heroism must come a rebirth of individual spirituality, reawakened national hopes, new liberties, and new baptism in patriotism, which must prove some compensation. But we have seen civilization stripped of the pretenses which clothed man's savagery, and we have seen elemental man, developed in genius and more formidable because of that, intoxicated with power or impassioned in the greed of conquest, offending or defending, contradicting every evidence of mankind's humane advancement. In the envy or jealousy or rivalry or hatred, refined by boasted civilization, are the barbarities of primitive man, and the seal of obsolescence is not yet stamped upon the warrior's sword.

FOR NATIONAL DEFENSE.

Perhaps it is a reminder more than a discovery; but there has come to us a conviction that this great Nation, rich in resources and strong in patriotic manhood, has been negligent concerning its own defense. We have dwelt in fancied rather than real security. Pride mingles with regret in this, because it suggests the mind of a nation so free from intended offense that there was no cultivated thought of needed defense. righteousness of purpose is portrayed in our trust in unarmed safety. But there is a warning in bleeding Europe, and there is call to-day for prudent, patriotic, and ample national defense. There is no mistaking the sentiment. We are not thinking of the hysterical; we need not be moved by a preparedness which is partisan in conception. We need not believe in a defense propaganda inspired by those who aim to wax fat in the production of arms and munitions, because there is none. the teaching that an anxiety about our national defense is inspired by greed. We rejoice in free speech and free press and untrammeled opinion, but patriotism is ill promoted by the imputation of false motives, whether aimed at those who believe in defense or those who doubt its wisdom. Such a teaching rends the concord of citizenship, which may develop a worse peril from within than from any enemy without.

URGES A STRONG NAVY.

Though we do not pretend to be exclusive in our devotion, we Republicans believe, sincerely and soberly, in adequate national defense. We have always believed in an ample navy, as invincible in modern might as John Paul Jones builded in our freedom's earliest fight. We have in mind a protected commerce on the waters and a seacoast secure in strong naval de-We were building to high rank among naval powers when the Democratic Party interrupted, and we subscribe to a stronger committal now, because of a new realization of the envy which our wealth and our commerce invite, and a new appreciation of our commanding place in the affairs of the world. I shall not say that it is ours to have the greatest navy in the world, but, noting the elimination of distance and the passing of our one-time isolation, we ought to have a navy that fears none in the world, and can say any time and anywhere, "These are American rights and must be respected."

ECONOMY IN SECURITY.

It is not for me to specify the provisions for naval defense, Since modern warfare is in large part a conflict of brains, so must naval defense be devised in highest intelligence. Let us strengthen every arm—aerial, submarine, fleet cruisers, and great dreadnaughts. Let him who is anxious about the cost remember that Republican policies afford the ample means without conscious burdens upon the people. Every forehanded American citizen, whatever his activity, knows that the cost of insurance against accident, theft, fire, flood, or thunderbolt, assessed as a fixed charge upon his income, is worth its cost in peace of mind, though loss never attends. Moreover, under any system security is economy itself.

There are manifest differences about our developments for military defense. The President made a trip from the coast to the valley of the Missouri to tell the American people the need of preparedness. It might have been more seemly to tell the story to Congress, for that body was in session and empowered to act and seemingly ever ready to testify obedience. However, Congress undertook to provide an army for defense, and the majority wobbled between pacification and preparedness until the Republican minority in the Senate put something real in the pending measure. We Republicans made a rational response to the call of the land, but Democratic insufficiency and ineffi-

ciency are recorded in the conference amended act, and a Federal nitrate plant to supply powder to the patriots and pap to the paternalists and Federal fertilizer to the farmers in competition with private enterprise is the great constructive offering of a Democratic majority.

NOT "TOO PROUD TO FIGHT."

Until the civilized world is pledged and repledged to peace, and until civilization commits nations to the nobler practices of the individuals who constitute them, in which I would have America lead, this Republic will have need for a basic army and a ready provision for military defense. We have territory to defend, we have independence to preserve, we have lives to safeguard, we have property to protect, we have rights to assert, we have missions of humanity to perform. We proclaim justice and we love peace, and we mean to have them, and we are not

too proud to fight for them.

Let no one apprehend the curse of militarism in this fair land. We declare unalterably against it. Our free citizenship, walking confidently, absorbed in the triumphs of peace, would tolerate no such blight on American institutions. There is to be no surrender of cherished ideals, that same committal to justice which has marked our continued development, with that same committal to justice which has given us front rank in the onward march of civilization, with that rare unselfishness which led us to unsheath the sword for humanity's sake and put all territorial aggrandizement aside, with that belief in the square deal, individual, national, and international, which is the foundation of American faith, we mean to go on, an exemplar of peace to all the nations, an arbiter of justice to all the world, a promoter of righteousness to all the peoples of the earth.

At the same time we have more to do than to chart a national course through the waters surging with the turbulence of war; our inspiring course is on the highway of peace. Our armed defense must ever be linked with our industrial self-reliance, and the nation worth dying for must first be worth living for. Out of nature's prodigality we have incalculable resources and limitless possibilities, and there is need only for the unhindered application of man's genius and industry to make us as independent industrially as we are free politically. Ample defense rests on industrial freedom and self-reliance as well as patriotic sacrifice, and industrial preparedness gives that assurance of material good fortune in peace on which must be founded all

our higher aspirations.

PROTECTIVE POLICY NECESSARY.

Subsistence is the first requisite of existence, and we have the higher American standard of living because of the Republican protective policy which makes of Americans the best paid workmen in all the world. Out of the abundance of employment and higher compensation, together with the beckening opportunity which offers every reward, we Americans have attracted the laborers of the earth and set new standards here.

It is not for me to put the stamp of relative importance on pending issues—the intelligent voters will determine that for themselves. But I know what they are thinking, and they believe that the protective policy which made us industrially and commercially eminent is necessary to preserve that eminence. I know they want it restored and maintained. For myself I prefer a protective and productive tariff which prospers America I choose the economic policy which sends the American workingmen to the savings banks rather than the soup houses. I commend the plan under which the healthful glow of prospering business is reflected in every face from the great captain of industry to the schooling child of the daily wage earner.

QUOTES PLATFORM OF 1860.

Moreover, I like the abiding consistency of our unchanging position upon this policy. The Republican convention of 1860, which gave to the Nation and all history the nomination of

Lincoln, made this simple and ample utterance:
"That while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imports as to encourage the development of the industrial interests of the whole country; and we commend that policy of national exchanges which secures to the workingmen liberal wages, to agriculture remunerating prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the Nation commercial pros-perity and independence."

We might fittingly reiterate that utterance to-day. The failure of revenues under existing Democratic policy, the necessary resort to the imposition of direct and offensive taxation war taxes on a people at peace—to meet deficiencies which ever attend Democratic control, the depression and disaster which followed Democratic revision, which were relieved rather than

caused by the European war-all these argue the Republican restoration.

CALLS PROSPERITY TEMPORARY.

No one disputes a temporary prosperity in our land to-day. But it is sectional in its factory aspect, abnormal in its fevered rush, fictitious in its essentials, and perverting in its tendency. Worse, it is the gold sluiced from the river of blood poured out by the horrifying sacrifice of millions of our fellow men. God forbid that we should boast a prosperity wrought in such waste of human life. We had rather rejoice in the prosperity of peace. We had rather boast our good fortune won from the world as it stands erect, in a fair contest, where men openly contend for the laurels of industry and the garlands of trade. I do not mean that we must "sharpen our wits in competition with the world," for we tried that, and involuntarily turned the blade to cutting our production and severing thousands from American pay rolls. There was no cut in the cost of living, but a visible hack at the capacity to live.

The Democratic Party is always concerned about the American consumer. Our Republican achievement is the making of a Nation of prospering producers, and by producers I mean every human being who applies muscle or skill or brain or all to the conversion of nature's abundance into the necessities and luxuries of life or participates in the ways and means of their transportation and exchange. Far better a high cost of living and ability to buy than a lowering of cost attended by destruction of purchasing capacity.

COST OF LIVING NOT REDUCED.

It is worth while to recall the magnified importance given to the high cost of living four years ago, first, to emphasize Democracy's failure to reduce it, though it risked and almost accomplished the ruin of our good fortune in attempting it; second, to declare there is no such thing. What was thought to be the high cost were only the higher demands and the larger capacity to buy, which were the natural reflexes of the higher standard of living reared under Republican protection.

The one notable advance in cost has profited the American farmer, for whose befitting share in good fortune we have stood unfailingly and sincerely. His reward is a Republican achievement, and we prefer to cling to the conditions which brought to agriculture its delayed but deserved reward and hold it secure in Republican maintenance of a home market unmatched in all the world. More, we want our basic prosperity to be home created and home sustained and not dependent on conditions abroad.

Let us agree—nay, let us boast—that American industry can compete with any in all the world, under like conditions. But we also boast a condition, created through isolation and maintained by protection, wherein the rate of American wages is twice or thrice to ten times that of Old World competition. Reduce our wages and we shall have conditions more nearly equal, but no Republican will consent to that. We are willing to standardize the wages of the world. We are as fit to lead in doing that as we were to fix the newer guaranties of liberty and independence; but we Republicans do not mean to lower our scales to effect the leveling. We want the world measurements raised to our heights. Until it is done we shall cling to American wages for American workmen, American markets for American products, and hold the Republican guaranty of our material good fortune.

SAYS DEMOCRATS ARE PENITENT.

The nations abroad and the Democratic Party at home are bearing witness to Republican wisdom. German industrial self-reliance is the sequence to her adoption of a Republican protective tariff, and England's manifest conversion to this fostering plan will magnify the prophetic wisdom of Republican protectionists. Even the Democratic Party is penitent now and makes confession in action if not in words. The proposed destruction of American sugar has been repealed and simulated grief about the American breakfast table has been put aside. With that facility for changing position which has been made manifest from Baltimore to Vera Cruz, the party in power proposes to restore the tariff commission which it had hastened to destroy.

This change of attitude is not because of its great and manifest love of commission alone, but because failure is written across every paragraph of Democratic revision and fear is haunting the White House slumbers. The Wilson administration has sensed the country's anxiety about industrial conditions when the revelry in munitions and the immunity granted by war are ended. It has made a reflective estimate of the perils of 1914, once called psychological, and means to apply a stolen remedy, with more concern about the effects than the ethics involved. We do not oppose a tariff commission. We

favor it. It is a Republican creation. We do not want one, however, conceived in Democratic hostility to American industry or managed in Democratic opposition to business success. We would hasten the protective defense against foreign invasion, to guarantee our industrial security, and then let a tariff commission deliberately and scientifically work out the needs of American preference.

SQUARE DEAL FOR BUSINESS.

No honest business in this country is too big to be good and useful or too little to be protected and encouraged, and both big and little deserve the American shield against destruction by foreign competition, and protection from the raiders, political or otherwise, at home. Business and its agencies of transportation are so inseparable from each other and from the common weal that the political party which does not pledge them a square deal, no more and no less, does not deserve the confidence of the people. The strength of the business heart shows in every countenance in all the land, and the weakness of that heart holds a nation ill. We must strengthen the heart of American business in Government cooperation rather than official opposition.

It is not inspiring to recite Democratic failures. dwell on that party's insincerity or incapacity. The country indicts and the record convicts. It proclaimed the sacredness of its pledges and then profaned them. It professed economy and is staggered by its own extravagance. It has turned adequacy of revenue under indirect and unfelt taxes to insufficiency and direct taxation. It has espoused the freedom of the seas and wrought only the freedom of the Panama Canal. affirmed its devotion to Jeffersonian principles and simplicity of Government and is voting millions of the Public Treasury to the establishment of Federal factories to destroy private in-It declared for enlarged shipping facilities without added burdens upon the Public Treasury, and now proposes that \$50,000,000 to \$500,000,000 of public funds shall go to shipping, federally owned and privately managed, with every menace that Federal ownership involves. We believe in a great merchant marine, federally encouraged and privately erected, wrought in the committal to the achievement of private enterprise and measured to the requirements of our commerce in peace,

ATTACKS PHILIPPINE POLICY.

The President has said ours is a provincial party, evidently forgetting the federalist founding of our nationality and Republican expansion to greater national glory. The Democratic Party not only fails to grasp our immensity and importance; it is sectional on the mainland and unheeding of our Island possessions. Its vision does not catch the splendor of Old Glory in the sunlight of the world. Right now, when the devouring flames of war are burning most fiercely, when our national view must be world-wide to be comprehensive, the Democratic administration has proposed to set adrift an island empire, in violation of our obligations to the world, to the Philippine people, and ourselves. Amid proclamations of our ministrations in behalf of mankind it undertook to renounce its guardianship of a race of people and leave them to walk alone when they had not been fully taught to creep. A few rebellious Democrats joined the Republican minority in sparing us this national disgrace, but the design is written among the vacillations of the present administration. The Democratic Party once hauled down the flag which had been unfurled in honor in the Pacific and met rebuke at the first popular expression at the polls. No administration which hauls down the flag and none which proposes to haul it down ever can succeed itself in directing the affairs of the American people.

MUST ASSUME WIDER BURDEN.

One century of marvelous development has led us into another century of international sponsorship. This mighty people, idealizing popular government and committed to human progress, can no longer live within and for ourselves alone. Obliterated distance makes it impossible to stand aloof from mankind and escape widened responsibility. If we are to become the agency of a progressive civilization and God's great intent—and to believe otherwise is to deny the proofs of American development—we must assume the responsibilities of influence and example and accept the burdens of enlarged participation. The cloistered life is not possible to the potential man or the potential nation. Moreover, the Monroe doctrine, stronger for a century's maintenance, fixes an obligation of New World sponsorship and Old World relationship. Our part must not be dictatorial; it must be trusted leadership in a fraternity of American Republics.

To meet the obligations we must first make sure of maintained mental, moral, and physical health at home. It is good to recall that ours is the only major political party ever formed in this country on a great moral issue. Our first proclamation was human liberty, to be glorified by the spiritual and material development of a free people. We opened the way to higher human attainments and emphasized human rights under the guaranties of civil liberty. We need only to go on, imbued with the spirit which has thus far pointed our way. The light of a moral people is the halo of liberty itself. Let us be honest not only in proclamation, but in practice; not alone in campaigns, but in incumbency of office; not only before altars of worship, but in our daily affairs and in every human relationship. If popular government is to be held dependable and command the confidence as well as the loyalty of its citizenship, political parties and their platforms and their spokesmen must be honest and sincere.

URGES HIGHER PLANE FOR LABOR.

If we are to urge the world's attention to international justice, we must hold secure our civil justice at home and make social justice and attending welfare typical of our national life. We have advanced wonderfully. The reward of merit is eternal, have advanced wonderfully. The reward of merit is eternal, but we can promote the development of merit. I have spoken so emphatically for the American producer that I want to add here a committal to improved conditions of production. It is good to gaze afar toward markets we hope to attain in peaceful commercial conquest, but production is itself the maker of markets at home. To the safety and inviting environment of the laborer we must add his growing merits of compensation. There can be no permanent material good fortune that is not righteously shared; there can be no real moral achievement that does not lift the great rank and file to an ever higher plane. Maintained republican policies provide conditions for the ideal advancement and continued uplift, and it is not too much to hope that we shall acclaim the day when choice instead of necessity fixes the status of the American wage earner.

My countrymen, for two generations, with short interrup-tions, the Republican Party, in conscience, courage, and capacity, has been translating the dependable popular sentiment of the Republic into governmental policy. We have not yielded to the expediency of adopting every ephemeral whim, because devotion to country and its ultimate good ofttimes demand opposition to a momentary popularity. The final appeal to sober intelligence has justified our course in political righteousness. But we have been so engrossed in developing America that we have not stopped to search our own hearts for the soul of

Americanism.

AMERICA A COMPOSITE NATION.

In the travail of life, liberty, and the pursuit of happiness the American soul was born. Set aglow at Bunker Hill, it was reflected in the faces of the patriots of a fearless Republic, where men dedicated themselves to the solemn and momentous Americans by birth, but they were dedicated Americans in the baptismal rites of a new Republic and a new patriotism. They could not all sign the Declaration of Independence, but could not all join in making the Constitution, but they pledged the succeeding millions of Americans to its everlasting defense.

There were stalwart Americans then—Americans from Great Britain, with British ideals and their devotion to orderly government. There were Americans from the land of Napoleon and Lafayette to give of the enthusiasm and heroism of France in establishing new freedom. There were Americans from Germany to fight the battles of the Republic and blend their sturdiness and thoroughness in the progress of a new people, not a new race. There were Americans from the green fields of Ireland. with a passion for liberty; Americans from southern Europe to battle for opportunity. There were Americans who came from oppression and stood erect in the freedom of the Republic. They all made common cause. There was lack of homogeneity of race, but there was kinship of soul, and that soul was American. The gates to our ports have swung inward ever since; there has been a welcome to the foreign born, whom we asked to drink freely of the waters of our political life and find their places in the sun of American opportunity. They are an in-separable and important and valued part of American citizenship, and the few zealots of any origin who violate our neutrality do not and can not impugn the loyalty or the American patriotism of that great body which adds to the swelling chorus of-

My country, 'tis of thee, Sweet land of liberty. HOUR OF AMERICAN ALLEGIANCE.

It is not surprising that in their hearts there is sympathy or partiality for the land of their nativity when it is involved a life-and-death struggle like that which saturates Europe with the blood of their kinsmen. Search your hearts deeply, my countrymen. One must be human to be an American; he must have human sympathies and human loves, and I should home for the highest human attainment. We believe in Ameri-

pity the foreign born and the sons of foreign born whose very souls are not wrung by the cataclysmal sorrow of the Old World. But sorrow is the test of soul and the very altar of reconsecration. This is the momentous hour for the blazing souls of American allegiance. The spirit of the fathers is calling, and the safety of unborn Americans is demanding and the security of the Republic is requiring that now and here and everywhere, under the Stars and Stripes, we proclaim a plain, simple, glad, and unalterable Americanism. It must be the offering of loyalty and devotion and love and trust and life, if need be, to these United States, now and everlastingly.

The Americanism which indexes these United States must be

more than the consecration of the individual. In the great fulfillment we must have a citizenship less concerned about what the Government can do for it and more anxious about what it can do for the Nation. There must be the submersion of local and sectional views and the standards of nationality reared in their stead. Holding to the ideals of just American rights, the Government must protect those rights at home, on our borders, on the

seas, in every land, and under every sky.

NO GEOGRAPHY TO UNITED STATES RIGHTS.

Seeking to practice the very Americanism I preach as Republican gospel, I am reluctant to speak of a division of American sentiment relating to our foreign affairs. One must be an American first and a partisan afterwards, though we believe that Republicanism is the culture of highest Americanism. But it must be said for the truth's sake and clearer understanding we have hungered in vain for that unflinching Americanism at Washington which is needed to exalt the American soul. geographic modification of American rights. They are the same in Mexico that they are on the high seas; they are the same in Europe that they are in Asia and are sacred everywhere, and the American spirit demands their fullest protection.

Whatever the ultimate solution may be, history will write Mexico as the title to the humiliating recital of the greatest fiasco in our foreign relations. Uncertainty, instability, Mexican contempt, and waning self-respect will be recorded in every chapter, and the pitiable story of sacrificed American lives and the destruction of lawfully held American property will emphasize the mistaken policy of watchful waiting and wobbling war-

"MISERABLY MEDDLED" IN MEXICO.

Under the pretext of noninterference the Democratic administration miserably meddled. In the name of peace that same administration encouraged revolution, and the cost of American sacrifices was charged to needless war on Huerta, where the real American expenditure required only the voice of authority demanding protection to American rights. The unbiased critic will recite that the Democratic administration first coddled Villa

as a patriot, then chased him as a bandit.

Our civilization has evolved the rules of right conduct and written them into forms of government by law. They were conceived in justice and developed in righteousness. They have become instinctive in our American life and are cherished as a part of our people's inheritance. Our people do not understand any suspension; they are impelled to march on, confident and unafraid. When the spirit of American accomplishment, or the mercies of American ministration, or the inclinations of American teaching, or the adventures of American development take our people abroad, under the compacts of cvilization, they have a right to believe that every guaranty of American citizenship goes with them. When it does not, we have forfeited the American inheritance.

MAY AID WAR-TORN EUROPE.

No political party can draw a variable chart for our ship of state amid Europe's warring ambitions, lust for power, or battles for self-preservation. Justice points the way through the safe channel of neutrality. There are dangers, seeming or real, looming on every side, but we should feel secure along the course marked by international law and our own conscientious convictions of American rights. "Straight ahead" shall be the command, and when peace comes the sober judgment of the world will exalt us ever higher and higher as a people, strong in heart, and noble in the espousal of justice and justice's humanity. In that world-wide respect and confidence which needs only to be preserved we shall have a lofty place in the great reconstruction, and we reasonably may hope to see this mighty Republic again ministering to the reestablishment of peace and all its precious blessings. "GOOD TO BE AN AMERICAN."

My countrymen, Americanism begins at home and radiates abroad. The Republican conception gives the first thought to a free people and a fearless people, and bespeaks conditions at

can markets for American products, American wages for American workmen, American opportunity for American genius and industry, and American defense for American soil. American citizenship is the reflex of American conditions, and we believe our policies make for a fortunate people for whom moral, material, and educational advancement is the open way. The glory of our progress confirms. The answered aspirations of a new world civilization acclaim. We have taken the ideal form of popular government and applied the policies which had led a continent to the altars of liberty and glorified the Republic. We have justified pride and fortified hope. We need only to preserve and defend and go unfalteringly on. Power is the guarantor of peace and conscience the buckler of everlasting right. Verily, it is good to be an American. And we may rejoice to be Republicans.

Aeroplanes.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 9, 1916.

Mr. BENNET. Mr. Speaker, there is no more important question before the House than the question of developing our air service.

Lord Kitchener recently stated that "an aviator is worth an

army corps.'

Recently during a debate before the British Parliament Lord Montegue, in urging further development of the already very extensive British air service, said:

Let it not be said to our shame by the coming generation that we lost in the air what our fathers won at sea.

The newspapers bring us daily reports of increasing activities of air craft, of extended air raids, in which as many as 90 aeroplanes have participated at one time, and which have been attacking cities, destroying railroads, supply stations, submarine bases, defeated thousands of troops. Aeroplanes now operate in fleet formation, and battle planes equipped with guns fight other aeroplanes to prevent them from carrying out their attacks or reporting invaluable information. Recently the dispatches told of 60 air duels having taken place in one day and of aviators who had already brought down as many as 20 areoplanes each.

At sea we find that dirigibles and aeroplanes are also extending their operations. We are now receiving frequent reports of bombardments of battleships from the air, of sinking submarines by aeroplanes, and of holding up merchantmen by Zeppelins.

LARGE BODY OF CAVALRY AND 2,000 INFANTRY ROUTED BY FIGHTING AEROPLANE.

That an army or navy without aeroplanes is at a mournful disadvantage is an accepted truth. I read in the World's Work, for November, 1914, a very significant bit of recent history:

for November, 1914, a very significant bit of recent history:

The Germans were checked by a much smaller force of Belgians in the early part of the war, when the former disregarded the warnings and tried to sweep into Belgiam with their outnumbering forces—but without aeroplanes. A handful of Belgian aviators then changed the history of the war. Without them Parls would undoubtedly have been captured by the Germans. The Russian defeats afforded the next lesson. They only had a few aeroplanes, while the Germans had many. A million men more did not compensate for this deficiency—Russia lost. Lack of fifty or a hundred aeroplanes forced Gen. Townshend to surrender to the Turks with 10.000 troops at Kut-el-Amara, while a relief column was almost in sight. The half dozen aeroplanes that were with the relief expedition carried 18.800 pounds of food to the besieged, but that was not enough for 10.000 men, and there were also starving, suffering beasts; therefore Gen. Townshend surrendered. From 50 to 100 aeroplanes would have saved 10,000 troops and the humiliation of such a defeat.

Now comes the following official communique, stating that an

Now comes the following official communique, stating that an aeroplane routed a large body of cavalry and 2,000 infantry in western Sudan:

LONDON, May 26.

The dispersal of a force collected by Ali Dinar, the Sultan of Darfur, in the western part of the Sudan, on the frontier of Kordofan, the Province adjoining Darfur on the east, is announced by the war office to-night. A British column occupied El-Fasher, the Sultan's capital, and the Sultan fled with a small body of followers. Darfur, although a part of the Anglo-Egyptian Sudan and paying tribute to the Sudan Government, is left, so far as local affairs are concerned, almost entirely under the rule of the Sultan. The official statement issued by the war office describing the operations against the Sultan follows:

"The attitude of Ali Dinar, Sultan of Darfur, toward the Government of the Sudan, for some time has been unsatisfactory and truculent.

Early in February he concentrated a force on the Kordofan frontier at Jebel-el-Hella. A mixed force of all arms under Col. Kelly was assembled at El-Nahud and at the end of March occupied Um-Shangan and Jebel-el-Hella. Subsequently it moved forward to Abiat, where preparations were made for an advance on El-Fasher, All Dinar's capital.

"The main action occurred near the village of Beringia, 12 miles north of the capital, where the enemy to the number of between 2,000 and 3,000 held an intrenched position. The camel corps successfully induced them to leave the position. They then attacked our troops with the utmost rapidity and desperation. The enemy's attack was met by a withering fire and few penetrated within 10 yards of our lines. Our troops then counterattacked, totally defeating the enemy, whose minimum losses are estimated at a thousand men.

"All Dinar is reported to have fled with a small following early on May 23. Our casualities were 5 killed and 23 wounded.

"Before and during the action a valuable air reconnoissance was carried out by an officer of the flying corps, who, by means of bombs and a machine gun, forced a large body of hostile cavalry and 2,000 infantry to retire in disorder. The officer was wounded by a bullet in the thigh, but returned safely to Abiat."

BRITISH AIRMEN BLOCK PLAN TO INVADE EGYPT BY DESTROYING TURKS' WATERWORKS.

LONDON, Friday, May 26.

A British official communication issued late last night, concerning the operations in Egypt, says:

"Since the enemy air attack on Port Said the Royal Flying Corps in Egypt has given the enemy little rest. Four British machines have already bombarded enemy advance posts. Forty bombs were dropped, resulting in buildings and a plant at Al Hamma being seriously damaged and the water tanks at Rodhsalem being smashed. This will upset the whole plan of the enemy, as since the destruction of his drilling plant at Jifjaffa by our patrols, he has set great store on the Rodhsalem waterworks."

EUROPEAN NATIONS HAVE THOUSANDS OF AVIATORS.

Recently Earl Kitchener stated that "an aviator is worth an army corps." It has also been said that of all the weapons produced by this war the aeroplane is the most efficient-it protects; it destroys; it fights; it is the superspy, superscout, superbelligerent.

Other nations have found out by experience the value of a substantial air service and are training thousands of aviators. Recently when H. G. Wells urged the British Government in the English press to build a fleet of 10,000 aeroplanes there came from Germany the reply that Germany already had 9,000 aeroplanes available. During one of the discussions held in the House of Commons last March it was stated that there were close to 900 British aviators in the reserves alone who were waiting for aeroplanes. I am told that Germany has not less than 5,000 trained aviators, and England, France, and Russia are not far behind.

We know that Germany has a great advantage over England owing to her large Zeppelins—the like of which England has not These dirigibles, which are invaluable, especially for naval operations, are being constructed larger and larger, and their armament is most formidable. They can drop several tons of explosives and can remain in the air cruising for days at a The dispatches state that the last Zeppelin is 780 feet long.

AMERICA LAST WHERE IT SHOULD BE FIRST.

The United States, the country of Langley, the Wrights, Curtiss, and other prominent pioneers in aeronautics, is last where it should be first. The Mexican trouble and the recent Guantanamo naval operations have shown that in aeronautical equipment the United States Army and Navy rank last, behind even the third and fourth class powers and their colonies. For various reasons we have neglected this very important arm, and the estimates for the Army and Navy appropriations for aeronautics show that the plans made close to a year ago, when these estimates were made, are far from being adequate, and would only make the Army and Navy rank twelfth and thirteenth, respectively.

I have just received a letter from Mr. Alan R. Hawley, president of the Aero Club of America, who recently flew from New York to Washington, in which he points out that the Army appropriation bill only provides for the organization, equipment, and upkeep of two and a half aero squadrons, whereas the Chamberlain-Hay Army reorganization bill provides for eight aero squadrons. Mr. Hawley's letter follows:

aero squadrons. Mr. Hawley's letter follows:

Hon, William S. Bennet,

House of Representatives, Washington, D. O.

My Dear Mr. Bennet: The Army appropriation bill adopted by the Military Affairs Committee of the House and submitted for passage by that committee does not provide to carry out more than one-third of the provisions of the Chamberlain-Hay Army reorganization bill, which provides for the organization of eight aero squadrons; and whereas it would be fatal to again disregard the aeronautical needs of the Army, we beg to bring the following facts to your attention:

(1) The \$1.000,000 which the Army, appropriation bill gives to pay for the organization, equipment, and maintenance of the air service is not sufficient to provide the number of aeroplanes which Gen. Funston should have to-day at the Mexican border to protect American lives and American property from the attacks of Mexican bandits.

(2) The Army, naving charge of coast defense, which in other countries is in charge of the navy, needs aeroplanes; dirigibles, observation

balloons, and kites for the protection of our coast. These are not provided for in the Army appropriation bill.

(3) It is estimated that the aviation equipment alone should consist of not less than 24 complete aero squadrons, each squadron being allowed 3 aeroplanes for each aviator, or 24 aeroplanes to each squadron.

(4) Years of experience have shown to the War Department that it costs \$255,000 to organize, equip, and support for a year an aero squadron of only 12 aeroplanes. It having been found that it is absolutely necessary to allow 3 aeroplanes to each aviator, the cost of organizing, equipping, and maintaining an aero squadron is increased to approximately \$400,000.

(5) The Movien trouble has proved beyond dispute that the \$200,000.

content of experience have shown to the War Department of exch squadron. Cott of Stard of experience have shown to the War Department of each of each of each of each of the provide of the cott of organizing, equipping, and maintaining an aero squadron is increased to approximately the cotton of the cotton of organizing, equipping, and maintaining an aero squadron is increased to approximately the cotton of the cotton of the cotton of organizing, equipping, and maintain a single complete aero squadron; therefore the \$1,000,000 provided for in the Army appropriation bill would only be sufficient for Iwo and a half aero squadrons are to be organized, then the appropriation for Army aeronautics should be \$3,200,000, the amount needed to organize, equip, and maintain the eight aero squadrons. To this there should be added at least \$2,000,000 to provide for the acquisition and army now make about twenty-third in aeronautics—behind all the European powers and their cotonies—the appropriation of \$5,000,000 for anomauties avoid only enable this country to become eight in rank—behind all the European powers and their cotonies—the appropriation of \$5,000,000 for anomauties would only enable this country to become eight in rank—behind are a dozen European aviators who have each brought down between 10 and 20 aeroplanes in inf duels. The United States Army has not to day as many aeroplanes in commission as have been destroyed by one of these aviators; the Army appropriation bill involved in the country of the

UNITED STATES DEVELOPED THE FIRST SUCCESSFUL HYDROAEROPLANE AND FLYING BOAT AND LEADS IN THE CONSTRUCTION OF AEROPLANES.

The United States gave the world the first successful hydroaeroplane and flying boat-same as it had given to the world the first successful flying machine. American aeroplane manufacturers lead in the construction of flying boats and the countries of the world come here for these machines. Notwithstanding that, we find from the statements made before the Committee on Naval Affairs that our Navy has only 16 aeroplanes in commission and the very small training dirigible which has not yet been put in commission.

Lacking funds and personnel, the Navy has been confined to conducting experimentations, so it has not yet a naval aeronautical organization.

As our Navy is our first line of defense. I submit that adequate provision should be made for the development of this important

Capt. Mark L. Bristol, the head of the Navy Aeronautical Service, told the House Naval Committee some time ago that an appropriation of \$13,600,000 for aircraft, which would provide the Navy with 82 aeroplanes, 5 dirigibles, 41 kite balloons, and 2 aircraft ships, was required.

Considering that we have not any aeronautical equipment and that there are 13 naval districts which ought to be provided with aeronautical equipment for the defense of our shores, I believe that we could not make a better investment this year than by allowing the sum estimated for by the head of the Navy Aero-

nautic Service.

I see by the statements issued by the Navy Department that the reason Capt. Bristol's estimates were cut down was that at the time the estimates were made the American aeronautic industry was not in a position to supply the equipment necessary. Therefore the estimate was cut down. But conditions have changed, and the aeronautic industry has greatly extended in the past year and is now in a position to supply all the equipment that Capt. Bristol included in his estimate of \$13,600,000. The only delays in deliveries so far have been the delays caused by a change of requirements and specifications on the part of the Navy Department. This is to be expected, and the Navy Department itself, with all its facilities, has had to spend a whole year in developing a hydroaeroplane of new design. Flying boats and hydroaeroplanes of standard types can be obtained in large number on reasonable notice.

Kite balloons can also be made in this country on reasonable notice. A dirigible requires longer and will undoubtedly involve extensive experimentations. But we need these valuable craft. Therefore, we should begin immediately to experiment to

develop an efficient type.

In an official communique from one of the allied countries, published in the New York Sun recently, it was stated that aeronautics had undergone a greater development in the past three months than naval things had undergone in 100 years.

This being a fact, it is to be expected that the estimates for the Army and Navy which we are considering and which were drawn up many months ago should be insufficient and incon-

sistent with present conditions
So I would urge consideration of the subject. There are in Washington now Army and Navy officers who only recently arrived from Europe, where they were attached to the United States Embassies at Paris and Berlin. The Army officer is Lieut. Col. George O. Squier—an officer who has a remarkable record, and who was partly responsible for the United States acquiring the first aeroplane for the United States Army, which gave our Army for three years the distinction of having an aeroplane when no other nation had one. The Navy officer is Lieut. V. D. Herbster, who was connected with the American Embassy in Berlin for two years and has just returned.

NATIONAL GUARD SHOULD BE EQUIPPED WITH AEROPLANES.

Whereas the wisdom of the majority of Members of the House of Representatives has decided that the National Guard of the States of the Union is to be relied upon to a great extent for our defenses and to be put under Federal control, so as to increase its efficiency, thereby it is to be taken for granted that provision

is to be made to supply the guard with aeroplanes.

In the past year the Aero Club of America and affiliated aero clubs and organizations cooperating with the club have con-tributed several hundred thousand dollars to developing aviation corps in the National Guard, and, as a result, 40 States have already taken steps to organize aviation detachments. That is a convincing evidence of the National Guard's desire to develop this important and valuable arm. Therefore, adequate provision should be made to supply the aeroplanes which the National Guard is requesting. The New York National Guard, having been presented five aeroplanes and the funds with which to maintain the aviation detachment, is already training 25 men. They have many more applications, but the limited equipment available does not permit training more men at this time.

The experience of the National Guard of New York has shown that it will cost \$100,000 to organize, equip, and maintain an aero detachment for the first year, bringing to \$4,000,000 the total cost of organizing an aviation detachment in each of the 40 States which are ready to organize aviation detachments.

It appears from the estimates of what it would cost to organize a substantial air service in the Army, Navy, and militia that it would not amount to as much as the cost to build one of the battle cruisers provided for in the naval appropriation. Aeronautics is, in fact, the least expensive arm of the service. It also has the advantage that it can be organized faster than any other arm of the service, therefore we can not make a mistake if we provide for the development of this arm.

NEW YORK WORLD PROPOSES RESERVE OF 2,000 AVIATORS.

Every Member of the House of Representatives recently received a copy of a special edition of the New York World which was carried from New York to Washington by aeroplane, the president of the Aero Club of America acting as "Hon. Courier."

Here is the World's proposal:

Congress provided in 1914 that 60 officers should constitute the Aviation Corps of the United States Army. But when these aviators were needed this year in the Mexican emergency for scout and patrol duty the Army could furnish only one-fourth that number of trained flying men.

The Navy is no better prepared than the Army for aerial offense and defense.

The Navy is no better prepared than the Army for aerial offense and defense.

A reserve of 2,000 aviators for national defense, available also for the peaceful uses to which aeroplanes are fast being devoted—for Coast Guard, Life-Saving Service, and mail carrying—could be trained for one-tenth the cost of one dreadnaught. Ten Army and 10 Navy flying stations could be equipped with machines and instructors to train 2,000 aviators this cummer at a cost of \$2,000,000. Military and naval authorities believe that such a reserve corps is needed, not for militarism, but for reasonable preparedness.

MUST RELY ON VOLUNTEERS.

England and France have each more than 3,000 aviators in active service. The United States has scarcely more than 100 trained pilots, military and civilian.

Where, then, is the flying reserve coming from?

The Army can not furnish them; the Navy can not furnish them. Where shall it be recruited? Who shall train them?

In proposing the National Aerial Derby as an incentive to preparedness, the publisher of The World wrote to the Aero Club of America in part, as follows:

"This country is not a military country. Its instincts will always be to restrict standing military establishments and to rely on trained citizen reserves. This will apply to all branches of the Army, including Aviation Corps. There is thus little prospect of getting from the Army the number of officers and men required to form an adequate air service.

"If, as is the fact, we must have available for our aerial defense in the next five years aviators not in hundreds but in thousands, we shall have to depend upon volunteer reserves."

The State militia organizations stand ready to furnish these men for training just so soon as the Federal Government will provide machines, instructors, and training-camp facilities.

instructors, and training-camp facilities.

RESPONSE ENTHUSIASTIC.

The World has canvassed the sentiment of the States, through their respective governors or adjutant generals. It has never received a response on any question of national interest more enthusiastic or more

response on any question of national interest more enthusiastic or more nearly unanimous.

Governors or adjutant generals of 30 States assured the World within 24 hours by telegraph that they can furnish their proportion of the 2,000 men for aviation training camps.

Already more than 30 militia organizations in as many States are receiving financial assistance through public-spirited citizens who have contributed to the national aeroplane fund of the Aero Club of America. More than 50 militiamen are being trained as pilots at the areo club's expense. Citizens in this way are doing what the Government has neglected to do, because Members of Congress have failed to see that the sentiment of the country, from coast to coast, demands a reasonable sentiment of aerial preparedness.

To discover accurately what is the sentiment of the States, the World sent the following message to each governor, or, in the governor's absence, to the head of the State's military organization:

"Military and naval authorities believe the United States should have a reserve of 2,000 trained aviators for national defense. These men could be trained this summer for \$2,000,000, including cost of machines and equipment. This is one-tenth the cost of one dreadnaught.

"Would your State undertake to furnish its quota of aviation recruits to be trained at no expense to your State? Prompt, concerted action should add to the Army and Navy reorganization bills provision for Federal training camps for this purpose."

WHAT THE GOVERNORS SAY.

WHAT THE GOVERNORS SAY.

WHAT THE GOVERNORS SAY.

The replies, transmitted direct to the editor or through World correspondents in the State capitals, follow:
Charles S. Whitman, governor of New York: "Many members of the National Guard of New York would undoubtedly volunteer as aviation recruits this summer. I am heartily in favor of any measure that will provide for training camps for this purpose."
Frank B. Willis, governor of Ohio: "Ohio is for the big Aviation Corps proposition and will fill its quota in six hours. I am enthusiastic on this matter."

E. F. Dunne, governor of Illinois: "Should Congress provide for the formation of aero corps in the State militias and the President call upon this State for its quota, the State will promptly respond with willing volunteers."

willing volunteers."

Ernest L. Lister, governor of Washington: "The State of Washington will be glad to furnish its quota of aviation recruits if provision for

will be glad to furnish its quota of aviation recruits if provision for training is made."

Marcus H. Holcomb, governor of Connecticut: "Connecticut has many men interested in aviation and would furnish its full quota, as large a percentage as any State. I tavor preparedness in all branches, and, judging by experience on the other side, I believe the New York World is rendering a splendid service in advocating Federal training camps for more men like Capt. Raiph Taylor, of the Connecticut Coast Artillery, who was in the record-making aeroplane last Saturday."

Richard I. Manning, governor of South Carolina: "I approve plan for trained aviators for national defense. I believe South Carolina would furnish its quota."

Emanuel L. Philipp, governor of Wisconsin: "I am in favor of the purchase by the Federal Government of a sufficient number of flying machines and equipment for the adequate defense of the United States. Wisconsin would willingly undertake to furnish its quota of aviation recruits if called on to do so."

Samuel V. Stewart, governor of Montana, said there was no doubt Montana would furnish its quota of aviation recruits to be trained at no expense to the State, if there was a call for such recruits.

George D. Hays, governor of Arkansas, said he was satisfied Arkansas can be relied upon to do its share in furnishing its quota of aviation recruits along lines suggested in the World's telegram.

F. M. Canton, adjutant general of Oklahoma: "Oklahoma, I am sure, will furnish her full quota of men to be trained as aviators for national defense it called upon, if there is no expense to the State."

Mosea Alexander, governor of Idaho: "Idaho guarantees to furnish its quota of aviator recruits, and more, if necessary, Idaho stands with the President and Congress for sane preparedness."

James F. Fielder, governor of New Jersey: "Under the National Guard act we could, I believe, under the call of Congress, recruit for an Aviation Corps, and I have no doubt that a call for volunteers would secure the necessary quota for this purpose."

Woodbridge N. Ferris, governor of Michigan: "I do not see any need of training 2,000 aviators. I do not question the value of aviators in time of war and would expect a reasonable number of aviators would be trained. This effort to make extensive preparations in aviation is not in keeping with our moderate preparedness. I would not stand in the way of Michigan doing its share, however."

Henry D. Hatfield, governor of West Virginia: "West Virginia is ready to supply its quota of aviation recruits at any time. Adjt. John C. Bond states that he is besieged daily by militiamen who desire to join the Aviation Corps."

M. G. Brumbaugh, governor of Pennsylvania: "I believe that in the event of aviation training as you suggest, Pennsylvania will have volunteers far outnumbering its quota."

Samuel M. Ralston, governor of Indiana: "The United States should have a reserve force of trained aviators adequate to its needs. If Congress should provide for a reserve corps of 2,000 aviators, Indiana undoub

George A. Carlson, governor of Colorado: "Colorado will be glad to furnish its quota of the 2,000 aviators."

John H Morehead, governor of Nebraska: "If a law should be passed providing for trained aviators for the national defense, I have no doubt Nebraska will furnish its allotted quota."

Guy A. Logan adjutant general of Iowa: "I have 15 or 20 letters here now from young men who wish to become aviators and who want an aviation corps organized under the Iowa National Guard. If the Government would furnish the machines, we could get the men to man them."

them."

James Whitcomb, governor of Oregon: "This State is interested in aviation. It has two in the aeronautic corps of the Naval Militia; also two licensed pilots."

J. A. A. Burnquist, governor of Minnesota: "Minnesota will be prepared to furnish its quota of men for training in aviation up to at least 50."

Frank M. Byrne, governor of South Dakota, takes the position that South Dakota would do its part toward furnishing the necessary quota toward training an aeroplane reserve for Army use, and indorses the idea.

George W. P. Hunt, governor of Arizona; "I heartily approve the plan for establishing a reserve of 2,000 trained aviators and conducting Federal training camps for this purpose. Arizona would undoubtedly undertake to furnish aviation recruits in proportion to population."

Charies R. Miller, governor of Delaware: "Officially and individually I am in favor of a maximum military, naval, aerial, industrial, and economica, preparedness sufficiently strong to command the respect of the other nations of the world; to maintain our national honor and protect the commercial interests of our citizens throughout the world."

Elliott W. Major, governor of Missouri: "I don't know how many would volunteer from Missouri. I have not studied these questions, but have left them to be handled by the Federal Government."

William Spry, governor of Utah: "Utah can be relied upon to furnish its quota of men and anything else the Government may desire."

Lock Craig, governor of North Carolina: "The State could not undertake to furnish men for aviation recruits, but I have no doubt that a sufficient numoer of men would volunteer."

Naval Appropriation Bill Amendment for Government Manufacture of Armor Plate.

> EXTENSION OF REMARKS OF

HON. HENRY J. STEELE.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. STEELE of Pennsylvania. Mr. Speaker, the primary purpose in the use of armor is to secure the safety of ships of war. All the armor heretofore used upon our ships of war has been manufactured at the plants of three private manufacturers, but it is now proposed to erect a Government plant and to manufacture all the armor required at the Government plant to be erected.

Armor is not a commercial product, and the only customer for it is the Government. We have had much discussion as to the experience of the Government with the private manufacturers, but very little information on the practical side of the manufacture of armor. It is my purpose to give some practical

information on this subject.

Armor of some kind for ships of war has been in use for more than a century and a quarter. It would be too lengthy a story to detail here the history of its manufacture, but those interested in the subject will find a full account of its early development by Lieut. Very in volume 9, No. 3, 1883, United States Naval Institute. It will suffice for this occasion to say that the metallic plating of ships of war did not become a matter of great importance until after the introduction of shell fire, and the increased power of guns made the protection of thick wooden sides wholly inadequate. In consequence of this, the demand for armor plate became more imperative as time went on, owing to the greater use of machinery and apparatus, which needed protection even against comparatively small guns. In recent years its use has been further stimulated by the increased speed of fire of guns of all sizes.

About the close of the last century three kinds of armor seemed to produce noteworthy results: The Harvey process in England, the Krupp process in Germany, and the Schneider process in France. Concerning these various kinds Capt. Van

Duzen, United States Navy, in a recent article, said:

Of these three kinds the product of Krupp is generally regarded as the best. Krupp armor differs from that previously made, not only in the process of manufacture but in its chemical constitution. Its exact character is a jealously guarded trade secret, which has been sold at a high price to nearly all the great armor manufacturers of the world; but that it contains a small amount of chromium as well as carbon is now generally understood. Previous attempts to produce chrome steel armor had not been successful, though the trials had been numerous and persistent. Nearly all the armor now applied to ships, except very thin plates, is made by some modification of the Krupp process.

Again, he said:

Again, he said:

The object of having a hard face to armor is to break up projectles by shock or so to strain or deform them as to reduce their penetration. It is particularly effective on oblique impact. To combine hardness with toughness was the aim of armor makers for a quarter of a century, and success was not obtained until the advent of nickel steel. The use of chromium, tungsten, and other substances has further improved these qualities. Had not the improvement of projectiles and guns kept pace with the development of armor, ships could not now be made invulnerable; but both have improved so that the relation of guns and armor is now less favorable to the latter than at almost any time in its history. Nevertheless, armor is absolutely indispensable to the protection of ships and their crews against all classes of gunfire.

At the recent hearings before the Senate committee Admiral Strauss, when questioned as to the practical difficulties in carrying out the plan for the construction of a Government plant,

Senator Swanson. Admiral, do you know of any secret process of manufacture possessed by the armor-plate manufacturers that the Government could not use and make as efficient armor as is made now by these concerns engaged in the business?

Admiral Strauss. I do not believe there are any secret processes about the manufacture of armor plate. One of the big factors in the matter is the general and special knowledge of steel making and handling large ingots. That special knowledge must be gained by experience. I do not believe the most minute description of it would enable anybody to make armor. to make armor.
Senator Page. How would you expect to obtain that expert knowl-

edge?

Admiral Strauss. I fancy there would be a reasonable amount of failure at first. We might get some experts, but undoubtedly, in the course of time, we would be able to manufacture armor on our own

We have, therefore, two expert opinions—one stating that the manufacture of armor is "a jealously guarded trade secret," while the other states that he does not believe "there are any secret processes about the manufacture of armor plate." rience will no doubt reveal which of these two opinions is correct.

In the report of the Bureau of Ordnance or cost of Government armor factory, submitted on June 28, 1913, it was stated

as follows:

The excellence of armor is determined mainly by two processes in

The excellence of armor is determined mainly by two processes in the manufacture:

First. The production of the steel.

Second. The heat treatment of the ingot.

Both of these processes require a high degree of metallurgical knowledge, which must be paid for at a high rate. Unless competent metallurgists, open-hearth superintendents, carbonizing superintendents, and inspectors of heats are employed the quality of armor produced will necessarily be below the standard of that produced by private parties by whom high saiaries are paid. The bureau is by no means desirous of paying more for armor, whether made by private parties or by the Government, than the lowest price at which the best armor can be produced; but it is strongly of the opinion that the primary and most important consideration is quality, and that cost is entirely secondary.

In the report of the Niles Board, submitted to Congress in

In the report of the Niles Board, submitted to Congress in 1906 by the Secretary of the Navy, it was stated:

The chief and all-important exponent of the quality of armor is its ballistic resistance against actual attack by gun fire, and the increasing demands upon manufacturers in this regard have been an incentive

to them and to others to experiment with new methods of manufacture. With every increase in ballistic resistance demanded has come to the manufacturer a certain increase in the cost of production. The value of material has increased and the difficulties of manufacture multiplied, while the rate and certainty of production has markedly lessened.

In no branch of steel making is greater nicety of manipulation and treatment required than in the production of armor plate. To the minds of many people it is difficult to understand the great difference between the cost per ton of steel rails and the cost per ton of armor plate. A writer of experience in the manufacture of armor has recently said on this subject:

manufacture of armor has recently said on this subject:

It is not difficult to calculate roughly that on account of the costly alloys employed steel lying melted in the open-hearth furnaces represents per ton of finished armor plate a raw-material value of not far from \$150. In this connection it must be borne in mind that the Government requires that each finished plate shall represent not over 50 per cent of the weight of the ingot. This means that a minimum of 50 per cent of steel produced by the furnace returns to it as remelted scrap. The alloys in this discarded steel are to a large extent wasted, as they are nearly all slagged off during remelting. Armor-plate ingots are cast in carefully prepared sand molds similar to those used in steel foundries. At a low estimate, based on even the cheapest steel casting work, this molding must add to the cost of the steel per ton \$40. This makes armor plate worth \$190 per ton before it has gone to the armorplate department at all.

The process of manipulation and treetment referred to in the

The process of manipulation and treatment referred to in the Niles report was well explained by Mr. W. P. Barba, vice president of the Midvale Steel Co., in his testimony before the House Committee on Naval Affairs, page 3044:

Niles report was well explained by Mr. W. P. Barba, vice president of the Midvale Steel Co., in his testimony before the House Committee on Naval Affairs, page 3044:

Mr. Barra If perchance some member of the committee has not fully visualized what armor is and something of the process, I should like to try in five minutes to give some idea of what armor really is. In the first place, it is necessary to zet command of facilities which will melt, properly treat, and bring together approximately 400,000 pounds of fluid steel of the highest quality possible to manufacture. It at three gun turret, which is real to pour an ingot for a port part of has as yet required the American armor makers to produce. This plate is cast by bringing together the metal from three 60-ton furnaces, following it with a fourth a little later in the game, and the mold equipment alone necessary to contain this metal and to form the ingot, which is put the metal in it and produce eve one long 25,0000 before you can overhead charge against the ingots of at least \$700 per lipot. It has been experienced that this whole apparatus has gone to pleces on the first ingot and the whole charge of \$20,000 been applied against one moverhead charge against the ingots of at least \$700 per lipot. It has been experienced that this whole apparatus has gone to pleces on the first ingot and the whole charge of \$20,000 been applied against one 200-ton capacity, into the next shop where there is, in Midvale, a 10,000-ton press. This press probably would not go into this room. The shop in which the press is contained has two presses only and the necessary formaces. The shop is 626 feet long, which is only 120 feet than the Capitol and its stack is as high as the dome of the Capitol. If you gentlemen can conceive of a shop as big as the Capitol Ruiding, a building solely for the purpose of housing two tools, you will get some idea of the massiveness of the machinery necessary to do this work. This nachinery can not be purchased in the market. The Midvale Co. Th

tion by the local inspector of what, in his judgment, is the poorest plate in the group. Of the belt plates, the heavy plates, there are perhaps 10 plates in a group or there is the composite group, carrying thick and thin plates, in which there have been as many as 24 in a group. The weight is approximately 600 tons of armor per group.

Out of the group one plate is selected at first, the inspector, as I say, endeavoring from the information which has been regularly furnished him throughout the whole process to select that plate, which, in his judgment, is most likely to fail when attacked by the projectile. That plate is then backed with oak, exactly as it is installed on shipboard, and sent down to Indianhead and there placed on the butts in front of the guns which are to put the real, definite, and final test on this piece of work. The 13-inch plate is tested with two capped 12-inch projectiles and one capped 14-inch projectile, it being the desire of the department to develop the resisting qualities of the plates being manufactured. The requirement is that none of those projectiles shall penetrate the plate, and, further, that the plate under this attack must not crack. If you make a plate so soft that it will not crack it is likely to be so soft that the shell will penetrate the plate, thus failing through perforation. Another consideration is the number of falling plates. The best result that the Midvale Co. has ever experienced is in the contract we have just completed for the armor for the Idaho, which comprises 13 groups and required 16 plates to test, and we had 3 falling plates and 13 successes. That is the best proportion of success that we have ever enjoyed and represents, therefore, the best years I armor manufacture that we have ever enjoyed; due, first, to that reason; and, second, to the fact that for the first time we had sufficient armor to keep our plant going the entire year.

This statement shows that the manufacture of armor requires great nicety of manipulation and treatment, and a continuous operation, day and night and Sunday, for 27 days for the thickest plates, and 18 days for the thinnest plates. There can be no cessation in the operation for the temperature must be continuously maintained.

In the Senate hearings, the following colloquy took place during the testimony of Mr. Barba:

Mr. Barba. The operation requires an absolute continuous performance 24 hours a day, 7 days a week.

The Chairman. You mean the heat has to be maintained?

Mr. Barba. Yes, sir. I instanced a week ago in my testimony one operation which is common to every armor plant, which requires from 18 to 25 days' continuous operation at a temperature of 2,000° F., without cessation. You can not do that on an eight-hour basis.

The Chairman. That is one of the special parts of the manufacture heavens?

without cessation. You can not do that on an eight-hour basis.

The Chairmax. That is one of the special parts of the manufacture, however?

Mr. Barba. You can do that in the case of machinery where the tools may stand idle.

The Chairmax. My judgment would be that it would be possible for the Government armor factory to run on those processes which are not necessarily continuous in such a way as not to make it necessary, and you could get the same results, and you could expand and run 24 hours a day in an emergency.

Mr. Barba. But, Senator Tillman, where does your cost go under such an operation as that? When you are working 8 hours a day and the plant is idle 16 hours a day, everything stops more than 16 hours a day. It takes longer than 8 hours a day to pick up and get going. You need a little manufacturing experience, Senator, to show you the truth of these statements I am making to you.

The process above described relates exclusively to the treat-

The process above described relates exclusively to the treatment of the steel ingot in the armor factory. The production of the steel, however, is the first essential in the process of manufacture and requires a high degree of metallurgical knowledge.

In the case of the private manufacturer the armor factory is only a department of a large plant where the ores are brought from privately owned mines and manufactured into ingots.

It is not contemplated to manufacture steel in the Government armor plant, and, therefore, this first essential in the manufacture of armor will have to be purchased by the Government. Where it will be purchased will probably depend upon the location of the armor plant. If, as contemplated in the Senate amendment and discussion of this subject, it should be located at some point West or South, it would be natural to purchase the steel from the nearest available steel-manufacturing point. If it were to be located in the Middle West, the nearest point would probably be the United States Steel Corporation, and if it should be located in the South the nearest point would probably be the Birmingham, Ala., region. In either case the steel would have to be transported from the point of manufacture to the armorplate plant. Of course this would be an additional item of expense.

After the manufacture of the armor it would have to be subjected to the Government tests on the proving ground. This now takes place at Indianhead. The Bethlehem Steel Co. has also a private proving ground of its own. In the report of the

Rureau of Ordnance it said on this subject:

If the site chosen for a Government factory were far removed from ne present proving ground, considerations of economy might suggest ne provision of a proving ground for armor tests adjoining the armor the pres the prov factory.

The result would be that the armor would either have to be transported to the present proving ground or a new proving ground constructed adjoining the new armor plant. In either event considerable expense would be entailed.

or Pacific coast. If, for instance, the armor factory should be located in the Middle West, it would still be necessary, after the manufacture of the armor, to transport it to some point along the Atlantic coast to answer its intended use. This distance would be considerably greater than is now necessary, and would, therefore, add much to the cost of transportation. Hence it is apparent that it is vastly more economical to have the armor manufactured near the shipbuilding plants.

It is also apparent that the private manufacturers have the additional advantage of owning their raw materials and manufacturing the steel in the same plant where the armor is manufactured. With the private manufacturers an armor plant is merely an adjunct to a great steel plant, and, as already stated, it is easy to use up all the scrap and refuse in other ways. This would be impossible in a Government-owned plant, solely devoted to the manufacture of armor. In a private plant the workmen could also be readily shifted from the armor factory to the other departments, and the same thing would be true of the question of power and the operation of the plant. This would be very important where the plant could not be operated on full time. Without the ability to shift their employees to other time. Without the ability to shift their employees to other departments, it would be impossible for the Government to keep

its force of workmen together on one-third or even one-half time. Down to this time it has been the uniform opinion of those in authority who have studied the subject that it was to the best interest of the Government to purchase its armor. In 1896 Secretary of the Navy Herbert, in his report to Congress, said:

At the last session of Congress I gave, in response to an inquiry from a member of the Committee on Naval Affairs in the United States Senate, the opinion that the Government ought to purchase its armor rather than manufacture it. The reasons set forth in that communication are still believed to be sound.

In 1900 Admiral O'Neill presented an exhaustive report on it, and on page 6 of his testimony, given on February 16, 1900, he said:

I do not think it is expedient for the Government to undertake the manufacture of armor for several reasons, which I will state.

This is followed by several pages, setting forth the reasons for his opinion. In 1906 came the so-called Niles report. In December of that year Secretary of the Navy Bonaparte asked Congress, as a protection in dealing with armor-plate manufacturers, the privilege of erecting an armor-plate plant, if the Government thought it necessary. Congress gave him that privilege, and with this power in his hands, he became satisfied that it was not wise to erect such a plant.

In the report of the Bureau of Ordnance for 1913 it is stated: In this connection the department is reminded of the experience of the French Government with its armor-plate factory, the facts concerning which are already in the department's possession. It is to be noted that at present, some 13 years after the project was approved by the French Parliament, the plant has made no savings that compare with the anticipted savings and is still unable to turn out any kind of armor except thin plates.

In the light of the admission of Admiral Strauss that "there would be a reasonable amount of failure at first," and of the failure of the French Government after 13 years of experience, can anything else than failure be expected of the Government plant authorized by this bill?

The Bethlehem Steel Co. plant, by reason of its size and the excellence of its product, has been well termed in the steel industry the "Krupp of America." After the recent naval engagement in the North Sea Emperor William sent the head of the Krupp works the following telegram from Wilhelmshaven:

After receiving oral reports on the North Sea battle, I desire to tell you how greatly we are indebted for success to our splendid artillery and armor plate, and especially to the destructive power of our ammunition. Thus the battle day was also a day of honor for the Krupps.

How different is the policy proposed for this Government! Instead of acknowledging an indebtedness to the private manufacturers for their enterprise, a deliberate policy of destruction is proposed. It is a policy contrary to that of all the great powers of Europe.

In an emergency it is quite easy to raise volunteers and to drill and train them, but turning out munitions of war can not be done so quickly. Modern warfare calls for every particle of manufacturing efficiency that a country possesses. England has just paid a frightful price for failing to encourage the produc-tion of war material by private manufacturers. One of the tion of war material by private manufacturers. ablest of English newspaper correspondents, Mr. Sidney Brooks, in a letter to the New York Times in March last, discussed this very bill for the erection of a Government armor-plate plant. He gave the result of his observations as follows:

event considerable expense would be entailed.

Another consideration would be the transportation of the armor after it was finished and accepted by the Government to the shipyard where the armor plate would be placed upon the ship. These shipyards are all located along either the Atlantic

in money but in the lives of your soldiers. Encourage the production of war material by private manufacturers, and no matter what profits they make out of the industry, the Nation will find it a cheap investment. * * I abould be preud of the extraordinary skill and enterprise, the farseeing liberality with which they have been planned and conducted. I should recognize in them so many pillars of national safety, so many policies of insurance against the awful risk of being unprepared. And I should certainly do what I could to defeat any policy that threatened to destroy, to remove, or to weaken enterprise on whose instant efficiency might one day depend all the difference between victory and defeat. instant efficiency i

Republican Party Platform.

EXTENSION OF REMARKS

HON. JAMES R. MANN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 9, 1916.

Mr. MANN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the Republican Party platform.

The Republican Party platform is as follows:

REPUBLICAN PARTY PLATFORM ADOPTED AT CHICAGO, ILL., JUNE 8, 1916.

"In 1861 the Republican Party stood for the Union. As it stood for the union of States, it now stands for a united people, true to American ideals, loyal to American traditions, knowing no allegiance except to the Constitution, to the Government, and to the flag of the United States. We believe in American policies at home and abroad.

PROTECTION OF AMERICAN RIGHTS.

"We declare that we believe in and will enforce the protection of every American citizen in all the rights secured to him by the Constitution, treaties, and the law of nations, at home and abroad, by land and sea. These rights, which in violation of the specific promise of their party made at Baltimore in 1912, the Democratic President, and the Democratic Congress have failed to defend, we will unflinchingly maintain.

FOREIGN RELATIONS.

"We desire peace, the peace of justice and right, and believe in maintaining a straight and honest neutrality between the belligerents in the great war in Europe. We must perform all our duties and insist upon all our rights as neutrals without fear and without favor. We believe that peace and neutrality as well as the dignity and influence of the United States can as well as the dightly and influence of the United States can not be preserved by shiftly expedients, by phrase making, by performances in language, or by attitudes ever changing in an effort to secure groups of voters. The present administration has destroyed our influence abroad and humiliated us in our own eyes. The Republican Party believes that a firm, consistent, and courageous foreign policy, always maintained by Republican Presidents in accordance with American traditions, is the best, as it is the only true way, to preserve our peace and restore us to our rightful place among the nations. We believe in the pacific settlement of international disputes and favor the establishment of a world court for that purpose.

MEXICO.

"We deeply sympathize with the 15,000,000 people of Mexico, who for three years have seen their country devastated, their homes destroyed, their fellow citizens murdered, and their women outraged by armed bands of desperadoes led by self-seeking, conscienceless agitators, who when temporarily successful in any locality have neither sought nor been able to restore order or establish and maintain peace.

"We express our horror and indignation at the outrages which have been and are being perpetrated by these bandits upon American men and women, who were or are in Mexico by invitation of the laws and of the government of that country, and whose rights to security of person and property are guaranteed by solemn treaty obligations. We denounce the indefensible methods of interference employed by this administration in the internal affairs of Mexico, and refer with shame to its failure to discharge the duty of this country as next friend to Mexico, its duty to other powers, who have relied upon us as such friend, and its duty to our citizens in Mexico, in permitting the continuance of such conditions, first by failure to act promptly and firmly; and, second, by lending its influence to the continuation of such conditions through recognition of one of the factions responsible for these outrages.

"We pledge our aid in restoring order and maintaining peace We promise to our citizens on and near our border,

and to those in Mexico, wherever they may be found, adequate and absolute protection in their lives, liberty, and property.

MONROE DOCTRINE.

"We reaffirm our approval of the Monroe doctrine, and declare its maintenance to be a policy of this country essential to its present and future peace and safety and to the achievement of its manifest destiny.

LATIN AMERICA.

"We favor the continuance of Republican policies, which will result in drawing more and more closely the commercial, financial, and social relations between this country and the countries of Latin America.

PHILIPPINES.

"We renew our allegiance to the Philippine policy inaugurated by McKinley, approved by Congress, and consistently carried out by Roosevelt and Taft. Even in this short time it has enormously improved the material and social conditions of the islands, given the Philippine people a constantly increas-ing participation in their government, and, if persisted in, will

bring still greater benefits in the future.

"We accepted the responsibility of the islands as a duty to civilization and the Filipino people. To leave with our task half done would break our pledges, injure our prestige among nations,

and imperil what has already been accomplished.

We condemn the Democratic administration for its attempt to abandon the Philippines, which was prevented only by the vigorous opposition of Republican Members of Congress, aided

by a few patriotic Democrats.
"We reiterate our unqualified approval of the action taken in December, 1911, by the President and Congress to secure with Russia, as with other countries, a treaty that will recognize the absolute right of expatriation and prevent all discrimination of whatever kind between American citizens, whether native born or alien and regardless of race, religion, or previous political allegiance. We renew the pledge to observe this principle and to maintain the right of asylum, which is neither to be surrendered nor restricted, and we unite in the cherished hope that the war which is now desolating the world may speedily end, with a complete and lasting restoration of brotherhood among the nations of the earth and the assurance of full equal rights, civil and religious, to all men in every land.

PROTECTION OF THE COUNTRY.

"In order to maintain our peace and make certain the security of our people within our own borders, the country must have not only adequate but thorough and complete national defense, ready for any emergency. We must have a sufficient and effective Regular Army and a provision for ample reserves, already drilled and disciplined, who can be called at once to the colors when the hour of danger comes.

"We must have a Navy strong and so well proportioned and equipped, so thoroughly ready and prepared that no enemy can gain command of the sea and effect a landing in force on either our western or eastern coast. To secure these results we must have a coherent and continuous policy of national defense, which even in these perilous days the Democratic Party has utterly failed to develop, but which we promise to give to the country.

TARIFF.

The Republican Party stands now, as always, in the fullest sense for the policy of tariff protection to American industries and American labor, and does not regard an antidumping provision as an adequate substitute. Such protection should be reasonable in amount, but sufficient to protect adequately American industry and American labor and be so adjusted as to prevent undue exactions by monopolies or trusts. It should, moreover, give special attention to securing the industrial in-dependence of the United States in the case of dyestuffs.

"Through wise tariff and industrial legislation our industries can be so organized that they will become not only a commercial bulwark but a powerful aid to national defense

"The Underwood Tariff Act is a complete failure in every Under its administration imports have enormously increased in spite of the fact that the intercourse with foreign countries has been largely cut off by reason of the war, while the revenues of which we stand in such dire need have been greatly reduced. Under the normal conditions which prevailed prior to the war it was clearly demonstrated that this act de-prived the American producer and the American wage earner of that protection which entitled them to meet their foreign competitiors, and but for the adventitious conditions created by the war, would long since have paralyzed all forms of American industry and deprived American labor of its just reward.

"It has not in the least reduced the cost of living, which has constantly advanced from the date of its enactment. The wel-

fare of our people demands its repeal and the substitution of a measure which in peace as well as in war will produce ample revenue and give reasonable protection to all forms of American production in mine, forest, field, and factory.

We favor the creation of a tariff commission with complete power to gather and compile information for the use of Con-

gress in all matters relating to the tariff.

RUSINESS

"The Republican Party has long believed in the rigid supervision and strict regulation of the transportation and great corporations of the country. It has put its creed into its deeds, and all really effective laws regulating the railroads and the great industrial corporations are the work of Republican Congresses and Presidents. For this policy of regulation and supervision the Democrats, in a stumbling and piecemeal way, are undertaking to involve the Government in business which should be left within the sphere of private enterprise and in direct competition with its own citizens; a policy which is sure to result in waste, great expense to the taxpayer, and in an inferior product.

"The Republican Party firmly believes that all who violate the laws in regulation of business should be individually punished. But prosecution is very different from persecution, and business success, no matter how honestly attained, is apparently regarded by the Democratic Party as in itself a crime. Such doctrines and beliefs choke enterprise and stifle prosperity. The Republican Party believes in encouraging business, and will seek to advance all American interests.

RUBAL CREDITS.

"We favor an effective system of rural credits as opposed to the ineffective law proposed by the present Democratic administration.

RURAL FREE DELIVERY.

"We favor the extension of the Rural Free Delivery System and condemn the Democratic administration for curtailing and crippling it.

MERCHANT MARINE.

"In view of the policies adopted by all the maritime nations to encourage their shipping interests, and in order to enable us to compete with them for the ocean carrying trade, we favor the payment to ships engaged in the foreign trade of liberal compensation for services actually rendered in carrying the mails, and such further legislation as will build up an adequate American merchant marine and give us ships which may be requisitioned by the Government in time of national emergency.

"We are utterly opposed to the Government ownership of vessels as proposed by the Democratic Party, because Government ownership, while effectively preventing the development of the American merchant marine by private capital, will be entirely unable to provide for the vast volume of American freights and will leave us more helpless than ever in the hard

grip of foreign syndicates.

TRANSPORTATION.

"Interstate and intrastate transportation have become so interwoven that the attempt to apply two and often several sets of laws to its regulation has produced conflicts of authority, embarrassment in operation, and inconvenience and expense to the

"The entire transportation system of the country has become essentially national. We, therefore, favor such action by legislation, or, if necessary, through an amendment to the Constitu-tion of the United States, as will result in placing it under ex-

clusive Federal control.

ECONOMY AND A NATIONAL BUDGET.

"The increasing cost of the National Government and the need for the greatest economy of its resources in order to meet the growing demands of the people for Government service call for the severest condemnation of the wasteful appropriations of this Democratic administration, of its shameless raids on the Treasury, and of its opposition to and rejection of President Taft's oft-repeated proposals and earnest efforts to secure economy and efficiency through the establishment of a simple, businesslike budget system, to which we pledge our support and which we hold to be necessary to effect any real reform in the ad-ministration of national finances,

CONSERVATION.

"We believe in a careful husbandry of all the natural resources of the Nation—a husbandry which means development without waste; use without abuse.

CIVIL-SERVICE REFORM.

"The civil-service law has always been sustained by the Republican Party, and we renew our repeated declaration that it shall be thoroughly and honestly enforced, and extended wher-

ever practicable. The Democratic Party has created since March 4, 1913, 30,000 offices outside of the civil-service law at an annual cost of \$44,000,000 to the taxpayers of the country.

We condemn the gross abuse and misuse of the law by the present Democratic administration and pledge ourselves to a reorganization of this service along lines of efficiency and economy.

TERRITORIAL OFFICIALS.

"Reaffirming the attitude long maintained by the Republican Party, we hold that officials appointed to administer the government of any Territory should be bona fide residents of the Territory in which their duties are to be performed.

LABOR LAWS.

"We pledge the Republican Party to the faithful enforcement of all Federal laws passed for the protection of labor. We favor vocational education; the enactment and rigid enforcemnt of a Federal child-labor law; the enactment of a generous and comprehensive workmen's compensation law within the commerce power of Congress and an accident compensation law covering all Government employees. We favor the collection and collation, under the direction of the Department of Labor, of complete data relating to industrial hazards for the information of Congress, to the end that such legislation may be adopted as may be calculated to secure the safety, conservation, and protection of labor from the dangers incident to industry and transportation.

SUFFRAGE.

"The Republican Party, reaffirming its faith in government of the people, by the people, for the people, as a measure of justice to one-half the adult people of this country, favors the extension of the suffrage to women, but recognizes the right of each State to settle this question for itself.

"Such are our principles, such are our purposes and policies. We close as we began. The times are dangerous and the future is fraught with peril. The great issues of the day have been confused by words and phrases. The American spirit which made the country and saved the Union has been forgotten by those charged with the responsibility of power. We appeal to all Americans, whether naturalized or native born, to prove to the world that we are Americans in thought and in deed, with one loyalty, one hope, one aspiration. We call on all Americans to be true to the spirit of America, to the great traditions of their common country, and, above all things, to keep the faith."

The Merchant Marine and Shipping Bill.

EXTENSION OF REMARKS OF

HON. RUFUS HARDY, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES.

Saturday, June 10, 1916.

Mr. HARDY. Mr. Speaker, I ask leave to extend my remarks in the RECORD by printing a speech made by me in February before the Economic Club of Boston. This speech was revised and corrected by me upon request of the secretary of the Economic Club for publication in their National Economic League Quarterly from notes taken at the time of its delivery.

The SPEAKER. The gentleman from Texas asks leave to extend his remarks in the RECORD. Is there objection? The

Chair hears none.

The speech is as follows:

SPEECH OF HON. RUFUS HARDY TO BOSTON ECONOMIC CLUB, BOSTON, MASS. My fellow countrymen, it is with pleasure and with pride I

use these words in this assembly.

For the first time in my life, to-day I have set foot within the historic and great city of Boston, and I am 60 years old. I am proud of every incident in your history that marks your character as a people, because those incidents all redound to the glory of our common country. I am as proud of the glories of Boston, or almost as proud, as I am of the memories of the heroic deeds of the men of the Alamo [applause], and that broad southern citizenship of the State I hail from greets with pleasure kindred spirits from the East or North or West.

But I am not here to-day to speak of those things. I am here to speak of things practical and of the present, and I confess that when I came I expected my views would meet a wall of prejudice and preconceived opinion, and I realize that a prejudiced opinion is one of the most difficult things to change in all the world. I ran across such a prejudice not long ago on the

silver question. I believed then and believe now that the silvermine owner was as much interested in preventing the passage of the law for free and unlimited coinage of silver as the commercial world was, but you could not even tell him so. He would not hear you. And so I believe now that New England, the home of our shipping industry and the inspiration of our early triumphs in that field, is more interested in the adoption of the views I hold than any other section of our country. I came, believing that the message I bring would fall on almost closed ears, for the reason that I understood it was your preconceived opinion that those views were contrary to your interests. I am therefore agreeably surprised and really proud to see that your chairman has almost put the stamp of his approval upon the views which I have entertained for the 10 years I have been in Congress and which I desire to present to

you to-night.

Before I discuss the shipping bill now before Congress, which I have been fighting to pass for the last two years, I desire to give my views generally on what will build up an American merchant marine. I read with interest the proceedings of the United States Chamber of Commerce in Washington a few days ago. Unfortunately from start to finish it was devoted to the advocacy of ship subsidy. Gentlemen, think of it, a ship subsidy urged at this time, when any man who owns a vessel in the shape of a ship, steam or sail, can get such prices for his service that if the Government were to give him a subsidy it would be a shame to take the money. [Applause.] And yet this great body, this national chamber of commerce, stood there and asked for a subsidy. You know, Mr. Chairman, and I know that the greatest absurdity to-day would be to go before Congress in behalf of the shipowners and say "my clients, those I represent, are receiving now in freights from 100 to 1,000 per cent more than they ever did before, but I ask you earnestly to give them a subsidy in addition." You gentlemen are in this section of a subsidy in addition." the Union that has devoted more of its energy to upbuilding the merchant marine than any other section, and I ask you what do you think of such a request? The great body of our people, who have not been directly interested in shipping, have contributed millions to improving our harbors and canals and rivers, so that your ships and the ships of commerce generally may safely enter and traverse them. That is sometimes called a safely enter and traverse them. subsidy by those who seek to find countenance for their demand, but it is not a subsidy. It is a public improvement. It does not go into the pocket of any particular individual or corporation. A subsidy is not distributed in that way. The beneficiaries of a subsidy hang like hungry dogs around a table waiting for the crumbs to fall.

I must tell you that I was glad to find your chairman able to state, and stating so fairly, the facts in regard to England's merchant marine. He tells you that England never has given a subsidy to her cargo ships. She has paid certain sums, but for every dollar she has ever given she has demanded full service in return. She has built, under the direction of her Admiralty, certain ships which might be easily turned into war vessels, and so constructed that they could not be very economically operated in commerce, but yet constructed with a view of avoiding the expense of keeping them idle in times of peace while having them ready for a time of war; and a few vessels, not amounting to 5 per cent of Britain's total tonnage, have received, not a subsidy, but what is in effect very fair and just compensation for carrying the mails and for other public service rendered and service contracted to be rendered in certain contingencies. But suppose it could be shown that England did subsidize some of her fast ships, how would that help the other and unsubsidized vessels of her vast marine? How would it help Mr. Smith operating his vessel if Mr. Jones operating a vessel in competition with him got a subsidy? Pardon me for discussing this question at some length. I do so because it has a fascination for the shipowners, and it is shrewdly pushed to the fore by the shipbuilding interests, which, under our present laws, have a monopoly of building ships for the American flag. Special favor and privilege are always fascinating and the recipients of them are always overflowing with reasons to justify them. Our shipbuilders have always enjoyed a monopoly of our flag by prohibitory This did not matter so long as they built as good or better ships for the money than any other builders, but when the time came, and it did come, that they demanded a price of 50 to 100 per cent more than the foreign shipbuilder demanded for the same ship, then, in the language of James J. Hill, competition in our ships that is under our flag with foreign ships became Then the ship builders and owners of America began to look for some way to do business. They could do it in our coastwise trade, of course, because no other ships were allowed there, but on the high seas it was different.

If shipowners alone had been originally concerned, the way was casy. All we had to do was simply to let the American buy his ship here or elsewhere and so pay no more for it than did his foreign competitor. But our shipbuilder at that suggestion threw up his hands in holy horror. He declared he could not compete with the foreign builder, and that if you let American citizens buy ships where they please and put them under our flag and sail coastwise as well as overseas they—the shipbuilders—would be destroyed; and yet they realized that the ship which carried the commerce between nations must do so because it carried it cheapest, and that the cheapest ship made the cheapest transportation. The issue was clear-cut. It was, put our shipowner on equal terms with the foreign shipowner or give up all participation by our ships in the foreign trade and hold only to our coastwise trade, from which we could exclude the foreigner by law. Since the coastwise trade was about threefourths—now nearly seven-eighths—of all our trade, the decision was quick and easy for our shipbuilders. They chose to hold the monopoly of building for our coastwise trade alone and let the foreign trade go to foreign flags; and American merchants and the American public acquiesced. It was a blind and foolish and the American public acquiesced. It was a blind and robusts policy, but urged with many plausible arguments. They said, "Let us enjoy our coastwise monopoly and by building many ships we will soon bring down our price to the level of the ships we will soon bring down our price to the level of the foreign price, but if you open up the ship market you will utterly destroy us, and then the foreign shipbuilder will double his price"; and besides, they said, "If war should come we would have no shipyards, and be at the mercy of our enemy." Finally, they said shrewdly, "If American capital wants to engage in foreign transportation, it can buy the foreign ship, put it under the foreign flag, and so do the business." And this is what American capital did. Later, when the absence of our flag from the high seas became a scandal, we began to hear talk about our ships being driven out by antiquated navigation laws and the heavy burdens imposed by our laws on our shipping. All this talk was vague and general. It was never definite or specific, and it was always accompanied by a clamor for subsidy,

The subsidist makes his plea on two grounds: First, our antiquated navigation laws, which he never points out and never seeks to amend; and, second, the high wages we pay our seamen. I tell you, without fear of contradiction, that we have no antiquated navigation laws that impede our navigation save the one which forbids our merchantman from buying the cheapest ship he can for the money. On the second point, the question of wages, it seems never to occur to him that England also is a high-wage country, comparatively. Her wages are higher than those of Germany, France, Russia, Norway, Sweden, Holland, or Italy, and yet she builds cheaper and better ships than any of them and carries more of the commerce of the world than all of them put together, and she carries that commerce without

Senator Burton in a speech in the Fifty-ninth Congress declared that no nation had ever built up a great merchant marine on subsidy, and he is a profound student of the subject. My own study of the question has fully convinced me of the truth of his assertion. England has won by the skill and bigness and boldness of her enterprise. We must win in like manner or not at all; but if we would win, we must take off the weights and handicaps that prevent us from running an equal race and then enter the list of competitors seeking to furnish the transportation of the world just as we have entered the list of competitors seeking to furnish the world with the corn, the wheat, the shoes, the machinery, and all the other products of labor.

Mr. President and gentlemen, there was a time when the American flag rode on every sea and the American ship entered every port of the world. The grandest success in a maritime way that the world ever saw; but when that time was, although our seamen and shipbuilders received higher wages, yet America built the cheapest and best vessels in the world, as your chair-

man, Mr. Lincoln, has se clearly told you.

Mr. Lincoln has given you the story of the downfall and decay of our merchant marine. He knows those things because he lived them. He tells you that during all the years our marine flourished it was a fact that the New England shipbuilder built the best ships in the world, and built them for their own merchantmen and for the merchantmen of the world. Is not that so, sir? [Mr. Lincoln: "Correct."] Just so long as we built the best and cheapest ships, just that long our merchants led in the march of maritime progress. But what happened? happened: We were building wooden vessels. We built them splendidly, graceful in form, speedy in movement, and we operated them by the most skillful seamen in the world. I have heard it said that the American skipper made three ocean voyages while the best English ship could only make two. But when our War between the States came and our ships were being raided and destroyed by Confederate cruisers the other nations were not too proud or thick headed to buy our ships, and they did buy all we would seil. In that period your chairman says our merchants sold 800,000 tons of shipping. If we had been at that time in the place of the other nations of the world and our commercial rival had been in war, our law would have prohibited us from buying their ships at a bargain; but these other nations—England among them—were not cursed with such blindness. England allowed her merchantmen to buy our ships and sail them under her flag with every right of English ships. It is contended sometimes that we now have let foreign-built ships come under our flag by the lately passed Panama act. I want you clearly to understand the answer. We have done no such a thing. We did pretend to do it, but it was only pretense. We passed a bill authorizing the American merchantman to buy a ship wherever he pleased, but in the same bill we said that if he bought one built anywhere else than in the United States he could only sail it in the foreign trade.

Now, what does that mean? It means he might put our flag over it; but when he does so, what advantage or what privi-lege does he get by doing it? Not a rap of your finger. Under this fraud of a law he can not do anything with the ship under our flag that he could not do under the foreign flag. He may bring goods from Liverpool to New York or Boston and carry goods back to Liverpool. He could do that under the foreign flag. He gains absolutely nothing. What does he lose? First, he must change his officers when he changes to our flag. These he perhaps cherishes because they have been faithful and serviceable. That is his first difficulty. What next? He loses every distinctive privilege he had under the flag he transfers from. the English flag, he loses the privilege of sailing in the coastwise trade of some dozen different nations with whom England has treaties of commity. And, moreover, he loses the privilege of sailing in the coastwise trade of Canada. It is safe to say that there is no nation under whose flag a vessel does not enjoy some special advantage, small or great, and it is certain that by the law in question we offer absolutely no inducement to cause a shipowner under a foreign flag to part with even the smallest advantage. It is said that we in the South are careless in business matters, but that your people are not. As a New England business man, if you owned a ship under the English flag or any other flag, would you change it to the American flag when you understood the simple truth as I have told it to you about this so-called free-ship law? The committee I am on reported out that law after I had tried and falled to get them to amend it by letting such ships engage in our coastwise trade. told them that not a single ship would come to our flag under its provisions, and no ship did until the dangers of the present war came and then some of them took advantage of that law solely on account of our neutral position and they came with the privilege of retaining their officers because the law requiring American officers was suspended to enable them to do so.

There is one other familiar subject I wish to talk about just a little—the subject of discriminating duties. Your chairman has said that discriminating duties have been tried by every nation on earth and have failed. That is true. In our early history Jefferson said that as long as other nations levied discriminating duties against us we must maintain retaliatory duties against them; and that fact has of late years been falsely quoted to show that Jefferson favored discriminating duties. The whole truth is this: When the thirteen original States had separate shipping laws, they found that England and other nations were discriminating against them by imposing heavy tonnage dues on American ships entering their ports, and also heavy tariff duties on goods imported in such ships. Then it was found that when a State tried separately to retaliate she could not, because if Boston, for instance, imposed a high duty and New York a lower duty, Boston lost her trade and New York got it. New York and Massachusetts could not agree; and if they had agreed, then Baltimore could come down in her dues and duties and get the This was the situation when our Federal Constitution was framed. It was one of the things that helped to secure its adoption. All the States desired to have one central power that could put in operation a uniform policy on tonnage dues and tariff duties and so meet the laws of foreign States which discriminated against them. Among the first laws passed by Congress was, therefore, one enacting retaliatory discriminating duties and tonnage dues. But even as early as 1802 a movement was started to repeal that law and place in its stead upon our statute books a law authorizing the President to negotiate treaties abolishing our discriminating duties as to such nations as would abolish theirs against us. But it so happened that at this time the French Revolution was disturbing all the world.

Laws and treaties were everywhere asleep in international affairs,

The Napoleonic wars were sweeping the ocean of the merchantmen of nearly all European nations, and our ships had all they could do. They had a harvest; but just as soon as European peace was proclaimed the leading men of all parties in 1815 in the United States joined in the passage of an act to abolish discriminating duties against all nations that would abolish them as to us. The President was authorized to negotiate treaties to that end. Some 18 treaties were negotiated in the next 10 years. There were many qualifying clauses in these treaties not necessary now to discuss. In this country all parties and the leaders of all parties continually endeavored to make the sea more and more free, but England, with her vast colonial possessions, continued to refuse to meet our overtures. We were particularly anxious to trade freely with the West Indies, and England was anxious that we should not. She practiced all sorts of discriminations against our shipping. John Quincy Adams and his Secretary of State, Henry Clay, sought every way to make a treaty of reciprocity with her and to abolish these discriminations. They failed. They sent spe-cial representatives to England. That failed; but in 1828 President Andrew Jackson sent a special agent to England with authority and instructions to negotiate a treaty and with a message to the effect that a change had taken place in the American administration; that he meant business; and the treaty was finally made. England was the last great nation to give in, and from 1828 down to this day we have practically neither laid nor paid discriminating duties.

I could go into the subject at great length and show you how such duties obstructed commerce and irritated and aggravated nations and injured peoples. I could show you how it came to pass that an owner of cotton who must ship it from Charleston, S. C., to Europe found it better to pay an exorbitant freight and send it on a foreign ship than to send it on American vessels free, and how England finally closed her West Indian ports to our ships. It is enough to say that discriminating duties force cutthroatism and stagnation in commerce, and we do not want them. What we want is, to struggle with the world on equal terms on the sea for our part of its carrying trade and its commerce.

I could tell you of the debates in Congress, and the records from 1815 to 1828 are full of the subject. The statesmen of New England led in the struggle for free seas. They wanted nothing but an opportunity to meet the ships of the other nations of the world on equal terms, and they knew they would hold their own. Now, gentleman, what your chairman has said is the truth. What you want in order to compete is the cheapest and best ship and through that the cheapest unit of transportation that the world can offer. We won when we had the best ships, we lost when we ceased to have them. and when did we cease to have them? The story is simple, yet little known. Just before our Civil War England who was fighting a losing fight with us in wooden ships began to make vessels of iron and steel. She was perhaps far ahead of us in the general manufacture of iron and steel products and unfortunately when she began to build this new class of vessels we did not catch on. We were rather disposed to scout the idea, and England had begun to get the better of the struggle, when our war broke out. During that war we failed to keep step with England's maritime progress, and when the war ended many of our old merchant vessels had been sold or destroyed and our merchant marine was largely scattered and gone. England's merchant marine was in splendid condition. Her steel and iron vessels could beat our old wooden ones, and she could build new iron and steel vessels cheaper than we because she was the greatest manufacturer in the world of the materials that went into them. What then happened? Our steel industry was only beginning, and in order to protect that industry we put a heavy duty on the importation of the steel and iron that went into ships, and when we laid that duty we practically said to our shipbuilder that until the American manufacturer made and sold iron and steel products as cheaply as England he could not build any competing ships. And then we continued in force the law that prevented our merchants buying the English ships and so we foreclosed their opportunity to battle for existence in the carrying trade across the seas. Our shipbuilders could not compete, and our merchants

could only buy ships here. [Applause.]

The shipbuilding and coastwise interests are constantly talking about our antiquated navigation laws in the public press as the cause of the decay of our merchant marine. I have made them ashamed to talk that way when they come before our committee, because I have demanded that they point out the

laws they complain of and have shown them that they have never asked for the repeal of a single law. Your chairman to-night is the first man interested in shipping who has ever in my hearing named the real antiquated law which has killed our merchant marine. The shipbuilder will not tell you what it is, but he knows. I have had them to tell me in years gone by that our law required our seamen to be given better accommodations than the seamen of any other nation on earth. seaman here [Mr. Furuseth] who will tell you that is not true. I looked at the law. Our law until last year required 72 cubic feet of space for each member of the crew to eat, live, and sleep in. England's law requires 120 feet, and France and nearly every other nation require from a hundred to a hundred and twenty feet. So we have not required better but poorer quarters for our seamen. Sometimes they told me that our law prescribed an excessive scale of food. Look at the English food scale and there is hardly any difference. We have a law, it is true, prescribing a moderate schedule of food, but then this is allowed to be varied by the terms of the contract under which The seamen enlist and it is always varied. [Applause,] When I have shown these things and asked again what laws, they are as dumb as oysters, becase they can not find a law on our statute books that cripples our merchant marine except the law which your chairman pointed out and which I have pointed out to-night, and that is the law which prevents you from buying a ship where you please and using it in all our trades. The ship-builders and coastwise shipowners will not point out that law, because they do not want it repealed. Let me show you how impossible it is for us to have a merchant marine until that law is repealed.

It was testified before our committee that a ship costing a million dollars here would cost \$700,000 laid down on the Clyde. Now, if you buy the ship here it will cost you a million dollars, and you can sail it as an American ship in every trade. If you buy it on the Clyde and put the British flag on it, you pay seven hundred thousand. Ships are bought on borrowed money. That means that on the American ship you pay interest on \$300,000 more than you would on the British ship, and if you pay 5 per cent interest it means \$15,000 more interest per year. It means also that you pay insurance on \$300,000 more, which, I think, is generally about 5 per cent, and which would make your insurance fifteen thousand more per year. A ship is supposed to last 20 years and 5 per cent is charged off annually for depreciation. Repairs are also estimated to cost annually 5 per cent on the value of the vessel. So by buying the American ship you will pay annually fifteen thousand more interest, fifteen thousand more insurance, fifteen thousand more for repairs, and fifteen thousand more for depreciation; all told, \$60,000 more per year under this antiquated law for the blessed privilege of sailing your ship under the American flag with the full privilege of an American vessel. As a man that is not more blind than the cow that can keep in the road, I ask this simple question of you: If you, the most patriotic man in America, were thinking of going into the over-seas carrying trade, would you buy the American ship and pay this \$300,000 excess initial cost and this \$60,000 excess charge every year? Business men in carrying trade are not fools, and you see just as well as I do

why our merchant marine died.

When the Civil War ended we were still carrying over 30 per cent of our foreign commerce in our own ships. Those were the old wooden vessels that had not been sold or destroyed. As the years passed by we built no more ships for foreign trade, the old ones disappeared as the simple wear and tear played them out or as one by one they sank beneath the waves to their long long home and as one disappeared no other took its place, so that when the present European war broke out even counting those ships we subsidized to carry the mails we were carrying only about 8 per cent of our foreign commerce. Oh, it was a pitiful sight to watch while the proudest industry of New England was fading from the face of the earth because of one law which you have not repealed and apparently can not repeal. We cling to that law for the protection of some 40,000 men engaged in shipbuilding. We had better abandon that law and take every one of those men and build them magnificent palaces and employ servants for them and then clothe and feed and house and wine and dine them like princes. When you excluded our shipowners from the foreign trade, as I have shown you, you left to them exclusively the coastwise trade which is now seveneighths of our entire transportation, and this apparently has contented them, and now having bought high-priced American ships for that trade they join the shipbuilders and are unwilling for any other shipowners to come into that trade with ships cheaper than theirs. To them the cost of their ships is immaterial, since they have a monopoly in this transportation. The steel industry also joined hands with the shipbuilder, as did the railways, for reasons I need not dwell upon. So, gentlemen, I

may tell you that these united forces make a strong team to go up against. When you oppose their interests you can not even get a hearing. [Laughter.] The newspapers will not print what am saying to-night. I made the same kind of talk in Baltimore the other night. I saw a travesty of a report of it next day in a Baltimore paper. The mayor of Baltimore was present and wrote me that although he had attended the recent meetings of the Chamber of Commerce of the United States he had learned more on the subject of our merchant marine from what I said than he did from all that was said in the Chamber of Commerce. But for all that appears in the Baltimore paper, I might as well

have discussed Roosevelt's river of Doubt.

Now, what about the bill called the "shipping bill," which the Committee on the Merchant Marine and Fisheries is considering and framing? I must tell you that our committee in the last two years has conducted a most thorough and searching investigation into the matter of shipping and ship-line combinations and practices, and we embodied the results of our investigation in four volumes well worth your study, if you are intersted in the upbuilding of our merchant marine. I believe it is the most complete investigation ever made by a committee of When you read it you will find that the facts are laid bare in such way as to leave no controversy about them; and that those facts show every ocean line between here and Europe or South America or Asia or Australia is in combination with every other line. They show you that a few great corporations and railroads own 94 per cent of all the steamship-line service in our coastwise trade and operate them under conference agreements, and they show you that an independent competitor undertaking to fight these combinations in either our coastwise or foreign trade has no more chance to live than a feather in a whirlwind. This illustration came before us: The merchants of Beaumont, Tex., were doing a great deal of shipping of canned goods from Baltimore. The conference lines refused to run a direct ship, but shipped such goods from Baltimore to New York by rail, thence to Galveston by water, and thence by rail to Beaumont. The result was that the canned goods were handled three times instead of once, very much to their damage, and the Beaumont merchants were charged 26 cents per hundred for freight. They believed they could charter a vessel, save that extra handling, and transport the goods for 20 cents per hundred and still make \$4,000 for the ship on each voyage. This was their judgment after full investigation. They chartered the ship, but before they got it in the harbor of Baltimore, a brand-new ship owned by a corporation theretofore unknown appeared in the harbor, offering to take canned goods direct to Beaumont at 16 cents per hundred pounds. I give these facts and figures by memory.

The result was that the venture of the merchants of Beaumont came home with three-quarters of a load or less and with a loss instead of a profit of \$4,000. The second result, of course, was they abandoned their venture, and the third result was that the new corporation and the new ship put in by the shipping combine vanished, and the fourth result was that the old lines went back to their old practice of shipping canned goods from Baltimore to Beaumont via New York and Galveston and at 26 cents per hundred. That was just one isolated case. The pages of the investigation are full of similar cases. No one of the ship lines in the combination lost the money that was lost on the All the ship ship they used to kill this Beaumont enterprise. lines jointly bore it. The ship they used is called a fighting ship. They have other weapons to fight with and to prevent competition. They have deferred rebates. They have ways of pooling their earnings, arrangements by which if one line carries more than its just proportion it pays for it to the pool. I can not enumerate and explain all their practices, but they result in absolute domination of the situation, and the combination seeks to justify them. They make a plausible showing by saying that competition is destructive and that to avoid destructive competition these things are necessary, and so we have a condition confronting us, an absolute monopoly or combination fixing without restriction or limitation the rates, charges, and practices of the over-seas and coastwise transportation. What will you do about it? That question was up to the Merchant Marine and Fisheries Committee. Our answer is the shipping bill, and particularly the regulatory features of that bill. Incidentally what I have just been saying brings up another thing about subsidies. If you give a subsidy to the private owner engaged in transportation from here to Europe, what prevents him from taking your subsidy and then going into the combination and then fixing freight rates by agreement with the foreign lines? The Pacific Mail, though paid a subsidy, has stood in with its competitor, the Japanese line, and they always work hand in glove.

The live present question for us to solve is this: If you give the American shipowner the best and cheapest ship in the world, can be successfully compete in the foreign trade under our flag?

If you give him all the privileges pertaining to the American flag and place no more restrictions upon him than are placed upon foreign ships entering our ports, I answer yes, and I will tell you why. Next to America England pays the highest wages among all the great nations. She pays higher wages than Germany or France. Far higher wages than Italy or Japan, and yet her merchant marine is triumphant over those nations. I have said this before, but repeat it, in order to say that what England has done we can do. What England's shipbuilders have done ours can do. What our steel and iron manufacturers have done our shipbuilders can do. Our iron and steel manufacturers to-day, notwithstanding our wages, do turn out the cheapest products in the world. No man will do a thing that is hard to accomplish unless he has to. Just so long as you pamper and pet your shipbuilders and ship operators and tell them they do not have to enter competition, they will sit back, but when you tell them they are full grown and must get out and compete for success, then America will again build ships and sail them for herself and for the world. [Applause.] So long as our builders can charge the highest price in the world for ships and yet furnish them for seven-eighths of our trade, they will do it. I wish you could all read Mr. Redfield's testimony before our committee. There is a condition now like that on railroads, when a new motive power is found and the old locomotives have to be put into the discard. It is a condition similar to that of 1855 to 1860. when the iron and steel ships began to replace the old wooden ships and when England began to take the lead of us with her new ships. You know many an invention has failed to find acceptance because it would displace something already in use.

The Old World-the world that has been carrying the foreign commerce of the United States—have on hand old-style ships, old machinery, and small ships. They will cling to them; they will be slow to scrap them. We must build a new class of ships, and the material and opportunity is present at our hands. know little about machinery; but if you will read the testimony of Secretary Redfield you will find that by standardizing, by using our great steel and iron factories to make wholesale the separate parts of vessels which can be assembled and put together where wanted, and by using the internal-combustion engine, by using oil instead of coal for fuel, by economizing space in the new construction, and by the use of modern apparatus for loading and unloading, and by building larger ships, our shipbuilders can build ships that will make it easy for us to take

the sea if we try. Now is our chance.

Now, let me talk specially about our bill. The first part of it simply creates the shipping board consisting of three commissioners appointed by the President and the Secretaries of the Navy and of Commerce. The Secretary of the Navy ought to be on the board because the special vessels contemplated in the bill must be such that they can be used by the Navy. The Secretary of Com-merce is placed there because all our navigation laws and our Steamboat-Inspection Service are under his jurisdiction. Some have criticized the bill, because they say these two officers might be partisan. My opinion is that whenever you hear a man loudly proclaim his fear that the high officials of this country are going to be partisan in a business administrative action he is seeking to find fault. A man that is not partisan in political matters is not much of a man anyhow; but this will be a business board. [Applause.] It is required that the appointed members shall have no other business. They must be devoted to the duties of the board, and they will really conduct the general business of the board. The second section fixes salaries. The third section

gives the purpose of the bill. The purpose of the bill is to allow the shipping board to have built or buy vessels here or elsewhere in order to turn them over to a corporation or individual who will buy or lease them from the board under an agreement to operate them in certain lines under its direction, for the purpose of establishing our trade relations and commerce in sections where we need to establish them and on terms that are fair and reasonable. jection I have to this section is that it provides that if the ships are built abroad they can only sail in the foreign trade. I hope that will be modified at least to this extent-that is, that any of these vessels bought and paid for by the tax money of the people and used for the purposes of the bill may, en route to or from a foreign port, touch at any intervening port of the United States and to that extent carry our interport commerce. If one of these ships comes from Liverpool to Boston with a cargo of 10,000 tons and can get no return cargo there, I would permit her to carry goods from Boston to Galveston, where she will load with our grain and cotton exports to Europe. Over 50 per cent of the foreign vessels coming from Europe to Boston and New York must go to Savannah, Mobile, New Orleans, or Galveston, a distance of a thousand to two thousand miles, in order to get a return cargo. They must go that part of their

return voyage empty or in ballast, because they are not allowed to carry goods from one of our ports to another. This empty voyage of the foreign-built ship, say, of 10,000 tons, will cost it, say, a week's time and \$15,000. I would have the vessel bought under this bill and flying our flag to make money, and not lose money, on its trip from the northern to the southern ports. the same way, if one of these vessels made a trip from the Orient to New York or Boston, I would permit it to carry goods en route from the Atlantic to the Pacific, and so have a great advantage over any vessel making the same voyage under a for-eign flag. To do this would not only aid these American owned and operated ships and help them to compete in the foreign trade, but it would relieve the congestion of your freight situation in cities like New York and Boston and help reduce the charges for transportation to our southern and western ports, thereby benefiting our whole people, and it would only be a

common-sense use of our own property.

The Secretary of the Treasury, before our committee, was asked by me what he thought of such an amendment. He said he would like to see these vessels, when they make a round trip, allowed to carry freight to and from intervening ports of the United States, but he was afraid if it were done that the shipping interests would lobby and filibuster the bill to death. Is it not time our people were having something to say? When the seamen's bill was before our committee the seamen and the shipowners came before us. We must have had a thousand witnesses, but only one person came in behalf of the general public, and that was a woman who said she represented the Consumers' League of Chicago. Will the general public never wake up? Another question: Will chambers of commerce be guided and governed by interested parties and endeavor to kill our bill, or will they and the people discuss it and learn to understand it and take a hand in the matter for the general weal? I favor this bill, moreover, for a special reason. I believe that when you people see ships, bought with your own money, going empty from Boston to Galveston because your own law says they shall not carry your own freight when your warehouses and wharves are bursting or piled high with freight seeking transportation, you will demand that these vessels be allowed to carry that freight. You will want to know what honest reason there is why they should not, and I say to you now that if you will allow any American merchant the privilege of buying his ship where he can get it the cheapest, and then give him the advantage over the ship under the foreign flag of allowing him to earn money instead of spending it by touching at and carrying goods between our intervening ports, you will have ships seeking the American flag to stay and you will not need any subsidy to make them prosper

Our bill provides that those who secure vessels from the board by purchase or charter shall agree that the vessels shall be operated under American registry or enrollment, and shall not be sold, leased, or chartered without the consent and approval of the board. It is also provided that if the board can not lease or sell the ships on reasonable terms, then they may form a corporation, of which the Government will own a majority of

stock, and operate the ships through this corporation.

There is another provision, general in its nature, which provides that hereafter no vessel registered in the United States shall be sold to foreign ownership without the consent of the board. Many other nations have lately passed a similar law, because they are afraid their ships will get away from them and they think they will need them when the war is over. are the only nation on earth that prohibits its people from buy-In now forbidding the sale of ships we only follow other nations. I am not certain we are wise in doing so, although we ought by every means to endeavor to increase our merchant marine. It is certain you will never find any nation except ours refusing or failing to buy any vessel they can and as cheap as they can in order to aid them in the struggle for the commerce of the world as they see it coming when this war is ended. This bill provides the special construction of these vessels for use as naval auxiliaries in time of war. The great strength of England's Navy is not in the number of her battleships but in her deep-sea going merchant marine, from which she can draw auxiliaries and sailors to support and man her navy. The Secretary of the Navy testified that if we had war to-morrow we could not use a large part of our present Navy for lack of necessary medical ships, transports, colliers, and other auxiliaries, and that we need at least 500,000 tons more than we have of such auxiliaries, and more than we could supply from our merchant marine. This bill will give us that tonnage, and for that reason will be worth more to the Navy of the United States than a dozen dreadnaughts, costing eighteen millions apiece. This bill will cost fifty million, and it will furnish all the auxiliaries to render our Navy efficient, and without which the Navy is only fit for

show and to hang around our coast and furnish handsome quarters for well-kept captains and admirals. I do not know what you gentlemen think about peace and preparedness. I do not care to go into that; but this building up of the merchant marine will be a great strengthening of our Navy without flaunting any menace in the face of the world, because in time of peace they would know these vessels were useful. [Applause.]

Gentlemen, this shipping bill will not at once restore our merchant marine, but it will point the way. I prophesy that every ship built under it will be built under open competition with the world in American shippards. These yards to-day have the cheapest shipbuilding material, both iron and wood, in the world. They will have an opportunity to use new processes, new methods, new forms, and they will build a new kind of ship, and when they are built they will demonstrate that they can furnish, with profit, the cheapest unit of transportation. Those who fight this bill practically propose nothing, but ask us to stand like dolts and dotards, as we have stood since 1866. It is a period of 50 years now since we have watched by the bedside of our merchant marine and known that our patient was sick unto death and death only a little way off, and yet we have done nothing. Shipbuilders and quack doctors have been asking the impossible and refusing the sensible thing. They have been prescribing subsidy, when they knew they could not get it, and refusing to prescribe anything else. I tell you that if you will prescribe and administer free ships to the patient and then give him the advantage over the foreign shipowner of letting him use his ship in both our coastwise and foreign trade, he will have what is far better than a subsidy. The patient will be You know it, and everyone who has listened to me and understood what I have said knows it. The talk about our high wages keeping us off the sea is as baseless as the same talk would be if it were applied to any other industry and given as a reason for saying that we could not enter the markets of the world with any of the products of our labor. I believe we can sail the seas without any artificial advantage in competition, because England, without any advantage, pays higher wages than her competitors and yet holds the seas. I find by a comparison which I have painstakingly made that the officers of English ships in their regular line get practically the same wages as do ours.

I have compared the English official pay roll on a first-class ship with the American, and the difference is very little, and as to seamen there is or will be no difference at all in the wages on ships plying between the same ports, since the seamen's bill has made the seaman free—because you can not work free men of equal skill side by side without giving them equal wages and equal treatment. During the Napoleonic wars we captured the commerce of the world. We have had no opportunity like that since then until now. We have an opportunity to-day that men of 60, like me, have not seen before and far younger men than I will not see again.

I have not discussed a number of features of the bill; but take it and read it; think of it as you will. It may be that private enterprise will halt and hesitate and will not go out and win its way. Our bill means that the United States puts its shoulder to the wheel, puts its back under the burden, and points the way to private enterprise. We may lose a little money, though I do not believe we will lose a dollar. tigation of the Panama Canal ship line shows that that ship property of the United States has run with a profit since the day we owned it, and, furthermore, has reduced the freight on all the tonnage carried from this country to the Canal Zone by more than half, on an average. It not only reduced the freight on what was carried in these Government-owned vessels, but it was testified before our committee by the representatives of an iron-pipe industry of Montgomery, Ala., that when they had immense contracts for thousands of tons of pipe to be delivered in Chile or Peru he found that transportation to the Canal Zone was the only transportation to be had at reasonable rates. He said freight rates had risen from 100 to 500 per cent everywhere except on freight to Colon. That freight is carried still at fairly reasonable rates. Thus it was shown that our Panama ships were not only profitable but that they have proved a stabilizer of rates. I do not censure the shipowners now for charging what they can get.

I fear that if I had a horse and could sell him for a thousand dollars I would take the thousand, even though he were not worth half the money. It is up to us, gentlemen, to find some means of protecting ourselves against oppressive rates, and if this bill, either by the powers conferred on the board to regulate rates and evil practices of shippers or by its expenditure of \$50,000,000 in the purchase of ships, will help us to protect ourselves, as I believe it will, it is wise legislation.

In conclusion let me say that if some of you gentlemen will find time to hail me down in the fair land of Texas, where the sun is brigher than it is here to-day, where the snowflakes fall with the same whiteness and softness, but with a little less continued rigor, you will afford me great pleasure. I am delighted to be with you. The time was in my early boyhood when we forgot the Fourth of July and only celebrated Christmas with crackers and fireworks and when the old flag was not looked on tenderly. We had had too much of the horrors of war and the aftermath of war. That time is gone. I have learned that the American people are made up of dozens of races-the German, the Anglo-Saxon, the French, the Italian, and others-but when the same sun warms their hearts and the same snow and rain and gentle dew fall on them all, the same purpose and devotion to a common country begins to throb and pulse through all their veins. When we mix and mingle, we of the great Southwest and you of the great Northeast, a genial warmth grows into friendship and affection and these good people whose ancestry goes back to Valley Forge and Yorktown find their children and kindred down where the cotton grows. It makes me feel like I want to go around and see some of your monuments and memorials, and when you come to us I would like to take you to our capitol, where the memory of Stephen F. Austin, a Vermonter, is perpetuated. I would like to show you the Alamo and San Jacinto. You have your Boston Tea Party, your John Adams, your Charles Francis Adams, who has written many things to endear him to the Learts of our people, and we have our Bowie, our Davy Crockett, our Sam Houston. We can cherish them all. My countrymen, in the name of one country, one prosperity, one flag, one humanity, and one God, besides presenting a great question I wish to bring you greeting and good will from the Scuth to the North, from the Southwest to the Northeast, from Texas to Massachusetts. [Prolonged applause.]

Does Prohibition Pay?—Oregon, Washington, Colorado, and Arizona Answer Yes!

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL,

IN THE HOUSE OF REPRESENTATIVES, Saturday, June 10, 1916.

Mr. RANDALL. Mr. Speaker, the subject of prohibition is one which now interests not only the humanitarian, but the student of economics and the captain of industry. Totally without jest and with an eye single to the cashbook and the ledger you can now discuss this subject with the business men of this country and receive their cordial and appreciative attention.

The best proof of any pudding is in the eating. Prohibition has now been given trial on an economic basis. The result has startled the staid kings of finance.

startled the staid kings of finance.

From the coal-mining fields of Pennsylvania where distress prevails among the owners because West Virginia producers are bringing coal to the surface with sober miners at 25 per cent less expense, to the mines of Colorado and Arizona, and the lumber camps of Oregon and Washington the same story of prohibition profits comes with proof furnished by former anti-prohibitionists.

I will take this opportunity, Mr. Speaker, to publish in the Record a number of clippings from the newspapers of the four States of the West where prohibition has been in effect since January 1. As these papers in nearly every case were opponents of prohibition, the stories they tell must be credited by those who are inclined to doubt any claim made for the beneficial results of prohibition. The pages of the Congressional Record could be filled daily with stories like the following:

LUMBER INDUSTRY FINDS BENEFITS.
[From the Portland Oregonian.]

While the price of lumber has advanced substantially within the last year, estimates show that this advance has not been in proportion with the advance of commodities entering into lumber production. The cost of labor has gone up; the cost of belting, machinery, and various other supplies has increased sharply.

On the other hand, while labor has gone up, a better class of laborers is now available. The advent of prohibition has driven the shiftless, careless, unsatisfactory workmen out of the State and has left the field occupied solely by steady, industrious hands

SPORANE JAIL LOSES ITS INMATES. [From the Spokane Chronicle.]

There are no applications for county charity now from any

family which has an able-bodied man at its head.

It cost the county 20 per cent less to take care of the needy this month than during April of last year. Fuel orders were fewer and there was a marked decrease in the number of requests

There is plenty of work to be done, and Spokane men are doing it. The number of prisoners at the county jail is only a fifth of what it was last year. The expense of running the poor farm is decreasing and the number of indigents there is 25 per cent

less than in April, 1915.

TWO THOUSAND NEW SAVINGS DEPOSITORS. [From the Denver Post.]

Bank clearings for January, 1916, exceeded those of January, 1915, by \$8,000,000. The new depositors who have opened savings-bank accounts with Denver banks during the first month of prohibition approximate 2,050.

TRANSFORMATION OF THE BREWERIES, [From the Topeka Capital.]

At the Coors Brewery at Golden, generally called Denver's biggest brewery, they are making a high grade of clay ware and malted milk. The clay is made into casseroles and similar utensils, shipped east, and sold back to Denver jewelers and other dealers. It is said by jewelers to be a high-grade product. Every Colorado advertising medium issued in the city of Denver carries pages on which the merits of "Coor's Malted Milk" are proclaimed.

SCARE HEADLINES IN AN OREGON NEWSPAPER. [From the Portland Oregonian.]

Crime cut nearly third in dry month—Drunkenness decrease about 80 per cent—Groceries replace liquors—No family rows find way into Portland police court—Fewer accidents occur— Thousand evils cured, says assistant prosecutor—Reduction of 80 per cent forecast by Municipal Judge Stevenson.

PROSPERITY IN AN ARIZONA MINING CAMP. [From the San Francisco Journal of Commerce.]

The town of Oatman, which is not far from Needles, on the western side of the State, had a population of 250 last May. The United States Government, from a geological standpoint, had reported adversely in 1908 upon its prospects as a gold camp. But the United Eastern Mine made a phenomenal strike last spring, opening 43 feet of free-milling gold ore, averaging

Its stock advanced from 5 cents to \$4.25, or to over \$6,000,000 for its 1,500,000 shares. It is declared there are \$12,000,000

worth of ore in sight.

But this is not so interesting as the fact that to-day Oatman has a population of 8,000 and not a saloon or gambling house or a policeman in the whole place. The miners, instead of spending their money in drink, invest their surplus in local enterprises and developments, and are many of them very well-to-do to-day.

BUYING MORE LIGHT AND LESS DARKNESS,

W. J. Barker, vice president and general manager of the Denver Gas & Electric Light Co., who has recently been in New York City, is reported in the Wall Street Journal as crediting to prohibition the increased consumption of gas and electricity in his city. Concerning prohibition, Mr. Barker said:

"The putting out of business of so many saloons was regarded

as a serious matter at first, but by careful checking we have discovered that practically every place formerly run as a bar is now being used by some other business, and in many cases the consumption of gas and electric current is greater than under former conditions.

"I was asked recently why our current sales were so large when there were no bars at night for the men to frequent. My guess was that the men who formerly spent the evening at the bars now stayed at home, sat up late at night reading and drinking root beer, and so more than made up for the heretofore legalized liquor consumption by maintaining the standard of demand for electric current. Denver has never been so much alive. Buildings are going up on all available sites, the banks report increases in deposits and earnings, and we expect this year one of the largest tourist seasons in our history."

BANK CLEARINGS, WET AND DRY. [From the Portland Oregonian.]

* * But that is merely incidental. What we started out to inquire was, why is it that for the week ending May 4, 1916,

dry Portland's bank clearings show an increase of 32 per cent over the corresponding week of 1915, while wet San Francisco's show an increase of only 16 per cent?

DIVORCE MILL SLOWING DOWN IN DENVER. [From the Denver Times.]

The advent of prohibition is reflected in the divorce courts of Denver. It is estimated by court officials that divorce suits have dropped off 35 per cent in the short time that prohibition has been in effect.

It is argued that with the decrease in the consumption of liquor there has been a corresponding decrease in the complaints for divorce on the ground of drunkenness, which has always been one of the chief causes of legal separations. A like decrease is noted in the number of cases with cruelty as ground.

Nonsupport is less frequent, court attachés say, because men who formerly expended their wages for liquor are buying food and clothing for their families. The district attorney reports a diminishing number of nonsupport complaints through his office, too.

CALIFORNIA FURNISHES TWO-THIRDS OF CRIMINALS NOW. [From the Baker City (Oreg.) Herald.]

Since prohibition was declared in the Northwest two-thirds of the notices received here for the arrest of criminals from California, Washington, Oregon, and Idaho are received from the first-named State, Sheriff R. P. Anderson asserted to-day. Be-fore prohibition came into effect only one-third of the criminals concerning whom Mr. Anderson received letters were from the State that has been and is still wet.

DRUNKENNESS DECREASES IN DENVER. [From the Denver Express.]

POLICE RECORDS SHOW THAT PROHIBITION LAW IS A SUCCESS. Comparative table of arrests for drunkenness,

	1915	1913
January February March April	213 192 206 219	45 62 71 95
Total	830	273

Every man who has been caught drunk this year has been arrested

Not all drunkards were arrested in 1915, because police were instructed last year to take drunks home rather than to jail. The "golden-rule" policy prevailed then to the extent that even those drunks arrested were released without being taken to court and fined after they were sobered.

PORTLAND DRINKERS SAVE \$6,000,000. [From the Portland Oregonian.]

Portland is spending only \$281,641 annually for liquor under prohibition, compared with 6,563,326 spent in "wet" years, says Λ . M. Churchill, chairman of the legal committee of the committee of one hundred.

Since prohibition became effective, January 1, Mr. Churchill has compiled the statistics on importations under the dry law and compared them with the figures on liquor consumption and expenditures for liquor before last January.

Based on the volume of April shipments, Mr. Churchill has figured that Portland is spending only 7.5 per cent as much money for whisky as was spent in former years, only 1.9 as much for beer, and less than 5 per cent as much for all kinds of liquors collectively.

NO CRYING WOMEN IN MAYOR'S OFFICE. [Hiram C. Gill, mayor of Seattle.]

I haven't had a woman in my office crying and saying that her husband hasn't turned in any money in six months. I have not had this occur since the 1st of January. There used to be four or five a day.

HUMAN-INTEREST STORIES IN DRY DENVER. [From the Denver Post.]

Human-interest stories, pulsing with renewed hope and happiness for individuals, bring the greatest joy. A "saloon sweep," who lived on drinks and free lunches and slept on a broken-down couch in an empty house, is now earning \$2 per day and is so improved in appearance an old acquaintance did not recog-

BREWERIES BECOME FRUIT BUYERS. [From the Olympia (Wash.) Recorder.]

The plants of the Olympia Brewing Co., of Olympia, the Salem Brewing Association, of Salem, Oreg., and the Bellingham Brewery, of Bellingham, have been taken over by the Northwest Fruit Products Co., the producers of "Loju" and

"Appleju."

The late Leopold F. Schmidt, founder of the Olympia Brewing Co. and also of the Bellingham and Salem plants, believed in the future of fruit beverages of various kinds, especially of the apple, and later on of the loganberry. * * * At the Salem plant the manufacture of beer was discontinued one year sooner than the prohibition law required, so that the plant could be exclusively used for the manufacture of Loju, made from loganberry, and Appleju, made from apples, as well as resulting by-

The operation of these plants and the use of large capital in the fruit-products business, together with the employment of labor afforded thereby, will benefit the Northwest in general, and particularly the communities in which they are located.

AN OREGON EDITOR IS GREATLY IMPRESSED. [From the Portland Oregonian.]

Mr. Churchill's estimate, founded on various statistics, that purchase of liquor in Oregon has been reduced 95 per cent is impressive, but not so impressive as the reduction in drunkenness and the depletion of the police court docket.

> PROHIBITION ENFORCED IN DENVER. [From the Rocky Mountain News.]

Whatever differences of opinion existed when prohibition was an issue regarding the wisdom or unwisdom of putting Colorado in the dry column, the whole community is of one mind that the constitution shall be lived up to in letter and spirit. Mayor Speer was elected on his pledge that the laws would be enforced at all times, and the News, which advocated his election on a law-enforcement platform, is impressed with the manner in which he has taken hold of this question at the outset. He has satisfied his supporters and disarmed his enemies.

> PROHIBITION RESULTS IN ARIZONA. [From the Safford (Ariz.) Guardian.]

In the matter of efficiency of labor throughout the State there has been a saving in time of 25 per cent, while at the Copper Queen, the largest works in the State, there was over 31 per cent. With a pay roll among the various works in the State in six months of \$4,000,000, 25 per cent would be a saving of \$1,000,000, while with the larger companies a greater saving was realized.

This was due to the fact that whereas before prohibition 84 per cent of the employees only reported for work for two or three days after pay day on account of drunkenness, since prohibition 98 per cent report for work, and all hands are in better

condition for duty. Drunkenness had decreased at the end of six months 85 per cent, there being 2,880 fewer arrests for drunkenness in the State

during that time.

In the counties there has been a falling off in crimes of 33.03 per cent and in the cities 50 per cent less.

In six months the postal savings increased \$587,252 and in the

banks \$3.000,000.

In Phoenix, our capital city, there were 1,125 less arrests in x months. With the reduction of police force and general expenses incident to taking care of the drunks the city government has saved in that time over \$20,000. In Tucson, the next largest city, there has been a saving of at least \$3,000 in six months, with 255 less arrests for drunkenness.

> SEATTLE IS ENFORCING PROHIBITION. (From the Seattle Post-Intelligencer.)

Seattle is much in the limelight of the State press on account of its energetic campaign for enforcement. A very great majority of the State papers commend the mayor and chief of police for their zeal. Some of the editors take exceptions to the destruction of liquor and of drug-store furniture before the courts have passed judgment, and one or two are disposed to call it brigandage; but on the whole Seattle's course is commended.

> PEOPLE ARE POURING INTO COLORADO. [From the Denver News.]

Mrs. Hungerford, the State president of the Woman's Christian Temperance Union, in her spring convention tours over

this State; has been cheered by enthusiastic audiences everywhere, and she reports that people are literally pouring into Colorado, especially in the southern counties.

They have heard the cry from mines, fields, and orchards that opportunity is knocking at every man's door, now that the incubus of the liquor traffic is lifted from this great State.

MAYOR OF SEATTLE VOTED WET-BUT NEVER AGAIN!

Here is an interview with Mayor Hiram C. Gill, of Scattle,

published in the Pasadena Star-News

So far as general conditions in Seattle are concerned, the city is more prosperous than it has been in many years. That class of society which lived off the lower class of saloons has mostly migrated. I think California has most of it. There is practically no unemployment, and the only man who now mourns the loss of the saloon is he who was directly or indirectly connected with the business or who was leasing premises for saloon purposes and receiving a rental based not on the value of his property but on the value of the saloon location, as we had limited the number for some years to 315. Other rentals have held their own just as they were, and the man who was receiving 100 per cent on his money invested in a saloon location simply

has had to be reasonable.

"Personally I voted 'wet.' In common with everybody else in this city not interested, as I say, in the liquor business, I shall not be guilty again."

WASHINGTON POST QUOTES JUDGE RUCKER.

Judge A. W. Rucker, former Congressman from Colorado, interviewed by the Washington Post, said:

"Instead of hurting Denver, I am inclined to the belief that the abolition of the liquor traffic has been of very great benefit to the community. It is true there has been considerable loss of revenue from the license fees paid by the saloons, but on the other hand there has been very little of crime to punish since whisky selling was abolished, and consequently a big reduction in municipal expense. Indeed, the figures show that the balance has been in favor of prohibition, even from a monetary stand-

SEATTLE EDITOR CONVERTED TO PROHIBITION.

In Washington, during the campaign of 1914 for State prohibition, the bitterest opponent of the proposed dry measure was the Seattle Daily Times. Day after day through pages of advertising matter and columns of editorials the Times per-sistently fought prohibition, and was recognized the State over as the mouthpiece of the wets and the most implacable enemy of the dry propaganda. In "scare" headlines that could be read across the street this paper proclaimed that Kansas had been "blighted" and "devastated" by prohibition, at the same time declaring with equal fervor in other columns that "prohibition does not prohibit" and is always "a farce" and "a

After one month of prohibition hear what the editor of the Seattle Times, Maj. C. B. Blethen, has to say:

"We fought prohibition on economic grounds alone. We believed that in a great seaport city, with a population of upward of 300,000, prohibition would be destructive; that it would bring on economic disaster. We believed that under the license system we had the liquor traffic as well controlled as it could be; we wanted it let alone and we fought as hard as we could fight. But in spite of all we could do, prohibition carried and went into effect January 1. We already know that it is a great benefit morally and from an economic standpoint. Its moral effect has been tremendous. Seattle had 260 saloons and we had an average of 2,600 arrests a month for crimes and misdemeanors growing out of liquor drinking. In January we had only 400 arrests and 60 of these were made January 1, and were the result of hangovers from the old year. That in itself is enough to convince any man with a conscience that prohibition is necessary. There can be no true economy in anything that is immoral.

"On top of the great moral result we have these economic facts: In the first three weeks of January the savings deposits in the banks of Seattle increased 15 per cent. There was not a grocery store in Seattle that did not show an increase of business in January greater than ever known in any month before in all the history of the city, except in holiday time. In all the large grocery stores the increase was immense. Every dry goods store, except one, and that I have no figures from, had

a wonderful increase in business.

"I wished to know in what class of goods the sales increased so greatly, and so I went to all the grocery and dry goods stores to find that out. And to me it is a pitiful thing—and it

makes me sorry we did not have prohibition long ago-that the increase in sales in all the dry goods stores was in wearing apparel of women and children, and in the grocery stores the increase was made up chiefly of fruits and fancy groceries. This proves that it is the women and children who suffer most from the liquor business, and it is the women and children who receive the greatest benefit from prohibition. Money that went formerly over the bar for whisky is now being spent for clothing for the women and children and in better food for the household. * * * Yes, sir; we have found in Seattle that it is better to buy shoes than booze."

The Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. SAMUEL W. BEAKES. OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Friday June 2, 1916.

Mr. BEAKES. Mr. Speaker, I trust that this country may ever remain at peace. But many a nation peacefully inclined has been forced into war, and if we should ever be forced to take up arms to defend our firesides or our honor we should be prepared successfully to defend ourselves. When the hour of danger arises there is not time then to prepare. For adequate preparation can not be attained in a month or a year. War requires more preparation than formerly. As it has be-We have come more horrible it has become more scientific. seen the effect of preparation in the great holocaust that has enveloped Europe. We are not a military-loving people. We do not want an Army and Navy for the mere sake of having them. We would that there were some way of disarming the nations of the world. But we Americans are also a practical people. At present we can see no way of persuading the nations of Europe to disarm, and hence we must prepare to defend ourselves should we be attacked by any great nation. No nation has greater reserve strength than the United States, but it takes time to develop that reserve strength, and hence the need of such preparation as will successfully hold off the enemy until we can bring that reserve strength into action.

In my humble opinion, the most important branch of defense we have is our Navy. We are so much stronger than our neighbors on this continent that the nations whose attack we must provide against must cross either the Atlantic or Pacific Ocean to reach us. If we can prevent them so crossing, our Army, as provided by this Congress, is sufficient for defense. If our Navy is strong enough, we need fear no invasion.

There is no need of getting hysterical about the preparation

for defense. War is apparently no more imminent now than before, especially if this country continues to be guided by the wise diplomacy which has kept us at peace with the dreadful holocaust of war enveloping all the other great nations of the earth. But despite the wisest diplomacy war may come in the future, and we can not let this Nation become as defenseless as, for instance, is China. A dollar wisely spent now will save hundreds of dollars if war should come.

The naval bill of the present Congress is the greatest step for naval preparation that has ever been undertaken in this country. It involves an expenditure in one year of \$270,000,000. which is \$20,000,000 more than our entire military and naval expenditure last year, and before this bill becomes a law many millions more are apt to be added to it. In six months more the Naval Committee of the House will meet to prepare another naval bill. It will then have much information as to our needs which it can not now have. We will know more of the relative efficiencies of the various branches of the Navy, and we will know best in what manner to strengthen our Navy. But we must not waste time waiting to see what becomes of the navies of our possible antagonists. I believe every new ship authorized in the present bill—be it battle cruiser, torpedo boat, or submarine—is needed in any event. Undoubtedly we need other vessels, but the type will be more clearly understood six months

After this bill had been prepared for final passage the greatest naval battle of the century was fought, but this House had no intelligence of what happened when it voted on the bill. Hence the Senate Naval Committee will have a certain advantage in adding to the provisions of the bill in making adequate naval preparation. It was with this thought in mind that, without any compunctions, I voted against the many amendments in the mo-

tion to recommit, as I had to accept them all or reject them all. Some of these amendments were undoubtedly wise; others undoubtedly would have wasted money.

I do not believe that preparation for national defense should be a partisan question. We are all Americans before we are Democrats, Republicans, or Progressives. And we should prepare ourselves not as Democrats, Republicans, or Progressives, but solely as Americans. Hence it was with a deep feeling of regret that on this naval bill I saw the Naval Committee divided on party lines. This division did not represent the real division in opinion of the members of the committee. On this side of the House we believe that this division was caused by the efforts of our friends on the other side of the House to make partisan capital out of the preparation for national defense. I, for one, in casting my vote on matters of national defense, cast it as an American and not as a partisan. I desire sane and adequate preparation, but I do not want to waste the Nation's money nor to encourage extravagances.

It has been charged in this House that the Democrats are to blame for the fact that our Navy at the present moment is not large enough. What party was in power when the Navy sank from the second to third place in the navies of the world? Was it not the party to which the Members belong who make this charge? No one has charged that any of the money spent by the present administration for the Navy has been wasted. And yet the money appropriated by the last Congress, Democratic in both branches, with a Democratic President, was \$25,398,686.44, more than was ever before appropriated in any two years for the Navy. We were just as unprepared, nay, more unprepared, under Republican administrations than under this Democratic ad-ministration. What opportunity, then, can there be for the Republican Party to make partisan capital out of it? And, further, in this year of Democratic administration the appropriations for the Navy will be larger than in any two years of Republican administration. Which party is best preparing the Nation for defense?

In the last Republican administration the Secretary of the Navy was Mr. G. von L. Meyer. He it is who is loudest in charging the administration of Secretary Daniels with dereliction of duty in letting the Navy run down in comparison with the other great navies of the world. In the four years of Secretary Meyer's administration the battleships authorized by Congress had a total displacement of 171,800 tons. In the first two years of Danieis's administration the battleships authorized by Congress had a total displacement of 160,000 tons. In other words, in the building of battleships Secretary Daniels secured almost as much in two years as Secretary Meyer did in four years. of the two was the greater Secretary of the Navy? Complaint has been made as to the personnel of the Navy being insufficient, and this same ex-Secretary of the Navy has not been the least of the critics. The authorized enlistment has not materially changed, but when Secretary Meyer went out of office the number of enlisted men was away below the number authorized, while in March of this year, three years later, every man authorized by Congress was in the Navy. To be exact, there was a gain of 6,340 enlisted men in the Navy. In this very bill before us Members have attacked the increase authorized as inudequate, while the difference between the majority minority of the committee in personnel was only 800 men. Surely if 67,800 enlisted men is wholly inadequate, an increase of only 800 more will not make an adequate manning of our ships.

The gentleman from Pennsylvania [Mr. Butler], ranking Republican member of the Naval Committee, in a letter to Secretary Daniels, which was referred to the General Board of the Navy for an answer, brought out a letter under date of May 2 from Admiral Dewey which may answer in a way which administration is responsible for the dropping into third place of the American Navy. Admiral Dewey says:

(a) Considering displacement of "ships built": The United States advanced from third to second place in 1907 and dropped to third place in 1911

in 1911

(b) Considering displacement of "ships built and building": The United States advanced from third to second place in 1900, held this place for a short time only, and dropped to third place again in the same year, 1909.

(c) Considering "active personnel": The United States advanced from third to second place in 1908, dropped to third place in 1911, and to fourth place in 1913. The United States advanced again to third place in the first part of 1914 and later that year dropped to sixth place, owing to the expansion of the naval personnel of belligerent nations.

The United States lost second position in naval strength because it did not build ships and provide personnel to meet the well-known building program of the nation now second in naval strength. The German laws of 1898 and 1900, with amendments in 1906 and 1912, laid down a defialte program of building ships, providing the necessary personnel, and for replacing battleships after 20 years in service.

Going back to our most active critic, ex-Secretary Meyer, we see from the statement of the General Board of the Navy, as voiced by its chairman, Admiral Dewey, Mr. Meyer was Secretary of the Navy when this country dropped into third place in ships built. He was Secretary of the Navy when our Navy dropped to third place in personnel, and also to fourth place. At the breaking out of the European war, under Secretary Daniels, our Navy had returned to third place in personnel, which it held until the navies of the warring countries were put on a war footing, when of course we dropped our rank in personnel. These facts being beyond dispute, I submit that Mr. Meyer's failure to keep up our naval preparedness gives him no license to criticize an administration that did so much more than his administration did.

To make the United States Navy superior to the German Navy in every department Admiral Dewey submitted a table showing that there were needed 6 dreadnaughts, 10 battle cruisers, 21 scout cruisers, 80 destroyers, 9 fleet submarines, and 78 coast submarines. Since this estimate was made a number of German vessels were sunk in the great North Sea battle, so that the number required to be superior in every arm is less now than it was. The cost of building the ships estimated by Admiral Dewey as required to make the United States second in naval strength in every arm is given by him as \$652,530,306. It is very doubtful if we could start the building of all these ships in any one year if we would. Certainly we could not without retarding the building of an American merchant marine, which is

so greatly needed.

The naval bill this year provides 5 battle cruisers, costing over \$20,000,000 each, 4 scout cruisers, 10 destroyers, and 50 sub-marines. As I have said, it provides for more naval construction than was provided in any two years before. Our Navy is most deficient in battle cruisers, of which we now have none. Great Britain had 10 before the battle of the North Sea. Now she has but 7. Germany had 8 and now has but 7. The 5 we are building under this bill would, however, be larger and more speedy than any in either Navy. When these fast cruisers are built, having the most armament and with the highest possible speed, no great power would dare transport a large body of troops across the ocean while these great ships were afloat on the seas within striking distance. Their speed is such that dreadnaughts could not catch them, and with the deadly aim of the American gunner, which has been many times demonstrated, the transports would be in constant danger of destruction from an enemy that could not be reached.

The exact strength of the European navies is not now known. When the war broke out Great Britain had 76 battleships built and building. She has acknowledged that 9 of these have been She had, including the battle cruisers, 44 armored cruisers built and building. She has acknowledged that 14 of these have been sunk. Germany has acknowledged a loss of 2 out

of 40 battleships and 7 out of 17 armored cruisers.

It has been a practice of late for alarmists to run down our Navy. As against this I wish to introduce the testimony of a men who know. Admiral Fletcher, in command of the Atlantic Fleet, on March 2 of this year, testified:

Atlantic Fleet, on March 2 of this year, testified:

The ships of our Navy compare favorably with ships of similar types of any other navy, and it is believed they are slightly superior. It has been the policy in this country to build ships of a little greater displacement and a little greater power than similar ships abroad, laid down or appropriated for at the same time.

As to the efficiency and condition of our Navy, I can give you information more particularly in regard to the active fleet now in commission in the Atlantic. These subjects are dealt with in my annuar report, which has been printed as a Senate document and is now in possession of the committee, as I understand. From this report it will be seen that the battleships and destroyers now with the fleet, and which constitute its main fighting element, are in a very satisfactory and efficient condition, with the few exceptions noted.

As far as can be ascertained, there is no fleet that is more constantly drilled or exercised than our fleet on the Atlantic coast, or any fleet where more exacting requirements are demanded. This is borne out by the results shown in our maneuvers, our war games, our tactical problems, and our target practice. Had I any doubt upon these questions of personnel and efficiency as far as the active fleet is concerned, I would not hesitate to inform this committee, in order that steps might be taken to remedy these defects.

Admiral Knight says:

Admiral Knight says:

Our officers and enlisted men, in spite of many statements to the contrary, are able and efficient.

In May, 1915, Admiral Dewey, our greatest living naval officer,

Our ships and guns are as good as any in the world; our officers are as good as any; and our enlisted men are superior in training, education, physical development, and devotion to duty to those of any other navy. I can say with absolute confidence that the efficiency of the fleet has steadily progressed and has never been so high as it is to-day.

Capt. J. S. McKean said:

We have made more real progress in the last two years than in any previous five-year period in my experience in the Navy. I don't think I've ever known a time when everybody in the service, from top to bot-

tom, was working as hard with their heads and hands to prepare the ficet for active service

Rear Admiral Edwards said:

The work of Secretary Daniels has been one of distinct and important accomplishments. His integrity of purpose has never been assailed. His receptiveness for counsel is exceedingly marked. His deep affection for the service ought best be reflected by his memories of the Spanish-American War. Admiral Dewey certifies that at no period in the history of our Nation have the morals of the naval service been higher. Surely it ought to be written of one of whom such tributes can be justly paid that in administering efficiently the great trust reposed in him he has upheld the best traditions of the Navy.

I have introduced these quotations, not for the purpose of implying that there is not need of constructive Navy legislation, but simply to emphasize my belief that our Navy is a good one, the main trouble being not that it is inefficient but that it is not large enough. If it had not been for the big building program of the other navies there would not be the need of a big building program on our part. But a navy can not be built after war commences. To be effective it must be in existence at the beginning. Hence our duty to be prepared to ward off any foe on the sea, so that we may enjoy in safety our homes and our firesides. We have an enormous coast line, and we must be ready to defend it. This Congress is prepared to do more than twice as much in preparation in one year as has been done by any previous Congress in two years. We have been striving for peace, prosperity, and preparedness. Who can say we are not attaining all this?

The American Merchant Marine.

EXTENSION OF REMARKS

HON. RUFUS HARDY, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 10, 1916.

Mr. HARDY. Mr. Speaker, I ask leave to extend my remarks in the Record by printing a speech made by Mr. William H. Lincoln, of Boston, Mass., with some preliminary and introductory comments by myself.

The SPEAKER. The gentleman from Texas [Mr. Hardy]

asks leave to extend his remarks in the RECORD. Is there ob-

jection? The Chair hears none.

Mr. HARDY. In the latter part of February, this year, I was invited by the Economic Club of Boston, Mass., to deliver an address before that club on the subject of the pending shipping bill and the American merchant marine. On reaching the city I was most hospitably and warmly received and generously enter-tained during my stay there. I was taken in charge by Mr. Beatson, the secretary of the club, and on the day following the evening of the address was shown over the historic old city of Boston. I visited a great number of its noted and sacred historical spots. For the address I was delighted to find a magnificent and sympathetic audience, presided over by Mr. W. H. Lincoln, who opened the evening program by an address full of hard common sense and the eloquence of facts and reasoning, stated convincingly from the fullness and clearness of knowledge. His address was so nearly in line with my own views that after the program was over I talked with him at length. I found that he had in 1884, I believe it was, earnestly endeavored to induce Congress to pass a law such as he advocated, but had tailed, as all efforts of a similar character have failed. He informed me that he had a copy of a speech made by him before the National Shipping Convention at Boston in 1880, and very kindly, at my request, sent me a copy of it. I have read it with great interest. and believe that his reasoning and conclusions are absolutely sound, with one exception. He fell into the error of advocating American registry for foreign-built ships, but limiting their right by permitting them only to engage in the over-seas trade. In this he made the same mistake that Congress made in the passage of the recent Panama Canal act. It was, of course, in my view, a fatal mistake and would have rendered the law advocated by him futile, as I think I showed clearly in my speech before the Economic Club.

But if that law had been passed in 1880 or 1884, when advocated by him, its shortcomings would have been soon discovered and possibly corrected, and if that had been done and full registry given to ships built abroad but owned and operated under our flag, allowing them to be used in our coast trade, we would have long ago checked the decay of our over-seas merchant marine and taken at least second place among the merchant marines of the world and had our ships flying our flag in every quarter of the globe, and we would have been ready in August, 1914, to carry our own commerce in our own ships and, besides, preventing the great difficulties and obstructions we encountered for lack of shipping at the beginning of the European war, our ships would have reaped a great harvest of unprecedented profits, while our people would have been saved hundreds of millions of dollars.

It is worth something to know the character, the capacity, and the environments of men whose views are presented to us, and I therefore wish to say with reference to Mr. Lincoln, he is one of the sterling, substantial, prosperous, long-headed business men of New England. He has lived a long and stainless life, and is honored in the highest by those who know him and have worked with him in public and private affairs, and he is president now of the Boston Economic Club and has held many posts of distinction. All his life he has been familiar with ship-ping and personally interested in owning and operating ships and ship lines, and, more than that, he has been preeminently successful. His connection with the shipping industry began prior to the War between the States. The period of our great triumphs in the merchant marine is a part of his life, as is also the period of the decay of our merchant marine. He has seen in operation the causes which first produced our triumph and the causes which later brought about our utter and complete abandonment of the seas, and so I feel that his words ought to have great weight with those who seek to remedy our merchantmarine evils and bring back the day of pride to our shipping and our flag.

Mr. Lincoln's speech follows:

FREE SHIPS.

ADDRESS OF WILLIAM H. LINCOLN BEFORE THE NATIONAL SHIPPING CON-VENTION, BUSTON, OCTOBER 7, 1880.

The decline of our mercantile marine engaged in foreign commerce has for many years attracted public attention. Gen. Grant during his administration called the attention of Congress to this fact in more than one of his messages. ent Secretary of the Treasury has also presented the figures showing the rapid and persistent decay of our shipping in several of his reports. Still nothing has been done, and the decline continues steadily. There has been no concerted action on the part of those especially interested in this branch of business, and no agreement has been effected among the shipowners in regard to the desired legislation. We have continued drifting, rapidly losing ground, until the present time. The same laws continue in force that were designed to protect our commerce in its infancy, but changes in the modes of transacting business, in the methods of transportation, and in the construction of the vessels have rendered destructive rather than beneficial their operation; in a word, the world has outgrown these restrictions upon commerce; mankind has progressed; there is a free interchange of products and competition is more universal. It is not many years since a vessel of 800 tons was considered as of immense size and would attract public notice. It was regarded at the time as a rash experiment to construct such a large ship. Now a sailing ship of 2,000 tons excites no comment, and steamers of more than double this size may be seen at any time in our docks. While we have been standing idle, other nations have changed their navigation laws to suit the progress of the times, and have encouraged their commerce by removing restrictions and inviting competition. The fact must not be overlooked that England and France especially have caused to be established and maintained important lines of ocean steamships by a well-arranged system of subsidies, cluded in which is a provision for the transportation of the mails. During this period our country has been taking rapid strides in other directions. The settlement of the western country and the construction of railways, keeping pace with the advance of emigration, have proceeded in a wonderful manner. The vast agricultural and manufacturing interests of the country have been developing, engaging the energies and thought of our people and attracting the attention of the civilized world. These great interests have overshadowed what was formerly regarded as of primary importance, and in regard to which there existed a strong national pride. They continue so to do. and the emblem of our country's strength and glory is fast disappearing and is lost amid the flags of England, Germany, Norway, and Italy. This condition of things has been brought about under the operation of laws designed to foster and protect our commerce. Many intelligent shipowners have thoughtfully considered the subject, and have arrived at the conclusion that a radical reform is necessary in order to recover our position and maintain it. A few figures will illustrate in a forcible manner the extent of our decline and the time it has occupied.

The value of our exports and imports taken in American and foreign vessels in the years enumerated have been as follows:

ente statues l'on castrogal, aleman graf quot ente la mondigate de la grafia de la castrogal de la castrogal	In American vessels.	In foreign vessels.
185)	\$239, 900, 030	\$90,000,000
1860	507, 999, 030	255,000,000
1874	252, 000, 030	638,000,000
1879	272, 000, 000	911,000,000

While these figures prove the serious decay of our shipping interests they also show the wonderful increase in the trade of the country. The latter is as gratifying as the former is humiliating. It will be noticed that in 1850 there was carried in American vessels nearly threefold the amount that was taken by foreign vessels, and that in 1879 the position was reversed, so that our vessels only carried less than one-third as much as was taken by foreign shipping.

was taken by foreign shipping.

At the present time 59 per cent of the tonnage of the country is employed in the coastwise trade. The coastwise and inland navigation of the country has increased with the growth of population, and as all foreigners are excluded by law from this trade our tonnage in this branch has increased, so that a comparison of the total tonnage of the country in different years does not represent the decadence of our foreign commerce. This is the manner, however, in which it is usually presented by the Secretary of the Treasury in his reports. In 1850 the total tonnage of the country was 3,535,000 tons; in 1860, 5,353,000 tons; in 1870, 4,246,000 tons; in 1879, 4,169,000 tons. It will thus be seen that while the coastwise trade has largely increased the total tonnage has largely diminished.

But the chief object of our laws of registration is to protect and encourage shipbuilding in the United States. When wood was universally employed in the construction of ships we had an advantage over England. We possessed most valuable tim-ber, the forests were near at hand, and our shippards produced the finest specimens of naval architecture that could be found in any ports of the world. For many years there was no necessity of protection, because we were able to build ships cheaper and better than any other nation, and we built ships for the nations of Europe. England has long enjoyed the supremacy upon the seas, but the child was successfully competing with the parent, and in 1860, just prior to our Civil War, our tonnage equaled that of Great Britain. It was an achievement of which the Nation was justly proud. Our ships were found in every port and obtaining freights upon equal terms with the most favored countries. In some ports they commanded the preference. As a rule, they were more ably commanded and better manned and equipped than the vessels of any other nation. We could build our vessels more cheaply, sail them at less expense, and perform more voyages in the same period than any other people. The future seemed sure that we were destined to become the great maritime power of the world. But great and sudden changes took place. The Civil War placed our flag at a fatal disadvantage; shipbuilding languished; many ships were destroyed and a larger number were sold to foreigners. At the close of the war, and for many years later, wages were high, building material was expensive, and in place of our country being able to produce ships more cheaply than any other it became the dearest place to build. Still our shipowners persevered. Shipbuilding was continued, though on a smaller scale. Owners soon found that not only did their ships cost an excessive price, but the expense of maintaining them was great. Oppressive laws respecting the shipment and discharge of seamen, and the rapacity of our consuls in foreign ports, that were not so keenly felt in a time of prosperity, became a burden too great to be borne. Our shipowners became discouraged, and other fields for the employment of capital offering greater inducements, they commenced to dispose of their ships to foreigners, ceased contracting for new ships, and transferred their energies and money to more remunerative employments. have our largest and most enterprising shipping firms gradually abandoned the business. A considerable number of our ship-building firms have either failed in the business or have ex-perienced such losses as have caused them to discontinue. The figures will show to what an alarming extent this has prevailed:

Ships and barks built in the United States.

 In 1855
 381

 In 1856
 306

 In 1878
 81

 In 1879
 37

And this condition of things exists under the laws to protect the shipbuilding interests.

It can be no matter of surprise that our merchant marine has been seriously reduced. Take also into consideration the fact that during the war we sold to foreign nations nearly 800,000 tons of shipping, and the problem is solved. These large sales were chiefly made on account of the enormous premium upon gold, and the receipts or sales being in gold realized a large sum In order to comprehend the full significance of these sales it may be well to state that during the three years-1854, 1855, and 1856—we sold but 167,000 tons to foreigners. While we built in 1879, 43,000 tons of registered vessels, there were sold to foreigners 37,000 tons, abandoned 24,000 tons, and lost 87,000 tons, making a total of 148,000 tons. It should be here stated that the sales to foreigners have been chiefly ships that have nearly outlived their usefulness, and at low prices. In view of all these facts, can it be denied that we should not have suffered such a decline if we had been permitted by our laws to have purchased vessels upon the same terms as other nations, in the cheapest market? If it can truthfully be denied, then there is no reason why we should not continue our downward course until our flag is driven from the ocean. There is no escape from such a conclusion.

In consequence of the decline in wages and in the prices of material in the shipbuilding districts, it is probably true that we can again construct wooden vessels of the same class at a lower price than other countries, but there is no longer a de-For the coastwise trade alone are our shipyards now employed in building wooden vessels. Iron ships are superseding the wooden. In every important respect they have proved more desirable. They secure a higher classification for a longer term of years, they are maintained at less expense, carry more cargo upon equal tonnage, and obtain higher rates of freight, and even at the enhanced rates command the preference. In the port of Calcutta iron ships obtain \$1 per ton, and in San Francisco \$1.25 per ton, more than the best wooden vessels. The reason for this may be found in the difference in the rates of insurance and in the less liability of damage to cargo.

It is a most remarkable fact that, despite the boasts that have been made that iron ships can be built at the same price in this country as upon the Clyde, there is not a single iron sailing ship under our own flag. While all other nations are privileged to buy in the cheapest market, we are excluded, and for the purpose, we are told, of protecting American industry. We seem to overlook the fact that the ocean is the great highway of commerce, that the antiquated navigation laws of other countries have been repealed, so that comparatively few obstructions now exist to a perfect freedom of commerce. The large increase of the shipping of other nations, the sharp competition that has existed for business, have for several years reduced the rates of freight to unprecedented low figures. Only by the practice of the strictest economy, and by freedom from disasters at sea, could the shipowner make the receipts equal the expenses, Meanwhile our Government has not taken the first step in assisting our shipowners to meet this change; I may say, this revolution in this branch of business, and consequently our flag is being driven from the ocean. Lines of ocean steamships are constantly being established between this country and Europe to meet the ever-increasing demands of the trade.

We did boast of one line of American steamships from Philadelphia to Liverpool, but even that exists only in name, as onehalf of that line is now composed of steamers sailing under the flag of Great Britain. A most impressive fact with respect to our trade with Europe was published in the American Ship, of New York. It stated that the grain fleet dispatched from that port last year numbered 2,987 vessels, carrying 102,312,568 bushels of grain, of which 1,075 were steamers, carrying 42,426,535 bushels, the remaining 1,822 being sailing vessels, carrying 59,892,033 bushels. All of this tonnage includes not one American steamer and only 74 American sailing vessels. It is estimated that over \$100,000,000 per annum are paid to foreign vessels for the transportation of our produce.

This is truly a deplorable condition for a great and prosperous Nation, possessing a large line of seacoast, and engaging in such

an enormous trade with the nations of the world.

There are but two courses to pursue-one is to adopt the principles of a semicivilized age and impose restrictions upon commerce, which will be sure to cause retaliatory measures by other nations; the other is to be in accord with the progress of the age, and remove the restrictions that already exist-a relic of former days. It may be interesting as well as instructive at this point to trace the progress of Great Britain and to learn some wisdom by her experience. Laws restricting commerce are of ancient date, and it is not a new thing for ship builders and owners to clamor for monopoly. The commerce of Great Britain would have been utterly ruined many times if the pre-dictions of those interested had been fulfilled. It still prospers, and, as I intend to show, by every successive step in the line of greater freedom has entered upon increased prosperity. I am indebted to a work of John Lewis Ricardo, Esq., upon the navigation laws of Great Britain, for much valuable information. In the reign of Edward III, in 1340, a law was passed, "that no person should sell or give away any vessel to a foreigner upon any account." The difference between that and our own law The difference between that and our own law is that we are permitted to sell, but not to purchase. If it is a more advantageous, it is certainly a more selfish and an equally narrow policy.

The first navigation act, passed in 1381, provides "that no subject of the King should ship any merchandise outward or homeward save in ships of the King's allegiance, on penalty of forfeiture of vessel and cargo." I have recently read a similar proposition, though perhaps a trifle more liberal, to relieve our shipping from competition. But this did not prove a success, and in the following year it was amended so that English merchants, being in foreign ports and not finding any sufficient English vessels there, might ship their goods on board foreign vessels. This monopoly having caused oppressive rates of freight, in 1390 a law was passed "that the merchants of England should export their merchandise in English vessels only, and the owners were desired to carry them for reasonable freights." Ship owning must have been a lucrative business in those days-at the expense of the people. The result of these acts is stated in 1558, in an act of the First of Elizabeth: That since the making of these statutes other sovereign princes have made like penal laws, by reason whereof there hath grown great displeasure betwixt the foreign princes and the kings of this realm; and also the merchants have been sore grieved and endamaged." For 177 years these laws had been at work, and with these results.

The act was repealed, but replaced by another, scarcely better-"that exports and imports in foreign bottoms must pay double duties." In spite of these restrictions, the Dutch ob-In spite of these restrictions, the Dutch obtained the supremacy and led all other nations. How came this to pass? The ancient records tell us-"by the privileges they allowed to strangers, by lowness of their customs, and by the structure or roominess of their shipping, holding much merchandise, though sailing with fewer hands than our ships, thereby carrying their goods much cheaper to and from foreign ports than we can, whereby the Dutch gain all the foreign freights, while our ships lie still and decay or else go to New Castle for coals." In a word, the monopoly enjoyed by the English had not been favorable to progress in the art of building or economy in management. The Dutch, by their greater freedom of competition, had become able to take freights cheaper. This is the secret-competition had stimulated the Dutch to improve the construction of their vessels and to economize their management, while the monopoly enjoyed by the English had hindered their progress. In 1652 was passed the famous act of naviga-tion, "that no goods or commodities whatever of the growth, production, or manufacture of Asia, Africa, or America, including our own plantations there, should be imported into England or Ireland, or any of the plantations, except in English-built ships, owned by English subjects, navigated by English commanders, and three-fourths of the sailors Englishmen." with the Dutch was the consequence, and for two years the commerce of the world was interrupted. Ten years of peace followed, during which the Dutch regained their supremacy.

In 1660 an act styled the Maritime Charter of England was passed, intended to crush the Dutch. Two years later a sup-plemental statute enacted "that no foreign-built ship shall enjoy the privilege of English or Irish built ships, even though the owners be Englishmen"; and yet history tells us that even 20 years after that the English could not compete with foreigners. So much for protection. It is true the Dutch lost the ascendency, but not in consequence of the navigation acts of England. Weakness came upon them as a result of long and costly wars with England and France. Their great shipping grew up and flourished without protection of navigation laws, and they lost it in consequence of heavy taxations and by being forced from their own principles of cheap and free trading.

We know the effect of the laws of England upon her colonies in this country. After the independence of the United States retaliatory measures were passed by our Government. No produce or manufacture of English could be carried to the United States in other than American ships. The ships of either country were crossing the ocean one way in ballast. In 1815 this state of things was stopped and a treaty of reciprocity was adopted. The prosperity of shipping commences from the abolition of these acts of navigation restricting commerce.

I have thus endeavored to trace briefly the progress of free-dom in commerce from the earliest days. These antiquated laws are so often quoted to show how England increased and maintained in prosperity her shipping that it seemed best to show that as she learned wisdom by experience these restrictions were abolished. As the freedom and rights of the people have advanced by successive and gradual steps from a state of slavery and vassalage to one of independence and power, so have the laws that fettered and restricted commerce been succeeded by a more enlightened and liberal policy.

We may as well seek to restore the laws and usages that governed society in the dark ages as to attempt to build up our

commerce by restrictive legislation.

There are various plans proposed to restore the shipping trade of the country, which will now be briefly considered. It may be well here to state that as the decrease of our shipping has been gradual, so must be its restoration, but with this disadvantage: It is more difficult to build up a trade after it has passed into other hands than it is to lose it by indifference and neglect. While we have been retrograding other countries have been advancing in a tide of prosperity. Our progress under the wisest and most efficient legislation must be slow and laborious.

A system of subsidies to regular lines of steamships to foreign ports is warmly advocated by some. But the people of this country appear to be opposed to subsidies. It has been attempted, and the manner in which the legislation was obtained was not creditable to those concerned in it. There is no doubt that the Government should endeavor to cause to be established lines of American ocean steamships to the most important foreign ports in South America, the East Indies, and Europe, and, by the payment of proper sums of money for the transportation of mails, place these lines upon such a footing that they can successfully compete with foreign nations. This should be done without delay. It would greatly promote the commercial welfare of the country, and by opening new markets for our manufactures would benefit the whole people. I trust this convention will pass a resolution requesting the action of Congress in this direction.

It has been urged by some that the Government impose a heavy tonnage tax upon all foreign vessels entering our ports, and also a discriminating duty upon goods brought in foreign bottoms. I am confident that such propositions will not be entertained by Congress or receive the support of the people. Such measures would be sure to provoke retaliation on the part of other Governments, and would also enhance the cost of the merchandise imported.

Greater freedom is what is required. The ocean, the great highway of commerce, is free to all alike. All nations are in competition. It is evident that the nation that can produce the ships the best adapted for the business, and at the lowest price, and that can sail them at the least expense, will outstrip all others. It is admitted by every shipowner, so far as I can learn, that at present our foreign commerce is not upon an equal footing, and we can not to-day successfully compete with the navigation of other nations. The problem to be solved is, What will enable us to do so? I reply, we must put ourselves in the line of progress; further restrictions upon commerce will not do it; greater freedom will. Give us ships as cheap as other nations furnish them and the same advantages in respect to maintaining them, and that is all we ask. To put the proposition in plain terms, change our navigation laws so that any citizen of the United States may purchase steamships or sailing vessels in the markets of the world, and place them under the flag of his country, with this provision, that such steamship or vessel shall be forever excluded from the constwise trade. As the coasting trade is confined to our own vessels, there is a manifest propriety in excluding all vessels of foreign build from a participation in it. The vessels in this business are not brought into competition with those of any other nation, and, consequently, no relief is demanded. This trade is peculiarly our own, and should remain so. It is where we are brought into the arena of the world's commerce that we require entire equality and freedom. Let us consider some of the objections that are raised to the change in the laws that we advocate:

First. That the foreign business itself is unprofitable; that the foreign steamers and ships have been doing the business at a loss; and that it is preferable they should sustain the loss rather than our own citizens. Admitting this to be true, I would inquire, What important and leading business that does not have its periods of depression as well as those of prosperity? Shall we argue that a legitimate and necessary business, and one in which all peoples and nations are engaged, shall be abandoned on this account, especially when, as we must all admit, such business is vital to the welfare and necessary to the proper maintenance of the honor and standing of the nation? No one, surely, will admit or ever entertain such a plca.

There has been an overproduction of vessels. Italy, Norway, and Germany have been largely augmenting their tonnage, as

well as Great Britain. But the business of the world is ever increasing; large numbers of vessels are lost every year, so that the adjustment takes place in a less time than would be sup-

posed.

Second. It has been repeatedly stated that iron ships can be built in this country at prices nearly corresponding to the cost abroad. If this be true, certainly no one would undertake to build vessels in England, for there are many advantages in having a vessel built near at hand, where supervision can be more constant and reliable. But it is not in the purchase of new vessels that the especial advantage would accrue, but in buying vessels already in use, and at largely reduced prices. It is the ability to take advantage of good bargains that are frequently offering. Iron steamships and sailing vessels are constantly for sale, the same as other kinds of property, and circumstances may enable the purchasers to buy at much less than the actual value. Our commerce would receive most valuable and extensive additions from this source. All shipowners will appreciate the truth of this statement.

Third. That we should be flooded with the worthless and wornout hulks that England is anxious to sell us. Such an argument is a reproach to our shipowners. It assumes a want of intelligence and sagacity on the part of our shipping merchants that is wholly unwarranted and without any foundation; it means that they are not fit to be intrusted with the management of their

business.

But an important provision should accompany this change in our navigation laws. All material entering into the construction of a ship should be admitted free of duty when so employed. It would be a suicidal policy to admit the manufactured article free and impose a duty upon the raw material. But it is said that the shipbuilders do not ask for this, and that they are content with the tariff as it exists. The answer to this is that it is no disadvantage to them to be allowed the privilege; and quite likely if they were to be put in competition with builders abroad they would gladly avail themselves of it. The simple fact that there is not an iron ship sailing under the American flag, and only a very small number of steamships in the foreign tradethree, I believe, in the European business--is very significant. Because a few firms have built a considerable number of iron steamships for the coastwise and inland trade this does not affect the question. They built them not because they could do so cheaper or better than builders abroad, but simply because the coastwise trade is confined to American-built vessels. fact serves to strengthen the argument that as they have utterly failed to assist in supplying the demand for tonnage for the foreign trade, and as our commerce is perishing, it is time to apply the only suitable remedy. While steamships are multiplying with astonishing rapidity, it must be remembered that sailing vessels still obtain the larger share of the commerce of the world, and that, possessing many important advantages, they will continue to be in demand.

Fourth. In the absence of any sound argument it is commonly remarked that British gold is freely used to support such measures as we advocate. How, when, or where does not appear, and it is apparently without any foundation in fact. The statement is made and widely circulated in many newspapers for the sole purpose of creating a prejudice against any change. While the shipbuilding interest might obtain a benefit, it is evident that the welfare of England would be promoted by our continued exclusion, and for the simple reason that we are throwing all our commerce into her hands. Far better for her that she should continue mistress of the seas and receive the millions yearly that we are paying her for carrying our imports and exports, than that she should furnish us with the weapons for a successful compe-While the English shipowners may recognize our stupidity in clinging to this ancient policy, they certainly must foresee that their repeal would give us advantages that would be turned

against them

Fifth. That a repeal of these laws would work injustice to American industry. While the fact is not proven or admitted, I would ask, Shall the whole country suffer, shall our commerce be annihilated, in order that the iron-ship builders may have an opportunity of doing what they have not been able to do, and which there is not the slightest indication they will be able to accomplish, at least for years to come?

On the other hand, it is more than probable that the introduction of iron steamships and vessels into our commercial marine will stimulate our own industries in the same direction, and that in consequence of being able to obtain the material at the same prices as other nations, we shall secure the natural and legitimate result; our own shipyards will multiply, and building

interests will revive.

There are some timid persons who fear that if any breach in the wall of protection is effected it will invite an assault upon

the whole tariff system. But our shipping occupies a different position from all other interests of the country. must be brought into competition with those of every other nation, and the desired changes relate only to our foreign trade. The same rules that apply to the one interest can not be brought to bear upon the other. So that it seems just to assume that the great industrial establishments of the country that have grown up and developed so successfully under our system of protection, that the producers of the raw material who have experienced the benefits of the fostering care of the Government, will suffer no injury by the removal of the burdens upon our commerce. Their interests will not be jeopardized or put in peril, for the parties foremost in urging the removal of restrictions upon navigation would as earnestly oppose any measures that would cause the great industries of the Nation to suffer.

I have thus endeavored to meet the objections that have been urged with so much persistency against the proposed changes in our laws, and at the same time to show the great benefits that would accrue to our shipping interests and to the Nation by giving to our shipowners the same freedom that all other maritime countries enjoy, and in the exercise of which they have ob-

tained great prosperity.

Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. GEORGE W. EDMONDS, OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 31, 1916.

Mr. EDMONDS. Mr. Speaker, I am opposed to the gradual and continuous entrance of our Government into activities which should be reserved for private enterprises. Where military secrets are involved or processes should be kept secret for the good of the general public, it ought to be the duty of the Government to keep matters of this kind under its own control. This is not true, however, of the proposition before us. armor plate is a scientific process that requires skill, but it has no secrecy connected with it that would give our Government any advantage over private concerns that have dealt in this line of work for years. The manufacturing of armor plate should of work for years. The manufacturing of armor plate should therefore remain with companies already established that have the necessary facilities as long as there is no disposition on their part to take unfair advantage of the Government as to

If our people would only study the conditions that existed in foreign nations that have in the past entered into Government

ownership, they would soon realize its impracticability.

In the North American Review for May, 1913, this question of Government ownership is touched upon in an article entitled "Socialism and the State," by Jules Roche, former minister of commerce, colonies, post, and telegraph of France, which I incorporate as a part of my remarks:

SOCIALISM AND THE STATE-A PRENCH VIEW.

socialism and the State—a french view.

[By Jules Roche, deputy, former minister of commerce, colonies, post, and telegraph of France.]

At the end of the third volume of Macaulay's admirable History of England occurs this passage, written just after the disturbance of 1848:

"The proudest capitals of western Europe have streamed with civiliblood. * * Doctrines hostile to all sciences, to all aris, to all industry, to all domestic charities, doctrines which, if carried into effect, would, in 30 years, undo all that 30 centuries have done for mankind, and would make the fairest provinces of France and Germany as savage as Kongo or Patagonia, have been avowed from the tribune and defended by the sword. Europe has been threatened with subjugation by barbarians, compared with whom the barbarians who marched under Attla and Alboin were enlightened and humane. The truest friends of the people have with deep sorrow owned that interests more precious than any political privileges were in jeopardy, and that it might be necessary to sacrifice even liberty in order to save civilization."

The doctrines mentioned by Macaulay, after keeping in the background for a time, have now come to the fore again, grown little by fittle in force, until they have burst forth into new spiendor, have given birth to organized parties which are striving every day more energetically to transform the idea into permanent acts and facts, and displaying in this work so much perseverance and audacity that, if the English historian were a witness of what is now going on, he would experience a deeper anguish than that which he expressed so eloquently 64 years ago.

It is now some time since the socialist movement has shown itself in all countries, in a more or less intense form and in an apparently new shape, that of State socialism. It is true that socialism reality remains what it has always been and what it must always be—that is, revolutionary; for its very definition makes it so, since it proclaims itself to be the systematic enemy of all the

Is it, therefore, possible to imagine that the State in a civilized country can adopt and apply the principles of socialism? Is there not an Irreducible contradiction between the two? In order to make this contradiction clear to all eyes, it is first necessary to point out the essential principles of socialism.

What, then, is socialism? Those who see in it only its political platform do not get beneath the surface; this is only the minor side of the matter, its least strong side. What we must discover in socialism is the cause of this platform. This cause is simple; it is an idea, and a profoundly false one, concerning the origin of evil. At bottom, socialism is especially a philosophical doctrine, almost a sort of religion. It believes and teaches that the inequality of conditions among men arises from laws emanating from governments; that the State can create riches and regulate at its will the distribution of these riches; that capital is the enemy of labor; that "the development of the capitalist order is responsible for the working class"; that, in a word, all the evits, or nearly all, from which mankind suffers, are produced by "society," and that it depends upon the legislator to reorganize this society arbitrarily, in accordance with a new plan in which the State will be all and the individual nothing, when universal felicity will reign. In a word, socialism is a peculiar conception of the nature of man, and of the rôle and the power of the State. This is its particular stamp, the essential of its errors and dangers; what follows is simply the consequence of this. Laws which put an end to property and inheritance; the nationalization of mines, factories, railways, and banks; the organization of a system of universal functionaryism—all this, and still other legislative proposals of the socialist parties, is but he application to particular cases of the ruling idea. It does not suffice, therefore, to combat these projects separately, though this is of coarse necessary, for in this way you simply push the

pared with natural things, on the conditions essential to the happiness of the individual.

In order to grasp the full truth of what I say, to see it with the mind's eye as well as with the ordinary eye, we have simply to glance at the state of humanity to-day and at its state in the past. As, according to socialism, "the capitalist organization" is the root of evil, this evil would not have existed at the beginning of our race. So the greatest well-being and the least misery should be found to-day in those parts of the globe where the capitalist regime is the least developed.

When it is stated in the presence of thousands of workmen, whose infantile imagination is inflamed by ardent words and whose untrained reason is misled by sophisms, that the difficulties of this life spring from the present social order, the inference is that humanity was born in a terrestrial paradise and that we have but to turn to the tribes of Asia, South America, Africa, and Oceania, who have kept nearest to the primitive state and furthest away, consequently, from "the capitalist state," to find there the happiest of beings dwelling among the pleasures of Eden. But I should like to see these fiery apostless of socialism reduced to the lot of the Fuegians, the Bushmen, and the Australian aborigines, who are so completely protected from the evils of the capitalist!

On the contrary, what should be said without cessation to the work-

Australian aborigines, who are so completely protected from the evils of the capitalist!

On the contrary, what should be said without cessation to the workers, to those who have the hardest time in life, is that all progress implies capital, all capital implies work, all fruitful work impies liberty, all liberty implies sproperty, and that the ideal of the human race is not behind us but before us.

The nearer man is to nature the more he is under the domination of his enemy, the more miserable he is, and the more he is the foe of his kind. Without going into a profound analysis of the human passions, we have only to regard the most visible and most certain phenomena of life to perceive that the decrease of the evils which adict our race is in direct proportion to the development of this capitalist order whom the socialists are never weary of anathematizing. There is no worse error than that of Rousseau. The most unfortunate, the most feeble, the most suffering of men, is the primitive man, who lives from hand to mouth, without arms, without instruments, with no capital to shield him from want for the moment while he has time to look about him in order to improve his lot. What the philosopher of Geneva saw so badly, the admirable mind of Lucretius grasped immediately and without error. What a faithful picture of the condition of man before the capitalist regime was born is traced by the powerful poet of "The Nature of Things." ignorant of all the geological and prehistoric archaeological discoveries of our times, who sang:

"Then our first ancestors did not yet know how to master things by fire, nor to use skins and to cover their bodies with the skins of the wind and ruln."

It is from such conditions, and not from the Golden Age, that we are sprung, and if, little by little, we have reached the point where

In the brushwood their rude limbs, obliged to flee the attacks of the wind and rain."

It is from such conditions, and not from the Golden Age, that we are sprung, and if, little by little, we have reached the point where we now are, it is due to capital, which began with the first fiint hammer; it is due to the incessant efforts of human genius, which tamed by degrees the forces of matter and bent them to our needs, which conceived and spread the ideas of justice, liberty, love of neighbor, conceptions so different from the ferocity and the state of soul of our first parents. But instead of continuing in this way of progress, socialism would destroy the necessary elements and conditions which make it possible. In deflance of the most constant facts and the most profound forces of the human heart, socialism pretends to build up a complete Utopian city, which would, in fact, be the worst sort of a prison, where would be confined the mind, and which would soon become the theater of the deepest misery into which humanity has ever been plunged.

No; evil does not spring from society, nor even from laws, which does not mean, however, that the legislature can not better the laws. Evil springs from nature, not yet sufficiently mastered by science; it is in us, not yet sufficiently purified, sufficiently elevated by reason, by the arts, by thought; it is in the mind, in the very heart of these than-matured who declare it to be in the laws and would have us believe in their chimerical power to remove it if we only confide the making of the laws to them! If ever there were a true remark, it is this: "Socialism, that is the enemy!"

But I would not have my readers my that I not that all he for the heat is the west of have my readers my that I not that all he for the heat is the west of have my that it is there exists, that there is no social progress to be realized. All that it wish to say is that sociallem, far from curing human suffering, will say make it worse; that its innovations would produce only misery to diminish this misery.

It all the stabilished, even from our list one much, just hat the diminish this misery.

It all the stabilished is the stabilished of the stabilished with the laws of nature and the conditions of its own role. The State can become socialistic without placifies on much, just hat he respective sphere of each? It is not the first time that the subject has been under discount of the stabilished with the individual? What is the respective sphere of each? It is not the first time that the subject has been under discount of the stabilished in the stabilished in the conditions. Long before Montreyulee, Plato, and Cleron had applied bold, in his celebrated essay which appeared in 1792, devoted all his powerful faculties to an attempt to seded what are the limits of the status with the stabilished of the status with the stabilished in the status with the stabilished in the status with the stabilished in the status with the stabilished with the stabilished in the status with the stabilished in 1803, explained every hidden corner of this difficult problem.

It is not the stabilished with the status of the conception of a providential State and the benefits to be derived any among the charlatans, which is quite natural, but among many cleen. His control of this kind plainly reveals the errors of the conception of a providential State and the benefits to be derived from a regime of complete individual state, and in the stabilished with the stabilished with

Has the State, which has never created progress, either moral or scientific, known how to aid happily moral or material works, in conformity with or depending on the laws of progress, observing the conditions of true progress; that is to say, rendering possible the free

sction of the best individuals? Here again observation reveals the same and the control of the c

tion and progress and were announced at the head of the constitution. And then happened in the history of France events whose political effect is of such importance that they should be meditated upon by all nations in order that these nations may draw therefrom a lesson that will save them from similar faults and cruel experiences.

The home and foreign events of the carly months of 1793 had so profoundly troubled the country that their inevitable consequences were felt on every side. It was equally inevitable that the persons whose "political science" consists in exploiting public misfortune and popular credulity by promising miracles in order to secure the support and the favor of the masses would profit by these circumstances. The "heelers" of the popular quarters of Paris appeared in the galleries of the convention, to find on the floor accomplices not less bustling and ardent than themselves. The Jacobin delegation from the suburbs terrorized, on April 30, the Assembly, essentially cowardly like all assemblies, by the declaration of the conscious "boss" who headed it and who exclaimed in a threatening tone: "I come in the name of 10,000 men, who are at your doors, to demand that you reestablish the maximum. If you do not do it, we will declare an insurrection!" This threat sufficed. Four days later was issued the decree of May 4, 1793, which required every farmer, merchant, and miller to declare the quantity of grain in his possession; which provided for committees appointed by the municipalities to revise these declarations and to fix the average price of grain in accordance with the average in each Department, from January 1 to May 1; which pronounced the most rigorous punishment—death, even—for those who should conceal or destroy corn; which offered rewards to informers—in a word, a decree containing the whole series of measures which characterize "Socialist laws" engendered by those baleful "well-wishers of the people."

Once again material things revolted; the famine simply increased.

once again material things revolted; the famine simply increased. Then the lawmakers grew stubborn. The decree concerning grain was followed, one after the other, by decrees concerning wood, coal, peat, oats, oil, butter, vinegar, meat, cattle—all kinds of imaginable merchandise; these decrees meting out penalties, fines, imprisonment, the holy guillotine, and offering bounties for the "patriotic" soup kitchen; the decrees, in a word, running the whole gamut of radical panaceas. But finally the most obstinate were forced to see things as they really were; like Philip the Fair, the convention had to repent. The dire disasters which these "Socialist laws" brought down on the land opened the eyes of the lawmakers, and with their own hands they put an end to their stupid and deadly work. On December 25, 1794, the committees of public safety, general security, legislation, and of commerce and finance held a joint meeting and recommended to the convention through their chairman, Joannot, the total suppression of all the decrees relating to subsistence. The text of the report deserves to be quoted. It runs as follows:

"The short-sighted members who, yielding to popular demands."

of public safety, general security, legislation, and of commerce and for public safety, general security, legislation, and of commerce and through the about the content of the content of

France, with its 40,000,000 of inhabitants, there are about 130,000 kilometers of telephone wires and 232,743 felephones. In the United States my statistics show 22,326,000 kilometers of wire and 7,506,000 telephones for 93,000,000 inhabitants. That is to say, in the United States private industry furnishes 1 telephone for about 12 inhabitants, while in France there is 1 for about every 171 inhabitants, in France there is 1 for about every 171 inhabitants, while in France there is 1 for about every 171 inhabitants, cramped in some directions by contracts which the State is authority, it might almost be said under its legislative and administrative absolutism, cramped in some directions by contracts which the State is ever ready to violate. And what do we find? In 1910 we had about 50,000 kilometers of railways, or 1 kilometer for every 800 inhabitants, while in the United States, where railways enjoyed until 1887 an almost absolute liberty in the state is every 200 inhabitants. When compared with the whole of Europe, we find that in 1910 here were about 630,000 kilometers in all Europe—that is, the 93,000,000 inhabitants of the United States, boossess 70,000 more kilometers of railways than the 450,000,000 Europeans! And yet it was in Europe that the locomotive was invented and that railways were first built. But the United States, on account of the freedom of individual enterprise, and the absence of all legislative and administrative hampering, had in operation more than 8,400 kilometers of road, while England had 5,318; Germany, 5,291; France, 2,018; and all Europe, 14,205. But at the end of 1883, things had greatly changed. According to the official tables of our ministry of the control of the freedom of individual enterprise, and the absence of all legislative and administrative hampering, had in operation more than 8,400 kilometers of road, while England had 5,318; Germany, 5,291; France, 2,018; and all Europe, 14,205. But at the end of 1883, things had greatly changed. According to the official tables of

Telegram of Hon. Charles Evans Hughes, accepting the Republican Nomination for President of the United States.

EXTENSION OF REMARKS

HON. JAMES R. MANN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 12, 1916.

Mr. MANN. Mr. Speaker, under the leave granted by the House I insert in the RECORD the telegram of Hon. Charles Evans Hughes, of New York, of June 10, 1916, addressed to Chairman Harding, accepting the Republican nomination for Provident of the United States. President of the United States, as follows:

'Mr. Chairman and delegates, I have not desired the nomination. I have wished to remain on the bench. But in this critical period in our national history I recognize that it is your right

to summon and that it is my paramount duty to respond.

"You speak at a time of national exigency, transcending merely partisan consideration. You voice the demand for a dominant, thorough-going Americanism, with firm, protective, upbuilding policies essential to our peace and security; and to that call, in this crisis, I can not fail to answer with the pledge of all that is in me to the service of our country. Therefore I accept the nomination.

STANDS FOR AMERICANISM.

"I stand for the firm and unflinching maintenance of all the rights of American citizens on land and sea. I neither impugn

motives nor underestimate difficulties.

"But it is most regrettably true that in our foreign relations we have suffered incalculably from the weak and vacillating course which has been taken with regard to Mexico—a course lamentably wrong with regard to both our rights and our duties.

"We interfered without consistency; and while seeking to dictate when we were not concerned we utterly failed to appreciate and discharge our plain duty to our own citizens.

BRAVE WORDS STRIPPED OF "FORCE."

"At the outset of the administration the high responsibilities of our diplomatic intercourse with foreign nations were subordinated to a conception of partisan requirements, and we presented to the world a humiliating spectacle of inaptitude.

"Belated efforts have not availed to recover the influence and prestige so unfortunately sacrificed; and brave words have been

stripped of their force by indecision.

"I desire to see our diplomacy restored to its best standards and to have these advanced; to have no sacrifices of national interest to partisan expediencies; to have the first ability of the country always at its command here and abroad, in diplomatic intercourse; to maintain firmly our rights under international law; insisting steadfastly upon all our rights as mutual and fully performing our international obligations, and by the clear correctness and justness of our position and our manifest ability and disposition to sustain them to dignify our place among the

KNOWS NO ULTERIOR PURPOSE.

"I stand for an Americanism that knows no ulterior purpose, for a patriotism that is single and complete. Whether native or naturalized, of whatever race or creed, we have but one country and we do not intend to tolerate any division of allegiance.

"I believe in making prompt provision to assure absolutely

our national security.

I believe in preparedness, not only entirely adequate for our defense, with respect to numbers and equipment, in both Army and Navy, but with all thoroughness, to the end that in each branch of the service there may be the utmost efficiency under the most competent administrative heads.

URGES PROPER PREPAREDNESS.

"We are devoted to the ideals of honorable peace. We wish to promote all wise and practicable measures for the just settlement of international disputes. In view of our abiding ideals, there is no danger of militarism in this country.

"We have no policy of aggression, no lust for territory, no

zeal for strife.

"It is in this spirit that we demand adequate provision for national defense, and we condemn the inexcusable neglect that has been shown in this matter of first national importance.

"We must have the strength which self-respect demands, the strength of an efficient nation ready for every emergency.

FOR READJUSTMENT OF TARIFF.

"Our preparation must be industrial and economic as well as military. Our severest tests will come after the war is over. We must make a fair and wise readjustment of the tariff, in accordance with sound protective principle, to insure our economic independence and to maintain American standards of

"We must conserve the just interests of labor, realizing that in democracy patriotism and national strength must be rooted in even-handed justice. In preventing, as we must, unjust discriminations and monopolistic practices, we must still be zealous

to assure the foundations of honest business. "Particularly should we seek the expansion of foreign trade. We must not throttle American enterprise here or abroad, but rather promote it and take pride in honorable achievements.

STANDS FOR CIVIL SERVICE.

"We must take up the serious problems of transportation, of interstate and foreign commerce, in a sensible and candid manner, and provide an enduring basis for prosperity by the intelligent use of the constitutional powers of Congress, so as adequately to protect the public on the one hand, and, on the other, to conserve the essential instrumentalities of progress

"I stand for the principles of our civil-service laws. In every department of Government the highest efficiency must be insisted upon, for all laws and programs are vain without

efficient and impartial administration.

FULLY INDORSES PLATFORM.

"I can not, within the limits of this statement, speak upon all the subjects that will require attention. I can only say that I fully indorse the platform you have adopted.

"I deeply appreciate the responsibility you impose. have been glad to have that responsibility placed upon another. But I shall undertake to meet it, grateful for the confidence you express. I sincerely trust that all former differences may be forgotten, and that we may have united effort in a patriotic realization of our national need and opportunity.

"I have resigned my judicial office, and I am ready to devote

myself unreservedly to the campaign.

"CHARLES E. HUGHES."

The Interpleader Bill.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES.

Monday, June 12, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, referring to the interpleader bill (H. R. 12541), which has just passed the House. I desire to say that the final passage of this measure will tend to relieve a large number of fraternal socities and insurance companies from very unpleasant legal complications in which many of them have found themselves in their efforts to meet their just obligations. It is unthinkable that a company or an individual should be made to pay two or three times the amount agreed upon without recourse, and yet this is the very condition that has confronted many worthy organizations which have undertaken to alleviate the distress of their beneficiaries. As matters have stood, it has been possible for rival claimants under a policy of insurance to make two recoveries where but one sum was due, and this has held as to mutual benefit societies as well as to life insurance companies.

The bill, divested of legal phraseology, proposes to permit a fraternal society or an insurance company to deposit the proceeds of a policy, so that they shall be in the custody of Federal court, leaving the claimants from separate jurisdictions the right to come in and assert their claims. It will tend to stop the practice that has heretofore existed of permitting a claimant in California, for instance, to sue and recover in California for the full amount of a policy, while another claimant in Virginia may sue and recover upon the same policy in

Virginia.

While a question was raised in the committee as to the propriety of fixing the limit of jurisdiction at \$500, and the amount was raised by committee amendment to \$2,000, I am glad that that amendment was stricken out in the Committee of the Whole and that the bill as introduced now stands at the judgment of the House. It seems to me that to have accepted the higher amount, to wit, \$2,000, would have deprived the fraternal societies, whose benefit policies in many instances do not equal \$2,000, of the manifest advantages intended to be conferred by the bill. The higher amount would have tended to exclude these worthy societies to the advantage of the more powerful insurance companies. As the bill now stands it treats all parties fairly and promises to remove the legal entanglements which have hitherto subjected the beneficial associations and insurance companies to a great deal of annoyance. If the bill passes the Senate and is finally enacted into law, it will greatly simplify the procedure by which insurance benefits may be paid to the proper parties where contests arise without unduly wronging those who have to pay, for, after all, in the case of beneficial societies and mutual insurance companies the loss resulting from double or treble payments would fall upon the members of such societies and companies.

REASONS FOR PASSING THE BILL.

Since the introduction of this bill there has been an unmistakable sentiment in its favor. The Committee on the Judiciary gave the matter careful attention and approved the bill as drawn, except for the \$2,000 limitation, which has now been reduced to \$500, as originally intended. The chairman of the Judiciary Committee, Mr. Webb of North Carolina, has submitted the testimony of certain labor organizations approving the bill, and from the mass of correspondence that has come to me in support of the measure I have picked four letters representing other interests, whose reasoning and arguments appeal to the fairness

I think these four letters are fairly representative of the attitude of most of the beneficial societies and mutual insurance companies of the country on this question.

ARTISANS' ORDER OF MUTUAL PROTECTION, Parkway Building, Philadelphia, June 9, 1916.

Hon. J. Hampton Moore,

House of Representatives, Washington. D. C.

Dear Sir: I have been informed that House bill No. 12541, introduced by yourself, providing that a bill of interpleader might be filed in the United States Circuit Court, has been amended so that it is not effective unless the amount involved is \$2,000 or more. If this bill is finally passed in this form it will be of very little use to fraternal societies.

The average amount of benefits paid by such societies is \$1,150. In our organization, which is a Philadelphia institution and 43 years old, 90 per cent of our members carry \$1,000 insurance.

Can anything be done to restore the bill to its original form, so that an interpleader might be filed where the amount is \$500 or more?

There are nine and a half billion dollars of insurance carried in fraternal societies in the United States, and about 35,000,000 people, directly or indirectly, are interested in the 175 organizations of our type. This would seem to me to represent a sufficient number of people to be entitled to consideration in this bill.

I would be very glad to write to each of Pennsylvania's Representatives in Congress if you think it would serve any good purpose. I am very much interested in this bill, as it will afford our organization relief from time to time.

Respectfully, yours,

Allen P. Cox,
Most Excellent Recorder.

ALLEN P. Cox, Most Excellent Recorder.

THE WOMAN'S BENEFIT ASSOCIATION OF THE MACCABEES.

DEAR SIR: I desire to call your attention to the fact that a bill that is of importance to all fraternal beneficiary societies and insurance companies has been introduced in the House of Representatives of the United States Congress by Representative Moore and referred to the Committee on the Judiciary. This bill is known as H. R. 12541, and is a bill authorizing insurance companies and fraternal beneficiary societies to file a bill of interpleader.

As you doubtless know, insurance companies and fraternal beneficiary societies frequently find themselves in a position where several people make claim for the amount due under a policy or benefit certificate. If the insurance company or fraternal beneficiary societies which claimant is entitled to the fund and pays accordingly, it may be sued by the other claimant or claimants; and if the court concludes the company or society has paid to the wrong party the company or society would be compelled to pay the amount again to the claimant designated by the court.

In case all of the claimants are within the jurisdiction of the same State court the company or society may avoid the danger of double payment by filing a bill of interpleader, paying the money into the court, bringing all the claimants into the court, and requiring them to litigate among themselves as to who is entitled to the fund. If, however, these claimants are in different States, as is frequently the case, a bill of interpleader can not be resorted to, because no State court can get jurisdiction of all the parties. The company and society is thus placed in a position where it must refuse to pay anyone and run the risk of being sued by all the claimants; or, if it pay one, it may be sued and be compelled to pay again to the other or others.

Bill H. R. 12541 is designed to give relief from such a situation by permitting bills of interpleader to be filed in the Federal courts, where jurisdiction of the parties can not be obtained by the State court. I a

Very truly, yours,

NELLIE E. LOUNSBURY, Great Commander, Warren, Pa.

THE VOLUNTEER STATE LIFE INSURANCE CO., Chattanooga, Tenn., March 18, 1916.

Hons. Robert Y. Thomas, Jr., M. C.; William L. Igoe, M. C.; J. Hampton Moore, M. C.,
Washington, D. C.

Washington, D. C.

Dear Sirs: Referring now to House bill 12541, introduced by Hon.
J. Hampton Moore, permit me, on behalf the above company, to express
its unqualified approval of the measure and to say that, speaking from
our experience, the passage of same can not possibly harm claimants
of any character; and it will most certainly reduce the labors of the
companies, embarrassment to them, the costs and present circuity of
litigation in many instances.

Accordingly, it is plain that the passage of such measure will ultimately tend to the reduction of insurance rates in that it will result
in a saying of expense to the companies always without harm or prejudice to the rights of claimants.

Yours, very sincerely,

W. B. Miller,

General Counsel.

THE PENN MUTUAL LIFE INSURANCE Co., Philadelphia, February 8, 1916.

Hon. J. Hampton Moore.

House of Representatives, Washington, D. C.

Dear Mr. Moore: In reply to your letter of the 7th Instant, would say that this company has frequently been up against the contingency of a possible double recovery. In only one case, however, were we actually compelled to pay the claim twice. This was under policy No. 38183, issued on December 29, 1884, on the life of William M. Mitchell, of Norfolk, Va. Twelve years premiums were paid on the policy at the time of the insured's death, Mr. Mitchell dying on January 22, 1896. The insured made a transfer of the policy to Mr. John L. Hinton, of Elizabeth City, N. C., and at his death Mr. Hinton made claim as assignee, as well as B. L. Brothers, administrator of the estate of the deceased, who resided at Norfolk, Va. The conflicting claimants refused to recognize each other and both eventually brought suit. The judgment secured by Mr. Brothers against the company was paid on April 21, 1897, the amount being the face of the policy plus \$55 interest, the decision being by the court of law and chancery of the city of Norfolk, Va., and the date April 12, 1897.

Mr. Hinton also recovered under the North Carolina suit in December of 1901. The company paid the judgment, the total amount being \$1,000 plus \$328 interest. The suit in the North Carolina case was decided against the company, notwithstanding the fact of the proper evidence being produced showing that the claim had been paid by judgment under the Virginia suit. In numerous other cases where conflicting claimants have brought suit we have either been able to induce them to appear in the same jurisdiction, removing the case to the Federal court, or have been successful in inducing them to adjust their differences. In several comparatively recent cases we have required a bond upon settlement with one of the claimants and have protected ourselves in this way.

In the Daniel W. Jones claim, of Berkeley, Va., we came very near having a repetition of the Mitchell case. In this particular case Mr. Hint

most common in connection with life insurance, and interpleader proceedings very frequently seems to be the only way out, if it is possible to join all the parties in interest.

Respectfully, yours,

HARRISON S. GILL, Supervisor of Applications and Death Claims.

The Shipping Board and the Ship-Purchase Bill.

A constructive measure to reestablish our over-seas merchant marine, advance our foreign trade, regulate rates, prevent extortion by shipping combines, and provide a great naval auxiliary fleet.

SPEECH

HON. RUFUS HARDY,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, May 16, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15455) to establish a United States shipping board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with its Territories and possessions, and with foreign countries; to regulate carriers by water engaged in the foreign and interstate commerce of the United States, and for other purposes.

Mr. HARDY. Mr. Chairman, of course you can not really discuss a great question like that of the American merchant marine to extend I will be able to place a fuller discussion in the Record, and shall do so. I have been amused frequently by such remarks and shall do so. I have been amused frequently by such remarks as those which concluded the remarks of the gentleman last preceding me, to the effect that he was greatly disappointed that the committee did not report some bill that would tend to build up our merchant marine. Of course, he is a Republican, and is blissfully oblivious of the fact that men of his way of thinking have in their 50 years of power done nothing that tended to build it up. The gentleman's party in power has done nothing have in their 50 years of power done nothing that tended to build it up. The gentleman's party in power has done nothing, because, like the gentleman, they have been afraid they might take somebody's special privilege away.

I have been as impartial a student as can be found in Congress of the subject of our merchant marine for the six or eight years I have been on the Committee on the Merchant Marine and

Fisheries. There is not a man in my district, so far as I know, who own's a dollar's worth of shipping; and there is no man in my district, so far as I know, who has ever been a seaman or ever expects to be; and as between the shipowner and the man who operates his ship for him I ought to be impartial. I certainly have no hostility to or desire to injure either.

I have had only one interest and the different successions and the contract of the state of

tainly have no hostility to or desire to injure either.

I have had only one interest, and that is the interest in common with every man, woman, and child in the United States, in building up a national industry and securing to our whole people the benefits of a wisely established and economically and justly operated merchant marine. Whenever you pin down gentlemen like the one who last addressed the House, or anyone who stands with him in opposition to this bill, and ask him what kind of a bill he would have, his one answer is a bill to make up the alleged unavoidable difference in the cost of American shipping over foreign by a subsidy. And yet the Republican members of our committee have not offered a subsidy bill as a substitute for ours and thus put the issue squarely up to the nearly. ours and thus put the issue squarely up to the people. It was a fine opportunity to go before the people on that issue, definitely presented. But they prefer to do nothing—to offer nothing. In this, as in other matters, in power they are helpless; out of power, they are only critics and faultfinders, advocates of the impossible, and talking, as they have done for 50 years, to muddle the facts and befuddle the minds of the people in the interest of the shipbuilder and the coastwise shipowner. And so they are now dividing their talk between ship subsidy and discriminating duties as means to put our ships back on the seas. Both propositions ought to have been thrashed out, and I think have been thrashed out and rejected long ago. At any rate, they have never dared to pass a general subsidy or a discriminating-duty law. But now in this debate they state that all the nations which have merchant marines built them by subsidy. Let me read to you what one who is considered good authority on this subject, or used to be, and who stands high in the councils of the Republican Party to-day, said on this question of subsidy.

On February 28, 1907, Theodore Burton discussed this question in this House. He first quoted from Mr. Garfield, who said in

1870 that "subsidy is odious to the American people," and he

Mr. Chairman, the idea of any subsidy or any bounty or subvention for the support of private enterprise is repugnant to a great majority of our citizens.

Mr. HUMPHREY of Washington. Will the gentleman yield? Mr. HARDY. I can not yield for colloquies, because I can not say all I desire to say in the time at my command, and I make that statement now to the gentleman and to everybody.

Mr. HUMPHREY of Washington. All I desired to say was

that Senator Burton has recanted.

Mr. HARDY. He can not recant the reasons he gave. Mr. HUMPHREY of Washington. But he can recant. Mr. HARDY. Men sometimes recant without changing their

opinions. He may have recanted. He may have changed his opinion, but the value of the opinion he gave here rests on the force of the facts and reasons he gave for it, and those facts and reasons are unanswerable. President Garfield, unfortunately, is dead, but he was a great leader, thinker, statesman, and patriot, and I presume there is no claim that he changed his opinion. Since I heard Mr. Burton more than once earnestly and ably denounce subsidy, I would really like to hear him on the other side of the question. These are some of the arguments he made against a subsidy bill in 1907:

It is conceded that this measure is for the purpose of making up a difference in cost of construction and operation of ships which will continue for all time.

I would not favor a tariff to meet a confessed perpetual higher cost

in America.

There is one feature of this bill, the subsidy provision, which is odious to the American people. It is a feature, I think, which no man in the House—certainly no Representative of an inland district—can support and sustain himself before his constituents.

Answering the claim that subsidy was protective tariff in another form, Senator Burton said:

I deny it. In the first place, there is the essential distinction that while a tariff brings money into the Public Treasury a subsidy pays it out. Then there is a stronger distinction in the very nature of the case: You can build a wall around a country; you can enforce any kind of a domestic policy; you may levy tariffs in figures so great as to be prohibitive, but you can not exercise any such control over all the seas. There competition is unlimited and fitness and cheapness must prevail.

He continues:

That foreign shipping is built by subventions and subsidies is absolutely not correct. What does England pay for? For fast service for mail and for a naval auxiliary. The great body of her commerce is carried by her tramp steamships, which receive no more subsidy or help from the national treasury than the outcast human beings from whom they are named. How about German shipping? In Germany there are two great lines. The North German Lioyd receives a subsidy, the Hamburg-American Line does not, and yet it is the more prosperous and pays the larger dividend of the two. How, then, in the face of that can you say that the German merchant marine has been built up by subsidies? And you will find the world over that gain in merchant marine and ownership of ships is not due to subsidy but to some collateral facts.

Again he says:

Now, my theory of the American protective tariff is not that it causes us to enter into competition for all time where we will be at a disadvantage.

The advocates of a ship subsidy must either admit that our shipbuilders can compete with foreign shipbuilders to-day, when everything is in their favor, or else admit that the shipbuilders of the United States can never compete with the shipbuilders of the world; and therefore, according to Mr. Burton, this Government ought not to try to maintain and support them by protection or subsidy.

Mr. Garfield also maintained that protection was only justifiable in favor of an industry which, by being aided, could be put on its feet and enabled to compete, but ship-subsidy advocates start out with a statement that our shipbuilders have been for nearly 60 years, are now, and always will be unable to compete; and they want to begin a subsidy now, to continue forever, and I will show before I am through that the ship-building monopoly has destroyed and will forever destroy our

ability to compete on the ocean.

On the other hand, I claim and our committee claims that our shipbuilders can compete and can compete now, but I freely admit that unless they are forced to compete they will not compete now or ever; and if they and the shipowners together can get a subsidy, they will never build or operate a ship in the overseas trade without it. Lest I forget, permit me to quote right here the distinguished gentleman from Washington [Mr. Habley], a member of our committee opposed to our bill. He stated that when the war in Europe broke out we were building some sixty-odd vessels, and that to-day the shipyards in America were building 300 vessels, or 360 I believe it was.

Mr. HADLEY. Three hundred and sixty. Mr. HARDY. Thank you. He was asked the question as to whether or not they were being built for American or foreign

use, and he replied that he did not know, that that would only be determined when they went under registry; but that if they were not put under American registry they could be sold abroad anywhere, and that if this law was passed they would not be likely to be put under American registry. It will be a strange sight for this generation to see American-built ships flying for-eign flags all over the world. The gentleman never thought that when he was saying these ships built here could be sold anywhere else he was declaring our shipbuilders can compete with the world and at the same time illustrating a very material difference between the foolish policy of this Government and the wise policy of every other Government under the sun. Ships built abroad can not be sold here; our law forbids it; and yet the gentleman wants our shipbuilder to avail himself of the privilege of building ships for other countries while denying the shipbuilders of other countries the right to build for us. The humor of this attitude ought to strike him. I doubt, however, if the inconsistency of his attitude in this matter has ever occurred to the gentleman, so accustomed is he to consider our shipbuilder as set apart and sanctified and clothed with special privilege.

The privileges of the American shipbuilder that have stood in the way of our commerce and other industries all these years must go just as soon as the American people get in real earnest about having an American over-seas merchant marine. subject will not be befogged much longer. When I first went on this Committee of the Merchant Marine, about six years ago, I heard it everywhere that our antiquated navigation laws had destroyed our merchant marine and that the heavy burdens imposed by our laws on our shipping made it impossible for our ships to compete with foreign ships without some special advantage or a subsidy being granted them. What these anti-quated laws and heavy burdens were, I tried to find out. The whole thing was very simple when I found it out. The sole trouble was our law prohibited the American from using under our flag any ship not built in America, and the result of it is we have been trying to compete with the shippers of the world in vessels that cost from 50 to 100 per cent more than the vessels of our competitors. Our shipbuilders now fight the repeal of that law with bitterness and so far with success, although they are now contemplating the possibility of building more ships in this country than our shippers will use and of selling them abroad. At the same time we say to the foreign shipbuilders, you must not bring any ships here to sell, and to the American shipowner, you must not buy abroad; but to our shipbuilder, you may sell abroad if you can.

The history of our merchant marine will be illuminating and help us to find what we must do in order to rebuild it. If we learn that history clearly and learn also clearly the history and character of the American people and American enterprise, we will know how to build and maintain the greatest merchant marine in the world, and that without putting any burden on the other industries or the people of the United States, can build a merchant marine that will help to sustain and build up all our other industries instead of burdening them, and con-

tribute largely to our commercial world supremacy.

HISTORY.

Gentlemen, in our colonial days our shipping enterprise was large for that day and time. International commerce and overseas transportation were really in their crude beginnings. Our manufactures came in the main from the mother country and from Europe, and we paid for them with the products of our agriculture and fisheries. This occasioned considerable interchange between us and England and Europe. All ships were small and propelled by sail. The laws of all nations affecting interchange of commerce were dictated by shortsighted and narrow selfishness, All nations resorted to export and import duties and to burdensome restrictions and taxes each upon the shipping of the other. Even dependencies and colonies fared badly at the hands of the mother country if they became her rivals. In this hard school the shipbuilders, the fishermen, and seafaring people of New England learned that skill, industry, and perseverance conquer all things. They began to build their small ships from their magnificent forests, and to build them as good as the best or better than the best, and they began to carry their own commerce in their trade with other countries and sometimes to carry the international trade of other countries wherever they found an opening while they were yet under the wing of England. When the Revolution severed the ties that bound them to England they found yet greater obstacles thrown in their way. They were a loosely bound confederacy of independent States. They were fairly one people, but they had varying pursuits, laws, and customs. The laws governing imports and exports and shipping were different in each of the States. Now, England, France, or Spain could and did pass laws laying heavy

burdens on all ships entering their harbors and competing with their own and they could and did retaliate, each of them against the other. But when they levied burdens upon the ships of our States the States could not retaliate for this reason:

It was found that when a State—New York, for instance—levied heavy duties on foreign ships she lost her trade to Boston or Philadelphia or Baltimore where the duties were lower, so their laws not being uniform, each State became a rival of the other in seeking the foreign trade and so threw away the only club with which they could fight the discrimination practiced against their shipping by foreign countries. This was the situation when our Federal Constitution was framed. It was one of the things that helped secure its adoption. All the States desired to have one central power that could adopt a uniform shipping policy and so meet burden with burden, restriction with restriction of the foreign nations. Therefore among the first laws passed by Congress was one enacting retaliatory discriminating duties and tonnage dues. And that fact has of late years been falsely paraded to show that Jefferson not only favored the policy but the principle of discriminating duties while his writings show that he always favored the greatest freedom of the seas and only resorted to discriminating duties as a measure of retaliation. But even as early as 1802 our shipping interest started a movement to replace that law with one authorizing the President to negotiate treaties abolishing our discriminating duties as to all nations who would cease discriminating against our ships. It so happened, however, that at that time the French Revolution was in full progress disturbing all the world, and the Napoleonic wars put to sleep all questions of treaties and betterment of international relations and swept the ocean of a large part of the merchant marine of European nations so that our ships being neutrals had all they could do and our merchant marine of necessity grew, but just so soon as by the treaty of Ghent peace was restored to Europe, our shipping interests saw that they were being taxed and burdened enormously by the old discriminating duties under the old system. In 1815 all parties in Congress joined in passing an act to abolish discriminating duties against any nation that would abolish them as to us. There was hardly a dissenting vote. The debates of that year and of succeeding years all show that the prosperity of our merchant marine prior to that time was in no way attributable to the discriminating-duty system, but was rather impeded by it. From that year forward succeeding administrations negotiated treaty after treaty, some 18 in all, with leading and lesser nations of the world reciprocally abolishing discriminating duties. The system was denounced in every Congress from 1815 to 1828. It was shown to be destructive of international good relations; to be the cause of friction and irritation, and a great obstruction to free and profitably interchange of commerce, and our people believed they suffered from its operation more than any other.

Just to illustrate how they suffered, it was stated in these debates that cotton from Charleston to Liverpool had better be carried on an English ship and pay high freight charges than be carried on an American ship free of charge. England was slow to abolish her discriminating duties. Her colonial pos sions gave her an advantage. She refused to negotiate. She practiced all sorts of discriminations, especially in her colonies, against our ships. She finally absolutely closed her West Indian ports against them. President John Quincy Adams and his Secretary, Henry Clay, tried hard to effect a treaty, but failed. Finally, in 1828, Andrew Jackson, being President, sent a special messenger to the Court of St. James and succeeded in making a treaty for the abolition of discriminating duties between them and us, and from that day to this we have practically neither laid nor paid discriminating duties, and without discriminating duties or subsidies or any other governmental aid from that day on down to 1861 the old American merchant marine, although her sailors and her shipbuilders received higher wages, excelled every other in growth and prosperity. Our flags dotted every sea and our seamen were familiar with the approaches and the waters of every harbor of the world. It has been said in this debate that the period of 1840 to 1857 was really the glory of the American merchant marine. That is not exactly true. The period of our glory was from the beginning down to 1860. We built the best and fastest ships for the money and we built them for our own people and for the other peoples of the world, and it is said the American clipper could make three voyages across the ocean while the best English ship was making two. Naturally and necessarily our merchant marine prospered.

Briefly I have told the story of our triumph.

Now let me give you the story of our fall. What you want, what you must have, to compete is the cheapest and best ship

and through that the cheapest unit of transportation. We won when we had that; we lost when we ceased to have it. How and when did we cease to have such ships? The story is simple. Just before the Civil War England, who was fighting a losing fight against us in wooden ships, began to make vessels of iron. She was doubtless far ahead of us in the general manufacture of iron and steel products. Her introduction of the iron ship was the beginning of a revolution in shipping. Unfortunately we did not catch on to this new class of ships. We seemed rather disposed to scout the idea, and England had begun to get the better of us when our Civil War broke out.

During that war we failed to keep step with England's marine, and when the war ended our old vessels, or many of them, had been sold or sunk or were scattered and gone. England's merchant marine was in splendid shape. Her steel and iron ships could beat our old wooden ones both in speed and carrying capacity, and she could build new iron and steel vessels cheaper than we, because she was the greatest manufacturer in the world of the material that went into them. What then happened? Our steel industry was in its beginning, and to protect it we put a heavy duty on the importation of the steel and iron that went into ships, and when we did that we practically forbade our shipbuilders building any competing ships until such time as the American manufacturer should make and sell to him iron and steel at the price paid by the English shipbuilder. And then we continued in force the law which prohibited our merchant from buying and putting under the flag any ship not built in America, and so we foreclosed his opportunity to reenter the struggle for the carrying trade on the ocean. Our shipbuilders could not compete and our merchants could only buy ships here. When the war closed in 1865 we were still carrying in our old left overs, our wooden and sail vessels, between 30 and 40 per cent of our foreign trade. Then our merchant marine began its lingering and final decay; the old ships gradually and one by one wearing out, being abandoned or lost and no new ships being built to take their places. So that when the European war of 1914 came our merchant marine was carrying only between 8 and 10 per cent of our foreign commerce, and a great part of that small per cent was carried in a few vessels subsidized to carry our mails. This is the simple story of the facts; the story of the rise and fall of the American over-seas merchant marine.

From one cause or another very little comprehension of the causes of the early triumph or the later decay of our shipping has been shown in the columns of the press or in our national legislation, but there have been some faint glimmerings now and then, here and there. In 1904 Congress passed an act creating a merchant-marine commission, composed of five Senators and five Representatives, with the duty of investigating and report-ing at its next session what legislation, if any, was desirable for the development of the American merchant marine; and this commission visited and took testimony at all the leading cities of the country. This investigation shows that prior to the of the country. enactment of the Dingley law the handicap of high-priced iron needed by our shipbuilders was partly understood and attempted to be remedied by a clause in that law providing for the admission of shipbuilding material free. Unfortunately, that Congress was so wedded to the idea of protection both for the iron manufacturer and for our coastwise shipping that they lim-Ited the free material to vessels built for foreign ownership or vessels of domestic ownership that should not engage in our coastwise trade more than two months in the year, and so they smothered the feeble purpose to emancipate our shipping by the stronger desire to shelter two favored lines of American industry from competition; and, commenting on the effect of that legislation, the House Committee on the Merchant Marine, Report No. 4136, Fifty-eighth Congress, say:

No American shipowner under present conditions builds a deep-sea ship, even though she be designed primarily for foreign commerce, without considering that he may be glad some day to fall back on the coastwise trade. Therefore this apparently liberal privilege of free materials has not checked the decline of American ocean shipbuilding and has been availed of for the complete construction of only one large steel ship, the Dirigo, built by Arthur Sewall & Co. at Bath, Me. The Messrs, Sewall say that the peculiar status of the Dirigo is the cause of frequent anxiety to them, for if the vessel were to be more than two months on voyage from Puget Sound to Hawaii the duties would have to be paid on the foreign plates, angles, and beams of which she is constructed. American ships continue to be constructed of domestic steel, even when designed for foreign service. This fact lent large Importance to certain testimony in the hearing of June 28, 1904, at Cleveland. Mr. James C, Wallace, then vice president of the American Shipbuilding Co., said:

"Recently one of our largest steel mills sold abroad 100,000 tons of steel nets."

snipouliding Co., said:

"Recently one of our largest steel mills sold abroad 100,000 tons of steel plate. They delivered it, I understand, at Belfast, at \$24 a ton. That would practically mean, with ocean rates as they are, \$22 a ton at tidewater. They are charging us to-day at Pittsburgh \$32 a ton. A differential of \$10 in a ship carrying 5,000 tons is \$50,000."

So it is clear that the free ship material clause of the Dingley law was a fraud, though doubtless not so intended. I will add here that we have at last passed a real free ship material law, one that has no restrictions or limitations on it, and, as a result, our shipbuilders to-day pay no more for their iron and steel material than do the shipbuilders of England. Comment-ing on the testimony of Mr. Wallace and others, the Marine Commission says:

It has been conclusively shown by testimony before this commission that the materials which enter into the construction of ships are sold by our factories and laid down in foreign shipyards for a price far below that charged to our own people,

And they quote a number of shipbuilders, among them John Roach, to the effect that the high cost of iron produced by the tariff upon it is one of the principal difficulties our commerce has to contend with. Mr. Roach said:

If Congress will take off all the duties from American iron, then we are prepared to compete with foreign shipbuilders.

They then proceed to show that the clause in the Dingley Act putting ship materials on the free list was rendered futile by

the restriction put upon the use of the ship.

Gentlemen, I have quoted all this (see hearings before subcommittee of Committee on Naval Affairs, on S. 5259 and H. R. 5980, August, 1914) to show more than one thing: First, to how long we have been trying to solve our merchantmarine problem; second, to show that until now the mountain in labor has only brought forth a mouse; third, to show that putting ship materials on the free list was a fraud if the ship was excluded from our coastwise trade; fourth, by analogy show that putting foreign-built ships under our flag is likewise fraud if they are excluded from our coastwise trade; and fifth, to show that although the American iron producer could sell iron and steel as cheap as the foreign producer, he did not do so until he was compelled to do so, and by analogy to show that although the American shipbuilder, with the cheapest shipbuilding material, both iron and wood, in the world, can compete with the foreign shipbuilder, he will not do so until he is compelled. He will act like the iron producer and demand a higher price for his ship just so long as our exclusion laws give an added value to his ship by permitting it alone to engage in our coastwise trade. We finally put shipbuilding material actually and absolutely on the free list, and the result was our shipbuilders got shipbuilding material just as cheap as the English shipbuilders did, and they got it, moreover, from our own iron and steel manufacturers, and so when we finally put ships on the free list our merchantmen will get them as cheap as does the Britisher, and, moreover, will get them from our own shipbuilders. Perhaps I have not made myself perfectly clear. In the Panama act we authorized American citizens to buy ships built abroad, register them under the American law, and put the American flag over them; but the same act prohibited them from engaging in our coastwise or inland trade absolutely. In passing this law we either fooled ourselves or tried to fool somebody else. If nobody wanted a ship under our flag that could only be used in our coastwise trade two months in the year, as I have shown in connection with what we said about the Dirigo, who would want a ship under our flag that could not be used in the coastwise trade at all? I predicted when we passed the Panama act that no foreign-built ships would come to our flag under it, and none did till the present European war. We ought to have known that, since it was clearly shown by the investigation of the marine commission to which I have re-That commission in 1904 wrote a form letter addressed to the leading ship companies which was as follows:

THE MERCHANT MARINE COMMISSION,
Washington, D. C.
Dear Sirs: It is stated in the report of the Commissioner of Navigation for 1902 that you are the owners in whole or in part of several stemmships foreign built and now flying foreign colors.

The Merchant Marine Commission is charged by Congress to ascertain, if possible, the best method of increasing American tonnage in the over-seas trade. Will you kindly state for the information of the commission:

1. Whether you would it so authorized.

the commission:

1. Whether you would, if so authorized by Congress, transfer your foreign-built ships to American registry to engage exclusively in the foreign trade, but to remain without subsidy, differential duty, or any other Government encouragement?

2. Whether you would transfer your foreign-built steamships to American registry if they were admitted to all or part of any subsidy or differential duty granted by our Government, but were still confined to the foreign trade?

3. Whether you would transfer your foreign-built steamships to American registry if no subsidy or differential duty were granted, but if the ships were allowed to enter the coastwise trade on the same terms as other American vessels?

5. Whether, if your foreign-built ships were admitted to American registry, you would also wish to have the privilege of employing alien officers and be exempted from the food scale required by United States

Very truly, yours, WINTHROP L. MARVIN, Secretary, To that letter a good number of such companies made categorical answer. One of the largest companies was W. R. Grace & Co., and their answer was as follows:

NEW YORK, November 2, 1804.

The MERCHANT MARINE COMMISSION, Washington, D. C.

GENTLEMEN: We acknowledge yours of the 24th ultimo, and berewith answer questions proposed in the light of existing circumstances and conditions, which may change materially by the time legislation is

In reply to question 1, we reply in the negative.

To question 2 we reply that we would probably if entitled to full

sibsidy.
No. 3 we answer affirmatively.

No. 5. We would prefer to have the privilege of employing aliens for positions below captain and chief engineers, but would not object to compliance with United States law respecting food scale.

Yours, truly,

W. R. GRACE & Co., Per A. D. SNOW.

There were differences in the answers as to other questions, but every answer was the same as to the first question. They all answered that they would not put their foreign-built ships under our flag if they were to be excluded from our coastwise trade, but I am sure that many of them, like W. R. Grace & Co., would put them under our flag if permitted to engage in the coastwise trade. I am deeply in earnest about this matter. There never was or can be a better time for us to make a new beginning and start out on right lines. All past values in the shipping business are upset.

The market value of a ship depends solely upon how much she can carry and how fast and safely she can carry it. She can find all the cargo she can carry in almost any direction. When this war is ended there will be a general readjustment and bringing back of order out of chaos. New lines and new trade will be established. Every ocean will be a battlefield commercially and every port of the world will be a fortress to be taken. What place and rank among the nations will we take in the struggle? We can take first place by pursuing the right policy. We can take last place, and we will take it, if we yield to the importunities and greed of the shipbuilding and present coastwise shipowning interests in boosting the price of Americanbuilt ships by giving them alone the right to engage in our coasting trade. We can do that, and so withdraw our flag from the over-seas trade, or we can say to our commerce, "You are free. The chains of a half century are stricken from your limbs; go forward, enter the battle for commercial supremacy." It is going to be war. The warfare of peace. The war that strengthens and heals nations; but to the strong, the swift, the efficient will come the victory, and the victory will bring a thousand blessings to the victor. I hope we will not enter the conflict provided with any but the best weapons. The very best of all weapons in this warfare is going to be the cheapest ships and cheapest unit of transportation. I repeat, because I want you to see it and because it is true and clear, that if you give any class of ships the exclusive privilege of engaging in our coastwise trade, the greatest coastwise trade in the world, that privilege is going to give that class of ships a higher price than ships of equal intrinsic value. If in fact you put two twin ships on the market, one having and the other not having that privilege, the one will easily sell for 10, 20, or perhaps 50 per cent more than the other, and therefore you must see that if that privilege is given only to American-built ships, American-built ships will continue to be the highest-priced ships in the world, and our merchant marine will continue to be hampered by its inability to compete on account of its high-priced ships; and if we enter this great commercial warfare with our law standing as it now stands, excluding all foreign-built vessels from our coastwise trade, we are beaten before the battle is joined, and we may as well prepare to fall back to the shameful place we had in August, 1914. I want us to repeal that antiquated law, and permit every ship that flies our flag, owned by our citizens, to carry our commerce anywhere, everywhere. If we do that, I will show you a different picture. Every ship needed will seek our flag, and every ship that flies it once will keep it till driven out by better ships or lack of cargo in both our domestic and foreign trade, because it will have the great advantage of being permitted to carry both.

Our shipyards, like our iron and steel plants, will enlarge their capacities and they will build new type standardized ships, equipped with modern appliances and machinery, with oil-burning Diesel engines, with labor-saving and space-saving devices, and they will build ships for us and the world, just as we did prior to 1860. Discussing the subject of our shipbuilding before our committee, Secretary Redfield furnished a letter from

E. Platt Stratton, supervisor of the American bureau of shipping, from which I quote:

ping, from which I quote:

Signs multiply of a disposition in the United States so to standardize the construction of cargo types of steamships as greatly to reduce their cost. This tendency is to be encouraged in every way possible, since its successful development will go a long way toward making the United States entirely independent of other countries in the construction of the ships in its foreign carrying.

The motive power for such standardized vessels for fixed rates of speed can be reliably furnished as specialities of manufacture in duplication in the same manner in which standard types of pumps, turbines, and internal-combustion engines are now manufactured and supplied by such establishments as the General Electric Co.

STREE, MILES AS INITIAL SHIPBILLDING PLANTS.

STEEL MILLS AS INITIAL SHIPBUILDING PLANTS.

Our country's great steel works now possess the facilities in capacity, if not in detail, for furnishing the finest shipbuilding material at as low prices as that of any other country.

The perfection of the various details in ship construction herein referred to in outline will doubtless quickly bring the United States to the front as the first shipbuilding nation of the earth in the production of standard cargo carriers unequaled by any other nation possessed of like commercial facilities, to which our unlimited quantities of cheap materials will greatly contribute. With cargo carriers thus under such good headway our shippards will gradually become expert in the construction of all the types of merchapt ships that go to make up a general marine. The opportunity and all of the accessories necessary for success are now ours.

He then submitted minute description of the type of vessel which can be built wholesale in our steel plants and shipyards, and full memoranda showing its elements of saving over ordinary existing ships, by reduction of wage cost from smaller num-ber of men required, by less cost of fuel for operation, and I give his third item in full:

his third item in full:

Gain in freight-carrying capacity, owing to less space occupied by the propelling machinery and less space necessary for storing fuel, which, it has been demanstrated, can be carried in a ship's double bottom—a space in steam-propelled vessels heretofore utilized only for water ballast. The increased capacity incident to Diesel-engined ships is variously estimated by writers on the subject as from 5 to 10 per cent on the dead-weight cargo rating. To be well within conservative limits, the assumption is made in the typical ship that her dead-weight capacity is increased from 7.880 to 8.280 tons (400 tons), a trifle over 5 per cent. Prior to the existing war the freight rates between Chile and the United States, on the average of all bulk commodities, is shown by the Consular Reports to have been approximately \$12 per ton. At the present time they have increased about \$0 per cent over that figure, and in the case of nitrates, the principal article of export, the increase has been 100 per cent. Again, taking a conservative estimate, we will assume an average freight rate of but \$8 per ton, weight or measurement. In a 400-ton increase in capacity this will amount to \$3.200 per one-way voyage, or \$32.000 per annum for five round trips, in favor of the typical ship having Diesel engines.

If any man will study the facts given in the majority report

If any man will study the facts given in the majority report filed with the shipping bill at this session he can not doubt that our steel plants and shipyards acting in concert can build the best and cheapest cargo carriers in the world; and no man doubts they will do it if they must. And when they have done that, our shipmasters and seamen will do the rest. Our flag will again float everywhere in triumph as it did up to 1861

There is one other question I ought not to pass over in silence. It has been contended for years by subsidists that our ships can not compete with foreign ships without a subsidy, because we pay so much higher wages than the foreigner pays; and they say we pay higher wages because this is a higher-wage country and our citizens demand a higher scale of living. Under the old law there may have been some truth in this claim, because a foreign ship, employing its crew in its home port, signed them up for a round-trip voyage to any port of the United States and back again. The crew was, of course, employed at the rate of wages prevailing in its home port. When the ship entered the American port, however low its wages, the crew could not leave the ship, because under the law and treaties as they were if they did so the shipmaster, through his consul, applied to our courts and officers, secured a writ for their arrest, and had them taken as criminals and placed back on board the ship. This was the last relic of a barbarous age, the last surviving example of imprisonment for the violation of a civil contract, and the sole remaining example of involuntary servitude or slavery existing among civilized nations. This barbarous law was repealed by the seamen's act, approved by the President March Under that act no seaman can be arrested for desertion in the United States. The result is that seamen of all nationalities on all ships under all flags are now free when their vessels enter the harbors of the United States. They can not be compelled to continue in the service of masters who pay pauper Now, it was clearly shown to our committee that the contract price or wage for seamen is always determined, not by the flag of the ship but by the scale of wage of the port at which he takes service. Therefore if an English or German ship finds it necessary to engage a seaman in New York, it is compelled to pay the same wage an American ship pays, and if an American ship hires a seaman in Liverpool or Bremen he will pay the same wage the English or German ship pays in those ports. I have contended and believe that it is impossible to

work two free men side by side in the same line of business, they being equally skilled, without paying them substantially equal wages. If there were any law requiring that seamen on American vessels should be American citizens, it would be different; but there is no such law. The world market is open to the shipmaster to employ his seamen wherever he can get them, and our law, the seamen's act, puts the American shipmaster on an equal footing with every other shipmaster entering our ports in the

matter of securing and retaining his crew.

Practical operation of that law has scarcely begun, and yet its tendency to equalize wages is strongly shown by the report of Mr. Andrew Furuseth recently handed me. That report shows that the majority of American vessels at the port of Boston pay sailors \$45 per month; firemen, \$50 per month, 40 cents per hour overtime, and if they go into war zone 25 per cent additional. He visited English and Norwegian consulates there and found their vessels paying \$45 for sailors and \$45 to \$50 to firemen. In New York he found the same wages paid by the Morgan, the Grace, the United Fruit Co. lines under our flag, and the Lamport & Holt, the Prince, the Booth, and the Union Castle lines, which are under foreign flags. At Philadelphia he found nearly all American vessels paying sallors \$45, and firemen \$50 and 40 cents per hour overtime. He states that the Clyde Line and Merchants & Miners' Line pay what they have to, sometimes \$40, some times \$45 per month. He goes at length into the wage matter, and I can not, of course, include his report in full, but I think it demonstrates that vessels engaged in trade to our ports have come or are coming to a level wage scale. Of course there is going to be an effort on the part of owners to secure cheap labor and every possible device will be resorted to to that end, but the foreign shipowner will be no more determined to secure cheap labor than the American shipowner nor will he have any greater opportunity or power than the American shipowner. I believe it will be found under the new order of things and in this new struggle that is coming for commercial supremacy that that ship company, whether American or foreign, will succeed best which uses the best ship, cost and transportation capacity considered, and employs the best skilled and character of seamen at fair and reasonable compensation; that such a ship so manned will turn out the cheapest unit of transportation and prove its ability to live under the law of "survival of the fittest."

Mr. Chairman, I have said little definitely about the administration's ship-purchase and shipping-board bill which we are now considering. We have come to a period similar to two other periods in our history. In respect to the disturbed and chaotic condition of the shipping of the world this period is much like the period of the Napoleonic wars, and the advantage offered to our shipping now from that 'ause are very much the same as those we enjoyed then. Then we used them splendidly and when that war was ended we continued to increase the prosperity of our merchant marine. The other period to which I direct attention is the period from 1855 to 1865. During that period a revolution in shipping began by the introduction of the iron and steel ship, and by reason of our being engaged in war and of our resorting to restrictive measures instead of freeing our merchant marine that resolution resulted in our being driven

from the seas as international carriers.

Now, another shipping revolution is at hand. The new type of vessel, the internal-combustion engine, a whole catalogue of modern devices in machinery and equipment for handling and loading and unloading vessels, presents a greater advantage for the new construction over the old than did the iron and steel ship have over the wooden vessel in 1855. We are free to adopt all that is new and economical and most efficient. We have no old ships and old machinery to be discarded, and therefore nothing to prevent us from adopting the best of everything in shipping. If private capital were not timid but were willing to go into the enterprise, there would be no need for the Government coming to the front, but private enterprise does fear. They have seen our flag droop so long they are lacking in confidence, and they know our law still continues the shipbuilding monopoly. They will not venture, and so the Government must not only point the way but lead the way. When the Government builds or buys its \$50,000,000 worth of ships of the kind I have been speaking of, it will, to a large extent, meet a great demand for transportation which no private enterprise seems to be ready to meet. But that is not all. Private owners to-day, taking advantage of the hard necessities of our people, are charging such enormous rates as almost stagger our common sense of Under the bill in question the Government may not only by the operation of its own vessels stabilize rates, but it may regulate them fairly and justly through its shipping board. And that is not all. When the Government has invested this \$50,000,000 in these new ships, in my judgment, whether they are

operated by private corporations under the direction of the board or by a corporation the stock of which is owned by the Government, their operation will prove such a magnificent and triumphant success that private capital will be given the confidence it now seems to lack and American shipping take new life. In my judgment, when the board has built these vessels, private corporations will fall over each other to secure them by lease or purchase from the board under the terms of the bill. In a way these vessels furnished by the board will greatly aid corporations and private capital which secures them by practically furnishing the capital required to construct the vessels at a lower rate of interest than could be obtained elsewhere. When the original \$50,000,000 has been invested and the original vessels have been sold or leased, the proceeds may be again invested, and will be so invested by the board in the buying or building of other vessels. It will thus be a revolving fund bringing forth ship after ship, helpful always to private enterprose and beyond all question constitute the greatest of all factors in the building up of a merchant marine that will carry our commerce under our flag to the four quarters of the earth. That will open up new trades, help our merchants and manufacturers in establishing markets for their wares in all the lands from which we have heretofore been so nearly excluded, and at the same time under the regulatory provisions of this bill the shipping board will break down the combinations and monopolies that have of late years absorbed all the shipping lines of the world.

If they do not fully break up those combinations they will at least, to a large extent, destroy the evil practices and the oppressive practices that have recently held commerce and in-dustry in the grasp of the shipping combine. In these respects the bill speaks for itself without my going over it and pointing out its details. After long investigation, our committee unanimously concluded that just and fair regulation was absolutely essential to prevent the oppressions and malpractices of unre-strained combination or monopoly. Time and the exercise of strained combination or monopoly. Time and the exercise of the powers granted the board will vindicate the wisdom of the committee and of the Congress in proposing and passing this law. To illustrate the necessity of such a law I will only quote one letter, though I might quote hundreds of similar tenor. The letter follows:

DECEMBER 8, 1915.

The letter follows:

Hon. WILLIAM G. McAddo,

Secretary of the Treasury, Washington, D. C.

Sir: * * We are desirous that you become thoroughly cognizant of the serious injury which the steamship monopoly plying out of here is causing our commerce and the export of the United States proper, the last exemplification being an arbitrary increase of 150 per cent on Porto Rico sugar destined to the United States.

In addition to this the steamship companies, and more particularly the New York & Porto Rico Steamship Co., have announced publicly that beginning with January 3, 1916, they purpose making changes in other freigats between the United States and Porto Rico. They do not specify the tendency of such changes, but we have received information from private but reliable sources that the same will consist of an increase of 25 to 30 per cent over the already high rates charged.

The most adverse feature from the viewpoint of our trade interests is the fact that having developed a plan—the outgrowth of one year's study and labor—to start our own steamship line at this time, the combine has threatened to wage a relentless and ruinous rate war if we venture to carry our plan into execution.

This is why we feel emboldened to crave the protection of the United States Government, so that our interests may not be left open to the attacks of the steamship monopoly, which, actuated by inordinate greed, seeks to sweep aside all attempts to establish reasonable freights, and why we respectfully petition that a recommendation be made to the Congress to enact legislation regulating the freight rates between Porto Rico and the United States under the supervision of the national Executive.

Such an act of Congress would be the greatest boon that could be

Executive.

Such an act of Congress would be the greatest boon that could be conferred upon the trade element and people of Porto Rico, and the chamber of commerce therefore prays that you will interpose your valuable influence to such end.

We ask you, Mr. McAdoo, kindly to pardon our insistence, but you will admit that in order to procure justice it must be sought through the proper channel.

Respectfully,

ISBALL,

CHAMBER OF COMMERCE OF PORTO RICO.

CHAMBER OF COMMERCE OF PORTO RICO, By B. ZALDUONDO, President.

I ought not to omit a paragraph in the bill which requires the shipping board to investigate certain things, among them the cost of shipbuilding here and abroad. Let us hope and believe that they will find that our shipbuilders are fully able to build the cheapest and best ships in the world, and that in the interest of our commerce and our merchant marine they shall advise us to remove all restrictions from our shipping and allow our mer-chantmen, like those of other nations, to buy their ships where

they may buy them cheapest.

And I must not omit the fact that under this bill a great naval auxiliary will be provided. Our Navy to-day is like an army without provision for food supplies. It is said that an army without provision for good supplies, it is said that an army without provision for food supplies. travels on its stomach. So a navy travels on its auxiliaries. We are to-day without them, and this bill will provide them.

This bill is, in truth, of greater value as a preparedness measure in case of war than the bill now ready to be submitted by the Naval Affairs Committee.

In conclusion, Mr. Chairman, our merchants, our manufacturers, our miners, our farmers have all been interested and are all anxious and praying that something be done to reestablish our merchant marine. The Republican Party has boasted that it was the party of constructive statesmanship. They have scornfully denounced the Democratic Party as incompetent, as in-capable of any constructive legislation. We are showing to our people that the Republican boast and denunciation are both false. For 50 years they had with them the problems of a defective banking and currency law, and they utterly failed to solve them. For a long time they have had the question of rural credits. They have done nothing to solve it. They have done nothing, in fact, for the last 20 years save to dwell on and boast of their deeds of the past and fail to meet the issues of the present. They have had the problems of our dead or dying merchant marine on hand during all the years they were in power after the great War of the Sixties, and they have done nothing to solve those problems. They have stood helplessly and idly by while our flag faded from the Atlantic and the Pacific Oceans. We have passed a banking and currency act which, if it stood alone, would justify our four years' administration. We have passed a tariff act only less remarkable because it applied to a subject more generally and intelligently appreciated. We have passed numbers of other laws of wide and wholesome application. We have passed an act to establish a rural-credit system. have taken a definite stand on the question of ultimate Philippine independence. And now, last but not least, we are passing this shipping bill, which will be one of the great monuments that will stand out to mark the first administration of Woodrow Wilson as one of the greatest, if not the greatest, since the administration of George Washington in the history of the Government of the United States.

Rural Credits.

EXTENSION OF REMARKS

HON. SAMUEL J. TRIBBLE.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Mr. TRIBBLE. Mr. Speaker, this rural-credit bill appropriates the sum of \$9,000,000 for the purpose of loaning money to the farmers. This amount is intended to finance the ruralcredit banking system provided in the bill and assure the success of the institution. The many millions of dollars necessary to supply the demand for farm loans will flow into the treasury of the rural-credit banks from the sale of bonds issued on the security of the farmers who deposit their land mortgages with the rural-credit banks.

METHOD OF RURAL-CREDIT BANKS.

1. The rural-credits board located in Washington, composed of three members, has complete control and supervision of the rural-credits banks.

2. The United States is divided into 12 districts. The 12 banks, located centrally in these districts, are known as Federal land banks. The minimum capital stock of the Federal land banks is \$750,000. The stock in the Federal land bank is placed on the market for sale. If not purchased in 90 days, the Government purchases the stock sufficient to finance the institution. The Government will not share in the profits. The stockholders of the Federal land banks share in the profits.

3. Local organizations are authorized and chartered. These local organizations are known as national farm-loan associa-The national farm-loan association is composed exclusively of borrowers. No person not a borrower can become a member of the farm-loan association. Ten farmers desiring to borrow can organize this association. The membership is un-limited, but must contain not less than 10. The local associa-tion shall elect five directors. The association shall also elect a president, vice president, loan committee of three, and a secretary-treasurer. No officer of the local association shall receive a salary except the secretary-treasurer.

HOW LOANS ARE SECURED.

Loans are secured by organizing a national farm-loan association composed of 10 or more farmers desiring to secure loans. The minimum loan is \$100 and maximum is \$10,000. borrower is required to make application for loan accompanied with subscription for stock in the local association. For this stock he pays \$5 per share. One share authorizes loan of \$100. If a borrower desires a loan of \$1,000 he must purchase 10 shares, or \$50 worth of stock. This purchase of stock is not a cash transaction unless borrowers so desire, but is added to the loan and paid with other deferred payments. The application, subscription of stock, and description of land is forwarded to the Federal land bank. The Federal land bank orders an examination of title and appraisement of the land. If the appraisement is satisfactory and the title good, the loan is made and the money sent to the secretary-treasurer of the local association to be paid to borrower.

AMOUNT, INTEREST, RATE, AND TERMS.

The borrower may secure 60 per cent of the value of the land and 20 per cent of the value of improvement on the land, making a total of 80 per cent. The amount of interest charged depends on the sale of the bonds. In no case can the interest exceed 6 per cent, and it is expected that the rate will be less. The deferred payments may be from 5 to 36 years, as desired by borrower.

REPAYMENT (AMORTIZATION) PLAN.

The principal and interest is paid annually. These annual payments contain both principal and interest, called amortization payments. Under the present system of loaning money the interest only is collected on deferred payments. For instance, should a loan be made for \$1,000 at 6 per cent for the term of 20 years, at the end of 20 years \$1,200 will have been paid in annual payments as interest and the \$1,000 principal remains unpaid. If the interest rate charged should be 8 per cent on \$1,000, for 20 years the annual interest payments would amount to \$1,600, and the principal of \$1,000 would still be unpaid at the end of 20 years. The amortization plan provided in the bill will be easily understood by the following table, showing loan on \$1,000 for 20 years at 5 per cent:

Annual periods.	Total annual payment.	Interest at 5 per -cent.	Paid on principal.	Amount of prin- cipal still unpaid.
1	\$80.24	\$50.00	\$30.24	\$969.76
2	80.24	48, 48	31.75	938.00
8	80. 24	46.90	33.34	904.67
4	80.24	45.23	35.01	869.66
5	80.24	43.48	36.76	832.90
6	80.24	41.64	38.59	794.31
7	80.24	39.71	40.52	753.79
8	80.24	37.68	42.55	711.23
9	80.24	35.56	44.68	666.56
10	80.24	33.32	46.91	619.64
11	80.24	30.98	49.26	570.39
12	80.24	28.51	51.72	518. 67
13	80.24	25.93	54.31	464.36
14	80. 24	23. 21	57.02	407.34
15	80.24	- 20.36	59.87	347.46
16	80.24	17.37	62.87	284.60
17	80.24	14.23	66.01	218.59
18	80. 24	10.93	69.31	149.28
19	80. 24	7.46	72.78	76.50
20	80.24	3.82	76.50	
Total	1,604.80	604.80	1,000.00	

It will be seen by this calculation on the amortization plan that \$1,604.80 will pay both principal and interest.

LIABILITY OF THE BORROWER.

The farmer is interested in knowing his personal responsibility before becoming a stockholder in the national farm-loan association. The borrower is liable for 10 per cent of the amount of his loan. In other words, he is liable for double the amount of his stock. If he borrows \$1,000, he owns 5 shares. The shares represent \$50. His liability can not exceed double that amount, or \$100, on \$1,000. The stock owned by the borrower is filed with the association, and when the debt is discharged the value of the stock and accumulated dividends must be paid the borrower.

HOW MONEY IS SECURED FROM BONDS.

When loans are made bonds are sold in the market to the highest bidder. The borrower does not get the same rate for which the bonds are sold; 1 per cent is retained by the Federal land banks to be used in paying expenses first and then dividends on outstanding stock. As business increases and bond sales are

very large the stock of investors in the farm-land banks are retired, and it is represented that the investors' stock will be retired in a few years. When the investors' stock is eliminated, then the borrowers' stock will draw the dividends and there will be no investors' stock participating in the dividends, and the borrowers' stock becomes valuable as an investment.

If bonds sell for 4 per cent, the borrower's loan will be for 5 per cent. If the bonds sell for 4½ per cent, the interest of loan will be 5½ per cent, and so on. No interest charged the borrower can exceed 6 per cent, and may be much less, according to the price of the bonds sold. Funds are secured by the sale of bonds to loan the farmers. The farm mortgages of individuals desiring loans are assembled into collective security, and upon this collective security farm bonds are issued and sold. The bonds are sound and safe, and should sell as well as Government bonds.

GOVERNMENT AID.

The Government appropriates \$9,000,000 to assure the organization of the rural-credit system. This may be used before funds are obtained by the sale of bonds. The board is also authorized to call on the Secretary of the Treasury for Government deposits in case the Federal land banks need assistance.

Furthermore, the Government pays the salaries of officers of the Federal land banks and the expenses of such banks, and exempts all stock and bonds of the rural-credit banks from taxation.

PURPOSES OF LOANS.

Loans may be made to purchase land, equipment, live stock, general farm improvement, and pay off indebtedness on farm. If the borrower uses the money for other purposes, a penalty is imposed and the loan becomes due. No person not engaged in farming or in good faith intending to become an actual farmer can secure a loan or become a member of the farm-loan association.

The foregoing contains a brief synopsis of the rural credit bill, to which the Government contributes financial aid in money.

JOINT-STOCK LAND BANKS.

The bill also authorizes the organization of joint-stock companies for the purpose of making loans on farms. The Government contributes no money to the joint-stock company and purchases no stock of same. Joint-stock land banks are organized and financed by persons seeking the stock of the bank as an investment. The capital stock must be at least \$250,000 paid-in cash before a charter is granted. The joint-stock bank is authorized to issue bonds on land mortgage in the same manner as the Federal land banks. The interest rate charged by the joint-stock company shall not exceed 6 per cent. The interest charged shall not exceed 1 per cent over the amount of interest for which the bonds were sold. If the bonds sell for 4 per cent, the interest charged shall be 5 per cent, and so on.

CAPITAL STOCK IS TAXABLE.

The joint-stock land banks are relieved of tax in the same manner the Federal land banks are relieved, except the capital stock of the joint-stock land banks may be taxed. They operate on the same priciple. The material difference consists in the fact that Federal land banks are operated by the Government. and the borrowing farmer gets the profits, while in the jointstock company the borrower does not share in the profits, and all dividends are paid to the shareholders who invested their money in the joint-stock company. No stock is issued to the borrower in the joint-stock company. The borrower has no liability for losses in the joint-stock company. Instead of giving the borrower the same interest for which bonds are sold, 1 per cent more is charged the borrower. After paying the expenses this 1 per cent belongs to the borrower under the Federal penses this 1 per cent belongs to the bollows. Indeed, the land-banking system, while in the joint-stock company the 1 per land-banking system, while in the joint-stock company the 1 per land-banking system. cent is applied to investors' stock after paying expenses. borrower owns the Federal land banks. He is not only interested in repaying his loan but he is interested in the proper management of the Federal land banks and his local organization because of the value of his stock. The borrower is not interested in the dividends of the joint-stock land banks and assumes no responsibility for losses,

FARM BONDS.

The Federal land banks are granted the privilege of selling farm-loan bonds to the amount equal to twenty times their capital. The joint-stock land banks are granted the same privilege to the amount equal to fifteen times their capital and surplus. Address Delivered by Hon. Robert Lansing Before the Jefferson County Bar Association at Watertown, N. Y., June 3, 1916.

EXTENSION OF REMARKS

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 12, 1916.

Mr. CULLOP. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include an address delivered by Hon. Robert Lansing before the Jefferson County Bar Association at Watertown, N. Y., June 3, 1916.

The address is as follows:

ADDRESS DELIVERED BY HON. ROBERT LANSING REFORE THE JEFFERSON COUNTY BAR ASSOCIATION AT WATERTOWN, N. Y., JUNE 3, 1916.

Gentlemen, it is my privilege to-night, here in my home city and before so large a gathering of distinguished members of the bench and bar of northern New York, to speak to you very briefly concerning the foreign affairs of this country. I know the deep interest which you all take in the subject, and I am glad of the opportunity to remove some of the misapprehensions which seem to exist and to present certain thoughts as to the difficulties in the international situation which I believe worthy of your careful consideration.

The great war has caused so many conditions which are entirely new and presented so many questions which were never before raised or even thought of that it has been no easy task to meet and answer them. The relations between neutrals and belligerents were never more difficult of adjustment. It was never harder to preserve neutral rights from invasion by the desperate opponents in the titanic conflict in which the power, if not the life, of the great empires of the earth is at stake, The peoples and governments at war are blinded by passion; their opinions are unavoidably biased; their conduct is frequently influenced by hysterical impulses, which approach to madness. Patience and forbearance are essential to a neutral government in dealing with such hations. Acts which under normal conditions would be most offensive must be considered calmly and without temper. It is an extraordinary situation and requires extraordinary treatment, with a due regard for the mental state of those who are straining every nerve to defeat their enemies, and to that end using every possible means to weaken them in their industrial as well as their military power.

In a nutshell the situation of our relations with Great Britain and Germany, the two powers with which we have had our prin-

cipal controversies, is this:

Germany, having developed the submarine as an effective engine of destruction, asserts that she can not, on account of the resulting conditions, conform to the established rules of naval warfare, and we should not, therefore, insist on strict compliance. Great Britain has no sympathy with the German point of view and demands that the submarines observe the rules of visit and search without exception.

On the other hand, Great Britain declares that on account of the new conditions resulting from submarine activity and the use of mines and from the geographical position of Germany, she can not conform to the established rules of blockade and contraband, and we should not, therefore, here to strict com-

pliance with those rules. Germany insists, nevertheless, that Great Britain be made to follow the existing law.

Both Governments have adopted the same arguments, based primarily on military necessity, and offer the same excuses for their illegal acts, but neither will admit that the other is in any way justified for its conduct. Now, what is the United States to do in these circumstances? If we admit the arguments advanced are sound—and I am sure no one will deny that they are more or less reasonable—and submit to changes in the rules of naval warfare, we will be without any standard of neutral rights. Conceding that the rules can be modified by a belligerent to meet new conditions, how far can a belligerent go in changing the rules? Would not the liberties of neutrals on the high seas be at the mercy of every belligerent? As it is, under the old rules neutrals suffer enough when a state of war exists. They should not be further restricted in the exercise of their rights.

The only alternative, therefore, is for this Government to hold firmly to those neutral rights which international law has clearly defined and to insist vigorously on their observance by all belligerents. In not the slightest degree can the settled rules be

modified unless all the parties interested consent to the modifications.

If Germany finds it difficult or impossible to conform submarine warfare to the international naval code, that is her misfortune; or, if Great Britain finds it equally difficult to obey the rules of blockade and contraband, that is her misfortune. They certainly can not expect neutral nations to submit without resistance to further invasions of their rights.

This has been the position of the United States from the beginning of the war. It has twice sought to obtain mutual consent from the belligerents to certain changes in the rules, but in both cases it failed and the suggestions were withdrawn.

It is true that the rights violated by the belligerents may differ in importance and therefore require different treatment. Thus the violation of the natural right of life is a much more serious offense against an individual and against his nation than the violation of the legal right of property. There is not and can not be adequate recompense for the wrongful destruction of life, but property losses may be satisfied by the payment of indemnities. If one belligerent violates the right of life and another belligerent violates the right of property, can you doubt for a moment which one gives this Government the greatest concern, or which one will call forth the more vigorous protest and the more earnest effort to prevent repetitions of the offense?

A government which places life and property on an equality would be generally condemned, and justly condemned. This seems to me an axiom, and yet, I regret to say, there are some Americans who do not recognize this difference. How many take this view it is impossible to say, but the number is not insignificant, judging by the letters and telegrams received in Washington. Indeed, it is held by some who sit in the Halls of Congress. These people openly complain that the Government does not exert as much pressure to protect American property as it does to protect American lives—property, which can be restored to the owners or an indemnity paid; lives, which can never be restored or adequately indemnified.

This mental attitude makes one wonder if the sensibilities of the American people have become so blunted by materialism that they think as much of the loss of their property as they do of the loss of the lives of their fellow countrymen. Such an idea is repugnant to a liberty-loving American; it is utterly wanting in the nobler impulses of a great people; it is hostile to the spirit of true Americanism. Yet it exists and is widespread and must

be reckoned with.

With the knowledge that a number of citizens prefer to have their material interests protected even to the extent of not insisting on our rights, the conduct of our foreign relations is made the more difficult. How extensive this influence is no one can say with certainty. That it exists at all is bad enough, for it shows that we do not all think true; that the great heart of the Republic is threatened with fatty degeneracy through those who have lost their patriotic vigor; that many Americans have become lovers of ease rather than lovers of national honor.

This attitude of mind of a portion of our people, as I sald, increases the difficulties of diplomacy. It is almost impossible to present a strong and unbending front in a controversy unless a united and determined nation is behind you, for the knowledge that our people are not a unit in supporting a vigorous policy encourages a foreign Government to resist our protests, feeling sure that we must withdraw or modify them. It is not a pleasant position. I firmly believe that the American people, awakening to the situation, will one of these days crush out this influence and become as they should be and really are at heart a great united Nation, jealous of their rights and eager to defend their honor regardless of personal sacrifice. Americanism, with ali that that term implies of patriotism, loyalty, and zeal, must be from this time forth the great standing policy of this Republic.

I wish that it was proper for me to tell you of other matters which frequently have to be considered in dealing with diplomatic questions. International politics are to a very large extent beneath the surface and do not apparently influence this Government's diplomatic action. Nevertheless, they do affect such action in many ways and more strongly than is supposed. Of course it would be unwise to disclose this knowledge or to give in every case the reason why a certain policy is adopted. Possibly the apparent reason does not seem a good one, and the Government is criticized for its action. As it can not give the real reason, it must bear criticism without murmuring, in the hope that the future will justify its policy.

When you disapprove of some course of action taken by this Government, be lenient in your judgment, for very often the action is the result of conditions which can not be made public and which may never be made public. It is always my wish,

and I know that it is the wish of the President, to take the people into our confidence, to tell them frankly what the situation is, but you must realize that it can not be done in every They must try to be patient and to trust the Government to do the very best it can in upholding the national honor and

I would like to go more into detail regarding foreign affairs. I would like to say something about the Mexican situation, about the submarine controversy, about the censorship of mails, about the British orders in council, about Pan Americanism and the proposed Pan American treaty. But each of these subjects would require all of the time which I have used, and even more, to give a full review; and only a full review would be worth while. I would like to do so here if anywhere, because it would be a satisfaction to have you know many things which have never been published, but which are very essential to a correct understanding of the questions and the difficulties which they

Let me add just a word. When the foreign policies of the Government are criticized by honest critics—I mean by "honest" Government are criticized by honest critics—I mean by "honest" critics those who are not influenced solely by political considerations or personal ambitions—I often wonder what the critics would do if they had the responsibility. Would they be so bellicose? Would they make demands when it was questionable whether they could compel compliance? Would they count the full cost of their action? I wonder whether they would be radical or conservative? Responsibility makes a world of difference in a man's point of view. When a few words may plunge this country into war, the man who has the power to utter those words will think a long, long time before he exercises that nower words will think a long, long time before he exercises that power. He will submit to a deal of criticism and endure abuse and ridi-cule rather than see the young men of America sent forth to die on the battle field. Only the supreme necessity of maintaining the honor of the United States or of defending its independence and the liberties of its people will induce him to speak the fateful words which may bring death to thousands of his fellow countrymen and change the destiny of the Republic.

Those who are prone to blame the Government because it does not demand and threaten ought to consider very seriously what would mean to the Nation if their wishes were carried out. If they were responsible for the consequences, would they give the counsel which as private citizens they are so ready to give?

I know that you, my friends and associates, all patriotic and thoughtful Americans, sympathize with me in the responsibilities which to-day rest upon me as Secretary of State. What-ever may happen in the uncertainties of the future, I know that I can come back here assured of your friendly judgment and of a just estimate of the motives which have inspired my acts. Your friendship and your confidence I prize most highly. I hope that I may always merit them. .

The Income Tax Constitutional Amendment.

EXTENSION OF REMARKS

HON. PAT HARRISON. OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES, Monday, June 12, 1916.

Mr. HARRISON. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include the message that Justice Hughes sent to the Legislature of the State of New York in January, 1910, asking the State of New York not to ratify the income tax constitutional amendment.

The message is as follows:

SPECIAL MESSAGE FROM THE GOVERNOR SUBMITTING TO THE LEGISLATURE CERTIFIED COPY OF A RESOLUTION OF CONGRESS ENTITLED "JOINT RESOLUTION PROPOSING AN AMENDMENT TO THE CONSTITUTION OF THE UNITED STATES."

STATE OF NEW YORK, EXECUTIVE CHAMBER, Albany, January 5, 1910.

To the Legislature:

I have received from the Secretary of State of the United States a certified copy of a resolution of Congress entitled "Joint resolution proposing an amendment to the Constitution of the United States," and in accordance with his request I submit it to your honorable body for such action as may be had thereon.

The amendment proposed by this joint resolution, adopted by two-thirds of both Houses of Congress, is as follows:

ART. XVI. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States and without regard to any census or enumeration.

The power to lay a tax upon incomes, without apportionment, was long supposed to be possessed by the Federal Gov-ernment and has been repeatedly exercised. Such taxes were laid and paid for the purpose of meeting the exigencies caused by the Civil War.

In 1895, in the case of Pollock v. Farmers' Loan & Trust Co. (158 U. S., 601), the United States Supreme Court decided that taxes on the rents or income of real estate and taxes on personal property or on the income of personal property are direct taxes, and hence under the Constitution can not be imposed without apportionment among the several States according to their respective populations.

It was not the function of the court and it did not attempt to decide whether or not a Federal income tax was desirable. It simply interpreted the Constitution according to the judgment of the majority of its members and left the question of the advisability of conferring such a power upon the Federal Government to be determined in the constitutional method.

The limitations so placed upon the Federal taxing power are thus described by Mr. Justice Harlan in his dissenting opinion:

thus described by Mr. Justice Harlan in his dissenting opinion:

Any attempt upon the part of Congress to apportion among the States, upon the basis simply of their population, taxation of personal property or of incomes would tend to arouse such indignation among the freemen of America that it would never be repeated. When, therefore, this court adjudges, as it does now adjudge, that Congress can not impose a duty or tax upon personal property, or upon income arising either from rents of real estate or from personal property, including invested personal property, bonds, stocks, and investments of all kinds, except by apportioning the sum to be so raised among the States according to population, it practically decides that, without an amendment of the Constitution—two-thirds of both Houses of Congress and three-fourths of the States concurring—such property and incomes can never be made to contribute to the support of the National Government. (Id., pp. 671, 672.) * *

Incomes arising from trades, employments, callings, and professions can be taxed, under the rule of uniformity or equality, by both the National Government and the respective State governments, while incomes from property, bonds, stocks, and investments can not, under the present decision, be taxed by the National Government, except under the impracticable rule of apportionment among the States according to population. No sound reason for such a discrimination has been or can be suggested. (Id., p. 680.)

I am in favor of conferring upon the Federal Government the power to lay and collect an income tax without apportionment among the States according to population. I believe that this power should be held by the Federal Government, so as properly to equip it with the means of meeting national exigencies.

But the power to tax incomes should not be granted in such terms as to subject to Federal taxation the incomes derived from bonds issued by the State itself or those issued by municipal governments organized under the State's authority. 'To place the borrowing capacity of the State and of its governmental agencies at the mercy of the Federal taxing power would be an impairment of the essential rights of the State which, as its officers, we are bound to defend.

You are called upon to deal with a specific proposal to amend the Constitution, and your action must necessarily be determined not by a general consideration of the propriety of a just Federal income tax or of giving to the Federal Government the power to lay such a tax, but whether or not the particular proposal is of such a character as to warrant your assent.

This proposal is that the Federal Government shall have the power to lay and collect taxes on incomes "from whatever source derived."

It is to be borne in mind that this is not a mere statute, to be construed in the light of constitutional restrictions, express or implied, but a proposed amendment to the Constitution itself, which, if ratified, will be in effect a grant to the Federal Government of the power which it defines.

The comprehensive words, "from whatever source derived," if taken in their natural sense, would include not only incomes from ordinary real or personal property, but also incomes derived from State and municipal securities.

It may be urged that the amendment would be limited by construction. But there can be no satisfactory assurance of this. The words in terms are all inclusive. An amendment to the Constitution of the United States is the most important of political acts, and there should be no amendment expressed in such terms as to afford the opportunity for Federal action in violation of the fundamental conditions of State authority.

I am not now referring to the advantage which the States might derive from the exclusive power to tax incomes from property or to the argument that for this reason the power to tax such incomes should be withheld from the Federal Government. To that argument I do not assent.

I am referring to a proposal to authorize a tax which might be laid in fact upon the instrumentalities of State government. In order that a market may be provided for State bonds and for municipal bonds, and that thus means may be afforded for State and local administration, such securities from time to time are excepted from taxation. In this way lower rates of interest are paid than otherwise would be possible. To permit such securities to be the subject of Federal taxation is to place such limitations upon the borrowing power of the State as to make the performance of the functions of local government a matter of Federal grace.

This has been repeatedly recognized. In the case of The Collector v. Day (11 Wall., p. 127), decided in 1870, the United

States Supreme Court said:

It is admitted that there is no express provision in the Constitution that prohibits the General Government from taxing the means and instrumentalities of the States, nor is there any prohibiting the States from taxing the means and instrumentalities of that Government. In both cases the exemption rests upon necessary implication, and is upheld by the great law of self-preservation, as any Government whose means employed in conducting its operations, if subject to the control of another and distinct government, can exist only at the mercy of that government. Of what avail are these means if another power may tax them at discretion?

In the case of Pollock v. Farmers' Loan & Trust Co. (157 U. S., pp. 584-585) Chief Justice Fuller said, referring to the tax upon incomes from municipal bonds, one of the matters there involved:

A municipal corporation is the representative of the State and one of the instrumentalities of the State government. It was long ago determined that the property and revenues of municipal corporations are not subjects of Federal taxation. * * * But we think the same want of power to tax the property or revenues of the States or their instrumentalities exists in relation to a tax on the income from their

In the same case Mr. Justice Field said (Id., p. 601):

These bonds and securities are as important to the performance of the duties of the State as like bonds and securities of the United States are important to the performance of their duties and are as exempt from the taxation of the United States as the former are exempt from the taxation of the States.

And the learned justice added, quoting from United States v. Railread Co. (17 Wall., pp. 322, 327), as follows:

The right of the States to administer their ewn affairs through their legislative, executive, and judicial departments, in their own manner through their own agencies, is conceded by the uniform decisions of this court and by the practice of the Federal Government from its organization. This carries with it an exemption of those agencies and instruments from the taxing power of the Federal Government. If they may be taxed lightly, they may be taxed heavily; if justly, oppressively. Their operation may be impeded and may be destroyed if any interference is permitted. Hence the beginning of such taxation is not allowed on the one side, is not claimed on the other.

While the invitere of the court in the Pollcely case differend in

While the justices of the court in the Pollock case differed in opinion upon the question whether a tax upon income from property was a direct tax, and as such could not be laid without apportionment, they were unanimous in their conclusion that no Federal tax could be laid upon the income from municipal bonds. Mr. Justice White, who dissented in the Pollock case with regard to other questions, as to this said (157 U. S., p. 652):

The authorities cited in the opinion are decisive of this question. They are relevant to one case and not to the other, because in the one case there is full power in the Federal Government to tax, the only controversy being whether the tax imposed is direct or indirect, while in the other there is no power whatever in the Federal Government, and therefore the levy, whether direct or indirect, is beyond the taxing power.

It is certainly significant that the words "from whatever source derived" have been introduced into the proposed amendment, as if it were the intention to make it impossible for the claim to be urged that the income from any property, even though it consist of the bonds of the State or of a municipality organized by it, will be removed from the reach of the taxing power of the Federal Government.

The immunity from Federal taxation that the State and its instrumentalities of government now enjoy is derived not from any express provision of the Federal Constitution, but from what has been deemed to be necessary implication. Who can say that any such implication with respect to the proposed tax will survive the adoption of this explicit and comprehensive amendment?

We can not suppose that Congress will not seek to tax incomes derived from securities issued by the State and its municipalities. It has repeatedly endeavored to lay such taxes, and its efforts have been defeated only by implied constitutional re-striction, which this amendment threatens to destroy. While we may desire that the Federal Government may be equipped with all necessary national powers in order that it may perform its national function, we must be equally solicitous to secure the essential bases of State government.

I therefore deem it my duty, as governor of the State, to recommend that this proposed amendment should not be

CHARLES E. HUGHES.

(No. 1111.)

UNITED STATES OF AMERICA, DEPARTMENT OF STATE.

To all to whom these presents shall come, greeting:

I certify that the copy hereto attached is a true copy of a resolution of Congress, entitled "Joint resolution proposing an amendment to the Constitution of the United States," the original of which is on file in this department.

In testimony whereof I. P. C. Knox, Secretary of State, have hereunto caused the seal of the Department of State to be affixed and my name to be subscribed by the Chief of the Bureau of Citizenship of the said department, at the city of Washington, this 27th day of July, 1909.

P. C. KNOX.

Secretary of State. By R. W. FLOURNOY, Jr., Chief Bureau of Citizenship.

On Sisal Fiber Trust.

EXTENSION OF REMARKS OF

HON. WILLIAM A. AYRES, OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 12, 1916.

Mr. AYRES. Mr. Speaker, on January 25 last I introduced in this House a resolution, No. 104, the purpose of which was to call the attention of this Congress to the flagrant violation of our antitrust laws, and asking for an investigation of the relations of certain financial interests in the United States with the powerful and merciless Sisal Fiber Trust organized some years ago in the State of Yucatan, Mexico.

I am deeply interested in this matter, as I have a constituency that is almost wholly agricultural and located in one of the best wheat and grain producing sections of the great Southwest. The district that I have the honor to represent comprises one of the greatest communities of prosperous, thrifty, and progressive farmers that can be found anywhere in the United States, barring none. The great hoard of emigrants following the star of empire westward brought with them the best farming metheds, the best energy, the best industry and intelligence from the other Commonwealths, built their permanent and comfortable homes, and reared their sturdy sons and daughters in Kansas, and who now constitute a citizenship equal to the best found in any State in this great Union.

Thoroughly assimilated with this native element in other portions of my district, I have the sturdy and industrious citizen of Bohemian origin, who came to America to enjoy the freedom of our institutions. Quietly they have pursued the even tenor of their way and they have succeeded admirably, and we number

them among our best and most prosperous citizens.

In other sections of my district I have the German citizen. When the history of our State is written and understood, it will be found that our German citizens occupy a most important position in its development and achievements. Everyone is willing to admit that to the German citizen is due much of the material prosperity for which this section of the State is noted— his lands are well tilled and his capacious barns are generally well filled. He has a sterling character and industrious habits that can not be excelled by any nationality that has made his home among us.

In another section of my district may be found the immigrant from Scandinavia. When these people migrated to America and settled in Kansas they brought with them their industrious and frugal habits, their positive convictions of religious faith, and their belief in our common schools and higher education. The bracing air of Kansas has given them vigorous constitutions, and where they have settled may be seen well-cultivated farms and refined homes.

Located in another portion of my district I have a colony of Mennonites. The entire history of these cople show them to be prosperous and industrious. They have attained to as high a degree of efficiency and success as any other farming class in the entire country. In possession of the sound virtues of life, they are not excelled by any people. They love peace and the maintenance of right relations between man and man, and demand the same standard for nations, and are among the most useful of our citizens.

All of these different elements making up and comprising this great agricultural constituency, live together in the strictest harmony. From this intermingling of nationalities has come forth a most remarkable and strong community. The assimilating fires beneath the melting pot of this civilization has been tempered to the proper degree, and they have all, without exception, readily become Americanized in thoughts, ideas, and manners, and no more loyal citizens can be found in any State

Had this monopoly of the sisal-fiber industry confined its op-eration strictly to the country where it was organized, we would have very little to say about it, unless we chose to voice our disapproval of such methods by the enforcement of retaliatory measures in a commercial way. These resolutions have been discussed thoroughly throughout the entire agricultural sections of the land, and have resulted in beneficial agitation.

The long-drawn-out investigation of this matter before a committee of the Senate has had the effect of arousing the country to a realization of what kind of predicament our farmers will be finally forced into, unless something is done to block the purposes of this combination. This investigation has resulted, at least, in giving the agents of this great organization in the United States a warning that they can not have an open field for exploiting our farming resources without some show of resistance on the part of the people affected. It has exploded the contention of the promoters of this combination that the advance in the price of fiber is due to a shortage of production, and the commission has therefore been forced to submit a proposal that all the available surplus of fiber be turned over to our Federal Trades Commission to be distributed to the several independent twine factories according to their several needs, but it has not resulted in any material concession of price. This agitation will probably result in keeping the price near the point where it now is, instead of allowing it to soar to extreme heights, where it would have gone had not this agitation taken place.

No doubt the farmer has already felt the magic fist of this merciless trust in his pocket. The humble farmer, with his 25 or 50 acres of grain, and the more extensive agriculturist, with his hundreds of acres of bread crop, will all contribute his proportionate share to this unjust and unwarranted tax in the way of increased prices for his twine.

There is no more patriotic class of citizens than the American He no longer cavils about his just share of financial burden when the cause is justified, but in this matter the advance in the price of twine has no justification that may be found either in the laws of supply and demand or in trade

The gentleman who is at the head of the selling end of the Yucatan commission openly admits that this corporation can largely control the market of this product, and says that his organization could raise the price of the raw fiber to 10 cents a pound, or even higher, if they wanted to. He states, however, that the price will not be arbitrarily raised, but the facts do not justify his meek declaration.

Ever since the twine-tying self-binder has come into common use sisal fiber has been a necessity to the American farmer in order to properly save his wheat crop. There is no alternative to which he can turn; there is no substitute that he can use to supply this necessity. It is conceded that wheat is an expensive crop to raise at best, and if the talons of this greedy trust are permitted to be sunken into the flesh of its prey it will lessen this source of cereal production in our Nation's great bread basket. The power to control being theirs, they will use it, not to the advantage of the poor producer but to create profits for themselves; not to expand and encourage production, but to restrict it by levying extortionate prices.

I do not believe that this Government will pass over this matter unheeded, and I sincerely trust that favorable action will be taken on this resolution.

The material welfare of our great agricultural communities has been finally recognized and we are proud of the record this Congress has made toward helping them to the essential opportunities that make for their convenience and advancement. Agriculture the country over is the very base of our prosperity. It has developed in spite of the fact that it has not had special laws to give advantage. For years the farmer has battled and prevailed against obstacles and adversity. He has struggled against the uncertainties of frosts, floods, and drought. He has had to accept the terms and the prices for the fruits of his toll as they were made by others. He has had no special legislation that has resulted in his direct benefit; but, notwithstanding these serious handicaps, he has gained for himself a very important position in the financial, moral, and social status of our Nation's citizenship.

Realizing the commanding importance of our rural civilization, this Congress has intelligently sought to aid our rural communities by the passage through the House of a "good-roads bill." This measure is now pending in the Senate, and This measure is now pending in the Senate, and we hope for an early passage, by which it will become the law. This bill gives to the State of Kansas the sum of \$747,656 for the sole purpose of improving our roads, and will be of great benefit to our people generally, but particularly to the

The Sixty-third Congress has already given to the country the Federal reserve act, which gave the farmer, as well as every class of our citizens and business men, an abiding confidence that his deposits are safe from the manipulation of stock speculators; and he now knows that his banker, to whom he has intrusted his surplus funds and savings, is not hampered by market fluctuations. We now have a strong financial system based upon an expansible and elastic currency founded upon commercial paper, with the credit of the United States behind This act has made financial and currency panics impossible, and has given a confidence to our people in its efficacy and wisdom. This is one of the greatest items of constructive legislation that our Nation has experienced in half a century, and it is meeting with the praise and approval of men every-

Under threat of financial disaster, we have dared to give the country this great relief from its former financial limitations, and it has resulted in the lowering of interest rates below the point ever known before in this country.

As this act could not be made comprehensive enough to permit of long-time loans on land security, the House and Senate have provided a rural-credits bill, now in conference and to be agreed upon soon and become law, by which our farmers may find ready access to the capital of those who desire to invest it. This law will enable those engaged in farming and stock raising to more adequately expand their legitimate business operations at a low rate of interest and for a long-time loan payable on the amortization plan of easy payments. The reduction of interest rates will greatly benefit the farmer generally and will enable many renters to acquire homes for themselves, and will give the present landowner the opportunity for improving his

present holdings and financing his productions.

Many perplexing and complicated questions have come up in this Congress, and many unpleasant and troublesome issues have been presented, and while all have not been determined to the entire satisfaction of all, it will have to be admitted that every honest effort has been made to avoid plunging our Nation into that awful war across the sea that is destroying millions of mankind, and, for aught we know, the nations of the Old World. It is not our war, and we as a people and Nation should be supremely happy to be kept out of it.

"The Real Wilson."

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY,

OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 13, 1916.

Mr. BARKLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article appearing in the New York Times of Sunday last by Maximilian Harden on "The real Wilson." The article is as follows:

"THE REAL WILSON."

FULL TEXT OF ANOTHER EXTRAORDINARY ARTICLE BY MAXIMILIAN HARDEN, THE DARING EDITOR OF DIE ZUKUNFT, GERMANY'S MOST RENOWNED AND DREADED WRITER, AGAIN FEARLESSLY CRITICIZES THE KAISER'S GOVERNMENT, EULOGIZES THE PRESIDENT, AND ADVOCATES FRIENDLY GERMAN-AMERICAN RELATIONS.

GERMAN-AMERICAN RELATIONS.

[In this and others of those bold and extraordinary articles with which Maximilian Harden has astonished the world since the war began, the famous German publicist gives an estimate, a defense, and a eulogy of President Wilson. "The real Wilson" is the title of Harden's article, which has been banned by the authorities in Germany. The copy, printed in German, which was sent to the New York Times from England, is believed to be the only one that has reached this country. In frankness and effectiveness this article ranks with the remarkable Harden essay, "If I were Wilson," which was published in the Times two weeks ago.]

(By Maximilian Harden.)

(By Maximilian Harden.)

Not a stone remained of the stronghold where the victors over the 31 kings had gazed in wonder at the sun of Joshua. But the Crucified One is arisen.

Not to a race like Mohammed, from whose deathbed Omar went before the tent and cried that his curved sabre would split every throat wide open that dared to assert the prophet was dead. He who arose from the rocky tomb in the garden of Joseph of Arimathea does not live under the shield of a threat that is to frighten doubters. All you shall live who without having touched His arisen body believe in the resurrection of His

On the seventh day after Easter, on Quasimodo Sunday, following the admonition in St. Peter's First Epistle, to wipe out evil and deceit, hypocrisy and envy, and, like new-born babies with pure milk, to become saturated with nothing but clear un-derstanding, there is read from the pulpit from the next to the last chapter of the Gospel according to St. John:

When, therefore, it was evening on that day, the first day of the week, and when the doors were shut where the disciples were for fear of the Jews, Jesus came and stood in the midst, and saith unto them, Peace be unto you.

And when He had said this He shewed them His hands and His side. The disciples therefore were glad when they saw the Lord.

Jesus therefore said to them again, Peace be unto you; as the Father has sent Me, even so send I you.

THE STORY OF DOUBTING THOMAS.

And when He had said this, He breathed on them and saith unto them, Receive ye the Holy Ghost.

Whose soover sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained.

But Thomas, one of the twelve, called Didymus, was not with them when Jesus came.

The other disciples therefore said unto him, We have seen the Lord. But he said unto them, Except I shall see in His hands the print of the nails, and put my finger into the print of the nails, and put my hand into His side, I will not believe.

And after eight days again the disciples were within, and Thomas with them. Jesus cometh, the doors being shut, and stood in the midst, and said, Peace be unto you.

Then saith He to Thomas, Reach hither thy finger, and see My hands; and reach hither thy hand, and put it unto My side, and be not faithless, but believing.

Thomas answered and said unto Him, My Lord and my God.

Jesus saith unto him, Because thou hast seen Me thou hast believed; blessed are they that have not seen, and yet have believed.

Noli me tangere. This motto stands at the door of every faith

that wishes to spread itself around the world, like the warming and protecting rays of light from an open tower. Thou shalt not touch me; not from a sense of touch, sight, or hearing shall thy will allow thy faith to spring, but from the heaven-born fruit conceived by a divinity. If this divinity needs force to assert itself, if the menacing curse of Moses or the saber of Omar must win respect for it, then it dwells in the crumbling

despotic citadels of the old covenants.

A new covenant, such as the Occident never had seen, became possible when a son of man, without the evidence of touch, sight, or hearing, believed in the resurrection of a body familiar to the eye, therefore in a new divinity. Because Mary of Magdala sincerely believes it, the woman despised yesterday as a creature of the devil is able to transmit her pious ardor to the brains of Peter and John. Because the faith became as firm as a rock in two of the disciples, ten of them, among whom there is not merely one doubting Thomas, cling to Him and gather together a congregation to which He becomes a shelter in the whirlwind of events. Because an abiding hope, whose ardor was never cooled by any draft of mean-souled distrust, caused unseen things to be made visible in Jerusalem and in Galilee, to this very day Calvins in the Netherlands upon their deathbeds see the towering figures of the Savior. The belief that He will come and at the last moment of their life free them from the bonds of sin has been sucked in with their mothers' milk. And in the realms of the psychic being the infallible passionate hope always forces into sight the face of what it desires

In this German spring, in which the sap, not by spurts, but with a gentle flow that promises good fruit, rises from the roots to the stalk and the branches, is there not germinating somewhere faith in the resurrection of Europe and in the new humanity in a restored earth, whose wounds and marks left by the Crucifixion may be felt by every finger? It will spread like rays from a warming and transparent tower far out across the desert, over silent privation and shricking misery, if it is cherished ardently.

It will win to the sacred cause hundreds and hundreds of thousands if its defender, with the other disciples, does not fear the hardships of journeying, the pain of persecution. Can Pentecost come from Easter without spring thundershowers? Can a strong and united faith develop from splintered doubts

without persecution and vengeful wrath?

Hark back through the echo of the spring festival at home to the teachings of Christ. The Sadducees—Hanan, Alexander, and Jochanan—are in power; their tool is the high priest, Caiaphas, whose weak will is subject to that of his father-in-law, Hanan,

They have crucified the happiness of the world. And shall their stern mind, never softened by the falling dew nor by the gentle tear of sympathy, permit that a handful of peace advocates, with the heritage of the One so shamefully executed, insinuate itself into the favor of the unthinking masses? Then all the amount of labor, the increase of power that the gloomy Nisan-mond has brought them, would be wasted in vain. It would have been wiser to have let the seducer himself, the catcher of souls, who through long delay and through oft-repeated warnings must have lost prestige, continue to wander through Judea and to have sent out word ahead of him that the main object of the vagabond's march was to rake in money.

Josephus writes that the Sadducee constantly engendered more ferocious severity than any other of the sects within the domain of the patricians of the temple. From their ranks came the watchword: "Rather the death of a man than pesti-lence and the ruin of the entire people." Hanan, a hundred times more severe than Pontius Pilate, is burdened with the guilt of the Crucifixion, and can only escape the curse of the survivors if he leads his "party of order," the herd of Jehovah-Imperialists, to victory and roots out of all the highways of Israel and out of every furrow of earth the weeds sown there and nourished by the breath of the deceiver. In the shadow of the Savior's spirit the flower of the priesthood perishes from cold. Woe unto you if this shadow succeeds in spreading. Wrath, that calls itself pious, because it clings to the dust of old phrases, eagerly arms its bailiffs against it.

VOICE OF WARNING FOUND NO ECHO.

What punishment may the Jews demand and inflict without a protest by Roman power, by the mild legate in Syria, Vitellius? Imprisonment and driving out with whips. In the Sanhedrin Peter and John shout for joy under the lash. The people who live in the temple and from the temple, for whom every wall of the holy house sweats outrageous profits, and who consequently believe themselves called to guard the temple as the ones chosen by the powers of heaven, want to force free spirits to do their will by means of orders and inhibitions, by punishments and pains, and do not even suspect what happiness this torture causes to the persecuted ones who are filled with their cause. One man warns them. It is the old rabbi, Gamaliel, a wise grandson of the wise Hillel. This most famous scholar and most tolerant priest in Israel speaks as follows to his comrades of the Sanhedrin:

If the new doctrine is criminal sacrilege, it will fall to pleces of its own weight. If it is the creation of an earnest spirit, then it is wanted by God, and the risky attempt to destroy a work that is favored by God can never succeed.

The voice of the warner found no echo. When was common sense ever heeded in the cloud of sparks stirred up by fafore the descendants of the Jews from Alexandria and Ephesus, Kilikien and Kyrene, he has, in the synagogue of the Libertiner, denounced the Jews as rebels who still dispute ocular evidence, and who are guilty of a grievous crime because their hate put the Messiah on the Cross. A sermon that stamps the Galilean as the Messiah and sets him upon the exalted seat of the promised Savior can not remain unpunished. The beneficiaries of the temple send out listeners. How can the ruling clique quickly seize the bold chap by the neck? Has he not, perhaps, by the allegation of things not proven to be true, lowered the esteem the public holds for Moses, the bringer of laws of the faith? He has; therefore he must answer to the Sanhedrin.

He shouts to his judges:

He shouts to his judges:

Ye stiff-necked and uncircuncised in heart and ears, ye do always resist the Holy Ghost; as your fathers did so do ye. Which of the prophets did not your fathers persecute? And they killed them which shewed before the coming of the Righteous One, of whom ye have now become the betrayers and murderers, ye who received the law, as it was ordained by angels, and kept it not.

* Behold I see the heavens opened and the Son of Man standing on the right hand of God.

Hastily they ram their fingers into their ears, so as not to hear such an impious declaration. Slaver drips from gnashing teeth over lips pressed hard together in rage. What says the law about such blasphemy? It says in Deuteronomy:

The dreamer who tries to convert you to the belief in a new divinity must die. As soon as the tongues of two witnesses have pronounced him guilty take him before the gate of the city. The hand of the witnesses shall cast the first stone. Then all the people shall stone the wicked man, so that he shall be completely destroyed. For he wanted to lead you away from the Lord thy God, who brought you out of bondage in the land of Egypt, and whom you must thank.

YOUTH WHO DEFIED THE DISCIPLES.

Stephen is taken outside the city. The witnesses who are to cast the first stones take off their outer garments and lay them before the feet of a youth, who, with wide-opened eyes, is watching the execution of the sentence. Now he stoops to pick up a stone himself. He is happy at being able to assist in the execution of the blasphemer. And from this day on he is the tool of hard-hearted, heretic-hunting priests. Armed with their warrant he breaks into suspected houses, drags the followers of the doctrine of Christ, men and women, before the judges or to prison. Not one-as is shown in the Epistle to the Galatians-is a hotter persecutor of the congregations of Christ, no one else lend themselves more willing to the service of the old laws. Indeed, many a night he hears through the darkness the sighs of the women thrown into jail on his accusations; he lies sleepless and meditates on the gentleness, on the quiet, heroic renunciation of the world by his victims and of the earthly pilgrimage, still producing miracles, of Him for whom they joyfully suffer and die. Often his face turns crimson, because he believes he sees the blood of Stephen that his stone drew from its veins spurt forth again. But he turns with horror from the seduction of such a eleception of the senses and pulls himself together with the resolution to avenge every breach of the law as it is handed down with unswerving severity and never to spare anyone who did not regard the law as the embattled home center of their desires and actions.

This Saul becomes the terror of the band of disciples. He becomes, after the day of Damascus, the Apostle Paul, who spreads the sectarian belief through the mass of the world Gamaliel's pupil, who for so long had sealed all the pores of his soul to the ancient wisdom of his teacher, hears the question from on high:

Saul, Saul, why persecutest thou me?

Through the roaring thunder it rings, as clear as the call of the lark on high in the ear of the weary man, who in the fatal spring of the Emperor Tiberius, who with wounded feet had wandered from the wastes of the hot land of Iturea and saw with blazing eyes the plateau of Damascus rendered fruitful by the blessing of God and the labor of man. Has a thunderbolt struck his brain? Saul falls to the ground. Paul, with a bewildered brain but with a soul like the sun at noonday, rises from the earth. The Christian, Hanania, becomes his physician, healer, teacher, and brother. The scales fall from Paul's With resistless power of the will he tears out the thorn that for months has been boring into his flesh, and with it the imp of Satan that has been chastising his heart, and he also receives the baptism. The thoughtless one who, with his brain fired with passion by everything, was the most ferocious persecutor of Christians, becomes the most earnest and enthusiastic Christian. He elevates the ardent, all-embracing faith far above Essenism; delivers it from the hands of the sects that live from day to day in the belief that the end of the world is at hand and the twilight of humanity near; joins power to its faith and insures its immortality through this union.

Is there germinating in our spring the faith in the resurrection of Europe and in the new humanity in a restored world whose wounds and marks of crucifixion everyone can touch This faith will tower like a transparent, with their fingers? warning lighthouse above the desert, above dumb suffering and howling misery, if it has been filled with light by the ardor of a strong, tried man and the will to power. He will win hundreds and hundreds of thousands to the holy cause. It needs Stephen and Paul; it needs the devotion of the spirit of martyrdom and of the head of a statesman. You Germans who remain Europeans and do not want to sink back into primitive animal life, become the apostles of the new faith! Do not let yourselves be halted either by the continual bawling of those living in the past, and who classify your pure desires as a Utopia and a barren island of idle dreamers, or be frightened by the tools of blind force, who are not suited by the tendency of your thoughts. Hanan can do no more in a warrior's garb than he has been able to do in priestly raiment.

He can proscribe heretics-those of to-day who will be the fathers of the church of to-morrow—can cut their spiritual hide to pieces with the lashes of his jailers, banish them from a hearing by their own people and have them stoned by every people, have their freedom of movement curtailed with iron nails; but he can never throttle the soul with his heavy hand. That rises from the wreck of the body, crosses the borders, slides under the barriers, and wins disciples the world around. Let him act fearlessly who feels his soul prepared; he who has ever heard with the ear of his soul the plaintive cry, "Why dost thou persecute the longing of humanity after the Holy Ghost?

We want a Germany that is strong, merry, bright, with agreeable, not haughty, dignity, and earnest gladness. This Germany can not be spared by humanity; but neither can she do without humanity. It is not her task to enslave it, or to color it after her own fashion, but to flourish in it as a powerful member in a constant interchange of healthful, life-giving

streams. We know that in every great period Germany's most effective weapon was thought; spades and plows, creators, not, like mortars, howitzers, and asphyxiating gas, destroyers.

We want reason, not the sword, to be Germany's guiding star; statesmen, not fortune's casual favorite on the battle field or in the submarine. So that history may not some day judge us thus: With an unexampled display of popular strength, genius, and endurance Germany fought for an ideal that had long been reduced to a shrunken, withered shadow against the band of her foes, who, with all their superficiality of judgment, with their confused dilettante-like ignorance, still combined in the perception of the direction pointed out for mankind to follow by all the great signs of present times

So that Clio may not sigh: With a most admirable implement wrought by the brain and the army, on the one side a futile cause was served; on the other, with useless tools and with an outworn, unprofitable, dusty force of the will, the work of preparation for what was recognized as necessary was shame-

fully bungled.

WANTS AN ERA OF PEACE AND GOOD WILL.

We want Europe to get well, not pine away as a cripple: we want her to become clean, not still more disgustingly besmirched. We want the vital questions of the world to be answered in a way that will meet the needs of the nations, both the strong and the weak, and, without supplementary strife over it, will last long after the day on which peace is declared. We do not want people to brag about the greatness of a time that was merely destructive, for with us greatness is the characteristic of creative ability. We want a free people to be in the future the creator of its own destiny from the ground up and be able to creator of its own destiny from the ground up and be able to rejoice without envy at the prosperity and spiritual advancement of other peoples; we wish that goodness and human rights be respected, even in the most ragged beggar. There you have the basic outline of our faith and desire. All you who wish to dwell within its arch gather quickly from all camps to the loyal union. Steel yourselves with the vow of brave men, to venture something at last. Only by daring will you be worthy of the heroes who are cheerfully bleeding out there. At no place and at no time has Pentecost come out of Easter without spring thunder storms.

THE QUESTION.

No matter how often we must think of it, the discovery of America must each time make a fresh appeal to our imaginations. For centuries, indeed from the beginning, the face of Europe had been turned toward the East. All the routes of trade, every impulse and energy, ran from West to East. The Atlantic lay at the world's backdoor. Then suddenly the couquest of Constantinople by the Turks closed the route to the Orient. Europe had either to face about or lack any outlet for her energies; the unknown sea at the west at last was ven-tured upon, and the earth learned that it was twice as big as it had thought. In that part of the world, upon that new-found half of the globe, mankind, late in its history, was thus afforded an opportunity to set up a new civilization; here it was strangely privileged to make a new human experiment.

Never can that moment of unique opportunity fail to excite the motion of all who consider its strangeness and richness a thousand fanciful histories of the earth might be contrived without the imagination daring to conceive such a romance as the hiding away of half the globe until the fullness of time had come for a new start in civilization. A mere sea captain's ambition to trace a new trade route gave way to a moral adventure for humanity. The race was to found a new order here on this delectable land, which no man approached without receiving, as the old voyagers relate, you remember, sweet airs out of woods aflame with flowers and murmurous with the sound of pellucid waters. The hemisphere lay waiting to be touched with life-life from the old centers of living, surely, but cleansed of defilement and cured of weariness, so as to be fit for the virgin purity of a new bride. The whole thing springs into the imagination like a wonderful vision, an exquisite marvel which only once in all history could be vouchsafed.

AMERICA A BEACON FOR THE WORLD.

One other thing only compares with it; only one other thing touches the springs of emotion as does the picture of the ships of Columbus drawing near the bright shores-and that is the thought of the choke in the throat of the emigrant of to-day as he gazes from the steerage deck at the land where he has been taught to believe he in his turn shall find an earthly paradise, where, a free man, he shall forget the heartaches of the old life and enter into the fulfillment of the hope of the world.

* * * The men who founded America * * * set up their standards here in America in the tenet of hope, as a beacon of encouragement to all the nations of the world. Tyranny has become more subtle, and has learned to wear the guise of mere industry, and even of benevolence.

What is liberty?

I have long had an image in my mind of what constitutes liberty. Suppose that I were building a great piece of powerful machinery and suppose that I should so awkwardly and unskillfully assemble the parts of it that every time one part tried to move it would be interfered with by the others and the whole thing would buckle up and be checked. Liberty for the several parts would consist in the best possible assembling and adjustment of them all, would it not?

We say of a boat skimming the water with light foot, "How ee she runs." * * * Human freedom consists in parts free she runs." free she runs." * * * Human freedom consists in perfect adjustments of human interests and human energies. * * *

Well, then, in this new sense and meaning of it, are we preserving freedom in this land of ours?

Have we, inheritors of this continent and of the ideals to which our fathers consecrated it—have we maintained them, realizing them, as each generation must, anew? we, in the consciousness that the life of man is pledged to higher levels here than elsewhere, striving to bear aloft the standards of liberty and hope.

And we stand in danger of utter failure yet except we fulfill speedily the determination we have reached to deal with the new and subtle tyrannies according to their deserts.

[Herr Harden then proceeds to quote scattered sentences and paragraphs from Mr. Wilson's speeches bringing out the necessity for America to hold fast to the old ideals of liberty and equality of opportunity for all.]

I have collected these excerpts from the campaign speeches of Woodrow Wilson [that under the title, "The New Freedom, a Call for the Emancipation of the Generous Energies of People," have also been published in the German language] in order to indicate what manner of man it is over whom there has been so much talk during the past weeks and months. So much silly and, unfortunately, also miserably shameless talk. "A dusty professor." "A rabid enemy of Germany, who has sworn to prevent England's defeat with all the means in his power." "A rascal bought by England." This is the parrotlike chatter of lazy ignorance that has nothing in common with holy love of country. Burn up at least ninety-nine hundredths of all the parasitical war "literature" bound in warlike covers and throw all these poems, speeches, romances, treatises, boostings, and tracts in the only place where they are of any use—In the paper mills—and devote your time to books from which you draw the spiritual inspiration of clear speech. Then, perhaps, pure reason will return to its home and awaken the duty of respecting the dignity of strangers.

GERMANY MIGHT BE PROUD TO OWN WILSON.

As Rodin and Hodler, Macterlinck and Verhaeren, Kipling and Wells, Forain and Raemaekers, Spitteler and d'Annunzio, by their angry attacks on Germany lose none of their value in an artistic sense, so, too, Woodrow Wilson, the scholar and polian artistic sense, so, too, Woodrow Wilson, the scholar and politician, would not be a wretch, even if he did prefer English ways and statesmanship to Germany. That he has done so has never been shown. The problem, if the President of the United States is an eagle, may be decided when he spreads out his wings for a flight. He certainly is a man of high moral and intellectual rank. A man of whom we might be proud, if he were one of ours (and he could speak, as I let him speak from these pages two weeks ago). He is at the least an American Fichte. In the State of Virginia he was born by the descendant of an Irishman to the grandson of a Scotchman. So this man, who is now nearly 60 years old, has no blood prejudice this man, who is now nearly 60 years old, has no blood prejudice that promotes blind deification of England.

As a student at Princeton University he writes against "Cabinet Government," boldly attacks the secrecy and avoidance of responsibility that prevail in the business of the Government, and that lull into a sounder sleep from year to year the people's desire for active cooperation. The review is followed by a book over "Government by Congress" that earns him the call to a chair in the youngest college for women. He leaves the presidency of Princeton University (that, as the favorite resort of the proud and rich youth, might be called the Bonn of America) after eight years of fruitful administration because an endowment of \$12,000,000 had conditions attached to it the acceptance of which the President feared would be of serious injury to his college (through a deepening of the gulf between the classes). In order not to soil his ideals, his image of his power of thought, he goes. And is, as the wise and valiant looks upon the evidence of both sides from every angle, deserves

fighter of ugly abuses, chosen as the governor of New Jersey. He frees this State from the bondage in which it was held by the trusts. In defiance of the silly invooted custom that limits the governor to written communication with the assembly, he defends his plans of reform personally in the legislature and also at the voters' meetings and in the press. He does not hesitate to make known throughout the land the names of the obstinate deputies. And, with the enthusiastic support of the people's will, he puts his plans through.

REBUKE FOR SLANDERERS OF THE PRESIDENT.

He has outlined the life of Washington, the history of the American people, and the nature of the State in good books, and in the collection of essays, Only Literature, on politicians and statesmen, poets and writers, he has said as many wise things as hardly another in the two worlds for many a year. Then, as a new man in the highest place in the Republic, he has made farreaching mistakes. Is he the only one among all the heads of Governments? This man loves his people and has the desire to lead it upward to the heights of the ideal from which it has slipped into the swamp. Germany must be ashamed of the persons who slander him because there has been slimy dirt in the newspapers

Wilson, the teacher of political law, who now speaks in the name of the United States of America, stands upon the conviction that the announcement that from March, 1915, the Imperial Government would treat the waters around Great Britain and Ireland as being in the war zone was a gross denial of inter-national law; that the premeditated method of the German submarine warfare is not compatible with the basic laws of humanity; that this method which, without the flimsiest legal justifica-tion, without a twinge of conscience, destroys mighty ocean liners and unarmed passenger ships, and has cost the lives of hundreds of peaceful Americans, wantonly smashes to bits the undeniable rights of neutrals and the sacred privileges of all those not engaged in the war; that the Imperial Government, whose uprightness and good faith are not put in doubt, neither has succeeded nor ever will succeed in reconciling its methods

with the basic principles of humanity.

And as every promise of caution by Germany has been followed by an act by a submarine sharply contradicting it, the Government of the United States, that has been patient so long because it feels a genuine friendship for the people and rulers of Germany, must break off diplomatic relations with the Imperial Government unless the methods of submarine warfare are immediately given up, passenger and freight ships not armed for attack are spared, and the rules of humanity, of international

law, and of the rights of neutrals are again put into effect.

These are the principal contents of the note that the American ambassador laid before the State secretary of our foreign office on the evening of April 20. Dare we treat the complaint of a great, free people radiating the strength of youth and represented by a man of the importance and stamp of Wilson, according to the rules of a students' row? Shall we haggle over words, refuse to stand for the "entirely imperti-

nent" tone, and use it as a pretext for refusing to answer?

That would be unworthy of the great matter in dispute, of the belligerent nations, of the human race. If President Wilson, after careful examination, is convinced that a long chain of German methods of conducting warfare has worn away and broken to pieces the laws of humanity and the holy custom of nations, it is not only his right but his duty to speak with uncompromising clearness. He owes the fulfillment of this duty not only to his own country but to ours. For we, the German nation and Government, do not wish that something which is not to be kept shall be agreed to, that agreements shall not be observed. In the darkness of the state of siege-not to be profitably endured much longer, Emperor and Chancellor—we can find out whether such a thing has happened only when a firm hand, not to be turned aside by prohibitions, completely bares the real situation to our gaze.

Mr. Wilson demands nothing new. Has there been an agreement to do what can not be done; has there been failure to keep an agreement? That is the entire question. Against Wilson's basic argument that, even in the most ferocious war, the voice of humanity and of international law must be heard, nobody even lightly affected by the morality of our stage of culture will present objections; the Princeton professor might base his arguments on Bismarck or Goethe, who, in the presentation of essentials, are not so far removed from each other as heed-less or hostile phrase makers would have them.

the gratitude of every thinking German. He is not "weak" but strong. He is strong in the peculiar sense attaching to his position; strong as the only responsible guardian of the Empire, of German faith and trustworthiness must always be.

The audacity of the chancellor should not be compared with that of the U-boat commander; the fate of 70,000,000 Germans must not be intrusted to a daring submarine commander nor to a man disguised as a statesman. Yet such pilots for the slip of state are wished by the silly clamorers whose unbridled actions are becoming gradually more dangerous to the father-land than all the endeavors of the foe driven far back into his own territories. If these Pistols and the like, instead of pouring the wine of Mistress Quickly upon their noses, had stuck them into the book of history their shouts for the strong man must have been choked at the memory of Cleon the Athenian tanner. There was a swaggerer who was a strong man in the eyes of bullies. He branded the wise Pericles, because he carefully weighed all possible consequences, as a foolish philosopher, and, as head of the rascally crew of sycophants, he denounced all who worked independently for the good of the people instead of for profitable popularity. Informing and intimidation freed him from discomforting speakers and writers, and stole from the Athenians their most valuable possession, freedom of speech, and increased the fortune of the avaricious. "Pericles demanded calm deliberation on all matters; Cleon used every means to nourish and heighten the feverish excitement of the people. Pericles sought to act only according to reason and to set aside all results of unclear states of mind; Cleon drove the credulous multitude, by means of soothsaying, trumped-up oracular speeches, and inflammatory statements of all sorts, into the wildest excitement. He concealed from the citizens the perils of the situation and held up to their eyes certain victory, from which they were sure to derive new advantages and (Curtius.) benefits."

QUOTES LESSON FROM ANCIENT HISTORY.

"To annex and evacuate" was already Cleon's watchword. The entire Peloponnesus was conquered and tribute was wrung from Arcadia. Listen to his diatribes against Sparta and Mytilene! Terror alone can tame the islanders; only rascals can seek to turn away the Athenians from the prosecution of mercilessly cruel warfare. The inhabitants of Mytilene, having shamefully assaulted us, must be beaten to their knees and annihilated; if this is not done, their treachery will threaten us within a few years with another war. Does Diodotos advise you to keep hatred and lust for vengeance apart from political quarrels, which are not to be looked upon as a case before a law court? Does he counsel you to think only of the welfare and future of the State, unblinded by passion? That is but the old whimpering of the faint-hearted, who chatter about magnanimity and humanity when the only hope of deliverance from deadly peril is the merciless employment of every possible weapon. Sparta? Only when she has yielded all the territory that should be given by right to the Athenians—in the Peloponnesus, in Megaris, Nisaia, Pegai, Troezen, Achaia—then and only then can there be talk of an armistice. It is a waste of time to listen to the empty talk of Sparta's ambassadors; every Spartan lies as soon as he opens his mouth.

Cleon attains his goal. The ambassadors depart, and the most propitious hour for concluding peace and dissolving the hostic alliance is gone. Because the voice of statesmanlike prudence is drowned, the most important affair of state is ruined by the

frivolity of the flatterer of the multitude.

Does not he whose memory is good seem to see clearly before him our Cleons, the blonde and dark ones? Whether fortune would smile even for one day on the Pistols as generals and admirals as she did on their immortal prototype at Pylos, when she bestowed upon him the cooperation of Demosthenes and the treason of Menedaios, the Spartan leader, is as uncertain as is the hope that to-morrow a new Aristophanes may cure the hide of the tanner's tribe with the sharp weapon of his wit. They have deserved this chastisement ten times tenfold. Are they strong because, far from the front and the sea, they open wide their mouths twice daily and clamor for the conquest and annihilation of the world, which others in the van are to buy with their bones? Are they strong because they have never learned anything worth while, because they have simply picked up the speech of the power drunk, the foundations of all statecraft, the soul, history, and political economy of the nations hostile to us; because they never saw the thin spots in their hide; because they drive the multitude by coarse flattery to insane lust for power and to self-delification? Is it proof of strength to exalt the lowest impulse as the noblest, to wring applause from callous hearts and sweating hands by such cheap country-

fair tricks, by such horse-swappers' artifices? Even if those among us who resemble Pericles and Diodotos were of weaker fiber, reason speaks forth from them, not madness. They do not enrich themselves by supplying the army and the needy people; they are not paid by cliques and speculators for dirty work; hard times do not double their earnings; for them no fat roast is cooking over the fires of war. They serve the fatherland within the limits of their brains, modestly, after a fashion, and without thought of self-interest. Whosoever, consciously or unconsciously, from a safe hiding place, far from the enemy, accuses those governing us of dishonest weakness, betrays their interests.

OUTBURST OF SCOLDING ROUNDLY DENOUNCED.

It was to me like physical pain when Deputy Dr. Ernst von Heydebrandt wandered away into the midst of such evil com-In solitude I have often praised the brave earnestness of this man, his great will power controlled by keen understanding, the steely sharpness tempered with sobriety of his speech-I have praised him as the only personality in the Landtag and Reichstag worthy of the esteem even of his foes. But what he has now allowed to be printed is unworthy abuse, drearier than anything that the most violent enemy of the Junkers could imagine. This outburst of scolding pusillanimity from an embittered heart would not stand out above the rest even in a calendar for peasant children. Nowhere is there even a spark of the fire from a statesman's brain. Every understrapper of the foreign office-yes; even the author of the Sussex notewould be justified in exclaiming, with a shrug of the shoulders, when he saw the tortures of this Heydebrandt, "Yet that fellow would set up to be my judge; that fellow would damn men of my stamp!

"America," says the deputy and party leader, "was, even before the war, in relations with our opponents." German Empire; with Italy, Japan, Portugal, Russia—with Great Britain even, as has been said to us at least twice each To have such a relationship was quite within the rights of the United States; that it may have been set forth in a treaty is improbable and not supported by a shred of evidence.) "During the war America stood at first secretly, later openly, on the side of our enemies." (That remains to be proved; according to what I know the Republic never violated neutrality.) Mr. Wilson is "insolent"; his "arrogance can not be surpassed." Because it "favors his chances of reelection" he bases his acts on dictates of humanity, "which are surpassed only by the hypocrisy with which he advances them." The Americans are "business people," to whom an empire of the strength of Germany must speak only in the most harshly unequivocal terms. They supplied the belligerents with arms and ammunition. (So did we, neutrals, in every war of the last decades; and during the Boer War we were, in a more limited sense, exactly in the position of America to-day—able to sell the British arms and ammunition, but unable to sell them to the Transvaal and the Orange Free State on account of the English sea blockade. Does anybody with even half the average sense doubt that the American private business houses who armed our enemies would have shipped to Hamburg and Bremen with equal willingness all that we ourselves ordered? The exportation of war material could not have been prevented except by special legislation, and the reasons for open opposition to such legislation were based neither

on greed nor "relations.")

Without this supply to our foes from America, we hear, the war would "have been over more than a year ago." (A friendly notion, which can not be looked upon except as an error, even if Lloyd George, without apparent reason, had lied when he said that everything supplied by America amounted at most to one-sixth of the total.) Therefore "the blood of hundreds of thousands cries to heaven against this brand of humanity." (Not louder than the blood of all those laid low by the fire of Krupp and Ehrhardt guns, among whom, until yesterday, there were very many Germans.) "We see ultimate victory beckoning," but we must "voluntarily forego it" and "give up the best and most effective weapon against our deadly foe, England, because it suits the political and business interests of the Ameri-

cans. To such a pass have we come!"

To such a pass, that it may be said openly that responsible persons exist in the German Empire to-day who wish to forego using an effective, victory-promising weapon because they tremble before America's "insolent demand." To such a pass that a party leader, whose strength and parliamentary strategy are rightly rated higher than those of anyone else, speaks openly during a fateful hour for his dearly beloved fatherland about things and beings concerning which he has not the slightest knowledge. Therefore it would be hopelessly foolish to call him

"hypocritical." He is too clever to be embittered by the lost cause of the Prussian right to vote, too long accustomed to fair play to use the exaggerated hope of the masses for submarine victory as a favoring wind for floating the ship of his party off the sands.

SPIRIT THAT MUST ANIMATE THE PEOPLE.

But does this serious man seriously believe that ignorance blazoned forth with the power of a Hercules will pull him through the flood; does he expect to go through this world epoch without the slightest inkling of the history and will power, the needs and ambitions of great foreign nations, of the duties and rights of imperial world politics? After the war also a conservative party will be needed. It will be possible, however-despite the alliance with the big manufacturing interests, which assure to both sides not as much as three dozen seats in Parliament-only if it be entirely renewed, if it fit its thoughts and acts to the newly plowed earth, to the uprooted will of the time, changed from the smallest to the greatest. This can happen only if the party's leader does not in fateful days for Germany lay about him with his flail in the workshop of subtle statesmanship. The party will be thanked for giving the army able leaders; it will be blamed, perhaps too hastily, for having been economically inferior to the more cultured classes. where the war has brought greater profits to the agriculturer than to the masses in the cities—let that be allowed to him without envy. But let not one "who can see it through" speak harshly about patriotic duty to one driven by losses into want. Let him work in his district for social betterment and honest prices, but let him not haughtily brand as unpatriotic because they think differently from him men who have worked harder, and, by their industry, attained to wider knowledge and thus to a more accurate appreciation of what is politically possible and necessary. Hanan did that once.

Herr von Heydebrandt did this. "We have a fractional patriotism which considers all beyond its fraction as something foreign which can be damaged in any way provided it bring advantage to the fraction." Thus Bismarck scoffs; Bismarck, whose spirit has never been grasped by the noise makers of today, for which reason they uselessly desecrate his name. Compared to him, Herr von Bethmann seems a daredevil.

Bismarck, even in the most difficult moments of battle, always reckoned as a probability the most unfavorable of possible results; in every one of his three wars he tried everything conceivable to appease neutrals. In the Reichstag he himself bore witness to the fact that, in the service of the fatherland, he set aside "aggressiveness, threats, vituperation"; that he sought to soften, and even, in extreme cases, did not hesitate to "back down and grovel." He did this, he said, because "the wiser man

Has reason become madness? Was Bismarck, the always just, the soldier well acquainted with Shakespeare's lordly heroes, backward in his belief in Prussia's and Germany's mission? Look upon him at Versailles, with his white cap and sulphur-yellow collar, standing sleepless in the moonlight, on the ladder, before the common soldier on sentry go. "Do you believe that we shall ever get into Paris?" The confidence of that common soldier helps the chancellor to sleep.

Listen to him! "I have never looked upon international disputes which can be settled only by war from the point of view of German student honor, but only in relation to their effect on the demand of the German nation to live in common with all other great powers of Europe an independent political life on the basis of a national ability peculiar to us. Politics should not be a Nemesis; vengeance is not ours. Politics is a task to which, in reality, nothing but navigation in unknown waters is comparable. One does not know what the weather, what the currents, will be, what storms one must live through. moreover, in politics one is essentially dependent on the decisions of others and can never act independently. It is easy for a statesman, in the cabinet or the chamber of deputies, to use the wind of popular opinion for blowing the war trumpet, and then quietly to warm himself beside his hearth; it is easy for him to make thunderous speeches from his platform and then allow the riflemen bleeding to death in the snow to decide whether his policy is or is not to bring victory and glory. ing is easier than that. But woe to the statesman in this day of ours who does not cast about him for a casus belli which will be still tenable after war is over!"

HOW BISMARCK MIGHT HAVE USED POWER.

There speaks Bismarck. Who dares to maintain that this genius, this Vulcan tamed by politeness, would ever have treated a land of such inner and outer strength, such abounding youth and confidence in the future, as America in the way that Herr Heydebrandt counsels, even were Germany already menaced by

nine foes? Would he not have carefully weighed the efficacy of moral against military means? Assured of the cup of victory which only imprudence could dash from his lips, would he have allowed irresponsible trifling with carefully guarded public opinion? Were Bismarck now chancellor, Herr von Heydebrandt on the morning after his downfall from the narrow pinnacle of his glory would have read this in the North German Gazette:

In a certain highly important conservative circle which usually backs up the Government—not always gratuitously—efforts have of late been made by a press campaign and demagogical speechifying to exert influence on decisions of unusual importance. The Imperial Government takes pleasure in recalling that during the best days of the Conservative Party the Government has often been requested not to countenance such machinations in any way. Conscious of its responsibility, the Government spurns all such machinations. The Government's actions are based upon dutiful weighing of circumstances, means, and situations of which it has thorough knowledge; of which, moreover, to a considerable extent, the Government alone has such knowledge. Concerning international decisions the Government is even less willing than in everyday matters to endure attacks upon its prestige more patiently from the Right in Parliament than from the Left. Should the Government need further support * * *

THE ANSWER.

Says Herr von Heydebrandt-

I think that the German answer will be worthy of our country and of this great hour.

I think so, too; and I hope that in this hour Herr von Bethmann will measure up to the greatness of his destiny. To blow the war trumpet, to make thunderous speeches, to hand still another ambassador his passports, and swear all submarine commanders to merciless sweeping of the seas would be easy to the littlest intellect. What would hinder him? Fools and hirelings would extel him as the strong man sent by Providence; for three days he would hear nothing about butter famine, shortage of cattle, speculation in veal, rise in price of poultry and pigs' tails; he would no longer hear nothing but the cry from the soul of the nation for a food dictator, who, of course, should not be a farsighted captain of industry or big merchant, but an efficient field marshal behind the front. The Bardolphs and Pistols of Pan Germany would hall him with hosannas. And if, at the end of the week, the success promised by a hundred lickspittles had not arrived, the chancellor would nevertheless have hoarded up the applause and would blame the navy, which had promised more than it could achieve.

Any fool would be capable of enacting such a farce. A courageous man, one of strong heart, is he who sticks to the determination not to yield to artificially stimulated popular clamor, but to do what is necessary, what does not glitter, what does not penetrate until later into the brains of the political mob. Is it to be a matter of "student honor," or is there to be careful reflection whether the complaint brought to the Imperial Government is justified? No essentially new concession that might be considered a sign of weak yielding in us is asked; the contention is merely advanced that something already promised has not been fulfilled because it was not possible to fulfill it within the bounds of the method of sea warfare chosen. If this contention is shown to be justified, atonement must be made for a mistake. And Germany never shirks such a duty.

There can be no doubt that President Wilson is speaking for all neutral nations of both hemispheres, having come to an understanding with them before he wrote his note of complaint. To be sure, only one European nation has as yet definitely signified its agreement with him, viz, Monaco. "As a ruler, as an explorer of the seas, and savant, I join you in the complaint which your noble feeling for human dignity causes you to make against the shameful attacks by Germany on neutral rights, the honor of mariners, and the conscience of humanity." Albert Honorius, ruler of all the inhabitants of Monaco, lessor of the most famous gambling house and brothel, formerly our friend, telegraphed to the White House at Washington the above words. "Olet; non dolet." It is unavoidable for us to fall out with all of them, but we will not tremble. But if, without overpowering provocation, but on account of questions of advantage or points of honor, we bring upon ourselves the enmity of the New World, we shall then be playing the trump card of our foes. What does the enemy desire? That we fall out with America—and a quarrel with the United States would automatically bring one with the South American nations. What would bitterly disillusion our enemy and make him resign himself to fate? The fact that we had found firm foundations for an understanding with America.

England muddled along about conscription because she hoped that her answer on the question would be made easier if the United States raised a million men to fight us. If we come to an agreement quickly and genuinely with the Americans, the

dispute of America and all other neutrals against England will at once flame forth again, and England will have to loosen her commercial blockade and forego her prying into cargoes, which only Sweden refuses to tolerate. Then she can breathe again, for bottoms for her cargoes and means of nourishment will be assured to her. Of that more will be said later, and steps must be taken to prevent U any longer being made into X.

NO JOY OF VICTORY IN DROWNING WOMEN.

If we blunder blindly into new enmities, we play England's game. The effects of the break would be enormous. They would be felt in southeastern Europe, in the heart of Canada, Australia, Japan (to whose account a gigantic part of the over-seas arms and ammunition supplied to our foes must be placed), China, India, and Africa. Equally momentous for us would be the effect of a firm agreement. Yet it must not be prepared and received with a wry face; we do not wish to do what the enemy desires, but we also wish to swallow no poisoned pill. There must be neither untruthfulness nor underhand dealings. Let us fight whenever it is inevitable, but never when it can be avoided; let us wage no fight in which only frightfulness can bring victory. Should victory hinge upon the pitiless drowning of all defenseless men and women, old people and children, from neutral lands, in order to frighten every ship away from traffic with England, then millions of good Germans would feel no joy with England, then millions of good Germans would feel no joy in such a victory, and many a daring submarine commander would gladly exchange such hard duty for a watery grave. Never again could Germany assume her old position in the human race and live in communion with others, for she would then not only have sundered herself from the law of nations but would have broken a word that ought to have been binding upon her as an oath.

upon her as an oath.

This should have been foreseen before that word was pledged; now it is too late. If our position is shown to be untenable, it must be evacuated with the proud mien of him who has conquered himself. The bravest generals have often acted thus and have blamed the general who did not. They never hesitated before the phantom of "honor," that might change from the coat of arms to the funeral procession of a nation.

SENSITIVE, SWORDLESS, YET COURAGEOUS SOULS.

Let the sword be the instrument of the brain, the general the helper of the statesman. And whosoever deems the sword a rusty thing, no longer worthy of the new human race, let him not tax us for that reason with possessing a cowardly soul. Since every day the belief grows that military means are not sufficient to bring war's horrors to a successful end, necessity is forcing us to look upon reason as the root of politics, forcing us to the conviction that within our boundaries there are worthy, morally

sensitive, swordless, yet courageous souls.

In President Wilson's eyes war is a terrible crime, that bloody survival from the tales of knights, robbers, and ghosts against which Goethe once warned America's enthusiastic youth. He would apply international law and have a tribunal for laying it down and guaranteeing its execution. Are we to revile him for that? To-morrow 100,000,000 people will rally about him. Is he to be criticized for harboring the idea now and then that, after a triumphant war in Europe, all-powerful Germany would some day turn threateningly toward America and covet the hemisphere, discovered after the rest of the world, as an outlet for her long-repressed lust of power? He is mistaken (as an American, not as a slave of England); he will live to see our interests in harmony with his. When everybody has realized that even the strongest coalition can not conquer us despite the longest struggle, that the majority of voices in a debate is not, as it appeared to be in the days of the two groups of great powers, the expression of superior strength, then we may, without fear of being misunderstood, acknowledge our readiness for organized peace, such as will secure to each State its sovereignty. We will try every path that may lead toward this goal, willingly and without prejudice. If our answering note to America should show this willingness in words worthy of the great issue at stake, without foolish trimmings and distrustful fripperies, it would mean an appreciable step forward and, before the end of the summer, one of the heads of the military bogey would be hacked off.

Plentiful declarations of war have not turned the fifth chancellor of the German Empire from his wish to mix ethics with politics. German history and German genius will thank him if what now is weakness becomes the strength of a giant. Two rulers, essentially similar in mind, may easily come to an agree-

ment in the dwelling place of free nations.

"Peace be with you!" Must martyrs die on the threshold of every new doctrine? The seat of Paul is empty.

The Naval Appropriation Bill-Preparedness.

EXTENSION OF REMARKS

HON. IRA C. COPLEY.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. COPLEY. Mr. Chairman, probably no question that has been before the citizens of our country for the past generation lies closer to our hearts than this one of preparedness

Adequate preparedness means that we shall be able to protect the lives and firesides of our people not only within the geopraphical confines of the United States, but also in our dependencies, and in foreign countries, and on the great high-ways of commerce, whenever they are engaged in a lawful calling.

Some of our people apparently fail to realize that there is now a need for anything different than what they have had since the conclusion of the Spanish-American War. With these few I can have no quarrel. I take this occasion to express my own convictions on the subject, believing that they are sound, whether the standard by which they are judged be the general good to the greatest number in the entire world or the general good to the greatest number of our own citizens of these United States.

World conditions have changed within the last two years. Why, the very frame of mind of the people of most of the socalled civilized nations seems to have undergone a most radical change. It is no longer a question of the spirit of Christ, but one of might, each seeking to grasp for himself some advantage through the destruction of life, property, and happiness of his neighbor. It is war, and there is nothing nice about it.

It naturally occurs to us, as we are discussing the question of what we shall do to prevent ourselves from being drawn into this conflict, and to protect ourselves, not only during its progress but after it has been concluded, that there must be some cause for this. And if we can find the cause, perhaps we can more readily hit upon a course of action which will help us in maintaining a strict neutrality and in preserving for ourselves and our children such blessings as we now enjoy after the quarrel between the now contending nations has been finally adjusted.

For more than 250 years England has been supreme on the water, and she has been preeminent in commerce, just as has been every maritime nation since the beginning of time. These conditions have naturally developed an empire spirit in her people, and to-day the little island, with less than 40,000,000 of inhabitants, rules nearly 400,000,000 of other peoples, inhabiting territory many hundred times greater in extent than her own. All this has begat a peculiar school of statesmanship and diplomacy suited to her purposes.

Almost within the last half century another great nation has developed. When the "Smith of Sedan" welded the German States into one empire a rival that was to challenge England's

commercial supremacy found its beginning.

The German peoples, loosely bound together, had for a century or more been developing an intellectual efficiency that now had a chance to manifest itself along material lines. efficiency the world has never seen. Beginning with the child at the kindergarten, carrying him through their schools, which correspond to our grades, embracing vocational training from childhood, extending through the technical high schools and universities; the German mind as a whole has been trained in advance of that of any other nation.

They carried this along into their daily walks of life, into their work, their trade, business, or profession, and German efficiency stood at the outbreak of this war as a standard which no other people have ever yet reached in the history of this world. They began to use this training in production, distribution, selling, transportation, banking, and topped it all with the most scientific protective tariff that has ever been devised in this

world.

Fifty years of this began to manifest itself in the channels of commerce. England suffered most, and, as she always has done whenever her business has been interfered with, immediately her own efficient diplomacy found some combination to

curb the rising tide of a rival's trade.

It is impossible in a brief space of time to go into all the details leading up to this war. The prime cause was an endeavor

of each of these two great commercial nations to increase its own advantage in the race for wealth. The break was sure to come; everyone in Germany recognized it and prepared for the inevitable; everyone in England knew it but refused to believe it. In 1908, when Austria annexed Bosnia and Herzegovina, Russia, her ally, France, and England protested; but Russia was still carrying some fingers in splints as the result of her war with Japan and was not able to do her full share in the fight. Germany stood back of Austria and Austria retained those provinces.

At that time, in commenting on this incident, one of the great

captains of German industry used these words:

Germany's population has doubled within 40 years. We have admittedly the most sterile soil in all Europe. No longer will our soil support our people. We must either limit our population, which is unthinkable to the German, or we must find new colonies. England has a great many which she is not using, but she will not give any of them to us; she will not even sell them. There are a great many other places in the world to which England has no rights and in which she has no interests. Whenever we move in the direction of one of these we find a British battleship blocking our way Germany must have colonies either by peace or war, and I think England will give them to us by peace.

Some technical objection may be raised to some parts of this statement, but, in my candid opinion, it expresses the real cause

of this war, namely, trade expansion.

If, then, as seems clear, trade or wealth is the real cause of this war, what may we expect as our lot after this contest is over? Already we are taking over the trade of the world. The last figures available from the Department of Commerce, including April, 1916, show that we have imported for the 10 months of this fiscal year alone \$273,910,803 in gold more than we have exported, and for the 12 months ending April 30, 1916, our excess of imports of gold amounts to \$353,289,312, a sum so vast that it passes the comprehension of any of our great princes of commerce; but this is only a manifestation of our activities in which all our people are interested.

During these 10 months we exported a total of \$3,401,129,644 in goods, or \$1,678,707,529 more than we imported for these 10 months, while figures for the 12 months ending April 30 show exports of \$3,943,895,202, an excess of \$1,921,493,096 more than we imported during that period, and for the last 3 months our exports are at the rate of more than \$5,000,000,000 per year. England in her most prosperous times has never exported more than \$3,000,000,000 per year; Germany about half that figure.

This enormous balance of trade in our favor has resulted in adding to the stock of gold which we had before the war began, the enormous total of more than 20 per cent, and in addition probably around \$2,000,000,000 worth of our securities have been sent back to this country and are now owned by our people. No longer must interest and earnings be paid to the peoples of some foreign country. But this is only a beginning. facturing plant as organized is very much like a team of trained Our manufacturers are working at top-notch speed; their men wno work at the benches, their foremen, their selling agents are trained to the minute. Then what is going to happen

when this war closes? It is perfectly clear.

The official figures of the losses which Germany has sustained up to the 1st of May of this year amounted, exclusive of the naval list, to 2.822,000 men. Of these over 600,000 were killed in battle or died of wounds; another 150,000 died of sickness, their productive power destroyed for Germany forever. than a million, in addition, have been grievously wounded, their productive power seriously impaired for the rest of their natural lives; another million slightly wounded, their productive power more or less decreased; and any man who knows anything about the physical condition of men must realize that no man can serve in the trenches for any length of time under all the distressing and horrible conditions and retain a physical vitality that will allow him to produce in after years at a rate commensurate with what he might have done had he been engaged constantly in peaceful production. So I do not think it is far from the truth when I say that Germany has already lost the equivalent in production of more than 3,000,000 men. France necessarily must have lost about 60 per cent of this number; England about 30 per cent. Then, adding the losses in Belgium, we will surely find that our competitors have already lost the equivalent of

more than 6,000,000 producers.

I am not taking into consideration Austria, Italy, Russia, the Balkans, or Turkey, for they do not compete with us very much in the markets of the world. These 6,000,000 men who are gone are not the average of our competitors, but the best, strongest,

bravest, the most competent.

When this war is over the men now engaged must be returned to the channels of peaceful industry. In each one of the countries which is a manufacturing competitor of ours for the trade of the world, when the factory whistle blows on the morning of reopening it will find a very large number of its former employees absent forever. If this were the case in but one factory the loss might be supplied by drawing upon some other institution, but the same thing is true everywhere in all those countries. Any man who has had any experience in production knows exactly what it means if one-fifth, one-fourth, or, if this war lasts two years longer, even as many as one-half of all the producers, are suddenly destroyed. The United States must have the trade of the world, for no one else is in a position to compete with us for it.

The entire continent of Asia with nearly three-quarters of a billion inhabitants, the entire continents of South America, Africa, and Australia, all peopled by men who are not now manufacturers, and our country alone left in a position to produce economically, there can be but one result, the golden stream of wealth which has been pouring into this country, stimulated or directed primarily by the needs of our warring neighbors, will continue and must continue until they have been able to replace the producers in their ranks, and that, Mr. Chairman,

will require at least a generation.

Meanwhile, our manufacturers ought to be going on faster and faster. The opportunity is here, made for us, it is true, by the greed and blindness of our sister nations; but we are going to offer such a prize in commerce and trade as the world has never seen. If our neighbors in Europe are now contending for exactly this same prize, why should we hope to escape a shearing when, as a defenseless lamb, we are offering the richest of golden fleece?

What shall we do about it? We ought to have a trained army, amply and properly equipped, sufficient to mobilize at a moment's notice for defense of any point in our country. That question has been thoroughly thrashed out in this House. not agree with the conclusion, although I voted for it because it was the best that was offered to us by the majority. ought to have a navy of sufficient size and strength to prevent the landing of any soldier of any country in Europe on this Western Hemisphere without our consent. Such an army as we are likely to have will never be able to strike any of the European countries. We can not wage an offensive warfare with that army. No matter how great a navy we create we can never wage an offensive warfare on any country in Europe. When this war began, England had a fleet many times as effective as our own, and for nearly two years she has been unable to put a battleship within 50 miles of the German coast. England has spent nearly two years and seven billions of dollars developing an army, and she has not been able to put a soldier within 50 miles of the German frontier. Any army which we might create in this country could not do it in 10 years. Any navy which we might create could not within the same length of time accomplish what the Navy of Great Britain has been unable to do. There is no reason why the pacifists should agonize about the tendency to use an adequate army or an adequate navy whenever we have them, because it is perfectly clear that we could not accomplish anything offensive with either of them. And yet this war itself has shown us that when the prize is sufficient all the rights of neutrals guaranteed by treaties are of no avail. At this point I want to say that I am not one of those who is driven into a frenzy by the violation of the neutrality of Belgium, nor the sinking of the vessels carrying munitions of war, even though they also carry passengers. It is all horrible, but it is war, and every act of passengers. war is itself but one more added to the awful collection of

We have heard a lot about the hostage which we hold against attack by England; that Canada is her granary and is just to the north, with a population of about one-twelfth our own, and that we could take Canada, thereby interfering with England's grain supply. Why, the entire relation between England and this country was changed at the moment Field Marshal Kitchener began the raising of that enormous army. Prior to the outbreak of hostilities, insignificant as our Army was in numbers, it would compare favorably with the Army of Great Britain. We were nearer to Canada; our resources are greater than those of England; we could arm and equip and undoubtedly beat her in the race for that prize; but now England has spent billions of dollars and has a great army and the necessary guns. When this war closes, with her command of the sea, she could put a million men all along our northern borders inside of a very short space of time—in much less time, in fact, than we could make a sufficient number of guns and a sufficient amount of ammunition to oppose them, to say nothing of developing an army. England's granary is no longer hostage for good behavior.

We all know the history of the relations between England and this country, coming to the crisis in 1776 that gave us a national independence; again in 1812; and again in her sympathy with the South during our Civil War. But after the happy conclusion of that struggle England's policy entirely changed. At the close of the Civil War we had the greatest Army the world had ever seen up to that time, and trained to the moment. We had a Navy then, six ships of which could have met the combined fleets of all the powers of the world in the middle of the Atlantic and sunk them all with scarcely a scratch. They were the only "ironclads" in existence. England at once changed her policy toward us, and from that time until the breaking out of this war has courted our friendship. But England does not love us; neither does she hate us. She is for England and all of her peoples. And so, too, if Germany should win this war; Germany does not hate us, but she, too, is for Germany, and it does not need any word of mine to bring this House to a sense of realization that German efficiency knows exactly how to get what it wants if it has even so much as half a chance.

Our Navy ought to be made up of every conceivable kind of a fighting craft and properly balanced with dreadnaughts having the power to hand a buffet and receive one. It must have battle cruisers with their greater speed and great offensive power, with a lighter defensive armor. We must have fast cruisers for scouting purposes and for destroying enemies' commerce. We must have torpedo boats and torpedo-boat destroyers, submarines, and hydropianes, and everything that goes to make up a balanced Navy, and it may cost \$1,000,000,000 to build it. But what of it? Our national wealth is estimated at the present time at approximately \$200,000,000,000, and growing with such rapidity that the wildest flight of fancy can scarcely conceive what it will be within the next generation. One billion dollars properly spent will guarantee to us and our descendants forever the enjoyment of this prosperity which nature first bestowed upon our land, and which the courage, industry, and the sacrifices of our forefathers opened up. with this, not the least, is the blind, unreasoning stupidity of the warring nations of Europe. This war is not of There is not a man with the love of human kind our making. in his heart who does not want the war to cease at once. The opportunity is here for us, however.

I know that \$1,000,000,000 is an enormous sum, that the expenditure of this staggers the determination of almost any

man, and yet figures are but relative.

If a man owned a farm worth \$20,000, and there was some flaw to the title, or worse still, some truant watercourse which might destroy the fruitfulness of the farm and possibly the lives of the owner and his family, and if he could correct all this by the expenditure of only \$100 and failed to do it, there is not a prudent banker in all the United States who would loan that farmer money with which to prosecute his business. Likewise, if one of our thrifty artisans had a home worth \$2,000, with some weakness in the foundation or beams, which might at any moment collapse and destroy the life of himself or his family, together with the value of the house, and if \$10 intelligently spent would correct that and make the house safe and comfortable for his family and himself forever, and he failed to spend it, that man is not fit to own a home. One billion dollars, enormous as the sum is, sustains exactly the same ratio to the national wealth as \$100 does to the farm worth \$20,000, and again exactly the same ratio as \$10 does to the \$2,000 cottage.

I would vote for \$1,000,000,000 in bonds at once to build such a navy, and face my constituents in the consciousness that I had done my part in guaranteeing to them and myself and our posterity the prosperity and benefits for all time which peace

alone can give us.

We ought to lay down the keels of 20 of the greatest battleships that the world ever saw and enough of the other craft to balance up a navy, and continue this policy until the world understood that we proposed to control the waters over which

they might bring hostile armies to our shores.

We have no monopoly on the art of shooting straight. A naval battle to-day is a mere matter of the range of guns and the speed of the vessels. When Dewey fought the Spanish fleet in Manila Bay his guns outranged theirs, and he sank their vessels without sustaining an injury. When Togo fought the Russian fleet in the Japan Sea his ships were faster and his guns shot farther. He stood outside the range of Russian guns and sank their vessels without a scratch. When the Australian cruiser Sydncy overtook the German cruiser Emden the story was the same. Although the Emden was commanded by perhaps the greatest genius that this war has yet produced and was manned by a crew second to none for its courage and resourcefulness, the Sydncy could sail faster and her guns shot farther. I have seen the chart of the battle. The Sydncy kept the Emden under her guns all through, and on one occasion, when the

Emden tried to run in to get near enough so that her own guns could strike the Australian, the latter turned and ran. She made a complete loop to keep out of the range of the Emden guns, but never let the Emden get out of the range of hers. These tactics would not be allowed in an athletic contest, but there is nothing that is not fair in war, so the Emden was destroyed by superior speed and superior guns.

This last battle is so new that we practically have no information which would be of any value other than this—that undoubtedly heavily armored dreadnaughts and aircraft had much to do with it; but it is for our naval experts to tell us what we

ought to do.

The maintenance of a navy as a weapon of defense is much more economical from an industrial standpoint than an army. When this war broke out Great Britain had enlisted in her navy about 149,000 men, and yet that fleet practically held at bay, so far as England was concerned, the entire German Army of 5,000,000 men trained to the minute and equipped to the last word.

As I have said, a navy could not be used in making war upon a great people, but it could be used in destroying the commerce of our enemies. If we controlled the water, we could starve England within six months, even if the wins this war, by cutting off her food supplies. And if Germany should win and we controlled the water and destroyed her commerce, every sacrifice in blood and treasure which she has made will have been offered in vain. The moment this Congress announces to the world that it is our intention to control the water, no longer will Germany quibble with us about the violation of international law in her submarine warfare and no longer will England temporize with us about her violations of international law in seizing our cargoes and rifling our mails. Both of them will know just as soon as we make the start exactly what the end will be, and it will probably have more effect on ending this war than any other one thing that we or any other nation on earth can do.

I want the United States to possess the most powerful Navy the world has ever seen and never use it excepting in defense of ourselves and the oppressed of the world, and I close with the sentiment expressed by the foremost American citizen of this generation, "Speak softly and carry a big stick."

Naval Appropriation Bill-With Reference to the Government Armor-Plate Plant.

EXTENSION OF REMARKS

HON. HENRY W. WATSON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 13, 1916.

Mr. WATSON of Pennsylvania. Mr. Speaker, there are many features in this bill that are not commendable, nor will they be acceptable to the American people as wise legislation. tendency of the Democratic Party is drifting toward socialism rather than that of Americanism-I mean by Americanism those principles which have regulated the policies of our Government from its conception, nearly within the memory of men now living, down to the present day. In this short period of our Nation's life we have grown from a very feeble and experi-mental beginning to be the richest Nation of the world. Two characteristic State doctrines were preeminent in molding our past history—individualism and protective tariff. In recent years there has been a receding from these principles toward Government ownership of our public utilities and a modification of our tariff laws. A tax on importations prevents the influx of foreign commodities and lessens the burden of taxation. system of raising revenue has always been persistently attacked by the Democratic Party as an infernal law in favor of the accumulation of personal wealth and in favor of the man of

"Confidence in the integrity and self-control and the good judgment of the people" was Jefferson's doctrine, and I heartily indorse it as my faith in the American people to control the public utilities and industries without Government intervention except for the proper regulation in the course of commerce. Government ownership would be to return to feudalism, with the state, instead of the lord of the manor, preventing the development of individualism. Under Government control all rules and regulations would be prescribed by Congress, and no redress

could be obtained except through the concurrence of the Senate and House, a long and tedious procedure. The Interstate Commerce Commission is another step toward Government control. It has a complished effectual work, but the continual enlargement of its powers will savor of Government control. If its authority becomes too rigid, small railroads eventually will be compelled to abandon their charters. There are railroads being operated at a loss on account of the orders issued by the Interstate Commerce Commission. Appeal has been made by many small railroads asking to be exempted from certain details which big rail-roads could easily observe. The answers are, "If you can not comply, you will be compelled to close your road or appeal to Congress for relief." The Interstate Commerce Commission, with its growing jurisdiction, may bar extensive railroad building; 933 miles of railroad were constructed in 1915, fewer miles than at any yearly period during the past 15 years. Its laws have surrounded new railroad projects with such exact regulations that it is quite impossible to raise money to construct them. The Parcel Post Service also is initiative for Government control in carrying articles of merchandise. I am in favor of a parcel-post system, but not to the extent that will prevent the continuity of private corporations. I do not advocate any course of Government that may tend to warp the adroitness of the American citizen and stop the building up of our great industries, of which there has been no parallel in history. Our Government is one of the people; it is, therefore, for them to decide whether or not they prefer Government ownership of our public utilities and of our industries.

The Government has no competition, no one to fear, no power

Corporations, in order to subsist, must perform services equal to their competitors, and all are regulated by laws of superior authority. Americans have been famous inventors and have given birth to many of the wonderful devices of machinery that now move our industrial world. Monarchical Governments and those who exercise control of their public utilities depend very largely upon the ingenuity of the American genius for inventions. American locomotives are found in service in every country. The telegraph, the telephone, the airship, and many of the marvelous applications of electricity in the industrial arts have been the inventions of Americans. The employee in Government plants has slight chance for promotion; his life is fixed the moment he accepts a position in the Government employ. The higher positions are all filled by political influence. This can not be avoided as long as political parties exist, for they must distribute patronage. We owe much of our unparalleled industrial progress to foreign-born men, whose abilities and chances would have been dwarfed under the political conditions of their native countries. These men's brains were not changed when they swore allegiance to America, but their opportunities were enlarged, the hope of wealth an incentive, and individualism untrammeled. Government control retards the higher development of the human intellect and dulls the inventive genius of man. If the value of inventions were tested in Government shops and their adoption approved by Government officials, many inventions of merit would not have

Eleven million dollars appropriated for a Government armorplate plant is a shadow of the future. I hope the people of the United States will not permit themselves to drift toward Government ownership and leave behind them pure Americanism, where freedom of religion, of speech, and of the press have been our greatest happiness, and individualism our national strength.

Naval Appropriation Bill.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN. OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 29, 1916.

AUSTIN. Mr. Speaker, practically the only foreign policy the United States has consistently maintained is the Monroe doctrine: The doctrine that the Americas shall be for Americans and that any encroachment on the sovereignty of the peoples of the Western Hemisphere will be regarded as a deliberately unfriendly act toward the United States. How near our adherence to that policy has come to precipitating us into war in the past, and how full of danger our future is if we do not abandon that policy, a thing not to be thought of, is apparent to all who read history and draw lessons from what

they read. Germany in particular has large colonies in South and Central America and her aggressive policies where her national and commercial interests are involved bodes ill for the future unless the character of her government and people have changed. Japan, with her teeming millions actively seek-ing markets as well as territory among our neighbors to the south, may, in the not distant future, so act that war becomes inevitable.

The submarine question is still fraught with danger even though for the moment our differences with Germany are seemingly satisfactorily adjusted. The President himself, in his recent address to Congress, stated that when Germany announced her intention of torpedoing vessels found within the so-called danger zone around the British Isles he saw that such a policy would at least involve a severance of diplomatic relations with that country. He has also stated, when urging the country to provide an adequate Army and Navy, that he knew not what the next day would bring forth.

It is not to be thought that should war with Germany come, Japan would fail to seize that opportunity, favorable from her point of view, to press for settlement the questions she has raised in California, and to remove the United States permanently as a power in the Far East. It is equally true that should we unfortunately be involved in war with Japan, the simplest common sense would make Germany an ally of Japan. Germany's grievances with us over the action of our Government in the present war, denoted by her as unneutral, furnish a greater cause for war than the reasons which have brought war to some of the European nations in the past year or two.

With the Monroe doctrine as our foreign policy, a policy involving the defense of the whole Western Hemisphere, and with our foreign relations such that the President characterizes them as likely to lead to war at any moment, it becomes our imperative duty to see to our Navy, our first line of defense. With the possibility of war with Germany or with Japan within a year or two, coupled with the probability that a war with one of those nations involves a war with both of those nations, we must not only strengthen our Navy but we must make it incomparably the superior of the navies of Germany and Japan combined.

The Members of this House are all alike in one respect. We are untrained in the naval profession. We are totally unacquainted with the various engines of naval warfare. We do not know by first-hand experience the relative value of the different classes of ships, and if we would act advisedly in legislating for the upbuilding of the Navy we must seek advice from those who are able to give it. The views and recom-mendations of two classes of individuals, relative to the Navy, have been voluminously and energetically presented to the Naval Committee, and from the wealth of information collected we are to determine whether or not this bill will so strengthen the Navy that it will be able without question to protect our shores from whatever quarter and at whatever time the enemy may

The first class represented before the Naval Committee are the civilians, nontechnical men like you and me. class is made up of naval officers who have given their entire lives to a study and to the use of the weapons and strategy employed in the navies of the world.

If you are accustomed to consult a doctor when you are engaged in a lawsuit, if you are accustomed to seeking advice of a lawyer on a question of farming, then I would expect you to go to the nontechnical civilians for expert advice on naval needs. If, on the other hand, as wise men you seek out a lawyer to advise you how to protect your legal interests; if you apply to a physician to care for your health, then I would expect you, if you would be consistent, to seek and act upon the advice of eminent naval men when you want guidance in naval matters.

Among the views expressed by civilian advisers, we have heard that we should lay down far more vessels of war this year than the shipyards of the country, at double their capacity, could build. Other gentlemen of the same element urge that we dismantle all of our ships, cease our training, and let our Navy become an impotent thing, a Navy in name only. Granting that these gentlemen all speak from the heart, we can not grant that they speak with knowledge. They may express what they personally would like to see done, but they do not know what *should* be done, an entirely different thing, for they lack that intimate knowledge of naval affairs ar! naval needs which must be found in our advisers if their advice is to be of value to us.

of the world and on what additions are necessary to round out and make stronger and more perfect such a Navy as we have to-day. However, the consensus of their views, after bringing to bear the work and training of their lifetimes in the naval service, is that the Navy of the United States is fourth in strength among its possible attagonists. They tell us that our most pressing needs from the standpoint of ships are, first, more capital ships—that is, dreadnaughts and battle cruisers—next, more scouts; third, more destroyers; and fourth, more submarines.

The General Board of the Navy, with Admiral Dewey at its head and with three rear admirals and five captains of the Navy among its members, have recommended the construction of certain ships; the Secretary of the Navy has proposed a different building program, and this bill provides for still another list of ships. The General Board, especially trained and chosen, may, I believe, be safely taken to represent the average views of our trained naval officers, and it is generous to assume that the recommendations of Secretary Daniels are a mean between the views of the preparedness and pacifists elements of the country. The former is representative of the trained advisers, while the latter is representative of the non-technical element of the country and is largely talking of what they want as distinguished from what the Navy needs.

The General Board recommends eight capital ships; Mr. Daniels, four; and this bill calls for five capital ships, all battle cruisers. In the matter of capital ships the General Board is for a whole Navy; Secretary Daniels is for half a

Navy; and this bill is for but little better.

As for scout cruisers, the type of vessel which has been aptly termed the eyes of the fleet, the General Board recommends six. The Secretary of the Navy is again for a 50 per cent program and recommends three. In this bill we are asked to let the fleet go partially blind and get along with two-thirds of the required number.

When it comes to torpedo-boat destroyers, vessels of high speed, carrying ready for instant use a dozen of probably the most effective naval weapons, the torpedo, it appears that this bill provides for 10 of these vessels, when we are told by the general board that to improve the standing of our Navy we should build 28. Secretary Daniels is for 15, but even he seems to be too much of a big Navy man in this particular for the members of the Naval Committee, who voted for but 10 of these vessels.

In the matter of submarines, as with destroyers, the new construction provided for in this bill is a compromise. It is a futile attempt to delude the country into believing that the Navy is being made right, when as a matter of fact but a fractional part of the ships needed are provided. A weak Navy is worse than no Navy at all, for, while both invite disaster when war comes, in the latter case you do not needlessly sacrifice men and money.

I want a Navy complete in all its parts; so complete that the chances of war are reduced to a minimum; so strong that no nation will with impunity flout us; so powerful that wherever American citizens go they will be free from the insults now heaped upon them in almost every foreign country simply because they are Americans. I am for the general board's building program throughout. I hope to see Congress provide in this bill for 4 dreadnaughts, 4 battle cruisers, 6 scouts, 28 destroyers, and as many submarines as can be handled by our shipyards.

The recommendations of the majority of the Naval Committee falls far short of an adequate increase in the matériel. The best proof of that fact is that with the program proposed, our Navy will be, when these ships are completed, still the fourth Navy in the world if foreign nations continue their peace-time building program. I am not content to see our Navy remain in fourth place, and I am for twice as many ships as the General Board has recommended if that is necessary to make us superior on the sea to Germany and to Japan combined.

Admiral Winslow, the commander in chief of the Pacific Fleet, states that his fleet, charged with the protection of the entire west coast of the United States, could easily be defented by one modern dreadnaught. Are you gentlemen of the west coast aware that this bill does not provide for a single dreadnaught and are you content to have the present state of affairs on the west coast continue? Will you not provide one modern dreadnaught at least? Do you not realize that with Germany to handle on the east coast, the Atlantic Fleet will have all it can do, if not more than it can do, and that no vessels will be available on this side to send to your aid? With Japan able to send, at a moment's notice, more dreadnaughts and battle cruisers to the west coast to lay waste to your cities than we have in commission in our entire fleet; are you not blind to your danger when you fail to provide ships at least equal in

kind and quantity to those found in the Navy of that warlike nation immediately to the west of you?

But the interests of the west coast are the interests of the east coast as well. An act that hurts a part of the United States hurts all of it, and it is as vital to the interests of my constituents in the mountains of east Tennessee as it is to the interests of our people who live in coast cities, that we have a strong Navy always ready and able to keep inviolate the lives

and property of our people.

Congresses of the past have not fully met the situation, otherwise we would not be the fourth naval power of the world to-I can only regret that the majority of my associates here did not vote with me when I consistently cast my vote for the largest fleet program proposed each year. Granting that omissions have been made, it is nevertheless possible, by a simple amendment to this bill, to make up, in a large measure, for those deficiencies. I refer to the proposal to offer bonuses to shipbullders who will speed up their work on naval construction, complete all naval work in the shortest possible time, and make our Navy stronger to-day without waiting for a distant to-mor-I would go even further. I would have the Secretary of the Navy withdraw the contracts awarded to the navy yards for the two capital ships appropriated for last Congress and call upon such outside shipyards as can begin work on those vessels immediately. The procedure Secretary Dameis has seen at adopt in this particular is, in effect, a disregard of the will of Congress. The dreadnaught to be built at the Mare Island Congress. will not even be begun until two years after those ves-, sels were authorized. Congress was not legislating for vessels to be acquired in the dim future, but was seeking to increase the Navy of to-day. Were those ships to be constructed in civilian shipyards they would be about 50 per cent complete on the day when, under Secretary Daniels' procedure, they will just be begun. Preparedness is thus delayed two years when the President says he does not know when war will break

Watchful waiting applied to naval construction will never

produce a Navy.

So, I would urge that we provide in this bill that the vessels we have authorized and the new construction carried by this measure shall be completed in the shortest possible time, and if a bonus of 20 per cent is necessary to produce that result then let

us provide that bonus.

But our duty does not end when we have provided the necessary number of ships of all classes. Ships are helpless, in fact they are an added danger, without trained officers and men to man them. Alarming as is our situation when we compare the number of military vessels we possess with those in foreign navies, even more desperate is our position in regards to the personnel of our Navy. The bill now under consideration does, in a half-hearted manner, seek to enlarge the matériel, and while, in a small measure, it increases the number of enlisted men, it is woefully deficient as regards the personnel situation as a whole.

The training of officers to handle the fighting machines of the Navy and to drill and instruct the enlisted men in their manifold duties can not be accomplished overnight. It has been stated that it requires 10 years from the day a boy enters the Naval Academy to the day he becomes an experienced and valuable officer. The Naval Academy has been and will continue to be the only eminently satisfactory source from which we can draw our officers. Recognizing that fact, this Congress increased the number of midshipmen at the Naval Academy by an average of about 75 graduates a year. We are told that the Navy to-day is short about 1,000 line officers, and this estimate is exclusive of the additional officers necessary by virtue of any new construction provided for in this bill.

The increase in the number of midshipmen at the Naval Academy will make up that shortage in about 13 years, in which time we will be even more embarrassed for officers than at present unless we do something now to remedy the situation. If it takes so long to get satisfactorily trained officers, if we want only the best officers—and they can be obtained only through the Naval Academy—we should at the time we provide for additional ships provide for additional appointments at the

Naval Academy.

So this bill is again deficient in that it makes no provision for officers for the ships it proposes that we build. It is too much to expect the ships to run themselves, but that seems to be the idea. I am in favor of a further increase of the Naval Academy, made now so that we will not be disappointed if the miracle of ships moving and fighting without officers and men does not materialize.

We have also been told that we are not only short of the total number of officers but also of officers of the proper rank. We

need more flag officers, more captains, more commanders, and so forth, and the matter of readjusting the rank of the officers now in the service to accord with their duties and responsibilities can and should be done now by the insertion of a few words

I have always been a great admirer of the Marine Corps. The officers and men of that organization are always ready when called upon for duty, and their calls are frequent. The Marine Corps is a highly efficient organization and deserves and receives the recognition that is justly due it as such. Therefore I am glad to see that this bill carries in it a substantial increase in that Corps and at the same time carries legislation which will

promote its officers as they deserve to be promoted.

However, I do not see why a distinction should have been made against the naval officers and in favor of the Marine Corps Naval officers, like their brothers in the Marine Corps, are constantly engaged in arduous and exacting duties and I believe their rank and pay should be commensurate with the responsibilities they are called on to assume. We have young officers with the lives of many men in their keeping, in charge of hundreds of thousands of dollars' worth of property, and at the same time those officers are far junior in rank and receive less remuneration for their services than officers of other navies occupying much less responsible positions. A laborer is worthy of his hire, and I do not believe that the injustice now being done these officers by retarding the advancement they have so fully earned should longer be continued. In other words, let us do for the Navy what this bill does for the Marine Corps and include in its provisions a law which will so distribute the officers we now have, that they will not feel that an invidious distinction is being made in favor of the Marine Corps.

As for the enlisted personnel, the blue ackets necessary to man our ships, this bill carried an increase of about 13,000. The hearings show that our shortage in this respect is to-day in the neighborhood of 30,000, without counting additional men needed for new construction. On this matter we do not have to seek expert advice. Any layman can go to any of our principal navy yards and see vessel after vessel laid up for want of men. When war comes we must have trained men in abundance, and if they are to be trained after the outbreak of war, we had better disband the Navy at this time. We can not wave a wand and have thousands of men spring up, and men are not trained manof-war's-men when they have been taught to salute. It takes months, perhaps a year of unremitting labor, and the longer the beginning of that work is postponed the longer will our Nation

be helpless efficiently to resist any aggressor.

An increase of but 13,000 men in another halfway measure and is another attempt to compromise with truth.

Naval Appropriation Bill-Proper Preparedness-Give the People Full Values.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY.

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. CARY. Mr. Speaker, in the program that is being put through Congress this session the legislation providing for "Preparedness" dominates everything else and is, I think,

the question that most interests the country.

There are, as always, sincere but misguided men who never believe in preparing for a possible danger, and in the past history of our country this class was numerous enough to make some very sad history. The War of 1812 found us without adequate I reparation, and though we won that war it was an indecisive victory, and it cost us the destruction of our Capitol and the loss of wealth and life much of which could have been avoided by proper preparation. The War with Mexico and the Civil War were both carried on in the early stages under heavy handlcaps; and even after all of these lessons, when the Spanish-American War came it found us once more unprepared, and thousands of our bravest boys were sacrificed who would to-day be living if Army and Navy, hospital and commissary, ordnance and equipment had each and all been ready and prepared for rapid mobilization and efficient coordination.

Much of the legislation along these lines should have been enacted years ago. Ever since I have been a Member of Con-

gress I have consistently supported every honest and sincere measure to keep us prepared at all times to defend our Nation against the world if necessary. I have voted for increases in the Navy at all times and never along partisan lines.

During these last months it has been my aim to vote consistently for every measure providing for adequate defense both on land and sea. The increase in the Army, the establishment of a Government plant for the manufacture of nitrates, the development of an efficient Aviation Corps, the construction of sufficient submarines, the building of an adequate number of battleships and the establishment of a Govern-

ment-owned armor-plate plant.

Two of these propositions, the establishment of Governmentowned nitrate and armor-plate plants met with considerable opposition from the same sources that have always opposed the building of battleships in Government navy yards. years ago there was very violent opposition to the building of battleships in navy yards and the arguments of the big ship yards were amusingly similar to the arguments of the armor

plate people to-day.

They said then, as the armor-plate people say now, that the Government could never make the ships as cheaply as a private plant, but careful investigation proved that while the overhead charges at the navy yards made the original cost of the ships a little higher, the superior workmanship and care in construction made the expenditure for repair so much less that the difference in original cost was more than offset. It was further discovered that as soon as ships were built in Government navy yards the prices of the private plants immediately began to decrease, and it is almost laughable to-day to note that the armor-plate people are tearfully offering to give us armor plate ever so much cheaper if we will only continue to do business with them. Some of the advocates of the Armor Plate Trust on the floor of this House have endeavored to show that the cost of armor plate in this country compares favorably with the cost in other countries. The cost of armor plate, ably with the cost in other countries. The cost of armor plate, the cost of naval construction, and the maintenance of the Navy in this country do not compare favorably in any detail or as a whole.

If we had received anything like an adequate return for money expended in naval construction during the last decade our Navy would be twice the size it is. Just let us examine the figures of the four great nations of the earth for a period of the last 12 years for naval construction:

Great Britain_____United States_____ \$1, 999, 209, 088 1, 331, 721, 206 854, 053, 078 791, 244, 187 Germany _____ France____

We have spent in that time over \$200,000,000 more than France and Germany combined. Does anybody in this House believe that our Navy is stronger than the navies of France and Germany combined or even as strong? Once more that old, old, sickening question arises, that never will down, "Where did the

money go?"
As I stated in the early part of my speech, I have always, since I became a Member of Congress, voted for an adequate increase in our naval strength. But over and over again I have

insisted, and over and over again I intend to insist, on the right of the people to know "where the money goes."

I have been accused of being against "Preparedness." I have been accused of patriotism. I have been accused of not supporting the President in his demand for proper defense because I have continued to ask this question; but my record will show that I was for a strong Navy when more than one Member who to-day shouts for preparedness was known as a "littlenavy" man.

But-and on this side of the question I have not changed and will never change-I believe in a defense that will defend the Nation, and not in defense that will only enrich the millionaire armor-plate plutocrat. I believe in a defense that will make the nations of the earth respect us in peace and fear us in war. I believe in a program of defense that will employ the very best inventive skill of the Nation and enlist brains rather than dollars to devise and create effective means to combat the ingenuity of other nations.

I have called attention before, and I call attention again, to the almost criminal neglect of the inventor in this country. call attention again to the machinations of the Armor Plate Trust against every invention that might injure their business,

and quote herewith from previous speeches of mine.

I think I would also be able to show why our Navy is not in harmony with modern science; why we have no large-caliber guns which can throw high-explosive shells, such as are now being used in the European war; why we have no armored automobiles with automatic machine guns; why our inventors have

been turned down by our Navy Department when they offered their inventions exclusively to our Government; why American inventors are obliged to sell their inventions to foreign countries, where they are received with honor and profits. England knighted our American citizen, Hiram Maxim, and made him rich for his invention of the automatic machine gun, while he received only snubs and ridicule from our bureaucracy. Germany is relying on the "Gathmann system" of high explosives and large-caliber guns to conquer the whole of Europe. Yet this Chicago inventor, after offering his various inventions exclusively to the United States Government, was rebuffed and ignored by the "ring" which controls and was forced to lay his life work to Germany and Japan, which have adopted them, and his only hope now is that they will never be used against the Government which spurned him.

I will give only a partial list of American inventors who were first in every line of modern improvements, none of which improvements were adopted by our hypnotized Government

officials.

Improvements were adopted by our hypnotized Government officials.

Maxim, 321513, July 7, 1885; filed May 2, 1884.
Lewis, 1004666, October 3, 1911; filed June 27, 1910.

Why have we lagged behind in all modern developments of armament, ammunition, and everything that goes to make an efficient modern fighting force? We had the inventors; we had the money; we have the men.

The submarine was an American invention. While all of the nations of Europe have developed this form of fighting sea craft to a remarkable degree of efficiency we have neglected it outrageously.

The flying machine was an American invention, and what have we done with it? Our whole aviation system is an international joke. We have a ridiculously small number of machines, most of them obsolete; and worse yet, we have put officers in charge of aviation stations that know nothing of the science of aviation.

Last June I paid a visit to the aviation station at San Diego, and found about 10 or 12 machines, of which only 2 were workable, 1 aeroplane and 1 hydroplane. The rest were ready for the scrap heap, as no one would dare to go up in them.

For the two which were still usable there were no extra parts available in case of accident, and the men were even timid about going up in these two, not because the men were at all cowardly, but simply because the machines were defective and none of them at all alike.

Holland, the inventor of the submarine, died in poverty. Langley was laughed at for his experiments with the aeroplane, and his death was probably hastened by the ridicule that followed his brave efforts to make us understand that aerial flight was feasible.

It will therefore be readily apparent that not only will the Government save money by making its own armor plate, but it will eliminate a most vicious system of graft and will give some encouragement to able and honest inventors.

Let us therefore carefully scrutinize each and every measure for "preparedness" that comes before the people.

If war comes millions of our citizens will be ready to offer their young manhood, their strength, their health, their lives, if need be; they are entitled to the best arms, the best equipment, the best care that money can buy and mortal brain devise to keep them fit and efficient.

On all legislation that comes before this House, no matter what its party origin may be, if it calls for proper defense I shall be ready and willing to lend my earnes; support, but over and over I will repeat that every measure for defense must guarantee that the taxpayer shall get full value for every dollar spent, that the Army and Navy shall have the best of everything that money can buy, and that manufacturer and producer shall be taught and taught emphatically that if they want Government trade they must set and keep a standard that matches, if it does not surpass, the best that any nation in the world can show.

"The American Army of Two "-Sale of Cedar Point Lighthouse Reservation at Scituate, Mass.

EXTENSION OF REMARKS

HON. JOSEPH WALSH. OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 8, 1916.

Mr. WALSH. Mr. Speaker, the passage of this bill, S. 5910, would ordinarily call for no extended statement were it not that the tract of land and the structure thereon, which are herein authorized to be sold to the town of Scituate, are the subject of an interesting incident intimately related to the history of that section during the War of 1812.

The old lighthouse on Cedar Point, Scituate, was established by the Federal Government in 1811, but its use as an aid to navigation has long since been discontinued because it was found more economical and practical in modern times to locate

and maintain a fixed light on the bar offshore.

The people of the historic old town of Scituate, however, The people of the instoric old town of Scituate, however, have for some time leased the old reservation and maintained it as a part of the park system, and it is their desire to acquire this property so that it may be held in perpetuity as a part of the attractive recreation grounds and parkways which have been established there. They are also ever mindful of the traditions clustering around this quaint and beautiful spot, and delight in telling the story of Rebegge and Abignil Bates, these delight in telling the story of Rebecca and Abigail Bates, those two brave daughters of the light keeper, Simeon Bates, whose courage and daring in September, 1814, saved the property—and probably the lives—of their townspeople from seizure and attack by a British man-of-war.

It was during the blockade of the New England coast by the British, in the War of 1812, that one pleasant September morning in 1814 the English warship *La Hogue* dropped anchor off the harbor of Scituate, less than 2 miles from the Cedar Point Lighthouse.

Floating at their moorings in the inner harbor were two coasting schooners, laden with flour and provisions. The two girls, Rebecca, scarcely 19 years of age, and Abigail, her sister, aged 15, were the sole occupants of the keeper's dwelling, which, as was the custom in those days, and is common even now, was connected with the lighthouse by a covered passage. They were

by signs of activity aboard the war vessel.

Watching for a time, they saw two of the ship's boats put off toward the craft in the inner harbor. As the boats embarking from the warship were filled with redcoats, the girls soon sensed the object of their departure.

Without stopping to warn their father, who was busily engaged in the fields about a mile away, the sisters snatched from the wall the drum and fife which had been carried by their father in the War of the Revolution, in which he enlisted when but a lad of 16. With these they hastened to the shore at the outer extremity of Cedar Point, and, concealing themselves behind a sandy cliff, they tooted the fife and beat the drum.

So vigorously did they perform and so martial were the strains from the fife and drum, which were wafted to the crews of the oncoming barges, that they shifted their course and headed back toward the man-of-war. The commander, apparently assuming that so much music indicated the presence of a considerable military force within the town, soon afterwards gave orders to heave up anchor and sailed away, leaving the vessels in the harbor and the townspeople unmolested. An authentic account of this incident may be found in volume 17 of Proceedings of Massachusetts Historical Society.

And so, sir, by granting the authority to sell this reservation to the town of Scituate, we make it possible for the good people of that historic community to forever keep this spot as a memorial to "the army of two in the War of 1812," as the Bates

sisters were known during the years that followed.

The citizens of Scituate are to be congratulated upon their public spirit in appropriating the necessary funds to acquire this tract, and I compliment them for their patriotic desire to perpetuate in this commendable manner one of the many sacred traditions connected with the history of this delightful old Plymouth colony town.

May the story of these two brave daughters of Scituate ever be kept in happy memory, and may their sturdy courage and patriotism prove an inspiration to the sons and daughters not only of Scituate but beyond its borders as our Nation marches down the corridors of time.

Address of Martin H. Glynn, Temporary Chairman Democratic National Convention.

EXTENSION OF REMARKS

HON. WILLIAM A. CULLOP,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, June 15, 1916.

Mr. CULLOP. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by ex-Gov. Martin H. Glynn, of New York, delivered at the Democratic national convention at St. Louis yesterday, June 14.

The address is as follows:

ADDRESS OF MARTIN H. GLYNN, FORMER GOVERNOR OF NEW YORK, TEM-PORARY CHAIRMAN DEMOCRATIC NATIONAL CONVENTION AT ST. LOUIS, Mo., JUNE 14, 1916.

Gentlemen of the convention, the Democratic Party, in this convention assembled, meets to perform a duty, not to itself but to the Nation. Proud of the part it has played in the Nation's past, the party of Jefferson and of Jackson is gathered here to dedicate itself anew to the preservation of a free, a united, a sovereign Republic.

We are proud of the battles we have fought in the past under the emblem of a great political party, but there is a truth that we desire to blazon above all that we may say or do in this con-

We have entered this hall as Democrats; we shall deliberate

and act here as Americans.

We who gather in this hall stand for the Americanism of the fathers who laid the foundations of this Nation so strong and deep that no storm has ever rocked them, no upheaval ever moved them. We stand for the Americanism which under the magic spell of citizenship and the mystic influence of the Stars and Stripes converts men of every country into men of one suntry, and that country our country; men of every flag into men of one flag, and that flag our flag.

OUR IDEALS AND OUR ASPIRATIONS.

When a hundred years look back upon this gathering of to-day, when we who now guard the ark of American covenant have become nothing but a memory and a name, the principles for which we declare in this convention, the issues for which we fight in this campaign will live in the lives of generations of Americans vet unborn.

If in the great crisis that now confronts the Nation, the American people falter, if they forget that they are guardians of the most sacred trust that a people ever held, their apostasy will be visited upon the descendants of their children's children.

Out of the flaming fire of revolution, out of a struggle in which they risked their lives, their fortunes, and their sacred honor the fathers of the Republic brought a Nation which they dedicated to liberty and to human progress.

For the Nation so consecrated, true men in every generation have labored and struggled, suffered and died, that it might flourish and endure.

We who stand to-day on the fertile soil of America, who live under the smiling skies of a free and fruitful land, must prove worthy of the trust that American sacrifice has imposed on every American.

For the America of to-day and for the America of to-morrow, for the civilization of the present and for the civilization of the future we must hold to the course that has made our Nation great, we must steer by the stars that guided our ship of state through the vicissitudes of a century.

For myself I have confidence enough in my country, faith enough in my countrymen, to believe that the people of America will rise to their responsibilities with a single mind and a single

Disregarding the divisions that make one man a Tory and another a Whig, one man a Republican and another a Democrat, Americans will cast aside the tinsel of party labels and the mummery of party emblems.

From the great pulsing heart of the Nation will come a patriot command to crush partisanship, and rebuke whatever is mean or

That command will be heard by the plowman in his field and by the laborer at his bench. It will reach the merchant in his office and the lawyer at his desk.

Responding to this command a Nation true to its traditions, proud of its greatness, glorying in its progress and believing in its future will prove that the spirit of Americanism burns as brightly in the heart of America to-day as it did in the splendid days of old.

And when, a century from now, America's children come to read our history, when at last they learn whether the men of 1916 were as true to America as the men of 1776, we pray God that the history we are about to make may prove an inspiration to their loyalty, that the pages we are about to write may be a spur to their patriotism and that our labors here and in the months to come may have preserved for them a Nation free and proud, an ideal sublime and true, a flag whose stars reflect the changeless majesty of the celestial galaxy itself.

In the attainment of this hope, the utterance of this prayer, we who gather here to-day have a responsibility that sobers our emotions as it strengthens our resolutions. false to ourselves and recreant to those who send us here if we permitted any thought of partisan profit, any consideration of political advantage to obscure our vision of the tremendous issues now before the people of the United States. We must cast aside all that is selfish, we must hold ourselves worthy of a Nation's confidence by offering only the best of our intelligence, the flower of our patriotism toward the solution of what all men perceive to be a crisis in the Nation's affairs.

SHALL WE REJECT THE DOCTRINES OF OUR FATHERS?

One hundred and forty years ago the manhood of America was called upon to decide whether this should be a nation. Half a century ago Americans were forced to determine whether this should continue to be a nation. To-day the Republic faces a third crisis no less momentous than that of 1776 or that 1860. To-day Americans must again determine whether their country shall preserve its national ideals, whether it shall have a national soul, whether it shall stand forth as a mighty and undivided force, whether the United States for which Washington fought and for which Lincoln died shall hold its place among the nations.

For two years the world has been afire; the civilization that we know has been torn by the mightiest struggle in its history. Sparks from Europe's conflagration have blazed in our own skies, echoes of her strife have sounded at our very doors. That fire still burns, that struggle still continues, but thus far the United States has held the flame at bay; thus far it has saved its people from participation in the conflict.

What the people of the United States must determine through their suffrage is whether the course the country has pursued through this crucial period is to be continued; whether the principles that have been asserted as our national policy shall be indorsed or withdrawn.

This is the paramount issue. No lesser issue must cloud it,

no unrelated problems must confuse it.

In the submission of this issue to the electorate we of this

onvention hold these truths to be self-evident to every student of America's history, to every friend of America's institutions:

First. That the United States is constrained by the traditions of its past, by the logic of its present, and by the promise of its future to hold itself apart from the European warfare, to save its citizens from participation in the conflict that now devastates the nations across the seas.

Second. That the United States in its relations with the European belligerents must continue the policy that it has pursued since the beginning of the war, the policy of strict neutrality in relation to every warring nation, the policy which Thomas Jefferson defined as "rendering to all the services and courtesies of friendship and praying for the reestablishment of peace and right."

Third. That save where the liberties, the territory, or the substantial rights of the United States are invaded and assaulted it is the duty of this Nation to avoid war by every

honorable means.

Fourth. That it is the duty of the United States Government to maintain the dignity and the honor of the American Nation and in every situation to demand and secure from every belligerent the recognition of the neutral rights of its citizens. Fifth. That because the President of the United States has

Fifth. That because the President of the United States has asserted these principles and pursued these policies the American people must support him with ardor and with enthusiasm in order that these principles and policies may be known to all the world, not as the opinion of an individual but as the doctrine and faith of a loyal and united Nation.

THE POLICY OF NEUTRALITY IS AS AMERICAN AS THE AMERICAN FLAG.

In emphasis of these self-evident propositions we assert that the policy of neutrality is as truly American as the American flag.

For 200 years neutrality was a theory; America made it a fact.

The first President of the United States was the first man

to pronounce neutrality a rule of international conduct.

In April, 1793, Washington declared the doctrine; and within a month John Jay, Chief Justice of the Supreme Court of the United States, in an epoch-making decision from the bench, whose realization would insure universal and perpetual peace, wrote the principle into the law of this land. The Declaration of Independence had foretold it by declaring "the rest of mankind enemies in war, in peace friends"; the Constitution recognized it; but the first President of the United States, by proclamation, the first Chief Justice, by interpretation, gave it vitality and power.

And so neutrality is American in its initiation.

Thirty years later Prime Minister Canning, in the British Parliament, pointed to this American policy of neutrality as a model for the world; and 80 years later, after approval by various statutes and agreements, it was written almost word for word in the treaty wherewith we settled our differences with England over violations of neutrality throughout the Civil War.

And so neutrality is American in its consummation.

And to-day in this hall, so that all the world may hear, we proclaim that this American policy of neutrality is the policy which the present administration pursues with patriotic zeal and religious devotion, while Europe's skies blaze red from fires of war. Europe's soil turns red from blood of men, Europe's eyes see red from tears of mourning women and from sobs of starving children.

The men who say this policy is not American appeal to passion and to prejudice and ignore the facts of history.

Neutrality is America's contribution to the laws of the world. Sir Henry Maine says so, Charles Francis Adams says so, Henry Clay says so, Daniel Webster says so, and upon the evidence of these witnesses we rest our Americanism against the sputterings of pepper-pot politicians or the fabrications of those with whom a false issue is a good issue until its falsity is shown, its maliciousness exposed.

HISTORY REPEATS ITSELF.

For enforcing this policy of neutrality George Washington was hooted by a howling mob of 10,000 war fanatics, who threatened to pull him from the presidential chair and start a revolution. But half a century later Charles Sumner said that—

Washington upholding the peaceful neutrality of this country, while he met unmoved the clamor of the people wickedly crying for war, is a greater man than Washington crossing the Delaware or taking Cornwallis's sword at Yorktown.

For supporting this policy of neutrality in a speech in the city of New York Alexander Hamilton was stoned almost to death, John Jay burned in effigy, Jefferson called a spineless poltroon, and Lincoln pictured as a craven. To-day, however, the Nation goes to all these men for its every conception of all that is best in American citizenship.

The fate of the fathers of our country at the hands of a noisy minority is the fate of the President of the United States to-day. But their reward of dignities merited and honors conferred will be his reward when the people speak on the 8th of next November.

WHERE THE PRESIDENT STANDS.

To win this priceless right of neutrality this Nation had to undergo a long and painful struggle.

It took Washington, with his allies and sword, 8 years to win recognition of his country's liberty; it took Washington and his successors 80 years of endless negotiation to win recognition of American neutrality. And this 80 years of struggle wove the doctrine of neutrality so closely into the warp and woof of our national life that to tear it out now would unravel the very threads of our existence.

Where is the American hardy enough to challenge a policy so firmly fixed in the Nation's traditions? Is there among us any man bold enough to set his wisdom above that of Washington, his patriotism above that of Hamilton, and his Americanism above that of Jefferson? Is there any American so blind to our past, so hostile to our future, that, departing from our policy of neutrality, he would hurl us headlong into the maeistrom of the

war across the sea?

The President of the United States stands to-day where stood the men who made America and who saved America. He stands where John Adams stood when he told King George that America was the land he loved and that peace was her grandeur and her welfare. He stands where Gen. Grant stood when he said there never was a war that could not have been settled better some other way, and he has shown his willingness to try the ways of peace before he seeks the paths of war. He stands where George Washington stood when he prayed that this country would never unsheath the sword except in self-defense so long as justice and our essential rights could be preserved without it.

For vainglory or for selfish purpose others may cry up a policy of blood and iron, but the President of the United States has acted on the belief that the leader of a nation who plunges his people into an unnecessary war, like Pontius Pilate, vainly washes his hands of innocent blood while the earth quakes and the heavens are darkened and thousands gave up the ghost.

Only by standing on this rock of Americanism, against which dashed the waves of conflict, could the President of the United States, faced by a world in arms, save this country from being drawn into the whirlpool of disaster. One false step in any direction and he would have carried the Nation with him over the precipice.

This difference, my friends, between "what is" and "what might be" is well illustrated by two pictures which hung on the walls of the art museum here in the city of St. Louis during the

Louisiana Purchase Exposition.

One of these pictures portrayed the famous warriors who have stricken terror into the heart of mankind since the dawn of history. Alexander the Great was there, Cæsar was there, Hannibal was there, Napoleon was there, and on either side of this sinister group lay in endless rows the sheeted dead of war.

The other picture represented hands, myriads of hands, humanity's hands, stretching upward toward the sky—gnarled hands of labor and wrinkled hands of age, smooth hands of youth, and tiny hands of babyhood, strong hands of men and delicate hands of women—bands of aspiration stretching upward from divine inspiration toward betterment and peace.

These two pictures symbolize the banners of this campaign.
Others may follow the lords of war who ride among the corpses of mankind. We follow the President of the United States and seek inspiration of humanity that aspires to higher

things

IF WASHINGTON AND LINCOLN WERE RIGHT, THE PRESIDENT IS RIGHT.

By opposing what we stand for to-day, the Republican Party opposes what Hamilton stood for a century ago. The founder of the Republican Party and the founder of the Democratic Party, placing their country's happiness above every other consideration, forgot partisanship and made American neutrality a national creed. We who follow Jefferson stand where Jefferson stood, but we look in vain for a sign from the present leaders of the Republican Party to show that they follow where Hamilton led. Where Hamilton counseled moderation they denounce it. Where Hamilton thought only of country they think only of self. Where Hamilton placed patriotism above partisanship they placed partisanship above patriotism. How, then, do they dare to speak for the great body of American citizens who form the rank and file of the Republican Party? Do these leaders believe that their Republicanism is a better Republicanism than Hamilton's, their Americanism a purer Americanism than that of Washington?

Unless statesmanship has fallen into disrepute among Republicans, the men who controlled the Chicago convention can not read Alexander Hamilton out of the Republican Party. Unless I mistake the temper of the American people the Republican

bosses can no more lead their adherents away from the neutrality for which Washington and Hamilton struggled than they can lead them away from the flag for which Washington and Hamilton fought.

If Washington was right, if Jefferson was right, if Hamilton was right, if Lincoln was right, then the President of the United States is right to-day; if the Republican leaders are right then Lincoln was wrong and Jefferson was wrong and Hamilton was wrong and Washington was wrong.

THE JUSTIFICATION OF HISTORY.

In all the history of the world there is no other national policy that has justified itself so completely and entirely as the American policy of neutrality and isolation from the quarrels of European powers. Before we declared our neutrality we were embroiled in all the troubles of Great Britain, France, and Spain; since then we have had less than three years of war with Europe and 116 years of amity and peace.

Before this declaration every war was a world war; since this declaration nearly every war has been a local war. Before this declaration war was a whirlpool, ever-increasing in area and in its whirl dragging down the nations of the earth; since this declaration war has become a sea of trouble upon which nations embark only from self-will, from self-interest, or the necessity of geographical position, of financial obligation, or political alliance.

Neutrality is the policy which has kept us at peace while Europe has been driving the nails of war through the hands and

feet of a crucified humanity.

It has banished conquest from our program of national greatness and has made us find our destiny at home. It has forced us to build on the brawn of our sons and the energy of our daughters rather than upon the tears of conquered women and the blood of conquered men. It has made us seek treasure in our harvests, wealth in our fields by staying our hands from war's bloodstained pot of gold. It has been the flaming sword which forbade us to devastate the Eden of others and compelled us to make an Eden of our own. It has freed us from the paralyzing touch of Europe's balance of power, leaving to Europe the things that are Europe's and preserving for America the independence, the peace, and the happiness that now are beers

As a result of this policy America stands serene and confident, mighty and proud, a temple of peace and liberty in a world aflame, a sanctuary where the lamp of civilization burns clear and strong, a living, breathing monument to the statesmanship of the great Americans who kept it free from the menace of European war.

Wealth has come to us, power has come to us, but better than wealth or power we have maintained for ourselves and for our children a Nation dedicated to the ideals of peace rather than to the gospel of selfishness and slaughter.

The praises of this policy are not written in the ruins of American homes, not in the wreck of American industries, not in the mourning of American families; they are found in the myriad evidences of prosperity and plenty that makes this a contented land. From every whirling spindle in America, from every factory wheel that turns, from every growing thing that breathes its prayer of plenty to the skies, from every quiet school, from every crowded mart, from every peaceful home goes up a song of praise, a pæan of thanksgiving to hymn a nation's tribute, to the statesmanship that has brought these things to pass.

NEUTRAL RIGHTS ASSERTED AND MAINTAINED AS NEVER BEFORE.

No American who knows the facts can honestly oppose or criticize the policy of neutrality which the present Democratic administration has pursued. Driven from this position, by the logic of our history and the lesson of our prosperity, carpers and defamers rush to the opposite extreme and assert that this policy has not been enforced with sufficient vigor by the present administration.

Standing here with the eyes of the Nation upon this convention, with the cold light of reason, the piercing shafts of logic streaming upon all that we may say or do, I declare, with history as my witness and with fact as my proof that the neutral rights of American citizens have never been so vigorously asserted or so successfully maintained as they have been asserted and maintained by the President of the United States during the present war.

America's doctrine of neutrality never meant that this Nation

America's doctrine of neutrality never meant that this Nation must rush headlong into war at the first invasion of its neutral rights. Neutrality is not a hair-triggered policy that explodes in violence at the first assault. It is a policy that has proved successful because it has always been asserted through negotiation rather than through force, through diplomacy rather than by an appeal to arms. This does not mean that America will not resort to war when all other means of protecting its neutral rights have failed, but it does mean that America will exhaust every peaceful means of protecting those rights before it takes the step from which there is no appeal. Just as in domestic affairs the penal statutes can not wholly suppress crime, so in foreign affairs the law of neutrality can not entirely prevent the breach of neutral rights. There has scarcely been a war since the principle of neutrality was embodied in international law in which some neutral citizens have not been killed, in which some neutral trade has not been interfered with.

A judicial review of relative values, a distinction between honor and sensitiveness, a consideration of life as well as property, a proper equation of conditions and circumstances are elements of neutrality's law.

One hundred and twenty years ago when Europe went mad with war as it has gone mad to-day, Jefferson pointed to the north star of our policy of neutrality when he said, "In the present maniac state of Europe we should not estimate the point of honor by the ordinary scale." The reasoning which made it a sound rule in "the maniac state of Europe" in Jefferson's day makes it an equally strong rule in "the maniac state of Europe" to-day.

This Nation, let us never forget, has always remembered that neutrality is a policy which is asserted against nations at war, against nations inflamed and disordered. It has always been wise enough to proceed with calmness and patience, and events have ever justified its willingness to appeal from Philip drunk with war to Philip sobered by reason and reflection.

HOW STANDS THE RECORD?

The issue, raised by our opponents, of the vigor with which our neutrality has been enforced is a comparative issue which can be decided only by comparative results.

And what are the comparative results? How stands the record of this administration compared with other administrations?

WHEN GRANT WAS PRESIDENT.

When Grant was President, during the war between Spain and the Spanish West Indies, a Spanish gunboat seized the vessel Virginius, flying the American flag, and a Spanish commandant in cold blood shot the captain of the Virginius, 36 of the crew, and 16 of the passengers.

But we did not go to war. Grant settled our troubles by negotiations, just as the President of the United States is trying to do to-day.

WHEN HARRISON WAS PRESIDENT.

When Benjamin Harrison was President the people of Chile conceived a violent dislike to the United States for our insistence upon neutrality during the Chilean revolution. When this feeling was at its height one junior officer from the United States warship Baltimore was killed outright in the streets of Valparaiso and 16 of our sallors wounded, of whom one afterwards died. In a message to Congress on January 25, 1892, supported by Secretary of State James G. Blaine, and on evidence submitted by Fighting "Bob" Evans and Winfield Scott Schley, President Harrison said this assault on our honor "had its origin in the hostility to these men as sallors of the United States wearing the uniform of the Government and not in any individual act of personal animosity," and that this Nation "must take notice of the event as an infraction of its rights and dignity" and as an invasion of its "international rights."

But we didn't go to war. Harrison settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

WHEN LINCOLN WAS PRESIDENT.

When Lincoln was President this country's rights were violated on every side. England, Russia, France, and Spain were guiltyof such flagrant violations that Secretary of State Seward advanced a plan to go to war with all of them at one and the same time.

France used every possible influence short of open war to injure us. She not only permitted the building of Confederate vessels in private shipyards, but she allowed at least two to be built in the national navy yard of France, and she supplied them with supplies from her Government arsenal.

And England did more.

Through his Secretary of State, Lincoln called England to account for the seizure of the U. S. S. Chesapeake on the high seas bound from New York to Portland, for the burning of the U. S. S. Roanoke off Bermuda, for the seizure on Lake Erie of the ship Philo Parsons and the scuttling of the Island Queen, the shooting of its engineer, and the wounding of its passengers; and he protested to England against the invasion of the territory of the United States by a band of southern sympathizers from Canada, who rode across the border into Vermont, burned a por-

tion of St. Albans, looted its homes, robbed its bank of \$211,000, killed one of its citizens, and wounded several more. In stinging language he told England that she violated neutrality by per-'the use of British ports and British borders as a base for felonious depredations against the citizens of the United States," and he wrote into history his diplomatic battle against England for letting loose the Alabama to prey upon our commerce, to destroy \$100,000,000 worth of property, to capture 84 of our vessels, and drive our flag from off the seas. No nation ever inflicted upon another nation a more damnable or more maddening wrong than England inflicted upon the United States in the Alabama outrage.

But we didn't go to war. Lincoln settled our troubles by negotiations, just as the President is trying to do to-day.

WHEN PIERCE WAS PRESIDENT.

When Pierce was President the British minister in this country and three of his consuls violated our neutrality during the Crimean War. We gave these representatives of Great Britain their passports and sent them home.

But we didn't go to war. Pierce settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

WHEN VAN BUREN WAS PRESIDENT.

When Van Buren was President a detachment of Canadian militia, during the internal troubles in Canada, boarded the U. S. S. Carolina in the American waters of Niagara River, killed an American member of the crew, fired the ship, and sent her adrift over Niagara Falls.

But we didn't go to war. Van Buren settled our troubles by negotiation, just as the President of the United States is trying

to do to-day.

WHEN JEFFERSON WAS PRESIDENT.

When Jefferson was President England seized hundreds of our ships and Napoleon hundreds more. From 1793 to 1807 historians say England and France together captured 1,600 American vessels and \$60,000,000 worth of American property. England compelled over 2,000 American seamen to serve against their will in the English Navy, and Napoleon ordered the seizure and confiscation of American ships wherever found. Our shipping rotted at every French and British port, our crews were cast into prison and left to die of abuse and neglect. The British ship Leopard fired upon the American cruiser Chesapeake in American waters, killed and wounded several of our sailors, took three native-born American citizens off the Chesapcake, and hanged one of them in Halifax.

But we didn't go to war. Jefferson settled our troubles by negotiation just as the President of the United States is trying to do to-day.

WHEN ADAMS WAS PRESIDENT.

When Adams was President France preyed upon our commerce. She extended her seizure, searches, and confiscations to the very waters of the United States themselves until she had piled up in our State Department charges of over 2,300 wiolations of neutrality's law. American ambassadors who sought to adjust these wrongs were refused recognition and openly insulted at the French court. President Adams called Washington out of retirement to head the Army, he created the Navy Department, and he built 12 battleships.

But we didn't go to war. Adams settled our troubles by negotiation just as the President of the United States is trying

to do to-day.

WHEN WASHINGTON WAS PRESIDENT.

When Washington was President and, "neutrality" first declared, war convulsed Europe, our ships dared not to put out to sea, commerce was paralyzed, and business depressed. American passengers and American crews were thrown into prison and deprived of legal rights. Genet, the minister from France, fitted out privateers in our harbors, flouted our officials, and tried to rally this country to the support of France in return for the help France gave us in the Revolutionary War. England and France seized 400 of our ships and confiscated millions of dollars' worth of our property, and up in Quebec Lord Dorchester promised Canadian Indians the pleasure of burning American homes and scalping American citizens.

But we didn't go to war. Washington settled our troubles by negotiation just as the President of the United States is

trying to do to-day.

ARE REPUBLICANS WILLING TO READ HARRISON AND BLAINE, LINCOLN AND GRANT OUT OF THEIR PARTY?

In the face of this record do Republicans realize that when they arraign the policy of the President of the United States to-day they arraign the policy of the Frestean of the United States to-day they arraign the policy of Harrison, of Blaine, of Lincoln, and of Grant? For the pleasure of criticizing a Democratic President, are they willing to read out of the Republican Party the greatest men the Republican Party ever had? Are

they willing to say that the Republican Party of to-day condemns what Hamilton did in revolutionary days, what Lincoln did in Civil War days, and what Grant and Blaine and Harrison did but yesterday?

In his policy of peaceful negotiations to-day the President of the United States follows the example set him by the greatest Presidents the Democratic Party and the greatest Presidents the

Republican Party ever gave this Nation.

Do the critics of the present administration believe that Lincoln should have risked national disaster by using the sword rather than the pen in pressing the Alabama claims? Are they willing to brand Grant as a coward because he kept us at peace with Spain?

Yet no incident of the present war shows so gross a violation of our neutral rights as England's action in building a navy to prey upon our commerce, no submarine attack surpasses in horror the butchery of American citizens by that Spanish firing squad in Santiago when Grant was in the presidential

In this, as in all the other big questions of life, the more we understand the past the better we shall judge the present. Where it took 10 years to secure inadequate compensation for the Alabama claim, the present administration has already secured in the case of a single claimant reparation greater than all the Alabama claims combined. Where, in other administrations during great foreign wars, the American flag was merely an invitation to plunder, to-day that flag is the best protection of all who desire to be safe upon the seas.

Where Washington vainly pleaded for recognition of our neutral rights, where Jefferson sought in vain to protect our shipping, where Lincoln failed to gain us the freedom of the seas, the man who now sits in the presidential chair has secured from every warring power, from every empire under the sun, the formal and definite assurance that the neutral rights

of America shall be respected and observed.

We challenge our critics to deny a single fact in the record. We defy them to show a single point at which the helmsman who has safely piloted us through Europe's storm has departed from the course laid down by those who established America's foreign policy.

THE DECLARATION OF INDEPENDENCE CONFIRMS THE POLICY OF NEGOTIATION.

"To maintain our national honor by peace if we can, by war if we must," is the motto of the President of the United States.

But before submitting to the chance and misery of war, true statesman that he is, he proposes to put the reason and justice of negotiation to the test. If they are as patriotic as they pretend, those who censure this policy of negotiation may blush from shame to learn that they censure the policy pursued by the signers of the Declaration of Independence.

In the document which made us free, John Hancock and Benjamin Franklin and Charles Carroll and all the other signers declare (I quote their exact words), they declare they "appealed," they declare they "conjured," they declare they "warned," they declare they "reminded England of our wrongs

before we went to war.

Anyone can disparage diplomatic procedure, but only men of

patience and principle can successfully conduct it.

Just as Rufus King criticized Washington's negotiations with France in the Genet affair, just as the members of John Adams's own Cabinet criticized his negotiations which averted war with France, just as Horace Greeley criticized Lincoln, so for personal and political purposes men whose ambitions outrun their sense of justice criticize the negotiations of the President to-day.

A POLICY THAT SATISFIES.

But, say our critics, this policy satisfies no one. They mean it does not satisfy those who would map out a new and untried course for this Nation to pursue, but they forget it does satisfy those who believe the United State: should live up to the principles it has professed for a century and more.

Chief Justice White of the United States Supreme Court says this policy has given America the greatest diplomatic victory of the past generation. Maximilian Harden, Germany's noted editor, says "that never once has this Republic violated its neutrality," and Gilbert K. Chesterton, the famous English journalist, says, "It is the duty of the President of the United States to protect the interests of the people of the United States"; that he can't dip his country into hell just to show the world he has a keen sense of being an individual savior.'

This policy may not satisfy those who revel in destruction and find pleasure in despair. It may not satisfy the fire enter or the swashbuckler; but it does satisfy those who worship at the altar of the God of Peace. It does satisfy the mothers of

land from whom bluster and brag has sent no loving brother to the dissolution of the grave. It does satisfy the fathers of this land and the sons of this land who will fight for our flag and die for our flag when reason primes the rifle, when honor draws the sword, when justice breathes a blessing on the standards they uphold.

And whom, we ask, will the policy of our opponents satisfy, and for how long? Fighting for every degree of injury would mean perpetual war, and this is the policy of our opponents, deny it how they will. It would not allow the United States to keep the sword out of the scabbard as long as there remains an unrighted wrong or an unsatisfied hope between the snowy wastes of Siberia and the jungled hills of Borneo. It would make America as dangerous to itself and to others, as destructive and as uncontrollable as the cannon that slipped its moorings in Victor Hugo's tale of '93. It would give us a war abroad each time the fighting cock of the European weather vane shifted with the breeze. It would make America the cockpit of the world. It would mean the reversal of our traditional policy of government. It would mean the adoption of imperialistic doctrines which we have denounced for over a century. It would make all the other nations the wards of the United States, and the United States the keeper of the world. What would become of the Monroe doctrine under such a policy? How long do our opponents suppose we would be allowed to meddle in European affairs while denying Europe the right to meddle in American affairs? The policy of our opponents is a dream. It never could be a possibility. It is not even advanced in good faith; it is simply an appeal to passion and pride, to sympathy and prejudice, to secure partisan advantage. In a word, this policy of our opponents would make the United States the policeman of the world. Rome tried to be policeman of the world and went down; Portugal tried to be policeman of the world and went down; Spain tried and went down; and the United States proposes to profit by the experience of the ages and avoid ambitions whose reward is sorrow and whose crown is death.

NATIONAL HONOR.

In desperation for a slogan our opponents try to create an issue out of national honor.

Now, national honor is not the whim of an individual mind. National honor is the composite sentiment, the composite reason of a whole people feeling the emotions of nature and following the dictates of God.

And it is for this reason that "the power" to declare war is conferred by the Constitution of these United States not on the individual will of the President, but on the composite reason, the representative decision of "the Congress of the United States."

Do, then, the Hotspurs of this country mean to proclaim themselves more jealous of our national honor than the framers of the Constitution, than Washington or Lincoln? Where, when, and from whom did they receive their commission as keepers and interpreters of the honor of this Nation? Who gave them a monopoly of the workings of the brain or the emotions of the heart? What mystic faculty do they possess which nature has denied to other men?

They proceed on the theory that the noisiest man in the land is the best patriot.

Fearful within, blustering without, the coward whistles to keep up courage, and hopes the world will read in his face what is not in his heart. The brave man, conscious of what is in his heart, and careless of whether or not the world reads it in his face, neither whistles to deceive his neighbors nor publishes his patriotism to win the Pharisee's crown of self-praise.

These noisy critics forget that an appreciation of honor is as elemental in every man as the instinct which calls the flush of rage to the cheek or the blaze of anger to the eye. When the honor of this country is outraged or the glory of its flag is besmirched, the man of the street, the toller in the fields, the artisan in the shops, the man who shoulders his musket and marches away at his country's call will need no one to tell him, no one to show him, where duty lies and manhood calls. The men who will do the fighting will not have to be drummed to war; they will summon themselves to battle with the valor of a Jackson and the ardor of a Wayne.

PREPAREDNESS.

The genius of this country is for peace. Compared with the blood-smeared pages of Europe, our records are almost immaculate. In the making of no other nation has conquest played so small a part. Stolen wealth does not fill our coffers or ravished territory swell our domains.

We have built our greatness on the resources of nature and the peaceful toil of our people. The ring of the anvil, not the rattle of the saber; the song of the reaper, not the shriek of the

soldier; the clatter of the shuttle, not the crack of the rifle, have won us the place we occupy to-day in the councils of the world.

With us war has never been a choice; it has always been a fate. We would like to furl the flags of war and still its throbbing drums; we sigh for the day when men will beat their swords into plowshares, their spears into pruning hooks; but we recognize that the miracle is yet to be performed which perfects human nature and imbues nations with the spirit to do unto others as they would do unto us.

Like the old Mohawk chief, who loved peace, we would like to throw the tomahawk of war so high in the sky that no man's hand could ever pull it down. But when some other tribe among the races of men sends us a bundle of arrows wrapped in the skin of a rattlesnake, we want, like old Gov. Bradford, of Massachusetts, to be in a position to send that rattlesnake's skin back stuffed with powder and with ball.

We deprecate the compulsion, but we recognize the need of the policeman on the beat, the safe in the bank, and the watchdog on the farm.

We pray for the millennium, but we accept things as they are. As men of common sense we realize that, for a nation, the policy of turning the other cheek when unjustly smitten means national decapitation and a funeral at which our people would be the mourners, our enemies our heirs.

We fought one war for existence and one for survival. We fought one war to exclude foreign influence and another to preserve internal peace. And we would fight four more wars for the same reasons, but the reasons we must have. When necessity demands we stand ready to meet with force the enemies of our liberty, the defamers of our honor, and the foes of our integrity.

The war across the seas has brought home to us the fear that so long as men are men and nations are nations wars will continue.

We have been aroused from our dreams of the millennium to the knowledge that nothing that men cherish is safe from assault; that the man who would preserve his rights to life, to liberty, and to happiness must stand ready to defend those rights with the last drop of his blood.

We have been carried too close to the rocks of war during the past two years to believe that those rocks do not exist. And looking into the future we can perceive that if our sovereignty is not challenged, if our peace is not assailed, it will only be because the world knows that we are strong enough to defend ourselves from every foe.

For these reasons this administration has done more for our Army and our Navy than any administration in our history.

More than this, it has mobilized the resources of the Nation to meet the needs of war. It has placed the wealth of the country back of the strength of the country, the toller back of the soldier and the sailor.

And to our opponents we say you can not create an army, can not build a navy in the course of a day; to them we say if our Navy is not strong enough, if our Army is not big enough, the Republican Party is 80 per cent to blame, for the Republican Party has been in control of this Nation 80 per cent of the time during the past 50 years.

The Democratic Party advocates and seeks preparedness, but it is preparedness for defense, not preparedness for aggression.

It is the preparedness which builds the Nation's house upon a rock so it will not fall when the rains descend and the floods come and the winds blow.

We may look upon preparedness with as little favor as we look upon taxes, but we pay the taxes because we want the protection for which the taxes pay.

Democracy refuses to be frightened by those who pretend to

Democracy refuses to be frightened by those who pretend to fear that this great land of freedom will descend into the abyss of militarism.

It knows that militarism can no more thrive in this country than the cockle and the tare can thrive amid the wheat of the husbandman who loves his land. It knows that preparedness, that reasonable preparedness, will not kill democracy in this country any more than it killed democracy in Switzerland. It knows that reasonable preparedness will insure us peace just as it insured peace for Switzerland, though war thundered at her doors.

Militarism in the United States is as impossible as the shadow of a ghost in the midday sun. We had a triumphant Army in 1776, we had an invincible Navy in 1812, and in 1860 we had the two greatest armies the world had ever seen.

But when the crisis passed that called these freemen to the colors the first to leap forward at their country's call were the first to return to the farms and factories whence they came.

From the ranks of democracy they came as silently as Putnam left his plow in answer to the shot heard around the world; and back to democracy they went as silently as the southern heroes whose horses Grant returned that they might plow the very fields which had been harrowed by their cannons'

NATIONAL SOUL.

These, then, are the principles that have been asserted and followed by the President of the United States during the past two years—that the United States shall not embroil itself in European strife, that the United States shall endeavor to maintain friendly and cordial relations with every other nation, and that the United States shall firmly assert and maintain and be prepared to assert and maintain its neutral rights against every beltigerent.

Nothing in the assertion of these principles by the President has caused the Nation so many anxious hours as the fear that the temper of the American people might be misunderstood.

Efforts have been made and may be made again to create an impression here and abroad that in asserting these principles the President spoke for only a fraction of the American people, that the Nation itself was divided, and that the President's solemn words could be disregarded because the American people

would not stand solidly behind him.

This convention must make it plain that all divisions among a American neople ston at the ocean's edge. This convention the American people stop at the ocean's edge. must declare and must give the country the means to declare that when the President of the United States speaks to a foreign power, he speaks for every citizen of America; that when the Nation's Chief Executive asserts a policy that has been an American policy since the beginning of the Nation, his action has behind it the force and strength of a loyal and united people.

We, who know and love America, know how false, how vain, how unreal, are the efforts of those who picture us to the world as divided against ourselves. We know that so far as our international relations are concerned we hold but one faith, acknowledge but one loyalty, follow but one flag.

We of this convention, representing every section of the United States, speaking for every racial strain in America, must send forth a message to all the world that will leave no room

We must enable every real American to stand up and assert his Americanism. We must make the issue so clear that every ballot box in the land may become a monument to the loyalty American manhood,

The citizens of this country will stand behind their President because his policies are right. They will stand behind him because his policies are the policies which have brought the Nation a century of prosperous and honored peace. They will stand behind him because they want these policies continued, that prosperity prolonged, that peace assured.

Yet, over and above every other reason that the Nation may have for upholding its President, is the necessity of proving

to the world that we are a united people.

So long as the other nations of the earth realize that the millions under America's flag think as one, believe as one, and act as one. in the face of foreign war, we shall be free from foreign intrigue and all that it entails. Once let the notion get abroad tha this Nation is merely a confederation of diverse and conflicting allegiances, and we shall never be safe from the machinations of foreign powers.

A regard for national surety as well as a pride of personal honor will therefore bring the American people to the support of their President. Whether their blood is drawn from the banks of the Rhine or where the River Shannon flows, whether they hail from Alpine valleys or the meadows of the Pyrenees. whether their descent be German or French, Irish or English, Austrian or Italian, Russian or Greek, the men who have sworn an oath of fealty to the ideals of America will be true.

They may love the lands of their fathers much, but they love the land of their children more. They may cherish the memory of the sod from which they sprung, but they stand ready to die for the soil that they have hallowed with their homes.

Their loyalty to America is more than loyalty to a name; their allegiance is more than allegiance to a flag. The man who serves America serves only the best in himself; the man who is loyal to America is loyal only to the nobles of humanity's ideals; the man who swears allegiance to America enrolls himself in the ranks of those who are pledged to freedom, to opportunity, to justice, and to human progress

High above every other issue that this convention offers to the American people we must therefore write a vindication of American loyalty. Secure in our conviction that America comes first with every American, confident that the great warm heart of the Republic beats true and strong, convinced that the stars

of the heavens are not more firmly fixed in the firmament than the stars of America's flag are shrined in the hearts of America's citizens, we must call upon our countrymen to show their devotion and their loyalty not to a Democratic President but to the President of the United States.

DOMESTIC POLICIES.

It is more than coincidence that an administration which has steadfastly maintained the peace and the honor of the Nation should have sought with equal energy and equal success the internal progress and domestic prosperity which is the

natural product of tranquillity and fair dealing.

It is not surprising that an administration which has jealously guarded the national rights of the United States should have cherished with equal zeal the individual rights of its citizens, It is natural that an administration which has stoutly asserted the ancient freedom of our commerce on the seas should have labored with equal sincerity for the new freedom of opportunity on America's soil.

Four years ago the people of this country intrusted their Government to a man and to a party who promised that they would liberate the Nation from the chains of industrial tyranny, who pledged themselves to break down the barriers behind which special privilege sat entrenched; who engaged themselves to emancipate business, to throw wide the gates of lawful enterprise, to restore to the men and women of America the paths of progress which had been choked and blocked by long years of invisible government.

That promise has been kept; that pledge has been redeemed. To-day the prosperity which the Nation enjoys bears witness that Democracy has kept the faith. To-day the gates of opportunity are open; the hosts of special privilege stand disarmed. To-day the forces of government are encouraging, not blocking, the full expression of the Nation's progress. To-day the business man, the artisan, and farmer find themselves free to enjoy the fruits of their labors unhampered by the sinister power of special privilege or the selfish oppression of "invisible government.

To attempt to describe the myriad ways in which this new spirit of government has found expression would necessitate a review of every national activity, a compendium of every department of the National Government. We must content ourselves here with a brief consideration of the great landmarks which chart the change from government for the fortunate few

to an even-handed government in the interest of all.

FEDERAL RESERVE ACT.

The first of these is the Federal reserve act, which freed the business man and the farmer from the financial domination of the money changers and lifted the menace of panic from our industrial life.

Five times during the past 30 years, at periods when industry was flourishing and crops were abundant, the purse strings of the country have tightened without apparent reason and the

Nation has been devastated by panics.

Business men had seen the patient work of years swept away in a night. Farmers had watched their homes sold over their The widow and the orphan, the tirewoman and the mechanic had found themselves defrauded of their pittances as they beat upon the closed doors of insolvent banks. Paralysis had fallen upon the Nation's industries. Armies of the unemployed had marched from factory to factory begging for work. Bread lines and soup kitchens had sprang up in every city of the land, and within their financial fortresses the few who brought about this universal misery watched their work and counted their gains.

Throwing down the gauntlet to those who had fattened on the system that made these evils possible, this Democratic adminis-

tration passed the Federal reserve act.

The safety, the simplicity, the effectiveness of the Federal reserve plan constitute a terrible indictment of the Republican administrations which had permitted panics to continue without adopting it.

In the panic of 1907, under the old system, New York could not lend a country bank \$50,000 with which to meet factory pay rolls; in 1915, under the new system inaugurated by this Democratic administration, New York loaned Europe five hundred millions, even though the financial centers of the world were disrupted by the world war, and there were still left in New York the largest bank deposits in its history.

If this Democratic administration had performed no other public service than the enactment of the Federal reserve act, it would deserve the unstinted approval of a grateful nation. Thanks to Democracy and to Democracy's great leader, the business man who is struggling to establish himself may now work out his destiny without living in terror of panics and hard times. The toiler in the factory may ply his tasks in security, knowing

that his employer's business is safe from assault. The farmer. who must borrow to move his crops, may do so without spending his days in anxiety, his nights in nightmares of foreclosure and disaster. Truly the scholar statesman, whose rod has struck the golden rock of America's resources, to set free the wealth im-prisoned for half a century, is a Moses who has led America's industries from the wilderness of doubt and despair to the promised land of prosperity and hope.

BENEFICENT LEGISLATION.

In the same spirit and with the same motive that inspired the Federal reserve act this administration has devoted itself to the stimulation of American industry, agriculture, and trade through all the agencies of government.

It has given a new meaning and a new force to the laws re-

straining big business from stifling competition.

It has created a Trade Commission to afford to business generally a more direct and prompt administration of the laws relating to business.

It has established Government representatives throughout the world, whose sole duty is to foster the expansion of American

It has created a closer union of economic, commercial, and financial interests between the United States and the nations of South America

It has declared in language that no court and no employer can misunderstand that "the labor of a human being is not a commodity or article of commerce," and that no employer can compel his men to work for him against their will.

It has freed the farmer from the chains of a financial system which was devised for business and not for farming and has enabled him to sell his produce at prices that compensate him for the sweat of the harvest, the tilling of the soil.

Time does not allow me to enumerate all the laws, all the activities which will establish this administration in our economic history as the most humane since Lincoln's and the most progressive since Jefferson's.

THE TARIFF.

But I can not close this brief and inadequate review of what the present administration has accomplished without adverting to its courageous and statesmanlike solution of the Nation's tariff problem.

The Underwood tariff enacted by this administration has banished greed from the gates of our ports and written justice

into our tariff schedules.

Of all the tariffs we ever enacted this is the fairest and the

Until the foreign war reduced importations no new tariff was ever more satisfactory. The highest protective tariff ever written would probably have given us no more revenue during this European war and a higher tariff on raw material would have hampered our manufacturers, a higher tariff on the necessities of life would have placed a woeful burden on the poor man in the conditions which the war abroad has brought about.

By the Underwood law this administration has taken the tariff out of politics; by the new tariff commission it proposes to take

politics out of the tariff.

The consumers of the Nation, and this means every man, woman, and child within its borders have been freed from a unique and oppressive system which enriched the few at the

expense of the many.

It is not my purpose to discuss the assaults that special privileges have made upon the provisions of the Underwood Act. These selfish and unfounded criticisms have been completely answered by one who is amply competent to judge and publicspirited enough to speak. Democracy's reply to those who would overthrow the tariff law that a Democratic Congress has enacted is the reply of that eminent banker, that financial genius, Mr.

Speaking at a banquet of the Republican Club in New York last January, by virtue of his life-long allegiance to the Republican Party, Mr. Schiff declared:

"I want to explain that nothing can stop the great prosperity we now have except a renewal of tariff agitation in the next campaign. Standing here on holy Republican ground, I say without fear or favor if you renew in the next presidential campaign the tariff agitation of the past, if you threaten the country and show it you want a renewal of special privilege and high protection, the people will have none of it. The people have learned; the workmen and the farmers have learned and they can not be misled any longer. I do not say that because I love the Republican Party less, but because I love it more. My heart is for the Republican Party, but my common sense makes me a

And in these words Mr. Schiff voices the opinions of men with whom special interest is secondary to the welfare of all.

PROSPERITY.

Under the present administration the United States has enjoyed a wonderful era of good business and good times

To-day prosperity shines from blazing furnaces and glowing It echoes from busy docks and from thronged emporiums of trade. Its message of plenty fills the land with the chant of the spindle and of loom, lifting the mortgage from the poor man's home and promising his children a future that seemed impossible before.

During the past four years this country has experienced a steady and continuous improvement in business. increased 21 per cent, the value of manufactured products 39 per cent, capital 43 per cent, wages 54 per cent, and exports 77 per cent. The flood tide of our prosperity has risen to such an unprecedented height that the only limit to trade is our ability to make and transport the commodities demanded at home and abroad. Our fields and our factories cry aloud for men and unemployment has ceased to be a problem. Wages have advanced, building operations have resumed, real estate has recovered its worth.

There is not an idle car on our railroads or an idle ship at our docks. For the first time in history America's greatest port

has become the world's greatest port.

Economists say that railroad earnings are an index to pros-This year the earnings of our railroads are \$60,000,000

more than under the last year of Republican rule.

The purchasing power of our people is greater than that of any other people on the globe. Never was there as much money in our vaults as to-day. The aggregate resources of our national banks are three thousand millions more than the aggregate resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan. We have four hundred and one millions of money more than we had a year and a half ago and our gold supply exceeds by many hundreds of millions the gold supply of any other nation on

Our prosperity is not local. The cotton fields of the South, the factories of the North, the marts of the East, and the mines of the West feel it—with a national response and a national thrill.

Nowhere else on earth is there a more equitable distribution of what the energy of labor hammers into existence out of the

material which capital places in its hand.

The calamity howler complains that our productive capacity is keyed to such a high pitch that our industrial machine is threatened with heated bearings, but he ignores the self-oiling attachments which this Democratic administration has attached to our economic and industrial mechanism. While calamity wailers talk of the struggle and the battle which is to come after the war, earnest men of business, with America in their minds and America in their hearts, act on the principle that the better we serve our country and ourselves in the present the better we prepare for the future.

The prosperity of to-day is a true prosperity, for it is founded on a true balance between agriculture, manufacturing, and com-merce. Ask the first man you meet how many of his friends are employed in munition factories! Ask the bankers you know how many of their accounts are munition makers' accounts! Their answer will show what a trivial figure war orders play in

our business to-day.

Under this Democratic administration a record-breaking balance of trade stands in our favor. In the last nine months our exports exceeded our imports by \$1,000,000,000. In all the history of all the nations in all the ages no country has ever enjoyed such a gigantic balance of trade. Its figures almost defy comprehension. During all the years of Republican rule our export trade never reached \$300,000,000 in any one month. Last March it reached \$410,000,000. If this rate should continue for a year we will have approximately a yearly export business of \$5,000,000,000.

This is unparalleled in the annals of commerce. Hitherto England has been the greatest of exporting countries.

best year is two billions less than our present year.

This avalanche of money poured into our pockets by the rest of the world as a tribute to our national resources and our fidelity to peaceful industry is not the measure of our prosperity. It is only the symbol. Compared with our trade at home this foreign trade is a mere pittance. Our domestic commerce to-day is larger than the foreign commerce of all the nations of the world combined.

Against this actual condition our opponents raise an argument With greater truth we can also enter the realm of of "ifs."

conjecture and declare that if another candidate had been elected four years ago the United States would be at war to-day. A ton of "ifs" do not weigh as much as a single fact. Our opponents forget that "if" the flight of the sea gulls off the coast of the West Indies had not directed his course, Columbus would not have discovered America when he did. But the sea gulls were there-" ifs" can not banish them-and Columbus found our land.

So, to-day, the figures are here, the work is here, the business is here, the money is here, to prove our prosperity under Demo-cratic rule, and all the "ifs" in all the languages can not alter

the situation.

Measured by every possible standard-by the volume of exports and imports, by the expansion of domestic trade, by the condition of labor, by the rate of wages, by the size of bank deposits and clearing house returns, by the balance of trade or by the amount of gold in the country, by any and all of these standards, this country to-day is enjoying prosperity such as no other country has ever enjoyed before.

Americanism and peace, preparedness and prosperity, these are the issues upon which the Democratic Party stands, and the heart of Democracy swells with pride that is more than a pride of party as it halls the man who has asserted this Americanism, assured this peace, advocated this preparedness, and produced this prosperity.

The man who is President of the United States to-day has

measured up to the best traditions of a great office.

He has been wise with a wisdom that is steeped in the traditions of his country, with a wisdom that has been disciplined by training and broadened by instruction.

He has been prudent with the prudence of one who has within

his hands the destiny of a hundred million people.

He has been firm with the firmness that proceeds from deep conviction, with the firmness that is grounded in a duty well defined.

He has been courageous with the courage that places country above self, with the courage that follows duty wherever it may

He has been dignified with the dignity that is self-forgetting and self-respecting, with the dignity that conserves the majesty of the greatest office in the world.

He has been patient with the patience which believes and trusts that truth crushed to earth will rise again, with the patience that can endure and wait, watch, and pray for the certain vindication of justice, humanity, and right.

He has been patriotic with a patriotism that has never wavered, a patriotism that is as pure and strong as the faith that

moved the fathers when they made our country free.

No President since the Civil War has had as crucial problems to solve, and no President has displayed a grasp more sure, a statesmanship more profound.

Assailed by the wolves of privilege he has pulled their claws

and drawn their teeth.

Assaulted by partisan envy he has shamed his traducers into silence and made friend and foe go forward together in the paths of national progress

He has fired our patriotism with a new ardor; he has breathed

into our ancient traditions a new vigor and a new life.

He has added strength to America's courage and mingled mercy with America's strength.

He has fastened the brakes of justice upon the wheels of power; he has lifted the mists from the temple where our liberties are enshrined.

And when the history of these days comes to be written and the children of to-morrow read their Nation's story, when time shall have dispelled all misconception, and the years shall have rendered their impartial verdict, one name will shine in golden splendor upon the page that is blackened with the tale of Europe's war, one name will represent the triumph of American principles over the hosts of darkness and of death.

That name will be the name of the great President who has made Democracy proud that he is a Democrat and made Ameri-

cans proud that he is an American.

It will be the name of the student and the scholar who has kept his country true to its faith in a time that tried men's souls; the name of the statesman who has championed the cause of American freedom wherever he found it oppressed; the name of the patriot who has implanted his country's flag on the highest peak to which humanity has yet aspired; the name that carried the torch of progress to victory once and will carry it to victory again; the name of Woodrow Wilson, President and President Canals for Defense.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 13, 1916.

Mr. MOOKE of Pennsylvania. Mr. Speaker, I find the question which the gentleman from North Dakota [Mr. Helgesen] desired to propound had to do with the dredging of approaches to the canal on both the Chesapeake and Delaware sides. That is a fair question, and I am pleased to answer it by saying that my understanding is that the opening of approaches was included in the estimates for a 12-foot depth as submitted in the Bixby report of 1912. This board recommended a sea-level canal 12 feet deep, at a cost approximating \$8,000,000. The 12-foot depth was agreed upon very largely because of the barge depth established by the New York Barge Canal. It is fair to say, however, that a 12-foot depth would not be sufficient for the passage of modern torpedo boats or submarines. Earlier commissions made careful estimates of cost for depths exceeding 12 feet. The highest of these was presented by the Agnus Commission of 1907, which made, perhaps, the most careful survey of any of the commissions and went more thoroughly into the element This commission recommended a 35-foot depth and estimated that all necessary work could be done, including the purchase of the property, for a total of \$20,621,323.70. This estimate included all necessary dredging from deep water in Chesapeake Bay to deep water in Delaware Bay, but Congress at the time did not look with favor either upon the expenditure of \$20,000,000 or upon the construction of a 35-foot channel. showing that we "failed to take time by the forelock" and have permitted ourselves to remain in a state of unpreparedness in this matter, I call attention to the fact that the total cost of our modern battleships has now reached about \$20,000,000, and that they require a channel depth of 35 feet.

It is unfortunate that we did not look far enough ahead in

1907 to anticipate our present necessities, but that is no good reason for further postponing them. I repeat we could provide an up-to-date canal between the Chesapeake and Delaware Bays that would be invaluable to commerce in times of peace and of inestimable worth to the Government in times of peace or war for the cost of a single battleship. If we do not provide such a passageway, it may happen some day that our neglect in that

regard will cost us the price of a dozen battleships,

VIEWS OF ADMIRAL GRANT.

At the Savannah convention of the Atlantic Deeper Waterways Association, in November last, Admiral Grant, who is at the head of the submarine service of the United States, made this significant statement:

the head of the submarine service of the United States, made this significant statement:

Inland waterways, capable of being used by the entire fleet, would enable that fleet to be concentrated at any point on our Atlantic seaboard ready to strike a blow upon an inferior force of an enemy or to defeat the enemy in detail should the latter be divided into squadrons. The value of such a waterway to a defending force is apparent. It could remain in safety until the enemy has been located on our coast and then could be concentrated behind ample protection for attack. An enemy operating on the high seas against our coast would then have to always keep its force concentrated. Otherwise it would leave itself open to being defeated in detail. Senator Sallsburk well illustrated the value of connecting inland canals in concentrating vessels at certain points along the coast line to meet a blockading force.

Considering our battleship fleet inferior to that of the enemy, our best chance to defeat invasion would be by the use of what is termed "secondary tactics," or utilizing that type of vessel which relies principally upon the use of the torpedo. The inferior force being unable to attack a superior enemy directly would remain in port, as is being done by the inferior fleet against divisions of the enemy's fleet. Through the inland waterway these vessels could be moved behind a secure protecting screen of fortifications and concentrated wherever desirable.

Considering a blockade of our coast whereby the enemy would attempt to close our most important harbors, the value of the inland waterway in order to move and conventrate such vessels as destroyers and submarlnes is evident. Furthermore—

(a) It would permit our merchant vessels moving along the waterway to elude the watchful cruisers of the enemy. Such merchant vessels would have to be speedy blockade runners;

(b) It would enable mobile guns to be moved from one end of our long coast line to another, ready to meet an invading force must first cross or capture. The e

but I must enter into a few details to make my plea understood for deeper inland waterways than those contemplated. The general dimensions of our torpedo-boat destroyers are: Length. 300 feet; beam. 30 feet; draft, 10 feet. And our submarines, Holland type, L and O classes: Length, 165-190 feet; beam, 17½ feet; draft, 13½ feet; tonnage, 450 to 500 tons on surface; cost, \$1,000 per ton. Any canal with a projected depth of 12 feet only will be, when finished, too shallow for submarine use.

SECRETARY DANIELS'S STRONG INDORSEMENT.

The Secretary of the Navy, Mr. Daniels, was also represented in a strong statement at the Savannah convention. His letter dealt with the subject of inland waterways in a most comprehensive manner. As to the value of inside passages for such craft as the submarine, the Secretary said:

ter dealt with the subject of inland waterways in a most comprehensive manner. As to the value of inside passages for such craft as the submarine, the Secretary said:

There are no ships in the Navy so delicate as our submarines and destroyers, and when we send them on long cruises it costs thousands of dollars to repair them after they have had to go on the high seas. Of the Atlantic coast to the other, and he had to go on the high seas of the Atlantic coast to the other, and the high seas in time of peace when we have not many of these craft, when we have not so many as we must have if we learn the lesson of the last month in Europe. For years the discussion among experts in naval affairs has been over the question as to whether most of the money should go into dreadnaughts or into destroyers and submarines, and our country has put its money chiefly into dreadnaughts, believing that they make the best defense. We are learning from the war in Europe something, about naval affairs. So far there has been little learned on land, and there have been no great engagements on the sea, but there have been some engagements which wedon sea a pating, and in our five raine, though it has not superseded the dreadnaught in importance, has proved to be a wonderful weapon of sea a pating, and in our five 1922.

Now, this intracoastai canal is of vital importance to our submarines, for, as I have said, they are as delicately built as a clock, and stand in great need of repair after a long voyage as a result of being rolled about an heavy seas. You will recall that during the early part of the war an English submarine was seen off the Island of Helgoland. A German ship, seeing this ship in distress and another English ship apparently going to its aid, rushed out and followed until other English ships came to destroy the German Ship. Again we saw a German Submarine destroy three large English cruisers without warning. Time and again the submarine has been effectively used, so that we are learning that it is to this small craft t

smaller craft to escape the dangers of storms at sea by plying from one port to another.

Aside from the commercial value of cheap transportation and safety from storms, and deep-sea navigation, there are the following military and naval advantages in case of war: It will enable us with a more limited number of mine-laying ships, mine sweepers, submarines, and the torpedo boats to transfer these mobile harbor and coast defense weapons from one point to another on our coast, thus multiplying their efficiency, increasing the radius of action and lessening the danger of their being intercepted by an enemy until an attack is launched. It would increase our coast defenses by transporting heavy mortars and traction engines on canal boats and barges to points up and down the coast when an enemy may attempt to make a landing or seize a base. The Germans use their canals and rivers to thus transport heavy artillery.

The Sheppard Bill.

EXTENSION OF REMARKS

HON. H. GARLAND DUPRE, OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES, Thursday, June 15, 1916.

Mr. DUPRÉ. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a resolution adopted by the General Assembly of Louisiana, protesting against the

passage of the Sheppard bill amending the interstate-commerce

The Sheppard bill is as follows:

THE SHEPPARD BILL.

THE SHEPPARD BILL.

Be it enacted, etc., That the act entitled "An act to regulate commerce," approved February 4, 1887, and acts amendatory thereof, be, and the same is hereby, amended by adding after the provise in section 1 the following:

"And provided further, That nothing in this act, nor exercise of any authority by the Interstate Commerce Commission by virtue thereof, shall absolve any railroad or other common carrier from obeying any rate, rule, regulation, or practice of any States with respect to the transportation of passengers or property, or the receiving, delivery, storage, or handling of property wholly within one State and not shipped to or from a foreign country, from or to any State or Territory, as aforesald, unless and until such common carrier shall have secured the judgment of a court of competent jurisdiction holding such rate, rule, regulation, or practice imposed, as aforesaid, to be unreasonable.

RESOLUTION.

Whereas there is now pending in the Senate of the United States a bill introduced by Senator Morris Sheppard, which has for its object and purpose the nullification of the law as declared in the now famous Shreveport rate case; and Whereas the General Assembly of Louisiana, by a resolution and appropriations made for the purpose, had the suit brought that wiped away the rate barrier erected by the State of Texas against Louisiana commerce at the State line; and Whereas the future prosperity of a large part of the population of Louisiana, together with the welfare of the cities of New Orieans, Shreveport, Monroe, and Alexandria, are indissolubly linked with the matter of freight rates; and Whereas if the Sheppard bill, now pending in the United States Congress, should be enacted into law, the effect of the rate fight already won would be nullified: Therefore be it

*Resolved**, That the General Assembly of Louisiana earnestly urge its United States Senators and Representatives in Congress to vigorously oppose the passage of Senate bill No. 5242, introduced by Senator Morries Sheppard and now pending before the Committee on Interstate Commerce, and that copies of this resolution be forthwith forwarded to Louisiana's Senators and Congressmen upon the passage of the resolution.

Problems of War.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES, Thursday, June 15, 1916.

Mr. DAVIS of Texas. Mr. Speaker, the power that controls the money of any country controls the destiny of that country. If the money and capital are concentrated in the hands of a few the destiny of that country is in their hands, no matter what you may call the form of government under which they operate.

It is well known, sir, that there is an invisible government that sways affairs in this and all other countries.

Two years ago a militant democracy, recently intrusted with power in this Republic, was leading the world in a great moral wave for universal peace and disarmament. This great Republic making peace compacts with most of the other nations of the earth alarmed the money devil and the world-wide War Trust.

The gold syndicate of the earth seeks to control, and does in a

large measure control, the government debts of the earth and the gold with which all government debts are now made payable. This money devil leagued with the world-wide war trust set about to offset the great move that America had put on foot for peace and disarmament. Through the inordinate greed and ambition of a few crowned heads in Europe they soon put the whole of Europe in an unexpected and devastating war, and following this they soon raised a clamor and a turmoil and a feverish anxiety throughout this country for massive armament and the investment of multiplied millions in preparation for To-day militarism is manifest everywhere, and a frenzy and frantic rage for war and blood and strife and turmoil, and more debts and more bonds upon which the gold syndicate can feast, is seen and heard and felt everywhere. Its irresistible unseen force is driving this Republic insane on the question

Mr. Speaker, why should we be in a frenzy of excitement and preparation for war? Why should we load our country with stupendous debt and taxation for vast armaments and expenses for war? What country do we dread and what country do we fear? For a hundred years we have never needed a fort nor a battlement along the Canadian line, our neighbor on the north. With her we have lived at peace, and all our relations have been with amity to a remarkable degree. Do we dread Mexico, our neighbor on the south? Nay, verily. Texas, one of the States of the Union, while yet in her infancy maintained a successful war against that country, and history tells us we do not need stupendous armaments, the largest Navy in the world, to take care of ourselves against that country. In fact she, with all the countries to the south of us combined, could not terrify us if they were so disposed. The countries of Europe are now exhausted, worn, torn, devastated with conflagration and interminable war, impoverished and famished, until they are literally bankrupt and are being fed, maintained, and supported in the war that is now raging largely by this country, and that, too, on credit. If the whole of Europe were disposed to organize, combine, and use their fleets and their powers it is doubtful in my mind if they could ever make a landing on our shores with an invading army. Modern warfare and the inventions of the age make such a thing next to impossible. Wireless telegraphy, the submarine, the air ship, and the mine have practically dis-posed of the theory of crossing the ocean with an invading fleet expecting to land and maintain an army in a hostile country. enemy in Europe or in Asia or the Orient expecting to land an invading army on our shores must of necessity mobilize that army and spend from one to three months in preparation to bring 100,000 men with the necessary equipments for an invasion. They must have a military fleet that would spread at least 12 miles abreast and 5 miles deep. Such a vast fleet must require from two to six weeks to cross the ocean. Every day of their journey we could be notified by wireless telegraphy of their exact position on the ocean. In a few weeks' time at a moderate expense we could string our ocean front with mines, locate for action our submarines and torpedo service. A ship in the air from an aeronautic station could serve as an ocean scout and tell us exactly where they were as they neared our shores, and in one night's time, with reasonable preparation and moderate expense, we could with submarines, torpedoes, and mines blow it into atoms, or at least prevent it from ever landing an army on our And I make bold to say, not as an expert, but as a man supposed to have common sense and fairly versed in the world's affairs, that no nation and no set of nations would undertake such a hazardous and reckless affair.

I have not been moved into a frenzy of fear by all the manufactured hysteria that has been raging through our country for the last several months. I have been thinking of the millions of people who need relief from the greedy corporation cormorants that prey upon innocent industry at home. I have been trying to think of the great mass of common people who have to bear the burdens of taxation and spill their blood in war. have followed Mr. KITCHIN, our chosen leader in Congress, and supported the Democratic program as agreed upon. The Army bill, though much larger and far more expensive than I thought necessary, was agreed upon by the Committee on Military Affairs and President Wilson and I supported the program. The Naval bill reported by the Committee on Naval Affairs was also much larger, more stupendous, and far in excess of what I felt necessary, but remembering that the Good Book had said "in the midst of counsel there is safety," the measure was brought forward with the counsel of the Committee on Naval Affairs and the Democratic administration, and I also supported that In all our conferences and in all our Democratic caucuses I fought for my convictions with all earnestness, but have been willing to yield to the wisdom of the majority.

It is the intention of Mr. KITCHIN and the leading Democrats to raise the larger part of the revenue to meet these stupendous military and naval expenses by increasing and enlarging the income tax on the swollen fortunes of our country and the munition makers. In this measure the leading Democrats are fully concurred, and I have labored anxiously to bring forward this measure. If the huge stacks of corporate and individual wealth of the country can be made to bear their share of the vast expense we have voted in the Army and Navy bills I will feel that the Democratic administration will come off well. In any event money should bear its part of the expense required for measures of defense preparedness and war. But the world has never been brought to see the justice of such a plan. In all ages gold has hid away in time of war, while men marched forth to pour out their blood. Capital has generally deserted the flag of its country and has never fought for liberty, but has moved to safe retreat and come out on the windup and administered on the bankrupt survivors and coined the misery and death of manhood into massive piles of additional wealth, Believing that if those who control the money of the country were made to share the larger burdens of war and not allowed to coin the misery, death, degradation, and distress of war into millions more money for their tills, they would be enlisted in behalf of peace and therefore prevent war, I have introduced a bill, which I insert in the RECORD that the American people may know and see the object I seek to obtain. I also insert a letter

addressed to the Secretary of War, the Hon. Newton D. Baker, commenting on this bill:

A bill (H. R. 16305) to make classifications for military and naval service, to promote preparedness, to provide for adequate and efficient national defense, to require that in all naval and military service of the United States, whether in time of peace or war, wealth shall bear and perform its proportional part of the service, and that money shall be made to fight for its country the same as men.

Be it enacted, etc., That each corporation in the United States or any of its Territorial possessions shall be reckoned a person and citizen for military and naval service; that corporations with a million dollars or more capital and surplus shall be considered adults and subject to military duty, and shall pay into the Treasury each year in time of peace a sum equal to the average annual cost of one soldier for each \$100,000 of the capital and surplus of said corporation in excess of \$1,000,000 and in time of war for each \$50,000 of capital and surplus in excess of \$1,000,000.

Sec. 2. That all personal incomes, family incomes, or joint incomes of

\$1,000,000 and in time of war for each \$50,000 of capital and surplus in excess of \$1,000,000.

Sec. 2. That all personal incomes, family incomes, or joint incomes of husband and wife in excess of \$100,000 per annum, shall be assessed, and the owner or owners thereof shall pay into the Treasury each year in time of peace a sum equal to the average annual cost of one soldier for each \$100,000 of said income in excess of \$100,000 per annum and in time of war for each \$50,000 of said income in excess of \$100,000. That in assessing the values provided in this section the values set by State courts shall be accepted.

Sec. 2 That any dowry, inheritance, bequest, legacy, income, or other sum of money arising or accruing from property or investments in the United States to a foreign potentate, principality, corporation, firm, or individual, other than for charitable, educational, or benevolent purposes, shall be assessed, and the owner thereof shall pay into the Treasury in time of peace a sum equal to the average annual cost of the maintenance of a soldier for each \$50,000 of said funds received in excess of \$100,000 per annum.

Sec. 4. That in order to ascertain the average annual cost of one soldier the total number of soldiers, sailors, and active and retired officers in the Army and Navy shall be divided into the total annual cost of said soldiers, sailors, and active and retired officers in the Army and Navy shall be divided into the total annual cost of said soldiers, sailors, and active and retired officers, and the result shall represent the annual average cost of one soldier as contemplated by this bill.

Sec. 5. That the Secretary of War and the Commissioner of Corporations shall have power to prescribe rules and regulations governing the execution of this act, and shall provide for collection through the Treasury Department.

Sec. 6. That all members or officers of corporations, all citizens or

the execution of this act, and shall provide for collection through the Treasury Department.

SEC. 6. That all members or officers of corporations, all citizens or residents of the United States subject to impressment or assessment under the provisions of this act, who refuse or fail to comply with such provisions shall be deemed guilty of desertion, and upon conviction shall be punished as provided by law in case of desertion. That the incomes, dowrles, inheritances, or legacies, etc., accruing to foreigners, described in section 3, shall escheat to the United States upon the decree of any court of competent jurisdiction it said foreigners fail to comply with the provisions of this act.

SEC. 7. That corporations, associations, or individuals organized salely.

SEC 7. That corporations, associations, or individuals engaged solely in religious, benevolent, charitable, or educational work shall not be subject to the provisions of this act, whether such corporations, associations, or individuals are domiciled within the jurisdiction of the United States or abroad.

House of Representatives, Washington, D. C., June 9, 1916.

Washington, D. C., June 9, 1916.

Hon. Newton D. Baker,

Secretary of War, Washington, D. C.

My Dear Mr. Secretary: Amid all the anxiety for adequate national defense and the great clamor for massive armaments, as a Member of Congress, I have been trying to view all these questions from the standpoint of the general masses of our people who must bear the burdens of taxation and make up the complement of manhood and men in the Army and Navy. The mad clamor for universal service, so called, is alarming. It is only a soft term, which means "conscription" with all its direful results of militarism and despotism. The old theory that would enable a war council to compei the meek and lowly poor men to march abreast in war to protect untold millions of money they do not own is brought from the paganism of the past ages, when kings assumed a divine right to control the life, person, and property of their subjects.

This Republic is founded upon a different and distinct theory of government. Here all political power is inherent in the people themselves, and all just powers of government are derived from the consent of the governed. All men have equal rights, and thereby incur equal liabilities in government.

Man alone should not be made the sole unit of offense and defense in

governed. All men have equal rights, and thereby incur equal liabilities in government.

Man alone should not be made the sole unit of offense and defense in war. Money should be made to fight for its country the same as men. The man who owns a million dollars has vastly more at stake in government than the man who owns nothing. I am one of those who believe that in proportion as a person's wealth bears to the whole wealth of the country he should be made to bear the burdens that war and armaments impose. Public policy requires that the weak and the feeble, the aged, the infirm, and the young and undeveloped shall not be made to fight even for their own defense; hence a moderate amount of money and capital should be exempt as a minor is exempt. Then the swollen fortunes of the country should be made to bear their part of all expense necessary for adequate preparedness and efficient defense. With that point in view I have introduced a measure in Congress, the short title of which is "Ic make money fight for its country the same as men." I send you a copy of the bill and shall be glad to have your opinion on the same.

The corporation as "an artificial man" does the business of our country to-day. Individuals as such have lost all identity and individuality in the great business and commercial world, and my measure makes the corporation "a man in war" the same as "a man in law." You will readily understand that the corporation in our jurisprudence is held to be "a citizen," "a man, "a person," and in all matters of business is so recognized. The bill makes every corporation with more than \$1,000,000 capital and surplus "a full-grown man" subject to military duty, then divides all capital in excess of one million into units of \$100,000 and makes each unit support a soldier.

The following digest of the measure will give you a fair idea of the questions involved.

The House Judiciary Committee of the Sixty-third Congress gave the following statistics of corporations with over \$1,000,000 capital, therefore subject to military duty under the provisions of the bill:

"Four thousand six hundred and eighty-eight corporations had capital of \$1,000,000 and over and less than \$2,600,000.

"One thousand three hundred and ninety-nine corporations had capital of \$2,000,000 and over and less than \$3,000,000.

"Six hundred and seventy-seven corporations had capital of \$3,000,000.

"Two hundred and seventy-seven corporations had capital of \$4,000,000 and over and less than \$5,000,000.

"Eigh hundred and sixty-one corporations had capital of \$4,000,000 and over and less than \$10,000,000.

"Six hundred and fifty-two corporations had capital of \$10,000,000 and over and less than \$50,000,000.

"Six hundred and fifty-two corporations had capital of \$10,000,000 and over and less than \$50,000,000.

"Thirty-five corporations had capital of \$50,000,000 and over."

The foregoing table of corporations gives approximately the following results:

1, 399 corporations support			Soldiers	Ja
	1, 399 677 - 292 861 652 62	erporations support	13, 39 13, 54 8, 76 34, 56 58, 68 30, 38	9 0 0 0 0 0

Making 8, 663 corporations support__

198, 949

country the same as men.

To tell me that it is right to compel men to stand up and be shot at and die for their country, and then tell me that you can't justly compel any part of the huge piles of wealth to stand up and die for its country is to tell me that money is more precious than manhood, that dollars are sacred and divine and men are mere beasts of burden, chattels to be sacrificed to protect money and Mammon.

An Affront to Honest Journalism.

EXTENSION OF REMARKS

HON. FRANK BUCHANAN. OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 15, 1916.

Mr. BUCHANAN of Illinois. Mr. Speaker, under the leave granted me to extend my remarks in the Record I insert several articles on the seamen's law and its operation appearing in La Follette's Magazine for October, 1915, as follows:

AN APPRONT TO HONEST JOURNALISM.

An Approximate To Honest Journalism.

The same power which organized the press of the country to force from the Interestate Commerce Commission a decision favorable to the railroads in the \$100,000,000 advince rate case is behind the nation-wide newspaper raid on the seamen's law. The same motive and the same selfish interest has inspired both attacks. The same power which controls transportation by water. In the advance rate case its literary bureau printed thousands of pages of "dope" news articles and editorial comment in the leading dailies, the great weeklies, and the mouthly magazines. Its victory in that case encouraged it to undertake the building up of a false public sentiment against the seamen's law, luten'ed to intimi late President Wilson and stampede Congress into modifying or repealing the statute altogether.

What is the seamen's law? What is its main purpose? What vital wrongs does it aim to right?

First, as to the sation: Under the old law he was bound to the ship. He became the property of the shipowner. Even though he found the captain of the vessel a brutal, slave-driving master; even though he found the vesses unseaworthy, overinsured, and made ready for sea burial and the collection of excessive insurance, he could not quit the employment upon which he had entered under penalty of imprisonment. He was the only man on American soil or under the American fing who could be jailed for quitting work.

Under the new law the sailor has the right to release from his contract and to receive one-half of his pay then due; and any stipulation to the contract in his contract of service shall be held void. But he

is not permitted under any circumstances to quit the vessel unless it be in a safe port, where vessels load and discharge cargo, the purpose of this latter provision being to safeguard the vessel against abandonment when the services of the sailor are necessary to its protection. In a port where cargo is loaded of discharged it is ensily possible for the owner to fine sailors to take the place of those quitting the vessel.

While the old law provided that American ships should be officered by American citizens, and required a certain standard of skill and efficiency for officers, it made no such provision as to sailors. The shipowners, in order to swell their enormous dividends, were supplanting white sailors with the low-wage, cheaply fed Orientals. No standard of skill or efficiency was required as to the crew. A white American sailor, skill or efficiency was required as to the crew. A white American sailor, skill or efficiency was required as to the crew. A white American sailor, shipping for a voyage, might find himself associated with Asiatics, who were neither skilled sailors, nor capable of understanding the orders of the officers, except through the medium of an interpreter.

The new law requires that 40 per cent of the crew the first year the law goes into effect shall be able seamen, the second year 45 per cent, the third year 50 per cent, the fourth year 55 per cent; and thereafter 65 per cent of the deck crew shall be able seamen, exclusive of licensed officers.

law goes into effect shall be able seamen, the second year 45 per cent; the third year 55 per cent; the fourth year 55 per cent; and thereafter 65 per cent of the deck crew shall be able seamen, exclusive of licensed officers.

Thus the new law establishes a standard of skill and efficiency for the crews of vessels of over 100 gross tons, except vessels navigating rivers exclusively and the smaller inland lakes, by providing that in oceangoing vessels every person shall be rated an able seaman after three years' service on deck at sea, and that for vessels on lakes, bays, and sounds, every person shall be rated an able seaman after 18 months' deck service on such vessels.

In the old law there were no requirements, either by statute or regulation, as to the number of hours of continuous service. Sallors might be worked until, through loss of sleep and rost, however skilled, they were a source of peril to the vessel, as well as to their shipmates.

The new law regulates the hours of labor at sea and in port (excepting when the vessel is in peril) by dividing sallors into two watches; the firemen, olders, and water tenders into three watches, which are to be on duty successively while at sea. In port hine hours, inclusive of anchor watch, shall constitute a day's labor.

Under the old law the accommodations for sailors were inadequate and insanitary; their food insufficient. The well and the sick were crowded together like rats in a hole. In the sailors' quarters only 72 cubic feet of air space was allowed each sailor—that is, 6 feet in lenath, 2 feet in width, 6 feet in depth—"too large for a coffin and not large enough for a grave" as one sailor grimly expressed it.

The new law requires 120 cubic feet of air space for each sailor, with 16 square feet on the floor. It prohibits the placing of more than one berth above another; it requires a light, clean, properly ventilated and equipped wash place for sailors, if there are more than 10 in the deck crew, and a separate wash place for furnishing of a separate roo

regulations of the inspection department under the provisions of the old law.

The new law requires on ocean-going vessels more than 20 miles from shore that lifeboats shall be provided for 75 per cent and ilfe rafts for 25 per cent of the maximum number of persons on board. It makes the same requirement for all ocean-going vessels less than 20 miles from shore and all vessels on the Great Lakes, bays, and sounds, from September 15 to May 15 of each year. But on ocean-going vessels less than 20 miles from shore, from May 15 to September 15, the new law requires lifeboats for only 35 per cent, life rafts for 35 per cent, and life belts for 30 per cent of all persons on board. It further provides that vessels on the Great Lakes from May 15 to September 15 shall furnish lifeboats for 20 per cent, life rafts for 30 per cent, and life belts for 50 per cent of all persons on board.

From the foregoing it will be seen that the shipowners were powerful enough with Congress to reduce the life-saving appliances from May 15 to September 15. Obviously, when the summer senson is on, and cheap excursion rates induce to heavy passenger traffic, greater, not less, provision should be made for the preservation of human life. But here again the steamship lobby was strong enough to so amend the Senate bill in the House and maintain the amendment in conference, as to permit vessel owners to crowd the space which should be occupied by lifeboats with women and children, who constitute so large a percentage of excursion-steamer passengers.

The shocking loss of life in the case of the Eastland at Chicago is proof overwhelming that the greel of the shipowner can only be restrained by the strictest statutory provisions.

The Empress of Ireland went down in calm water within 3 miles of shore, drowning more than a thousand passengers, most of whom were provided with life belts.

In the case of the Titanic, every soul on board would have been saved had there been a sufficient number of able seamen to taunch and man such boards. Two hours

lost.

It is equally important that the crew in every department who must in any emergency execute orders with the greatest dispatch should understand the language of the officers in command of the vessel. Otherwise, the service of an interpreter would be required with all

the resulting delay and the certainty of fatal mistakes in translation of orders due to the excitement and confusion prevailing. Hence, the new law provides that 75 per cent of the crew of the vessel in each department thereof must be able to understand any orders given by the

new law provides that 15 per cent of the crew of the vessel in each department thereof must be able to understand any orders given by the officers of the vessel.

For the further protection of the public the new law requires that every vessel shall provide for each lifeboat or life raft certificated lifeboat men, as follows:

If the boat or raft carries 25 persons or less, the minimum number of certificated lifeboat men shall be 1; if the boat or raft carries 26 or less than 41, the minimum number of certificated lifeboat men shall be 2; if the boat or raft carries 41 or less than 61 persons, the minimum number of certificated lifeboat men shall be 3; if the boat or raft carries 61 or less than 85 persons, the minimum number of certificated lifeboat men shall be 4; if the lifeboat or raft carries 86 or less than 110 persons, the minimum number of certificated lifeboat men shall be 5; if the lifeboat or raft carries 111 or less than 160 persons, the minimum number of certificated lifeboat men shall be 6; if the boat or raft carries 161 or less than 210 persons, the minimum number of certificated lifeboat men shall be 7; and thereafter 1 additional certificated lifeboat man shall be previded for each additional 50 persons.

ertificated lifeboat man shall be provided for each additionat 50 persons.

By "certificated lifeboat men" is meant any members of the crew who hold a certificate of efficiency issued under the authority of the Secretary of Commerce. In order to obtain the special lifeboat man's certificate the applicant must prove to the satisfaction of an officer designated by the Secretary of Commerce that he has been trained in all the operations connected with the launching of lifeboats and the use of oars, that he is acquainted with the practical handling of boats, and further, that he is capable of understanding and answering the orders relative to lifeboat service.

The new law further requires that in manning boats a licensed officer or able seamar shall be placed in each boat or raft; that he shall have a list of its lifeboat men and other members of its crew which shall be sufficient for her safe management; and that he shall see that the men placed under his orders are acquainted with their several duties and stations.

The duty of seeing that the boats, rafts, and other life-saving ap-

The duty of seeing that the boats, rafts, and other life-saving ap-pliances are at all times ready for use shall be assigned to one or more

The duty of seeing that the boats, rafts, and other life-saving appliances are at all times ready for use shall be assigned to one or more officers.

It will be observed that although the law is far from adequate in its provisions as to safety of ife at sea, it is an immense gain in the public interest over the provisions of the old law. It imposes upon shipowners certain duties in the public interest.

That transportation companies can not safely be exempt from strict statutory requirements and thoroughgoing Government supervision should require no argument. In the interest of public safety it has been found necessary to compel railroad companies to adopt safety appliances and to strictly limit the number of continuous hours of service for railway employees in the operation of trains.

Just as the steamship companies resisted by every known means all regulations providing for the safety of travel at sea, so the railroad companies contested every attempt to require the equipment of reasonable safety devices in the operation of their trains and fought to the last ditch the statute limiting the number of hours of service for the crews in charge. The organizations of railway employees petitioned Congress for years to provide safety appliances and to limit the hours of continuous service in the operation of trains. The public demanded such legislation as would make travel by land reasonably safe.

With the enormous loss of life owing to the lack of equipment of vessels with lifeboats and the supplanting of the white sailor with unskilled; ignerant, and inefficient Asiatics, it is at least equally limperative that the seamen's law be rigidly enforced and travel by water be made reasonably safe in the public interest.

The controlled press of the country has denounced this legislation as hasty and ill-considered. Such a charge betrays the ignorance of its authors. It is typical of the entire campaign which the press has conducted at the instance of the steamship companies. In all the mass of material with which the c

subject.

For more than 20 years this legislation has been before the committees of Congress. Session after session it has been the subject of hearings, investigation, and discussion. Comprehensive bills have been introduced Congress after Congress, public hearings held, and volumes of testimony taken and printed, all of which is of public record. The influence of the steamship companies has been powerful enough to delay decisive action throughout all that period. But, excepting as to some of the provisions regarding lifeboats and their proper manning, the bill in all its essential particulars has been debated before the committees of Congress and in one branch or the other for more than a decade.

than a decade.

The merits of this legislation finally became so manifest that both the Republican and Democratic Parties in national convention in 1912 pledged its enactment into law. The Republican platform declared:

"We favor the speedy enactment of laws to provide that seamen

1912 pledged its enactment into law. The Republican platform declared:

"We favor the speedy enactment of laws to provide that seamen shall not be compelled to endure involuntary servitude and that life and property shall be safeguarded by the ample equipment of vessels with life-saving appliances and with full complements of skilled ablebodied scamen to operate them."

The Democratic platform in 1912 declared:
"We urge upon Congress the speedy enactment of laws for the greater security of life and property at sea, and we favor the repeal of all the laws and the abrogation of so much of our treaties with other nations as provide for arrest and imprisonment of seamen charged with desertion or with the violation of their contract of service. Such laws and treat'es are un-American and violate the spirit, if not the letter, of the Constitution of the United States."

Both parties, therefore, were solemnly pledged to the enactment of the seamen's bill passed both Houses in the closing days of the Sixty-second Congress, and the failure on the part of President Taft to sign the bill was one of the most indefensible acts of his unfortunate administration.

The bill was reintroduced in the Senate on the first day of the last Congress. It was referred to the Committee on Commerce. It was introduced in the House shortly thereafter and was referred to the Committee on the Merchant Marine and Fisheries. Both committees referred the bills to the Departments of Commerce and Labor. The heads of those departments joined in a strong recommendation to the Senate that the bill be passed at the earliest possible date. But it was retained by the committees of both Houses for months. Extended hearings were had, a mass of testimony taken on the subject, and printed for the information of the Senate and House and for distribution throughout the country. It was reported by the Senate committee, debated for days, so amended as to require lifeboats for all, and, as amended, passed the Senate October 23, 1913. Having been before the Senate Committee on Commerce and the Senate for open and free discussion seven months, it was transmitted to the House and referred to the Committee on the Merchant Marine and Fisheries. Public hearings were held by that committee extending over weeks and months. It finally passed the House with amendments on the 27th day of August, 1914, having been before the House and its committee 10 months for consideration. It was returned to the Senate and was for many weeks the subject of consideration by a committee of conference of the two Houses. In the closing days of the session, March, 1915, the conference report was adopted by the two Houses and the bill transmitted to the President. He approved it March 4, 1915.

It would be difficult, indeed, for the opponents of this law to cite another measure which has been the subject of more thorough investigation, more deliberate consideration, by Congress than the seamen's act, which has been denounced as Ill-considered and hasty legislation.

The opposition to this measure is a combination of ignorance and dishonesty. Its defeat, session after session, by the steamship companies, aided by the corporation press of

A CONSPIRACY EXPOSED.

A Conspiracy Exposed.

This number of La Follette's Magazine is given over to answering the objections—all of them specious—that have been raised against the seamen's law. Mrs. Florence Kelley discusses this measure primarily from the standpoint of the traveling public. Mrs. Kelley has been the able and courageous general secretary of the National Consumers' League since 1899, and in this capacity, as well as through her writings, she has done much real service for humanity. Congressman Rufus Hardy, of Texas, who is the distinguished head of the House committee which favorably reported the bill, uncovers the shallowness and dishonesty of the printed matter circulated so widely by the shipping interest and quoted parrotilike by a subservient press. Philip Manson contributes a strong statement from the point of view of a patriotic shipowner. Mr. Manson knows whereof he writes.

In 1908 he organized the Bermuda-Atlantic Steamship Co. and was the principal stockholder of that company and its vice president and general manager up to 1912. He has recently returned from China, where he successfully negotiated a transaction of tremendous interest to the shipping world, concerning which an important announcement will soon be given to the public—an announcement which we regret we are not permitted to give at this writing. Mr. Manson most convincingly exposes the blind and bluster of the shippowners who have been fighting for the repeal of the seamen's law. Mr. V. A. Olander, who is general secretary of the Lake Seamen's Union, in his article makes clear the pressing need of applying this measure to the Great Lakes as well as to the oceans. No one who reads this article with unbiased mind can fall to understand and resent the selfishness of the plea of the Lake shipping interests that this measure "hurts their business." These splendid articles, together with Senator La Follettrie's editorial, will give every reader the truth about this great humanitarian law. We earnestly ask all of our readers to give especial attention

We gladly give our readers the full text of a resolution adopted by the Women's Trade Union League of Chicago. We wish it might carry its appeal to every good citizen in this country, as well as to the public scrvants to whom it is addressed. It requires no comment. Here it is:

"Whereas on the morning of July 24, 1915, the people of Chicago were shocked by the terrible tragedy of the capsizing of the Eastland at her dock in the Chicago River; and

"Whereas nearly a thousand lives were lost, many of them our fellow workers; and

"Whereas had the seamen's act been in force at that time it would have prevented the very overcrowding which made the Eastland capsize; and

"Whereas at the time that the tragedy occurred the shipowners, includ-

and
Whereas at the time that the tragedy occurred the shipowners, including the owners of the Eastland, were conducting a persistent and systematic misrepresentation of the La Foliette Seamen's Act to bring about the repeal of that law at the next session of Congress:

Therefore be it

"Resolved, That we, the delegates to the Second Annual City Conference of Women Trade Unionists of Chicago in meeting assembled, October 2, 1915, earnestly appeal to you to do all in your power to help keep the present seamen's act on the statute books."

SAFETY AT SEA AND THE TRAVELING PUBLIC.

[By Mrs. Florence Kelley, general secretary, National Consumers' League.]

Nothing more cynical has occurred in the recent life of the American Republic than the press campaign against the bill for safety at sea, Silence for less than a fortnight by the slaughter of the innocents on the Eastland, this campaign has continued in the form of news notes and editorials in 41 of the 48 States and in the District of Columbia. With cruelly few honorable exceptions, it can be truthfully said that the press of the United States, from ocean to ocean and from the Lakes to the Gulf, has placed itself on record as opposed to safety at sea.

The press of the mountain and desert States is particularly dogmatic. The editorial marine experts of Montana, Utah, Oklahoma, Nebraska, North and South Dakota, and Vermont are cocksure in inverse ratio to their maritime experience. Their press has been hardly less shrift than that of Seattle and New York. The Sioux Falls (S. Dak.) Press,

for instance, opines: "The seaven's act was ill-considered legislation." The last its (Mont.) Poot calls it "The last starse." The Sait Lake City (Uliah) Herald is more reassuring; it says, "When that mistaken legislation—the seamen's law—has been erased and Americans can undertake transportation enterprises in the Pacific in competition with Asiatic crews, Government interference with the ocean-carrying business will editorial headed. The safe and sure remedy." "If the next Congress repeals the seamen's act, as it is now expected to do, an exceedingly foolish piece of legislation will be wiped from the statutes." This safe and sure remedy." "If the next Congress repeals the seamen's act, as it is now expected to do, an exceedingly foolish piece of legislation will be wiped from the statutes." This safe and sure remedy is, however, not for the loss of life at sea; it is for the content, there is no thirt, such as middle and the seamen's allowed the advanced of the material furnished. Among all the abounding editorials and press notices, so monotonous and so sinister in their content, there is no thirt, such as middle the seamen's about the season of the material furnished. Among all the abounding editorials and press notices, so monotonous and so sinister in their content, there is no thirt, such as middle the season of the

THE TRUTH ABOUT THE SEAMEN'S LAW.

[By Hon. Rufus Hardy, Congressman from Texas.]

I am glad to discuss the seamen's bill. I am the ranking Democrat on the Merchant Marine and Fisheries Committee of the House, which reported the bill. There is not in my district a shipbuilder or shipowner or a seaman, but there are a quarter of a million people, some of whom are sometimes carried in ships, and all of whom buy and sell commodities, the price of which is affected by ship rates and shipping facilities. My interest in ships, therefore, is selfish as to freights and shipping tacilities; my interest in seamen is purely humanitarian.

My selfish interest became specially acute last August and remains so because of high rates and poor facilities for the shipment of our cotton, operating for a time to force us to sell at starvation prices, and still operating to our great injury. My people therefore strongly desire an efficient, available, safe, and economic over-seas and coast-wise merchant marine. I am willing to sacrifice economy for safety at sea and humanity to seamen, but not for special bonuses, bounties, or privileges to shipbuilders or shipowners.

I sat through many weeks and months of patient hearings during the last three years on this bill and endeavored to be just and fair. We heard all that asked to be heard for more than two years. Perhaps 10 men appeared before us in the interest of shipbuilders and owners of ships and ship lines, like Schwerin, of the Pacific Mail, and owners of ships and ship lines, like Schwerin, of the Pacific Mail, and

Robert Dollar, and able lawyers came before us in the former interest. The public was practically unrepresented and Andrew Firmseth was two were unjust to the shiptowner, we are greatly to be blamed.

I have the bill before me; also a pamphlet containing a "Statement was the public with the public of the public of the public. The sements bill." Remember that this is the home of Messrs, Schwerin and Dollar, who because they can't live under the seamer's law.

I take it the statement before me gives all the real object on setting ships because they can't live under the seamer's law.

I take it the statement before me gives all the real object to I section and the bill and that they only object to I section ment whatever is sought."

Sections 4.13. and 16 are objected to entirely, section 11 in part erroport where the ship loads or delivers cargo one-haif his carried wager. These critics charge that it was inserted purely to encourage describing the state of the state

refusing to come to our ports, yet all their cry is that they can't compete with foreign ships.

The pamphlet specially objects to section 11e, making our law as to advances to the men apply to foreign ships in our ports. This section is very drastic in its prohibition against certain allotments and advances in order to cut out employment and boarding-house sharks and other crooks. If we had not made it applicable to foreign ships, these same critics would have been quick to seize upon it as burdening our shipping in matters wherein the foreign competitor was free. The fact is this bill puts no requirement on our ships that is not imposed on every foreign ship entering our ports; and this is as it should be. They may not, if they wish to profit by our trade, complain of our treating them precisely as we do our own. It is hard for shipowners to believe, but if they will only employ competent crews of free men on fair terms they will secure greater efficiency and greater safety and more-profit.

Now, I have reviewed all the real objections to the bill. I think I have answered them fairly, and I believe the impartial reader will pronounce them bunk. The truth is that without this bill we have had no over-seas merchant marine, and this is the first right step taken in half a century to build up one. This bill destroys every inequality in the operation of domestic and foreign ships trading in our ports, subjects them both to the same restrictions, and gives them the same privileges and opportunities. They will pay equal wages simply because you can not continue to work equally skilled freemen side by side at different wages. Water not dammed will seek its common level.

I would not finish this article without saying that there is yet one thing lacking, without which all hope to build up our foreign merchant marine will prove vain—that one thing is the right of an American citizen to buy his ship where he can buy it the cheapest, put it under our flag and registry, and use it in our coastwise, inland, or over-seas tr

BLUFF AND BUNCOMBE-THE DISHONEST CAMPAIGN AGAINST THE SEAMEN'S

[By Philip Manson, a patriotic shipowner and organizer of steamship lines.]

The foes of the seamen's act are making much capital out of the announcement that some of the Pacific Mail Steamship Co.'s steamers are to be transferred to the Atlantic service. It is untrue that this transfer was necessitated by the seamen's act. Here are the facts:

Shortly after the passage of the act the Pacific Mail announced that the language provision of the act would make it impossible for them to operate their ships in competition with the Japanese lines. This was assumed on the theory that they would have to replace their Chinese crews with higher-priced American or other English-speaking Caucastan crews.

There is nothing in the act which requires this. The act provides that 75 per cent of the crews in each department shall be able to understand the orders of their officers. Those orders may be given in English, Chinese, Hebrew, or any other language. That the crews shall understand the orders of their officers is a most necessary safety provision.

As a matter of fact all of the Chinese in the steward department of the Pacific Mail steamers understand and speak English; they couldn't get a job with that company if they didn't. And the steward department has more men than any other department on their ships. Also, many of the Chinese in the deck and engine departments understand English.

It would not have been a difficult task for the Pacific Mail to have

ment has more men than any other department on their ships. Also, many of the Chinese in the deck and engine departments understand English.

It would not have been a difficult task for the Pacific Mail to have had their Chinese crews qualify under the language test, with the eight months which they had in which to do it. Or, the officers of the Pacific Mail steamers could easily have acquired within a few weeks a sufficient vocabulary of Chinese to enable their crews to qualify under the act if that company was sincere about the matter.

The original announcement of the Pacific Mail that they would discontinue their trans-Pacific service was unquestionably a bluff, in proof of which I cite the following:

On May 20 an interview with George Corse, general manager of the Pacific Mail in the Orient, appeared in the Japan Advertiser, of Yokohama, in which Mr. Corse said that his company would not quit; that the good will which they had worked up by many years of service was too valuable to give up, but that they might take their ships off for a time in order to teach the American people a lessen. A more brazen threat I have never met with from a public-service corporation.

On June 18 the China Press, of Shanghai, contained an announcement, under a Hongkong date line, which the Pacific Mail had issued, to the effect that they would not discontinue their service, but that they had been compelled to instruct their agents in the Orient to book no more new business, as the full capacity of their steamers for several months to come was booked up.

Up to a short time before the Pacific Mail sold five of its boats to the International Mercantile Marine it conducted classes on board its steamers, instructing their Chinese crews in English in order that they should qualify under the language test of the seamen's act.

The foregoing conclusively proves that the Pacific Mail had no intention of discontinuing their trans-Pacific service. The Pacific Mail undoubtedly thought that by threatening to quit they might bluff Congres

States had featured their announcement that the standars act, and cause them to quit. Thousands of editorials had been printed on the subject.

Not to have quit after all this newspaper furore would have been disastrous to the cause of the "interests," and the Pacific Mail's attack on the administration through the seamen's act would have been very much of a boomerang.

The robber freight rates that are obtaining on the Atlantic enabled the Pacific Mail to save its face and at the same time reap a huge profit. A Hberal appraisal of the five vessels which they sold will not exceed \$3,000,000. They received \$5,250,000 for them. They were enabled, thereby, to save their face, cash in \$2,250,000 in quick profits (which caused an immediate rise in the price of their stock), and at the same time they gave the "interests" a club with which to attack the administration.

It should be noted that the ships sold by the Pacific Mail remained under the American flag notwithstanding the seamen's act.

The Pacific Mail's cry of Javanese competition is sheer buncombe. There has been no Japanese competition. They worked hand in hand with the Tokyo Kissen Kaisha, the only Japanese line between San Francisco and the Orient. Their passenger tickets were interchangeable; also their freight bills of lading. Rates were fixed jointly by them and were as high as the traffic would bear. Every Pacific Mail sailing for

some time past has had every stateroom full, most of them with three passengers in a room; every inch of cargo space has been crammed full with cargo. The future business, as far as can be seen, is just as heavy. In the face of these facts, for the Pacific Mail to say that they were forced out of business by the seamen's act is rank mendacity.

Another calamity howler on the seamen's act, and, in fact, on any shipping legislation that does not give him a big, fat subsidy, is a Capt. Dollar, who is interested in a fleet of seven small boats with a total tonnage of 23,865 tons. Six of his boats are modestly named with the family name "Dollar." One good-sized liner will more than equal Capt. Dollar's entire fleet, but from the way the newspapers which have been fighting the administration on shipping legislation quote Capt. Dollar you would think that he was the Ballin of the American merchant marine. We must give Capt. Dollar credit for being the best self-advertiser in the shipping business. He certainly holds the limelight on matters maritime against all comers.

Capt. Dollar writes frequent articles on shipping, which are eagerly printed by a friendly press. In these articles he undertakes to show by an array of figures that it is impossible to operate ships profitably under the American flag. The fact that his figures are proved to be incorrect does not deter him from repeating them.

For instance, only the other day Commissioner of Navigation Chamberlain of the Department of Commerce, was compelled to rebuke Capt. Dollar in the following letter:

"I am somewhat surprised, after our several conversations on the subject, to read in to-day's New York Journal of Commerce that part of your criticism of the navigation laws which deals with measurement of your criticism of the navigation laws which deals with the British Board of Trade rules, has been the treatment of so-called 'shelter decks' on cargo boats.

"On August 28, 1914, I asked collectors of customs to report any

of vessels. You know that the sole factor in our regulations which may be regarded as adverse to shipping, as compared with the British Board of Trade rules, has been the treatment of so-called 'shelter decks' on cargo boats.

"On August 28, 1914, I asked collectors of customs to report any American steamers in foreign trade with shelter decks which might have less tonnage under the board of trade rules than under ours. None were reported, because we both know our owners and builders have preferred ships of the American-Hawalian Line type.

"On September 5, 1914, I again advised collectors to notify the owner of any sea-going American steamer that he could apply for a revision of measurement on the ground that sheltered spaces with openings at the sides or ends had been included in the tonnage. Again there were no applications. On March 16, 1915, revised regulations on shater decks were issued, and again there has been no request for remeasurement. Still a fourth time, on July 15, 1915, collectors were asked to bring the subject to the attention of American shipowners, and as yet there has been no reply."

Capt Dollar has had much to say about the extra man or two required in the crews of American ships. Many foreign steamers are voluntarily manned up to the full requirements of American avigation laws because of the increased efficiency and protection afforded thereby. Leaving out the question of the increased efficiency of fully manned ships, there isn't a ship affoat the profits of which would be materially affected by the wages of one or two additional men. The London Stock Exchange Yearbook for 1914 gives numerous instances of the enormous profits in the steamship business. Net profits of 50 per cent to 100 per cent per year are not unusual. These are not war-time profits; they are the normal profits previous to the war On September 21, two years before the outbreak of the European war, Shipping Illustrated said: "At present it is the easiest thing in the world for cargo steamers of any description to make

THE SEAMEN'S LAW AND THE GREAT LAKES.

[By V. A. Olander, general secretary of the Lake Seamen's Union.]

[By V. A. Olander, general secretary of the Lake Seamen's Union.]

Is there a pressing necessity on the Great Lakes for such safety regulations in navigation as is provided by the new seamen's act?

The ship-owning fraternity have loudly denied that there is any such need. They have claimed that the Great Lakes are the safest waters in the world. Their clamor against the La Follette seamen's bill, while it was pending in Congress, and against the iaw since its passage, has been almost continuous.

But there have been intervals of silence, periods during which the shipowner ceased his safety claims and held his tongue. During the past 10 years 31 vessels have disappeared into the depths of these waters and taken with them every person on board. Thirty-one ships missing with all on board 'not' a soul returned to tell the tale! That is the "safety" of the Great Lakes. It is when the reports of such cases come that the shipowner maintains silence.

There may be among those who read this some who doubt the statement that the Great Lakes have gathered such an awful toll. But here is the list:

Steamer Losco, steamer Kaliyuga, steamer Ira H. Owen, schooner Taster of the state of the state

meat that the Great Lakes have gathered such an awful toll. But here is the list:

Steamer Iosco, steamer Kaliyuga, steamer Ira H. Owen, schooner Tasmania, schooner Olive Jeanette, steamer J. H. Jones, steamer Arcadia, steamer Searchlight (fishing vessel), steamer D. M. Clemson, schooner Geo. Nestor, steamer Geo. A. Floss (fishing vessel), steamer Marquette 2 Bessemer No. 2, schooner Bose Simmons, steamer Silver Spray (fishing vessel), steamer Adella Shores, steamer Henry B. Smith, steamer Isaac M. Scott, steamer Hydrus, steamer Regina, steamer Leafield, steamer Argus, steamer Hydrus, steamer Regina, steamer Leafield, steamer Wesford, steamer James Carruthers, schooner Plymouth, lightship S2, steamer Benjamin Noble, steamer C. P. Curtis, barge Annic M. Peterson, barge Selden E. Marvin.

This is not a list of all the wrecks that have occurred on the Great Lakes during the last 10 years. It would take more pages than this magazine contains to chronicle all the losses. The list here given is one of total disappearance of ships with every person on board. Undermanning, carried to an extreme on the Great Lakes more than anywhere else, is the primary cause of these losses.

In the passenger-carrying trade the gamble with human life is frightful. The Eastland disaster, with its sacrifice of nearly 900 human lives by the capsizing of that excursion steamer at the docks in the Chicago River just as she was getting ready to cast off, was an inevitable result of the overcrowding practiced on every excursion steamer on the Great Lakes. There was nothing mysterious about the Eastland case. Every mariner on the Great Lakes, including those who occupy positions as Government Inspectors, knows what caused that disaster, though

unfortunately all do not feel free to tell the truth. Lifeboat capacity has been reduced to a minimum by the board of supervising inspectors of the United States Steamboat-Inspection Service in order that the subordinate inspectors might be left free to respond to the pressure from the shipowners to allow extreme overcrowding. Had the seamen's act been operative on July 24 there would have been no Eastland disaster, because the increase in the number of lifeboats under that act would have made it impossible for the local inspectors to have certified that vessel for such a great number of people. Why, almost at the very time the vessel was rolling over her owners were sending out letters condenning the seamen's act and asking for its repeal because it would reduce the carrying capacity of that particular vessel.

The new law, however, is not drastic in respect to lifeboat requirements. It calls for lifeboats to take care of only 20 per cent of the persons on board, rafts for 30 per cent, and nothing for the remaining 50 per cent. But that is not the fault of the sponsors of the bill. The La Follette seaman's bill originally called for lifeboats sufficient to care for every person on board. When it passed the Senate before being sent to the House of Representatives it provided for lifeboats for all. But in the tortuous course through Congress that part of the bill was materially changed, and when it was finally enacted lifeboats and rafts were provided only for the percentages named. Even that, however, is a vast improvement over the present regulations, an improvement that, had it been operative last summer would have prevented the Eastland disaster, but nevertheless is not sufficient to meet all reasonable requirements.

Capsizing is a very unusual accident for steamers to meet with. The

a vast improvement over the present regulations, an improvement that, had it been operative last summer would have prevented the Eastland disaster, but nevertheless is not sufficient to meet all reasonable requirements.

Capsizing is a very unusual accident for steamers to meet with. The dangers of fire, collision, and storm are greater. Can shipowners, who misuse their vessels to such an extent that one of them actually capsized alongside of her dock and drowned nearly 900 persons, be trusted to supply the safeguards necessary to overcome dangers when the vessel is out of port? A glance at the conditions prevailing on those vessels will answer that question. Only from three to five real sallors on board, besides the master and his two, or occasionally three, mates, a crew of "deck hands" that know absolutely nothing about the ship, and whose wages and treatment are such that on most of the vessels the term of service for these men seldom exceeds five or six days. Gangways and ports left open, or improperly secured, hatches uncared for, no watch regulations on deck except for a few of the men; operating in storm and fog with only one man (the deck watchman) available for sudden emergency duty on the decks, and the vessel packed with humanity until the people can scarcely clow their way around the ship. The danger is horrible.

The seamen's act will compel these vessels to carry a larger number of experienced seamen. It compels watch regulations which assure the presence of more seamen on deck during the night, more men awake and working, ready to respond to emergency calls. To what extent does it increase the total crew employed on board the vessels? Not at all except in the case of a few of the larger passenger-carrying ships. The increase is in the number of experienced men employed. The number of the total crew will remain about the same, with the exception noted.

Is the Eastland disaster a sufficient lesson to compel the enforcement of the new law? When the steamer Atlanta, in 1906, caught fire and burned

recent past. Nowhere is the seamen's act required more than on these waters.

On the cargo steamers an inhuman practice has prevailed for years of shipping young men and boys as deck hands, enticing them on board the ship in the belief that they were to serve on deck out in the open air, and then, after the vessel had left port, compelling them to go down into the hot, blistering fire holds to serve as coal passers, subject to being called out upon the often ley decks at any moment. The records kept by the shipowners themselves show that this condition has resulted in the men averaging less than three weeks on the ship. The seamen's act makes illegal this practice of shipping men on deck and then compelling them to serve in the fire holds. Bad as conditions are for seamen in other parts of the world, nowhere is that practice in vogue except on the Great Lakes.

It is impossible to discuss the entire situation and all the provisions of the act in a brief article of this kind. Only a comparatively few points can be touched. But there is one provision of the act, relating to seamen, which the shipowners, according to their press agents, are quite sure will result in disaster to the commerce of the Great Lakes. That is the section of the act under which the salior is entitled to receive one-half of the wages due him at any port where the vessel loads or discharges cargo. "The sailor will take advantage of this," say the shipowners, "by demanding one-half his pay and using if to get so drunk that he will not be able to return to the ship for duty, and that thus vessel after vessel will be delayed, and the whole business of the Great Lakes demoralized." That is what the shipowner tells the public. The truth is, that under the law for the past 17 years the seamen on the Great Lakes have had that very right to demand one-half of their wages at every port where the levsel loaded or discharged cargo. In 1898 the law was amended so as to give the sailor that right, providing that nothing to the contrary "in the ship's art

The "argument" of the shipowners against the other parts of the seamen's act is on a par with their claims against that section providing for the right to one-half of pay earned. The gentlemen should call off their press agents and listen to a little common sense instead of fighting the new law. If they continue to decline to act in good faith with the public then there is only one thing to do and that is to make the law really drastic and much more stringent than anything contained in the seamen's act.

Address of Ollie M. James, Permanent Chairman Democratic National Convention at St. Louis, Mo., June 15, 1916.

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 16, 1916.

Mr. BARKLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a speech delivered yesterday at the Democratic convention at St. Louis by Senator

The speech is as follows:

ADDRESS OF OLLIE M. JAMES, UNITED STATES SENATOR FROM KENTUCKY, PERMANENT CHAIRMAN DEMOCRATIC NATIONAL CONVENTION AT ST. LOUIS, MO., JUNE 15, 1916.

Mr. Chairman, Fellow Democrats, Ladies, and Gentlemen: I greet my Democratic brethren of the Republic, the representatives of a proud, victorious, and unconquerable Democracy—a Democracy whose life, achievements, and history challenges the admiration of the world. We cheerfully meet face to face the public we have not betrayed to point with delight to a match-

less record of promises we have kept. [Applause.]
During three years of its national control Democracy has enacted into law more progressive remedial legislation than the Nation has ever had written upon its statute books since its birth. In former national contests in the last two decades our party came as a prophet. We could only point out wrongs and promise remedies; but to-day we come with deeds, not words; with performance, not promise. Our deeds in the Nation have been greater than our words upon the hustings; our performance as the lawmaker greater than our promise as the campaigner. In other words, the Democratic Party has kept its word with the American people. [Applause.] We have made good. We have by our conduct of the affairs of this Nation deserved the renewed confidence of its people by proving worthy of the confidence once

The Democratic Party rejoices that under this administration for the first time since the Civil War it was enabled to amend the Constitution of the United States in the interest of good government and the masses of the people. We freed the Senate from the control of the great interests by making it elective by the records at the holls. We wrote into the Constitution itself up the people at the polls. We wrote into the Constitution itself an amendment, susceptible of no dispute, that wealth should bear its proper burden of the taxation necessary to run the Government efficiently, economically, and honestly. [Applause.]

THE LOBBY.

President Wilson drove invisible government out of Washington and uncovered the mightiest lobby that ever ramified a republic or had its rendezvous in its capital. He drove the lobby-ist out; he turned the American people in. [Applause.]

THE TARIFF.

The Democratic Party undertook to enact a new tariff law in keeping with the historic principles of the Democratic Party and justice to all the people. The Democratic Party believes that the right of taxation can only exist for the purpose of raising sufficient revenue to run the Government. Taxation never did justly exist and never will in a free government for the purpose of enriching one class at the expense of all the rest of the people. We undertook the reformation of the tariff with open minds and clean hands, unowned, unpledged to any interest except that of the public welfare, and we are proud of our achievement in writing into law the present Underwood-Simmons tariff bill. Not a schedule in it fosters a monopoly; not a rate in it protects a trust. [Applause.] We made as nearly free of taxation as possible the necessities of life, and sought to obtain as much revenue as they would bear from the luxuries of life. One of the greatest features of this law is the income tax, which raises from the fortunes of the rich, the prosperous, the well-to-do people of the Nation \$120,000,000 per annum, and lifts this burden off the tables and backs of the poor. To my mind, no law is more just than that of an income tax. Those that prosper under the Government ought to be willing to pay taxes to perpetuate it. It is a tax that forecloses no mortgages, forces no sales. It is collected only where riches abound and prosperity smiles. Would the Republican Party dare to suggest the repeal of this part of the tariff law? Will they be specific in their objections to this legislation? What schedule would they repeal? What rate would they increase? Would they substitute the Dingley rate or the Payne-Aldrich rate? If they were given control again, would they reenact the tariff law that the Democratic Party repealed, a bill that was repudiated by the Republican Party itself at the polls? [Applause.]

Who is it, anyhow, that desires really the repeal of the present law, made by honest men for an honest purpose, that of raising revenue sufficient to defray the expenses of the Government, and substitute in its stead the lobby-made, monopoly-breeding, trustcreating, millionaire-producing, Payne-Aldrich bill? [Applause.] Our Republican friends told us when we enacted this bill into law that it would close the factories, fill the streets with idle men, produce a panic, create soup houses, and distress would reign everywhere; but we rejoice to-day to point to an unexampled prosperity in the Nation, with labor more generally employed, at higher rates, shorter hours, and better conditions than ever before. [Great applause.] Our Republican friends tell us that after the war is over that poor, stricken, prostrate, torn, bleeding Europe will take our home market here from us; that this young, virile Republic, with 100,000,000 freemen, that has gone out to take the foreign markets of the world, must tremble in great fear lest these war-torn countries with millions of their men-the flower and strength of their manhood-buried in the trenches, with their factories destroyed, their country laid waste, their charred and blood-soaked land filled with widows and orphans and crippled men, and upon them the heaviest debt of all ages, will come here to this happy land, uncursed by war's ravages or its burden of debt, and take our home market from us. No, gentlemen; I have no such fear; America is going to take the markets of the world. [Applause.] We are going to meet our competitors in the other markets of the earth and take them, and this great people here fears no competitor at home that we are willing to meet away from home. With the freight rate and cost of transportation in our favor here, we certainly have nothing to fear when we are meeting them where the freight rate and transportation and many times adverse tariffs are in their favor. But we shall cut from them last hope of having even a false issue, for we shall pass a bill creating a tariff board to gather the facts created by the new war conditions or the conditions that may exist after peace is declared, and upon these official facts, obtained by men not interested in enriching themselves by taxing others, and with this gathered information be ready to meet every new condition which may arise. [Applause.]

FEDERAL RESERVE LAW.

Would our Republican opponents repeal the present Federal reserve law that emancipated the credit of a Nation; that made the credit of the country to run in life-giving currents through the avenues of business? Under the old system a few men could create a panic, as the whole Nation witnessed in 1907; when all the world was at peace and enjoying unusual prosperity. A small group of men upon Manhattan Island precipitated overnight one of the greatest panics in the history of the Nation. It toppled values, wrecked fortunes, destroyed holdings, turned out of employment thousands of men, and locked the door of almost every bank in the country against the depositor who called for his own money. The Republican Party—in control for 40 years of our national life—either did not have the ability or the courage or the desire to remedy this brutal system that lodged the money of a Nation in the control of this heartless group of men. The Democratic Party took control of this Nation, and under the leadership of Woodrow Wilson met this great problem. We took the money control out of the hands of this oligarchy; we lodged its control in the hands of the Government and created the Federal reserve banks of the country. We rested the finances of the great people of this Nation upon what they own, and not upon what they owe. [Applause.] output of the factory, the product of the farm, the ore of the mine, the business achievements of the people, was the basis of the money issued under this new system, and not the bonds that were resting upon the people. What would have been the result if the old Republican system had been in effect when the world's war broke upon us? The stock exchanges in every city in the war broke upon us? The stock exchanges in every city in the world were closed. Europe poured its vast holdings in plethargic streams upon our shores. The cry that went up from all the nations of the Old World was, "We want gold." Who thinks that the Republican system of finance under the guidance of and our soil from invasion, and to protect the rights of our citi-

these patriotic guardians would have been able to withstand this mighty cataclysm in the peace and credit of the world? But what was the result? Not a bank closed its doors; not a laborer was thrown out of employment; not a business was forced into bankruptcy; but there stood strong, serving the masses of mankind, this great legislative achievement of the Democratic Party. [Applause.] Panics no longer are possible. [Cheers.] The truth of it is, they have only come, during the history of this Nation, when the Republican Party either was in control of its affairs or the laws that it had enacted were unrepealed upon our statute books.

The panic of 1873 is familiar to the older of our citizens. The Republican Party was in control. The panic of 1893 came while the laws written by the Republican Party were unrepealed upon the statute books, and the plates for the issuance of bonds had been prepared by the outgoing Harrison administration. And so we are quite familiar with the panic of 1907; but as the master achievement of Woodrow Wilson, to my mind, next to keeping 100,000,000 people at peace with the world, the historian will record the Federal reserve law that created a democracy of credit in a Republic of freemen and established a currency system controlled by the Government that is quickly responsive to the business needs of the country. [Applause.] Would our Republican friends suggest a repeal of this law? I imagine not, though we enacted it over their intense and bitter opposition. They stood upon the floor of the Senate and with all the eloquence and logic at their command declared in solemn tones that if we did enact it into law that in 30 days the mightiest panic that ever broke upon a nation would be with us. They said it was but a recrudescence of greenbackism and the old free-silver craze. They declared that the national banks, 8,000 strong, would not go into it. We discarded this advice. We weathered these evil forebodings, and in the interest of mankind we wrote the law. No Republican convention from that day to this, no Republican orator upon the hustings with any degree of responsibility, has suggested a word of criticism or uttered a line of condemnation of this law. [Applause.]

AMERICANISM. We are all Americans no matter whence we come. We love our country because it makes us free. The beauty of the oceans that wash our shores, our fertile plains, our lofty mountains, our winding rivers, our unequaled landscapes, can only be enjoyed in their real and matchless beauty through the eyes of a freeman. More beautiful than the beauty and splendor of the land is the glory of the Government. The humblest may become the greatest, the weakest may become the strongest, the poorest may become the richest; here no taint of blood, no law of royalty. This freedom is as much the right of the one who comes here as the one who is born here. [Applause,] We are glad of it and happy to offer this opportunity and this happiness to all. We only ask in return loyalty, valor, and love; loyalty to the flag, valor in its defense, and love of our free institutions. [Applause.] We do not care what songs of the old home land you may sing or what memories of the country from which you came you may cherish. All we ask is that the song you shall hold dearest to your heart is the Star-Spangled Banner. [Applause.] And the memories you shall cherish most and best are those of America that makes you free. There are some who seek to destroy this Nation whose freedom and blessings they enjoy. call themselves anarchists. If I had my way, I would not allow a single man or association of men to bear aloft upon the streets and highways of this Nation a flag or emblem that either questioned the integrity or authority of the Stars and Stripes of the Republic,

PREPAREDNESS FOR SELF-DEFENSE. In 1906 I attended the great Peace Conference held in London and saw there assembled 26 nations of the earth speaking in different languages, but all spoke the language of peace. I thought that the millenium of peace had come, such a thing as the world's war was impossible; but the day when the Christian heart shall rule the world and when peace shall reign over the land is not here, and unhappily is not in sight. Self-defense and preparation for it is as necessary now as ever be-We must not mistake dishonor for peace, as we can not mistake oppression for peace. All Governments love peace—peace with freedom, peace with honor. Without these all is slavery beside. Woodrow Wilson and the Democratic Party advocate an army big enough to make aggressors think the second time bezens is the purpose of Woodrow Wilson. I want a navy large enough that it will be impossible for a foreign shell to fall in a single American city. [Applause.] I want an army strong enough to make it impossible for an aggressor's foot to press American soil. We do not want a foot of anybody's else's soil, and, by the eternal God they shall not take a foot of ours. [Applause.] I do not fear militarism. It has never menaced a free

In this land of freedom the right to declare war rests with the people themselves. Those who must fight its battles, speaking through their duly accredited Representatives in Congress House and the Senate-can alone declare war, and as the people can declare war so they can proclaim peace. Democracy be-lieves in preparedness without militarism. During this administration we have done more to build up an army and navy in three years than the Republican Party did in 40 years of its existence. More has been done to give the American people a navy and army in three months than Col. Roosevelt and Mr. Taft did in 11 years. The President challenged the seeming overwhelming opposition of Congress and of his own party, and in the name of self-defense "and America first" he took his cause to the country, and in the great and unshackled court of public opinion summoned the American people to the rescue. Their response was immediate and overwhelming in his support. President Wilson acts, he does not rant; he builds, he does not bluster.

INTERNATIONAL PROBLEMS.

No President during the life of this Republic has ever had to deal with so many delicate and dangerous problems as those which have confronted President Wilson during the last two years of his incumbency in office. With more than half of the world in arms in Europe, with Mexico in revolution at our border, these difficult and complicated international problems have confronted him almost daily, and he has handled them as becomes a patriot and a statesman. When the Lusitania was sunk the militant voice of Theodore Roosevelt cried out for war, and if he had been President of the United States at that time, to-day 500,000 brave American sons would be contending around the fort of Verdun in this mighty maelstrom of blood—thousands would have been buried in the ditches. Our President, patient, patriotic, farsighted, the real statesman, handled this question with the greatest ability, and won for America its

greatest diplomatic victory.
Some gentlemen in Congress undertook to take out of the President's hands the right of handling our foreign situation. Congress met that quickly, decisively, and said that they stood, as every American should stand, back of the President of the United States. When the President sent his ultimatum to Germany he was criticized by two elements-one that he was seeking to force the country into war and the other was that he was too cowardly to engage in the conflict. There are happily two kinds of courage; the courage of the man who is willing to undertake the danger himself and the courage of the man that sends others to the conflict. [Applause.] The courage of the man who wishes himself to enter the conflict may be rash, for he alone is to suffer, but the courage to take a nation into war, where millions of lives may be sacrificed, is another kind of courage. It is a courage that must be able to stand bitter abuse [applause]; a courage that moves slowly, acts coolly, and strikes no blow as long as diplomacy may be employed, honor of the country upheld, the flag respected, and lives of Americans protected. [Applause.] Woodrow Wilson has both kinds of courage—the courage of conflict and the courage to act coolly and sensibly when he is dealing with the lives of othersfate of a nation. [Applause.] It was no time for divided counsel. The interference of Congress would have created chaos in this country, contempt for our honor and our country abroad, and would have destroyed the power of America to either maintain its honor or protect the rights of the neutrals of the world.

LINCOLN AND WILSON.

The Mexican situation was inherited by the Democratic Party from the administration of President Taft. It had refused recognition of Huerta, and the same policy was followed along recognition of Huerta, and the same policy was followed along these lines by President Wilson, because he believed with President Taft that assassination should not be rewarded with the presidency of the Republic of Mexico. The President has dealt with the Mexican situation, and his policy has been the same as that of Abraham Lincoln under like conditions more than half a century ago. [Applause.] Speaking through his great Secretary of State, Mr. Lincoln said:

For a few years past the condition of Mexico has been so unsettled as to raise the question on both sides of the Atlantic whether the time has not come when some foreign power ought, in the interest of society generally, to intervene—to establish a protectorate or some other form of government in that country and guarantee its continuance there. You will not fall to assure the Government of Mexico that the President neither has,

nor can ever have, any sympathy with such designs, in whatever quarter they may arise or whatever character they may take on. The President never for a moment doubts that the republican system is to pass safely through all ordeals and prove a permanent success in our own country, and so be recommended to adoption by all other nations. But he thinks also that the system everywhere has to make its way painfully through difficulties and embarrassments which result from the action of antagonistic elements which are a legacy of former times and very different institutions. The President is hopeful of the ultimate triumph of this system over all obstacles as well in regard to Mexico as in regard to every other American State; but he feels that those States are nevertheless justly entitled to a greater forbearance and more generous sympathies from the Government and people of the United States than they are likely to receive in any other quarter. The President trusts that your mission, manifesting these sentiments, will reassure the Government of Mexico of his best disposition to favor their commerce and their internal improvements. I find the archives here full of complaints against the Mexican Government for violation of contracts, and spoliation and cruelties practiced against American citizens. It is not the President's intention to send forward such claims at the present moment. He willingly defers the performance of a duty, which at any time would seem ungracious, until the incoming administration in Mexico shall have had time, if possible, to cement its authority.

When American soil was invaded the President quickly

When American soil was invaded the President quickly ordered the United States troops into Mexico upon their punitive expedition. They are there now, and I have no doubt will remain as long as there is a possibility of the capture and punishment of the murderers who invaded American soil or are needed for the protection of American lives along the border. the Republican platform at Chicago denounced the Mexican policy of Woodrow Wilson, it denounced at the same time the similar Mexican policy of Abraham Lincoln—the one they have heretofore called the "patron saint" of the Republican Party. When the Lincoln administration came into power, Mexico had been in turmoil for years. The government of Juarez was in power, but was unable to enforce order. Not only had American property been destroyed, but American lives had been lost, and a member of the American legation had been murdered. It is a perfectly easy thing for the President of the United States to plunge his country into war if he is a politician before he is He would seek his own reelection as he came upon horseback up the bloody highway of contending armies. American people have never yet repudiated a war President and never will. We are naturally a red-blooded, fighting race. Of course, our Army could invade Mexico and march in triumph to its capital, but after the war was over other armies would march-an army of widows and orphans, an army of cripples and men broken in health, an army of pensioners, and an army of tax collectors gathering up the earnings of the people to pay the great war debt. All America wants peace—peace with

SHIPPING BILL.

The Republican Party defeated by filibuster the shipping bill proposed by the Democratic Party, which, if it had been enacted, would have made impossible the more than 200 miles of railroad sidetracks crowded by the products of the American factory and the American farm by enabling us to get shipments abroad and we would by this time have been enabled to have a merchant marine to take the products of the field and the factory and the mines to the hungry markets of Europe. They offer to the United States the often proposed and always defeated subsidy to the shipowners to be paid out of the Treasury of the people of the United States. This time they call it by the name of subvention, but it means, of course, the taking of the people's money to enrich a few men. They seem to be perfectly willing to take the public money and give it to other people to operate shipping abroad, but they are utterly unwilling that the Government of the United States shall with the people's money purchase these ships and operate them if private capital is not willing to do so without subsidy or, as they call it, subvention from the Treasury, and whatever profit was made by the Government's operation would go into the public treasury. The Republican platform proposes a subsidy to the shipowner, the profit going into their pockets. In other words, it is willing for the United States to pay the loss if there is any in operating the ships States to pay the loss, if there is any, in operating the ships when it is done by private capital, but unwilling for the Government to render the service if private capital will not under-

REPUBLICAN PLATFORM.

The Republican Party, seeking some issue, just any issue upon which to hang the slightest hope of returning to power, is driven to the necessity of denouncing in its own platform, adopted at Chicago, the vote of a majority of its own Members in the House and Senate upon practically all of the reform measures that have been written into law by the Democratic Party. They declare we "favor an effective system of rural credits as opposed to the ineffective law proposed by the present Democratic administration." By this declaration they charge practically every Republican in the Senate and almost every Republican in the House with having voted for an ineffective rural credit law, which has passed both the Senate and House. In the Senate the vote was 57 to 5, in the House 295 to 10. I suppose this denunciation of their fellow Republicans was caused by the fact that of the five Republicans in the Senate who voted against the rural credits bill which passed that body Senators Lodge, Oliver, and Wadsworth were members of the subcommittee that prepared the Republican platform, and they were anxious to vindicate their own vote at the cost of denouncing their Republican colleagues. [Laughter and applause.]

The Republican platform says "they favor an effective rural redits system, yet they proposed no substitute to the bills that passed the House and Senate, which are in a striking degree similar to the rural credits law of Germany which has reduced the tenants upon the farms from 50 per cent to 10 per cent. The Democratic Party believes in a home building and land owning population. It was our effort and desire to make it possible for every man who tilled the soil in America to own the land and have a home. [Applause.] The Republican Party in power 40 years since the Civil War has never passed any law for their relief, has never sought to cheapen credit, to enable them to become owners instead of tenants, but to-day they present the remarkable spectacle of adopting a platform which promises nothing, but in their anxiety to denounce Democratic legislation have to include in their wholesale condemnation nine-tenths of their own Members of the Senate and House of Representatives.

[Applause.]
The trade commission bill which was passed for the benefit of the business of the country, to make plain the law, to prevent monopolization of the industries of the country, received a majority of the Republican and Bull Moose Members of the Senate and House when it was placed upon its final passage. The Clayton antitrust bill, which had for its purpose free competition in trade and the prevention of monopoly, which are basic in the business prosperity of the country, received upon its final passage almost half of the Republican vote in the two Houses of

The one great achievement of the Democratic administration which was bitterly opposed by a majority of the Republicans in both the Senate and the House is not denounced or even honored with respectful mention in the Republican platform. This is indeed in strange contrast to the gloomy prophecies of financial depression, industrial ruin, and wholesale unemployment of labor, which the Republicans told Congress and the country would follow the passage of this law.

Anxious as is the Republican-Party for an issue, they most respectfully declined this one, and the Democratic Party rejoices in the thought that the greatest constructive piece of legislation enacted in the history of the Government dealing with the currency, the very life blood of commerce, has proved so successful that they dare not condemn it in the slightest degree.

THE REPUBLICAN RECORD ON THE NAVY.

The Republican platform declares for "a continuous policy of national defense," but there have only been two propositions made in our history for a "continuous policy." One was made by the General Board of the Navy in 1903, urging upon the Republican administration then in power the construction of two battleships a year. That "continuous" program was hidden in the archives and never saw light until the present Secretary of the Navy published it. Instead of adopting a "continuous policy" the very year that the General Board proposed a "continuous policy" advocating two battleships a year, the Republican administration authorized only one, and never under their administration did they attempt a "continuous policy" which they now want to adopt. If they had, it would not be necessary now for the Democratic administration to have to appropriate such large sums to make up the deficiencies in the Navy, due to the Republican refusal to adopt the continuing policy recommended by the experts of the Navy.

such large sums to make up the deficiencies in the Navy, due to the Republican refusal to adopt the continuing policy recommended by the experts of the Navy.

The only other "continuous policy" proposed is the one advocated by the President of the United States in his address to Congress last December, in which he urged the adoption by this Congress of a five-year building program which, if adopted, would meet the demand of the "continuous policy" which the belated Republican promise now offers. But what happened when this matter was under consideration in the Naval Affairs Committee of the House? Every Republican member on the committee decided to oppose the President's "continuous program" and vould vote for no program longer than for one year. "Promises butter no parsnips." After 16 years of failure even to let the public know of the "continuous policy" proposed by the naval experts, much less to carry out such a policy, and after the Republicans on the House Naval Affairs Committee, in June, 1916, unanimously opposed the President's policy, they now say they favor the "continuous policy." [Applause.]

UNDER DEMOCRACY THE UNITED STATES LEADS THE WORLD.

For the first time in the history of our country, the United States leads the world in exports. We are more prosperous than ever, and mills which have not turned a spindle for years are now busy. All the laborers of the United States are employed as never before. With the world war raging, our country is the only neutral one that is not in distress and the only one that has not declared a moratorium. Who would substitute for the clean, open, and perfectly just policy of the Democratic Party of equal opportunity and fair dealing for all, the partnership of corrupt politics and corrupt business that existed under the Republican Administration? Every demand of the stress of war the Democratic Party has met quickly. Private capital, unwilling to undertake the hazard of insurance of cargoes at sea during the war, Democracy passed a bill which provided that the Government should issue the insurance. Our Republican opponents prophesied that there would be great loss to the Government by this undertaking, if the Treasury itself was not bankrupt. However, the American products of the factory, the field, and the mine had to have a market, and that market was across the sea.

We were not frightened by this gloomy prophecy; there was no other remedy. Private capital would not undertake it, and we have not lost anything by it, but upon the other hand we have a balance of more than \$2,000,000. Democracy is the friend of the business and industries of the country big and little. It recognizes that in a great nation business should be along a great scale. All we ask is that business, however large or small, shall not be greater than the law. We have freed business from the blackmail of the politician, as we have emancipated it from the clutch of monopoly. The law has been plainly written for their guidance. Every business and industry in the Republic understands perfectly well what the law is and that the Democratic Party does not desire to hinder. purpose is to help, not harass, business; to build up and assist, not to destroy, but instead to encourage in every possible the legitimate business of the country. Democracy has given to this country government without graft, administration without favoritism, taxation without special privilege, expenditures of the people's money without dishonesty or scandal.

DIPLOMATIC TRIUMPH.

Four years ago they sneeringly called Woodrow Wilson the school teacher; then his class was assembled within the narrow walls of Princeton College. They were the young men of America. To-day he is the world teacher, his class is made up of kings, kaisers, czars, princes, and potentates. The confines of the schoolroom circle the world. His subject is the protection of American life and American rights under international law. The saving of neutral life, the freedom of the seas, and without orphaning a single American child, without widowing a single American mother, without firing a single gun, without the shedding of a single drop of blood, he wrung from the most militant spirit that ever brooded above a battle field an acknowledgment of American rights and an agreement to American demands. [There were calls from the delegates and the galleries "repeat it." Mr. James here repeated the paragraph. The continued cheering that followed this made it impossible for Mr. James to proceed. Tre-mendous outburst of applause and cheering, the parading of delegates with the standards of many States around the hall kept up for 20 minutes before he was able to proceed with his He truly demonstrated that principle is mightier than force, that diplomacy hath its victories no less renowned than Shall we by his defeat tangle again the untangled international problems-shall we say to the warring countries, "Open again these settled international questions; his was not the voice of his country"? In the bloodiest crucible of all history he has kept the stainless banner of the Republic flying above 100,000,000 of people in peace and in honor. During these years of great trial, of difficulties, and complications crowding upon each other like waves of an angry sea, with enemies powerful from without and critics and traducers from within, with abuse cruel as it was cowardly, he emerges as majestic and powerful as a mountain after a storm, loved by all who believe in justice, and feared by those who temporize with wrong. He elevates himself to that lofty but lonely eminence occupied by George Washington. Abraham Lincoln, and Woodrow Wilson, the three worst abused but best beloved Americans the Republic ever grew. [Great applause.]

NEITHER BULLIES THE WEAK NOR FEARS THE STRONG.

He neither bullies the weak nor fears the strong. He deals with the military lord with his millions of soldiers in the field demanding justice for the American people, protection of American lives and American rights as he does with the weak followers of a revolutionary torn Mexico. For the honor of our flag, the preservation of our lives, the protection of our rights he

would challenge the world to conflict; for political personal preferment or party advantage he would not inflict the slightest wrong nor impose the smallest injury. [Applause,] Mexico and Germany, England and Austria look alike to him when America is involved. He might overlook the wrong of the weak, but never the insult of the strong.

WHAT DO THEY MEAN?

The opponents of the Democratic Party declare that the for-eign policy of President Wilson has been "evil and vacillating." What do they mean by this? Is it that we should have gone to war when Belgium was invaded, which we were not bound to do by either contract or principle? That issue we are perfectly willing to submit to the American people. Around 20,000,000 happy firesides the fathers of America will gather this night with their unbroken family circle with their children upon their knee their unbroken family circle with their children upon their knee and their wife by their side, happy and prosperous. Contrast this with the fathers, husbands, and brothers of the Old World dying in the ditches, with the gloom and mourning in broken family circles, where hunger crouches and disease treads. If this be "evil and vacillating," God prosper it and teach it to the rulers of the Old World. [Great cheering.]

PEACE. He has struggled for peace. His fondest hope, his most fervent prayer is for the peace, not only of his own beloved country, but of all the world. When the last great day shall come, and before the court of God the nations of this earth shall march in judgment review, the monarchs of the Old World shall have to answer for this awful carnage, this heartless orphaning of millions of children, this cruel widowing of millions of mothers, this brutal turning of a once happy land into a place of mourning, and on that last day I can see our President holding in his hand the accusing picture of Henri Danger, of Christ upon the battlefield, with the dead and dying all about him, with the roar of cannon, the screaming of shrapnel, the wail of the dying, and above his head written these words: "And He said unto them, love one another." When that day shall come, who is it that would have our President exchange places with the blood-bespattered monarchs of the old world? I can see him with the white light streaming upon his head and hear the Master say "Blessed are the peacemakers, for they shall be called the children of God." [Applause.]

ACHIEVEMENTS OF WOODROW WILSON.

The Democratic Party is proud of the achievements of Woodrow Wilson. He has brought prosperity and plenty to 100,000,000 Americans. He has given work to every willing hand in the Republic. Every toller has the full dinner pail—full to overflowing

He has by legislation taken labor out of the brutal category of inanimate things and treated the toilers as men with hearts that beat and lips that pray, and they are no longer subjected to oppressive injunctions or Federal court manipulations; he has dignified the associated toilers of the field and the factory, men seeking by organization and association to brighten and make delightful the lives of the wealth producers and creators of the Nation; he has freed the industries of the Republic; he has liberated the business of the Nation; he has provided a Federal Trade Commission whose duty it is to destroy favoritism, weed out unfair advantage, and give to industry everywhere an equal opportunity; he has given to individualism high hope and new life; he drove from the Treasury of the Nation a ship monopoly that was enjoying subsidies on the canal tolls of millions of dollars a year, and at the same time proclaimed to the world that a treay made with America was more than a "scrap of paper, but was, indeed, a bond of honor that should be faithfully kept; he has struggled amid the world's war with the great nations of the earth for the freedom of the seas and the rights of Americans and of neutrals everywhere; he has stood for the law of neutrality which was written before the war com-menced and agreed to by the nations of the earth and could not be changed during the war to meet the exigencies of some or the demands of others.

With critics all about him, with patience and strength and great foresight, he has kept a Nation at peace with honor. He has driven from the control of the finances of the people of this Nation an oligarchy of wealth and substituted in its stead a just Government, interested only in supplying the legitimate business needs of the country with sufficient currency to meet its demands needs of the collary with suncient currency to freet its demands and requirements. It ought not to be necessary to nominate him in partisan convention. Patriotism in this world crisis should rise above politics, and all parties should rejoice at an opportunity to proclaim him the whole-hearted and happy choice of a Republic of peaceful freemen. And as we can not afford to swap horses while crossing a stream, who would say that we can apply the constant of the collaboration of the collabo afford to swap horses while crossing a bloody stream?

America can not afford to change leadership during this great cataclysm that shakes the nations of the earth, for to Woodrow Wilson more than any other citizen in all the world the Christian people, wherever the rain falls or the sun shines this world around, look anxiously, hopefully, and prayerfully that he will bring peace to the struggling armies of Europe. What party is it now that would dare undertake to discredit this master diplomat, this unconquerable leader, this great American, for by that you may palsy the hand that may write the peace treaty of the world. [Great cheering and applause.]

An Appeal of the Federal Council of Churches of Christ in America for War-Relief Funds.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 16, 1916.

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the appeal of the Federal Council of the Churches of Christ in America for warrelief funds.

The appeal is as follows:

SECOND MESSAGE TO THE CHURCHES OF CHRIST IN AMERICA, TO THE SUNDAY SCHOOLS, AND, THROUGH THE CHURCHES, TO THE AMERICAN PEOPLE FROM THE FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA TO EXPRESS THE UNITED APPRAL OF THE ORGANIZATIONS FOR WAR RELIEF IN EUROPE AND ASIA.

WAR RELIEF IN EUROPE AND ASIA.

DEAR BRETHREN: The response to the first message is prophetic, but not universal or commensurate. Not a word of complaint has come, and many messages have been conspicuously hopeful. For example, one pastor writes: "Ours is a country church of 100 members. Our offering of over \$200 is the largest we ever made." Another writes: "We are a little rural church. We send \$17.90 and pledge ourselves to send \$10 a week at least, so long as the war lasts." Another: "Our collection was \$2.400."

Meanwhile the cry of distress continues. Our correspondence from Europe and the reports from the organizations bring new stories of suffering, and those who suffer most are the most innocent.

No united movement of the churches could be more far-reaching in spiritual influence than this effort to extend a hand of Christian love and sympathy to the peoples across the sea.

The constituent bodies of the council, either through their national assemblies or through their executive boards, have given unhesitating approval of the action of the executive committee.

We therefore resort to you again, and our message comes this time in a wider representative capacity.

WHY ANOTHER MESSAGET

WHY ANOTHER MESSAGET

The first message was taken up by a voluntary committee consisting of ex-President William H. Taft, Judge Alton B. Parker, Hon. Seth Low, and Mr. Hamilton Holt, who issued a message to the people urging them to hear the voice of the churches.

Following this, on June 6, there was held in the federal council conference room a conference of representatives of the outstanding warrelief organizations, which unanimously voted to request the federal council and the churches to continue to be their voice to the people. It was further

"Voted: That continuous messages should be sent out to the people through the churches." This transforms our previously voluntary action into

A PROFOUND RESPONSIBILITY.

A PROFOUND RESPONSIBILITY.

To have these great causes look to the Christian church to become their voice is a gratifying token, but it imposes an immeasurable responsibility which we must regard with humility, but from which we must not shrink.

They asked the federal council to do this. The council has therefore turned over, for the time being, its staff and its resources. The Laymen's Missionary Movement has given over its forces to the committee on Armenian and Syrian relief. But what is the federal council? It is the sum of all its parts. It is simply your church and all the other churches together.

"THE CREATION OF A NEW ATMOSPHERE IN THE NATION."

"These were the terms in which Prof. Samuel T. Dutton, secretary of the Armenian committee, described the task of the church at the conference. It is the invoking of the spirit of unselfishness and self-sacrifice. The representatives of the war-relief organizations, many of them, have expressed their feeling that this has been the one thing lacking. Our ex-President of the United States, and the business men and publicists associated with him in reenforcing our first message, reminded us that we must invoke the religious motive of the people and transfuse the whole movement with a spiritual light.

"EVERY EXPRESSION OF UNSELFISHNESS IS A CORD OF LOVE RETWEEN BETWEEN AMERICA AND THE NATIONS."

Thus writes one of our European brethren concerning our first mes-

Thus writes one of our European brethren concerning our first message. Another says: "Your American churches have already begun to help us rebuild our shattered civilization," referring to a letter of our general secretary telling of our plans.

Still another of our European correspondents says: "We had come pretty nearly to feel that the American people were overwhelmingly concerned with their own commercial gains, but the plans about which you write me show clearly that the great body of our American Christians have not lost their Christian compassion."

In fact, looking over our correspondence, their expressions of gratitude are out of all proportion to what we have thus far done.

THE ACCELERATING DISTRESS NECESSITATES NOT A CONTRIBUTION BUT A CONTINUOUS MOVEMENT OF UNSELFISH VELOCITY.

time are out of all proportion to what we have thus far done.

THE ACCELERATING DISTIBES NECESSITATES NOT A CONTRIBUTION BUT A CONTINUOUS MOVEMENT OF UNSELFISH VELOCITY.

We wish that we might convey to you the reports and the stories that come to us from the war-relief bureaus. Here are a few random indications of the increasing suffering and of its momentum.

The B. F. B. blind fund writes that 25,000 are blinded, and that at the rate this continues hundreds of thousands will require permanent care, although some of them are taking their own lives. Dr. Lynch is gathering appalling statistics regarding the number of orphans and homeless children in all countries.

Every pastor ought to secure from the Jewish organizations and read the pitiful story of the Jews. Peoples like the Montenegrins, Ukrainlans, Nestorians, and peoples of Persia and Syria have received almost no relief except that furnished by people of their own race in this country.

The German relief organizations send us the story of 400,000 homeless people in East Prussia, of 35,000 houses destroyed, with the consequent suffering of thousands of women and children. The British War Relief Association sends a special appeal from the hospitals where the demand for equipments is always greater than the supply.

The Secours National tells us of the pitiful efforts at reconstruction of homes, the effort to maintain workshops, the pitiful condition of thousands of released priseners, of over a million French and Belgian refusers, and of over 1,000 homeless children in one community.

The Belgian Commission writes that the potato supply in northern France is absolutely exhausted and that the mortality statistics in cities like Lille are more than doubling. The war relief clearing house, as well as the national allied relief committee, tells of its constant cablegrams from all directions, which they described as "heartbreaking." It is stated that in Polan 20,000 villages are now in a state for. Juand we should simply "compare Polands need with America's pr

SOME OF THE NEEDS.

The first is money, but there is also opportunity to supply, by arrangement with various committees, new and clean second-hand clothing, woolen yarn and cloth, hospital supplies, blankets, socks, underwear, good shees, sheeting, flannel; cotton for the want of which hundreds are bleeding to death, while the United States is the storchouse of cotton; and there is need of various kinds of imperishable food.

Let us devote our prayer meetings and our services of worship to intercession for Europe and Asia and make it a subject for unceasing

prayer,

"He went out into a mountain to pray, and continued all night in prayer to God.

"And when it was day * * * He came down * * * and stood in the plain * * * there went virtue out of Him and healed them all."

Our communities look to their Christian forces for leadership in such

Our communities look to their Christian forces for leadership in such a time as this.

1. Appoint a committee in your church.
2. Consult with other pastors and laymen and secure the appointment of a community committee for continuous service.
3. See that the matter is seriously considered by your church federation or association of ministers. In some communities it has been found advisable to have a general community fund or community reasurer. In other words, some sort of clearing house for the community.

4. Make special appeals in behalf of the suffering children of Europe to the Sunday-school children, the young people, and the day-school children, using the dime banks, such as are furnished by the B. F. B. fund and other similar helps, suggested by the fund for starving children.

children.

5. Organize interest through other groups and organizations in the church and in the community.

6. Give one immediate special Sunday to a presentation of this great cause, unless you have already done so, and in this connection we would suggest citizenship Sunday, July 2, as a suitable opportunity.

7. Interview people of means for substantial contributions.

In connection with the community campaigns, we would earnestly advise the wide distribution of this message and of our first message.

8. Get continuous publicity, through the press and in other ways.

Make it "popular."

THE SPIRITUAL EFFECT ON OUR OWN CHURCHES.

While this may not be our motive or impulse, we may well consider it. Who doubts the spiritual reaction of foreign missions? Is not this movement of the same nature?

THE EFFECT UPON OUR NATION.

May this not be the means of lifting our Nation out of its political and economic confusion into a higher idealism which shall make it a moral power in the world?

THIS IS NOT SIMPLY A MESSAGE TO THE CHURCHES,

Some of the pastors have lost sight of this. It is a message through the churches to the people of America, to be voiced by 100,000 voices of ministers consecrated and ordained to reach the hearts of the people.

INFORMATION-HOW AND WHERE TO SEND CONTRIBUTIONS. The matter will, of course, be taken up with your denominational committees, if they have been appointed. The following organizations are mentioned, without in any way disparaging others, because they cover the sufferers of all sections. To submit any longer list would be confusing, and the others will doubtless make themselves favorably known. A directory of the leading organizations has been issued by the American Red Cross.

REVISED LIST.

the American Redief Committee in Berlin for Widows and Orphans: John D. Crimmins, treasurer, 30 East Forty-second Street, New York City.

B. F. B. Permanent Blind Relief War Fund: Frank A. Vanderlip, treasurer, 590 Fifth Avenue, New York City.

The Fund for Starving Children: Frederick Lynch, treasurer, 70 Fifth Avenue, New York City.

American Committee for Armenian and Syrian Relief: Charles R. Crane, treasurer, 70 Fifth Avenue, New York City.

American Huguenot Committee: Edmond E. Robert, treasurer, 105 East Twenty-second Street, New York City.

American National Red Cross: Hon. John Skelton Williams, treasurer, 1624 H Street, Washington, D. C. (The Red Cross has a department of noncombatant relief.)

British War Relief Association (Inc.): Henry Clews, treasurer, 542 Fifth Avenue, New York City.

Commission for Relief in Belgium: Alexander J. Hemphill, treasurer, 120 Broadway, New York City.

American Jewish Relief Committee for Sufferers from the War: Felix M. Warburg, treasurer, 174 Second Avenue, New York City.

East Prussian Relief Fund: Hubert Cillis, treasurer, 17 Battery Place, New York City.

The National Allied Relief Committee: James A. Blair, jr., treasurer, 200 Fifth Avenue, New York City.

Relief Committee for War Sufferers (German): Charles Froeb, treasurer, 531 Broadway, Brooklyn, N. Y.

Secours National: Mrs. Whitney Warren, treasurer, 16 East Forty-seventh Street, New York City.

Serblan Relief Committee: Murray H. Coggeshall, treasurer, 70 Fifth Avenue, New York City.

Union Nationale des Eglises Reformees Evangeliques de France, Emergency Relief Fund: Alfred R. Kimball, treasurer, 105 East Twenty-second Street, New York City.

War Relief Clearing House for France and Her Allies: Thomas W. Lamont, treasurer, 40 Wall Street, New York City.

Polish Relief (Federal Council Fund): Aifred R. Kimball, treasurer, 105 East Twenty-second Street, New York City.

Polish Relief Fund: Frank A. Vanderlip, treasurer, Aeolian Building, New York City.

SERVICES OF THE FEDERAL COUNCIL.

The general secretary will gladly render information, and while the federal council has not deemed it advisable to add another fund to the suggested ones, inasmuch as many churches have expressed the wish that the council, on account of its knowledge of the most immediate and pressing needs, should receive and distribute their funds, the council is willing to do this, whether for designated or undesignated funds. These should be addressed as follows: The Federal Council War Relief Fund, 105 East Twenty-second Street, New York City. Checks should be made out to the "War Relief Fund."

The federal council is meeting all the overhead charges of this movement out of its own treasury.

Pastors who secured and distributed our first message seem to have aroused the deeper interest, and we believe it would be worth while to distribute the first message, which may be secured at \$5 per hundred, and this second message, which may be secured at \$2 per hundred.

By order of the executive committee, representing the 30 denominations, and in the name these constituent bodies of the council.

onstituent bodies of the council.
Shaller Mathews,
President.
Frank Masson North,
Chairman of the Esecutive Committee.
Charles S. MacFarland,
General Secretary.

JUNE 15, 1916.

THE OPPORTUNITY AND TEST OF AMERICAN CHRISTIANITY—WHY SHOULD THE CHURCHES OF CHRIST IN AMERICA EXPRESS A NATION-WIDE APPEAL FOR THE RELIEF OF THE INNOCENT SUFFERERS BY THE WAR IN EUROPE AND ASIA?—IN THE PERIOD OF RECONCILIATION AND RECONSTRUCTION THAT MUST BEGIN WHEN THE WAR ENDS, WHAT PART WILL THE CHRISTIAN FORCES OF AMERICA BE PREPARED TO TAKE?

THE MESSAGE OF THE FEDERAL COUNCIL TO THE MINISTERS OF THE CHURCHES OF CHRIST IN AMERICA.

DEAR BROTHER: The federal council proposes for your consideration

DEAR BROTHER: The federal council proposes for your consideration and cooperation—

(1) A Nation-wide effort for the relief of the sufferers by the war in Europe and Asia; and

(2) A movement that shall prepare our Christian churches to play the vital part that belongs to them in the period of reconstruction and reconciliation that must follow the close of the war.

It is only through the churches of Christ that the public sentiment can be created and the sympathy be shown which will enable our Nation to help shape aright the future policies of the world powers and lay the solid foundations of world peace through a world court.

It is through the pastors that the churches can be informed, inspired, and impelled to meet the greatest challenge and test that the Christian churches have ever faced—a test involving the right of moral and spirtual leadership.

As the representative of the great body of these churches, the federal council asks your serious and prayerful consideration of the statements that follow. Its purpose is not to set up a new relief organization, as an addition to the hundred or more already in existence, but to supplement their work and impel a really unselfish giving by bringing the facts home to the hearts and consciences of the millions of members in our constituency. This can not be done without your active assistance. It resfs with you not only to present this matter and secure public contributions, but to enlist the laymen of means who need to be aroused to the situation and the peculiar demand it makes upon the churches. Of course, the ideal way is to get a permanent committee that will carry our your plans to reach all your members.

The federal council asks your aid also in bringing this movement

makes upon the caurcies. Of coarse, the coarse and pour nent committee that will carry out your plans to reach all your nembers.

The federal council asks your aid also in bringing this movement before the various bodies of your communion that may meet this spring and autumn, and securing for it such action as shall commend it most effectively to the local churches. The council believes profoundly that the crisis, which involves all the churches of Christ and the progress of Christianity itself, justifies this unusual demand upon your personal assistance as a Christian leader.

This is a time in which there are no precedents. The Divine call is upon the churches to do something large, worthy of their Master and Lord, something that shall manifest His spirit to the world and prove the reality of Christian discipleship and brotherhood. We feel sure that when you know the steps that led to this action by the federal council, and realize the immediate needs and the yet wider and more lasting service that our churches may render when peace has come, you will join us in the effort to bring the entire membership into cooperation in this noble work, even to the point of sacrificial giving.

The federal council, in view of the facts herewith presented and the immediate necessities of the situation, urges you to bring this matter before your people on Memorial Sunday, May 28, 1916, or on as near a Sunday as may be practicable, and take an offering as an initial expression of sympathetic interest. This offering may be designated for any of the causes here presented, and the money may be sent directly to the treasurer of the relief committee chosen. A list of leading relief organizations of wide scope is given in the addenda as a guide. If advice is desired in this regard, it will be gladly given by the general secretary of the federal council, who has in his office full information as to the most pressing needs. All the matter needed for sermon or address will be found in these pages.

The time is short? Yes; but long enough for starvation, deprivation, and death to do their work.

Some churches do not favor special appeals? But a crisis transcends all ordinary rules and even church rules. The churches that catch the vision and rise to meet this world challenge will revitalize their spirituality.

This is where giving enriches and withholding impoverishes.

WHAT LED THE FEDERAL COUNCIL TO UNDERTAKE THIS MOVEMENT FOR RELIEF AND RECONCILIATION?

The leading was providential. In December last Dr. Macfarland was profoundly impressed that the time had come for a private mission to the Christian leaders in the different nations of Europe, with whom he had been in correspondence. With the approval of the members of the committee, whom he called in council, he sailed on December 14, landed at Rotterdam, and spent the month following in Holland, Switzerland, Germany, France, and England, having interviews with leaders, both in church and state, and meeting with most fraternal reception. Word from abroad has left no doubt as to the fruitfulness of his mission. On his return he made a full report to the administrative committee, with certain recommendations, among which were the following:

"1. We should prepare to make this work of reconciliation and reconstruction our largest effort for the immediate future and prepare our minds and activities for it. It might be well to secure some sort of immediate general approval by our constituent bodies.

"2. The one thing which has been our strongest asset of influence has been the relief work of America and the American churches. But it has not been adequate or proportional. I learned in conference with the Belgian Relief Commission that our contributions of money had been disproportionate as contrasted with Canada and Great Britain, although, of course, this is offset by our gifts of food and supplies.

"We might issue an immediate call in this matter to the churches and to the American people. Our brethren abroad are saying that, while we may have been confused on the issues of the war, we have entered straight upon the one clear duty of relief, and we shall greatly strengthen our position and influence by opening this door more widely.

"Indeed, our most serious weakness is due to the reproach in which we are held because of the allegation, more or less made upon the part of all the nations, that we are utilizing the war for our economic and commercial gain.

"Our best counteracting influence is and will be our wor

The special conference's recommendations.

The administrative committee felt that these recommendations were so weighty that they should be considered by a larger body, and called a special conference of representative men, including the following:
Frank Mason North, Methodist Episcopal Board of Foreign Missions;
Fred B. Smith; John M. Glenn, director, Russell Sage Foundation;
Frederick Lynch, secretary Church Peace Union; John R. Mott, chairman World Continuation Committee; Cleveland H. Dodge; E. L. Smith,
American Board; S. T. Dutton, secretary Armenian Committee; Arthur
J. Brown, chairman Committee of Reference and Counsel; Alfred R.
Kimball; Jerome D. Greene, secretary Rockefeller Foundation; James
L. Barton, American Board; J. Edgar Leaycraft; and Fred P. Haggard,
of Russian Prison Work Committee.

After full discussion, this conference unanimously adopted the following findings:

lowing findings

"New York, March 23, 1916.

"To the Administrative Committee of the Federal Council:

"In view of the appalling need for material and spiritual relief created by the European war—a need which the churches of the United States have not yet sufficiently comprehended nor adequately attempted to meet—we recommend:

"That a special meeting of the executive committee of the Federal Council be called for thoroughgoing consideration to this need and to adopt comprehensive plans that will help to meet it. That the plans include the following:

"The immediate preparation and wide distribution of a strong appeal which should have for its chief purpose to arouse the conscience and stimulate the will of the churches in this great world crisis.

"The issuance of bulletins in which greatly needed information may be furnished regarding general and particular calls for help, and the several agencies through which assistance may be rendered.

"The appointment of leaders and committees in local churches and communities who shall come to feel the burden of this work and give themselves ungrudgingly to its accomplishment.

"The fullest cooperation with any and all agencies created for the common purpose." "To the Administrative Committee of the Federal Council:

THE EXECUTIVE COMMITTEE'S ACTION.

Following the advice of the conference, a special meeting of the executive committee was held April 19, and was attended by the official representatives of practically all of the constituent bodies. By invitation, Prof. S. T. Dutton, secretary of the Armenian Relief Committee; W. B. Millar, secretary of the Laymen's Missionary Movement; Rev. George T. Scott; and Dr. Charles Riggs, a missionary from Constantinople, were present.

After a full day's session the executive committee unanimously adopted the following:

"Inasmuch as the conditions of suffering and need in the nations directly affected by the war in Europe and Asia are appalling beyond

description and are not known to the masses of our people, who have not been sufficiently informed concerning the facts to inspire them to interest or action, and since the inability of the nations, strained as they are, to meet these needs constitutes an urgent appeal to the neutral nations, and especially to the people of the United States, to use their utmost endeavors to bring relief wherever possible to all who suffer: Therefore

"Resolved, That the Federal Council of the Churches of Christ in America, while recognizing the various relief organizations already at work and having no purpose save that of cooperation, believes that the time has come for a relief movement of such magnitude as shall fittingly recognize the obligation of Christianity to respond to all human need and emphasize to all the world the moral and spiritual consciousness and the Christian and philanthropic spirit of the American people.

consciousness and the Christian and philanthropic spirit of the American people.

"Also, Resolved—

"I. That the Federal Council of the Churches of Christ in America initiate a nation-wide movement for the relief of suffering in Europe and Asia growing out of conditions created by the war.

"2. That the movement shall be under the leadership and inspiration of the churches, a preeminently religious appeal to the people through the churches and religious orders and organizations, endeavoring to arouse among all classes the sentiment of personal self-sacrifice.

"3. That the federal council suggest for the inauguration of the movement memorial Sunday for the solicitation of funds for the suffering peoples of Europe and Asia, and invites all the churches and religious organizations of the United States to set apart as Memorial Sunday, May 28, 1916, for the consideration of the widespread sorrows of the peoples and for most generous contributions to relieve the suffering.

Sunday, May 28, 1916, for the consideration of the widespread sorrows of the peoples and for most generous contributions to relieve the suffering.

"4. That a letter be conveyed to all the churches and that the immediate cooperation of church federations and ministerial associations be secured; that the cooperation of denominational boards and of assemblies meeting in May be obtained, and that the churches also be reached through the religious press; that other movements, such as the laymen's missionary movement and the various Sunday school associations, be enlisted, and that the entire press of the country be invited to render assistance through publicity.

"5. That the movement be unrestricted in its appeal both in respect to the securing of funds and in the distribution of relief; and that individuals, churches, and other organizations shall designate their preference for the use of funds.

"6. That the administration hereafter to be appointed shall follow up these initial appeals so long as necessity may exist or until the executive committee shall otherwise order."

The administrative committee requested Rev. Howard B. Grose to secure sufficient release from the Baptist Boards of Missions to consult and advise with the general secretary in carrying out these plans, and Dr. Grose has rendered administrative service in initiating the movement.

This places clearly before you the action taken by the federal

ment.

This places clearly before you the action taken by the federal council and the reasons impelling it. Nine thoughtful representative conferences have been held, and Dr. Macfarland has also widely interviewed responsible men in both Europe and America. We believe you will agree with the conclusions reached by the executive committee and in the conviction that this is the hour of hours for our churches to act heroically in behalf of suffering humanity. "For the love of Christ. In His name."

THE IMMEDIATE, APPALLING, AND INCREASING NEED.

Our people have no conception of the actual conditions of starvation and suffering. Even those who have seen something of it at first hand can not fully comprehend it. Language can not depict the hopeless misery of hundreds of thousands of women and children and helpless old men. John R. Mott says that the remembrance of sights he saw often wakes him in the night and holds him sleepless. His visit to the battle fronts aged him more than 10 years of ordinary work. The same is true of Dr. Macfarland. In common with all who have been in the lands stricken and devastated by the war, he believes that if the facts could only be made known an immediate and adequate response would come from the members of our churches. This appeal is to make some of the facts known.

LOOK AT THE NEEDS.

I. Belgium.

LOOK AT THE NEEDS.

I. Belgium.

Five million dollars needed at once. Three million destitute people in Belgium kept alive by the relief furnished through the Commission for Relief in Belgium.

Consider these facts, taken from the report of F. C. Wolcott, sent by the Rockefeller Foundation to report on conditions in Belgium:

"There would be wholesale starvation within three or four weeks if the importation of food into Belgium were stopped.

"If any who cavil at the sending of relief supplies into Belgium could only visit Belgium and see personally the plight of the suffering people, they would come back as eager for the continuance of the work as I am.

"Of the 7,000,000 inhabitants in Belgium 3,000,000 are virtually destitute and drawing daily one meal, consisting of the equivalent of three thick slices of bread and a pint of soup.

"I have seen thousands of people lined up in snow or rain, soaked and chilly, waiting for bread and soup. I have returned to the distributing stations at the end of the day and have found men, women, and children sometimes still standing in line, but later compelled to go back to their pitiful homes cold, wet, and miserable. It was not until 18 weary hours afterwards that they got the meal they missed.

"There is another stratum of society just above the poorer, working people, which is only partially destitute, but even these must swallow their pride and stand in line every day for the supplementary ration. Most of them are mothers and fathers who have children only partiy nourished.

"Picture the mental condition of people without work for more than a year and a half, dally face to face with the possibility of starvation, cut off from communication with the outside world by barbed wire and armed cordons of a conquering foreign army.

"The need will continue great for many months after peace is declared. Factories have been stripped of their machinery. There is a complete stagnation of industry. It will take months to rehabilitate these industries and to start the wheels again.

Surely we ought to leave them in no doubt as to the sympathetic and generous spirit of American Christians who, realizing their afflictions, spring to their relief.

A BELGIAN GIRL EXPRESSES THE GRATITUDE OF ALL

"Oh, dear Americans, I am still small. My words can not tell you very well how I want to thank you, but, dear Americans, you must feel my heart. I pray every day to the good God that He shall bless your lives and that He shall spare you from war, hunger, and all other horrors. Take, then, loving and noble people, with my deepest feelings, the thanksgiving of my elder brothers and sisters. A thankful heart.

"Gerardina van der Voordt."

THE REPUTATION OF THE CHRISTIAN CHURCH IS IN A MEASURE IN OUR

To make the case concrete, here is an estimate of needs in Belgium and northern France. Note that the people of Belgium, who desire to work, would rather have materials out of which to make the garments than the garments made up, so that the unemployed might have something to do. That is the spirit of self-help that should lead us to make it possible.

WHAT IS NEEDED.

WHAT IS NEEDED.

For men: Two hundred thousand pairs of shoes, sizes ranging from No. 7 to No. 11; 300,000 shirts; 200,000 pairs drawers; 200,000 undershirts; 200,000 jerseys or sweaters; 400,000 pairs socks (wool); 350,000 pairs trousers; 300,000 coats; 150,000 overcoats, 100,000 scarfs. For women: Two hundred thousand pairs of shoes, sizes ranging from No. 3 to No. 8; 400,000 waists or blouses; 200,000 pairs drawers; 150,000 vests or underbodices; 400,000 pairs stockings (wool); 160,000 petticoats or underskirts; 200,000 skirts; 240,000 shawls or woolen coats or cloaks.

For girls: One hundred thousand pairs shoes, 200,000

coats or cloaks.

For girls: One hundred thousand pairs shoes; 200,000 waists or nlouses; 300,000 pairs drawers; 200,000 undervests; 200,000 petticoats; 300,000 frocks, 400,000 pairs stockings (wool); 200,000 coats or capes for school children; 100,000 woolen caps, bonnets, etc.

For boys: One hundred thousand pairs shoes; 400,000 shirts; 200,000 perseys or sweaters; 200,000 combination or union suits; 200,000 pairs trousers; 200,000 coats; 100,000 coats and capes for school children; 400,000 pairs stockings (wool); 100,000 caps or hats.

For small children and babies: Forty-eight thousand pairs shoes and 300,000 woolen garments. One hundred thousand blankets are also needed.

THIS IS AMERICAN CHRISTIANITY'S CALL TO MAKE ITS INFLUENCE WORLD-WIDE.

11. Northern France.

The need here is even greater than in Belgium, according to Mr. Wolcott, because of the lak of native supplies. There is plentiful testimony to bear out this statement. The appeal comes from the stricken people driven from their peaceful homes and left as refugees, dependent upon charity where the resources of charity, not its spirit, were wanting. The distress of the thousands of homeless, added to the helpless condition of the thousands of orphan children, challenges the sympathies and gifts of American Christians.

CRITICAL NEEDS OF 2,112,000 PEOPLE.

The American relief clearing house of Paris sets forth conditions as

The American relief clearing house of Paris sets forth conditions as follows:

"In the invaded Provinces of France the stock of clothing and supplies has been practically exhausted and the population in general is in a condition of serious want. The German Government has prohibited the exportation of foodstuff from Belgium into invaded France, making scrious the question of clothing and feeding the population in this district. The small stock of supplies in the stores and warehouses of the Provinces has become completely exhausted, and the situation has become critical in the extreme, people of wealth and consequence are going barefoot; women and children are without clothing; the suffering is extreme, particularly on account of impoverished physical condition owing to lack of proper nourishment. This population amounts roughly to 2,112,000, a very large proportion of them women and children, as the available men have been mobilized or have fied as refugees. We know that there are about 25,000 children in the neighborhood of Longwy who are without shoes and insufficiently clad in other respects. This population is entirely noncombatant and we want to make an appeal through you for their relief.

"The official list of refugees in France by departments in October, 1915, showed a total of 858,793, of which about 215,000 are under 15 years of age. It is safe to say that there are at least 175,000 refugee children in France under 10 years of age. At present these are apportioned in colonies, under the charge of charitable organizations."

HALF STARVATION IS DOING ITS DEADLY WORK.

Latest reports are that the death rate in the part of France occupied

Latest reports are that the death rate in the part of France occupied by the German Army has gone up from 20 to 42, and on account of mainutrition this rate is expected to advance enormously.

An American woman investigating conditions writes from France: "One who has not visited France can not realize the tremendous needs of all kinds. Those who last winter had a few things of their own are now without the barest necessities. Money is needed in large quantities, also clothing. I saw persons shivering with cold turned away, as there was nothing to give them."

TOUCHING APPRECIATION OF THE CHILDREN,

Of the work among the 2,000 orphan children at Yvetot she says:

"I took some of the 'kits' to this place, and the children wanted to show their appreciation in some way. So, in the rain and mud, they lined up in fours, headed by an Alsatian soldier with a wooden leg, and marched around the garden—200 of them—singing the 'Marseillaise' with all their might. Then they lined up in front of the doorway and shouted, 'Vive l'Amerique' and 'Vive la Marraine Americaine,' which means 'Long live America' and 'Long live our American Godmother.' It was too pitiful and I felt ashamed that we have done so little when they need so much. If our American friends could only imagine their own children in the same circumstances I am sure they would make some effort to send supplies to this place,"

III. Serbia.

Five millions of people deprived of their living and of chance to make it.

make it.

Five millions of dollars would give only one dollar to each sufferer.

Sorrowful as conditions are in Belgium and France, they are not less heartrenging in Serbia, which was filled with tragedy when the armies of the invaders overran it, destroying life and property.

"'We stumbled over the bodies of 19 little children. I buried 3 of them with my own hands.' 'So many have died on this journey from exposure.' Eight thousand women and children are waiting at Scutarl for ships to take them to Italy; meanwhile they are without food and shelter. These are details of the tragic tale. Thousands went staggering along the terrible way from Nish to Scutari, only to find no ships, no food, no shelter when they reached the sea. Refugees are still arriving at Scutari and Saloniki, and need food and clothing. The Serblan relief committee has sent \$70,000 where \$500,000 would not begin to meet the need. Dr. Forbes, of Boston, and Mr. Stuart are distributing relief at Saloniki, and Dr. Edward Ryan, Mr. Charles Carroll, and Mr. Hugh Griffen at Scutari. Blankets, hospital supplies, and clothing are immediate and pressing needs. Measures are being taken by the sanitary commission and the agricultural relief committee to suppress epidemics of typhus and cholera, and to supply agricultural implements and seed so that crops might be started. Serbia has about 4,500,000 inhabitants, and 600,000 of these are mobilized, so that all the male working population was withdrawn from ordinary pursuits. The peasant women have tilled the fields, but large sections are devastated.

"There are over 5,000 orphans in Serbia as a result of the war, and the relief measures include orphanages where these children may be cared for. A helper among these children reports:

"'I went out into the villages about Nish to clothe these ragged children. I also took food, and it was such a pleasure to help these half-starved little children, all skin and bone! This is the first help we have been able to give."

SERBS IN FRANCE.

How will our help measure up beside the noble self-sacrifice of the French people? Consider how the French are straining every nerve to care for their dependents, including large numbers of blind soldiers, and then realize what such care as this of Serbian refugees means. Madame Piettre reports:

"Our last work was for the Serbs. We have raised a nice colony for them in the Grandee Dalles. Here we have many intellectuals, ministers, professors, representatives of the Government, and reformed officers. They are proud, which makes their situation still more sad. One of them, mayor of Krivolac, fied with his horses to Saloniki, and had a little luggage. Others fied during 35 days' march through the mountains at Albany. The weariness obliged them to deprive themselves little by little of all their luggage. They only kept the food provisions, and after they were exhausted they marched five days without any nourishment. You can imagine how exhausted they were when they arrived. A special food was necessary, and the allowance for them is \$1.25 a day. They have no linen, and it is a sad sight for those of education to be obliged to receive a shirt, a pair of socks, etc."

IV. Poland.

IV. Poland.

ELEVEN MILLIONS OF HOMELESS, WANDERING PEASANTS, MOSTLY WOMEN AND CHILDREN.

Three and a half millions are in a condition of starvation, with certain death facing them unless relief comes speedily. Exposure, hunger, and disease are at work. Paderewski, the greatest living planist, is devoting himself to this relief work in behalf of his people.

President Wilson, in seconding the appeal for Poland, in his proclamation issued in response to a resolution adopted by the Senate, calls attention to "the appalling situation in Poland, where practically the entire population to-day is homeless, and where men, women, and children are perishing by thousands for lack of shelter, clothing, and food."

Recognizing the fact that "the people of the United States have demonstrated their sympathy for the suffering people on all sides in the great European war by their splendid and successful charitable work in Belgium, Servia, and other places," the President expresses the belief that the American people "will quickly respond to an appeal for help in Poland, once the tragedy of the situation is brought home to them."

PADEREWSKI'S GRAPHIC STATEMENT.

"Losses to date in property destroyed and agricultural, industrial, and commercial production, paralyzed amount to \$9,000,000,000.

"The horrors of the gigantic struggle have overwhelmed more than 18,000,000 inhabitants, including nearly 2,000,000 Jews. Fully 11,000,000 of helpless women and children, peasants, workmen, the very essence and strength of the nation, have been driven into the open.

"Thousands are hiding among ruins, in woods, or in hollows, subsisting on roots and the bark of trees. Hundreds of thousands of once prosperous families are helpless, hungry, sick, and succumbing.

"Only a great wave of mankind's pity can surmount so immense a wave of human misery.

"Only a great, enlightened, and generous nation can help effectually our perishing nation.

"In the name of Christian charity, in the name of common humanity, I therefore appeal to the great American people to help through the National American Committee of the Polish Victims' Relief Fund.

"Americans aiready have given much to other stricken nations; yet I am certain there is no soul in this noble country who will condemn me for asking—

"Some bread for the Polish women and children!

"Some food for the Polish farmers!

"Ignace J. Paderiewski."

Poland's needs are expressed in millions. The contributions from

Poland's needs are expressed in millions. The contributions from America for Poland up to January 1, 1916, amounted to only \$205,555.70.

Can the tragedy of the whole situation be brought home to our people? V. East Prussia.

V. East Prussia. Like Poland, East Prussia has been overrun by the contesting armies, the people suffering whether the Russians or the German forces were victorious, since the contested territory is sure to be devastated. With thousands of people driven from their homes, deprived of their livelihood, the suffering and need have been severe. A relief committee was formed in New York, and has received most of its funds from the Germans in this country. The conditions have not been made known so fully as those in other countries, but they are such as to call for sympathy and help.

RELIEF FOR GERMAN WIDOWS AND ORPHANS.

The American Auxiliary Committee of the American Relief Committee in Berlin for widows and orphans seeks relief funds for the 500,000 widows and twice as many orphans in the Central Empires as a result of the terrible slaughter. Members of the American colony in Berlin did what they could to alleviate the suffering of the needy ones, and then appealed to America.

The relief committee for widows and orphans of German and Austrian soldiers has raised over \$523,000 among the German-Americans in New

VI. The Armenian crisis.

VI. The Armenian crisis.

If the destruction of a race is thwarted, it will be because of the action of American representatives and the relief given by our people. Late consular reports say that there are 500,000 Armenian refugees in the districts of Damascus, Zor, and Aleppo. All relief committees strongly urge larger remittances. Mr. Peet, of Constantinople, business agent and treasurer of the four Turkish missions of the American board, says the relief already received has worked wonders, and if properly continued will help save a Christian nation from extermination. There are 300,000 refugees in Turkey who need help besides the half million referred to. A million dollars could be profitably used at once in his district alone.

We must add to these at least 200,000 survivors in the Carcesus and

We must add to these at least 200,000 survivors in the Caucasus and Persian Armenia—50,000 of them girls under 15 and 60,000 boys under 15. The total number of survivors is now placed at about 1,175,000. This increased number adds to the need of help. The condition of the refugees requires constant attention to prevent the spread of epidemic diseases.

diseases.

The report of the Armenian committee, a committee composed of men of the highest standing, forms one of the larkest chapters in human history, and should be read by pastors to their people, perhaps omitting some of the details too terrible to be repeated in public. This would stir the sources of relief.

The appeal issued to American Sunday schools by the Armenian committee is in line with this wider appeal to the pastors to make memorial Sunday a war-relief day in the churches, not limiting the appeal to one people, but including all sufferers by the war.

What an opportunity this gives to interest the children of the Sunday schools in the children of Europe orphaned and homeless through the war! And what finer spiritual stimulus could come to the young people in our churches than to enlist their sympathies and activities in this work of relief? Here is an avenue for service. Set them to the task of securing some offering from every member.

THE NEEDS OF OTHER PEOPLES.

The above is but partial. While this message was being written a large delegation of Lithuanians waited upon our general secretary. There are also the peoples in Persia and Syria, the Jews everywhere, the Nestorians, the Ukrainians in Austria, the Montenogrins, and multitudes of others, and the men in all the prison camps, to whom the International Young Men's Christian Association is ministering under the leadership of John R. Mott.

WHAT DO THE FACTS SHOW?

the leadership of John R. Mott.

WHAT DO THE FACTS SHOW?

The Belgian minister of finance stated recently that our country (which is unquestionably making money out of the war) had given seven millions directly to Belgium. In other words, only 7 cents per capita; while New Zealand, bearing its own war burdens as part of the British Empire, had given \$1.25 per capita to Belgian relief. England, staggering under the war load, has received and cared for thousands of Belgian refugees and given millions of pounds besides. It was thought that the United States, the only great nation untouched by the war, might furnish the food supplies for Belgium, but the commission was obliged to ask food from the whole world to save Belgium from starvation. It must be remembered also that the gifts to Belgium from our country include the large contributions of the Rockfeller Foundation, so that the total of popular contributions is smaller than appears.

The American Serbian relief committee has raised about \$260,000. The British Serbian relief committee there months ago had raised £1,500,000 (\$7,500,000) and France 2,000,000 francs (\$400,000).

To the Armenians we have given about \$1 for each sufferer, covering the entire period, and this is largely money from two or three large givers. It has not touched our people as a whole.

This is a pretty fair indication of the way war relief is being contributed in other countries besides America. It should be said that the Jews of America have given in aid of their people generously.

In answer to our inquiries, an officer of the Belgian relief committee reports that the total money gifts from this country to April 1, 1916, to all of the war sufferers was \$23,740,342. Since these figures were compiled, the Belgian commission alone has received somewhere around \$125,000 through the efforts of the Daughters of the American Revolution in celebration of King Albert's birthday. Of course, the sums mentioned do not include the vast amount of work performed by different societies, organizations

WHAT SHALL WE SAY?

Are we willing to let this stand as our final response to such an appeal for suffering humanity as the world has never before heard?

There is no doubt as to America's answer if only the facts can be realized by the masses of our people.

The churches of Christ hold the keys that will open the treasure chests of the people.

Secretary Harry F. Ward persuasively pleads that we are not only in danger of losing our Christian ideals but also our Christian compassion. Will our prosperity harden our hearts? Are we getting used to it?

ALL THAT IS DONE NOW FOR RELIEF WILL AID IN THE GREAT WORK OF RECONCILIATION.

This immediate work of relief is only the beginning of a campaign of information looking to the period of reconstruction and reconciliation to follow the war.

In that work the churches of Christ in America should have large part. Dr. Macfarland says in his conclusions resulting from his visit

part. Dr. Macrariand says in his conclusions resulting from his visit abroad:

"Despite all mutterings and trivial complaints all these peoples are really looking or will look to America for light, but whether or not political differences hinder America's official opportunity, there is nothing in the way of a great work of reconciliation by the churches of Christ in America with the churches of Christ in Europe.

"We may continue our spiritual task, unhindered by political limitations, from which we have unique if not absolute freedom.

"We may, without intruding upon men's consciences, find ways of suggesting that peace and justice will both be approached by the churches, and especially the responsible Christian leaders of all nations, rising above the conflict (even though led in it by conscience) Into a higher spiritual atmosphere."

This is something of far greater importance than giving of money. But our gifts are the practical and convincing way of showing our sympathy and open the door to influence and service in bringing together the sundered Christian forces in a new brotherhood that shall make for peace and righteousness and a better world.

The war relief will be needed long after peace comes. The stricken churches of Europe make a special appeal to our churches, and millions will be required for their rehabilitation.

Efforts thus far to aid our brethren have not met with the desired response. Take the case of the Protestant churches in France:

The Union Nationale des Eglises Reformees Evangeliques de France has had its delegate, Pastor Stuart L. Roussel, in this country, at the office of the federal council, and visiting our churches for nearly a year in an effort to meet a deficit of about \$125,000. Many of the pastors of these churches are at the front, and it is obvious that we have a special obligation to help the French churches. Pastor Roussel has returned with only about \$20,000 toward this deficit. This offers us an opportunity not only to relieve our brethren, but also by doing so to begin at once our help in the process of reconciliation and reconstruction in Europe.

Many other Protestant churches are in like need. The McAll Mission in France, the federal council's American Huguenot committee, representing the Central Evangelical Society of France and the Belgian Missionary Church, the churches of our own constituent denominations in northern France and other countries, all these make strong app

A REVIVAL OF SPIRITUALITY MUST RESULT.

In his report Dr. Macfarland persuasively urges that the reactionary influence for good upon the churches of this active and unselfish sharing in the world suffering can not be estimated. The churches will receive vastly more than they give.

A \$1-per-member offering for this great cause would not seem like an unreasonable self-sacrifice. Yet such a total would mean incalculable help and blessing to millions of innocent victims of the war. And what a testimonial it would be to the Christian spirit of our people!

America has done, is doing. Much is given that can not be tabulated. Let us rejoice in all that has been undertaken and accomplished and in all that is projected. But who will be satisfied with what we have done in view of the imperative needs?

The churches have not made their influence felt by any united and widespread manifestation of interest and sympathy as is now proposed by the Federal Council. What a help it would be to the work of reconciliation if every church would voice its sentiments of Christian sympathy with all who suffer from the cruel effects of the war, and send this expression with its offering, placing its action on its permanent records! This is suggested as one of the means by which our Christian brethren in Europe may be led to a true understanding of American feeling. They have had no way of learning the truth. Whatever we can do to make manifest our true spirit and our sincere desire to be helpful in all possible ways will render it easier to work together for the solutions of those problems that will confront us all when peace has come and the bereft and distracted peoples must find new ways of living together.

THE VOICE OF THE MASTER.

"Then said Jesus unto his disciples * * * whosoever will save his life shall lose it, and whosoever will lose his life for My sake shall find it." Is this His voice to the American people and the churches of America to-day?

An American Merchant Marine-A National Need-The British Trading with the Enemy Act, Its Effect on Our Foreign Commerce. Indorsement of the Administration Shipping Bill.

EXTENSION OF REMARKS

HON. JOSHUA W. ALEXANDER, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 16, 1916.

Mr. ALEXANDER. Mr. Speaker, under leave granted by the House to extend my remarks in the Record on the subject "Our merchant marine" I am calling the attention of the Congress and of the country to the provisions of the British trading with the enemy act and the royal proclamations enforcing the

provisions of the act and a statement showing present conditions affecting the trade of the United States with the Far East.

Great Britain is using her sea power to protect herself and to cripple her enemies. A situation is revealed that emphasizes the need of an American merchant marine. We should not be dependent on the shipping of Great Britain or any other nation for facilities to foster and develop our foreign commerce.

The shipping bill should become a law at once, and a shipping board organized, clothed with power to investigate world conditions and be the instrument of our Government to lay the foundations for a great and prosperous mercantile marine.

THE PROVISIONS OF THE BRITISH TRADING WITH THE ENEMY ACT AND THE ROYAL PROCLAMATIONS RELATING THERETO.

THE ROYAL PROCLAMATIONS RELATING THERETO.

By the King: A proclamation prohibiting trade with certain persons or bodies of persons of enemy nationality or enemy associations.

Whereas by the trading with the enemy (extension of powers) act, 1915, it is enacted that we may by our royal proclamation prohibit all persons or bodies of persons, incorporated or unincorporated, resident, carrying on business, or being in the United Kingdom, from trading with any persons or bodies of persons, even though not resident or carrying on business in enemy territory or in territory in the occupation of the enemy (other than persons or bodies of persons, incorporated or unincorporated, residing or carrying on business solely within our dominions), wherever by reason of the enemy nationality or enemy association of such persons or bodies of persons, incorporated or unincorporated, it appears to us expedient so to do; and Whereas it appears to us expedient to prohibit all persons or bodies of persons, incorporated or unincorporated, resident, carrying on business, or being in the United Kingdom from trading with any of the persons or bodies of persons mentioned in the list hereunder written, by reason of the enemy nationality or enemy association of such last-mentioned persons or bodies of persons:

Now, therefore, we have thought fit, by and with the advice of our private owned to the carry three department of the last sent of the control to the private owned to the carry three department of the last sent the current appears to the carry three department of the last sent the current appears to the last sent the current appears t

persons or bodies of persons mentioned in the lists eventual wit tenby reason of the enemy nationality or enemy association of such
last-mentioned persons or bodies of persons:

Now, therefore, we have thought fit, by and with the advice of our
privy council, to issue this our royal proclamation, declaring, and it is
hereby declared, as follows:

1. All persons or bodies of persons, incorporated or unincorporated,
resident, carrying on business, or being in the United Kingdom are
hereby prohibited from trading with any of the persons or bodies of
persons mentioned in the list hereunder written, which list, with such
variations therefo or additions thereto as may be made by an order
state under the power in that behalf given by section 1, subsection
(2) of the trading with the enemy (extension of powers) act, 1915,
shall be called and is hereinafter referred to as the "statutory list."

2. For the purposes of this proclamation a person shall be deemed
to have traded with a person or body of persons mentioned in the
statutory list if he enters into any transaction or does any act with,
to, on behalf of, or for the benefit of any such person or body of persons which, if entered into or done with, to, on behalf of, or for the
health of the persons or bodies of persons mentioned
in the statutory list as if for references in such proclamation,
shall apply with respect to the persons or bodies of persons mentioned
in the statutory list as if for references in such proclamation to enemies there were substituted references to the persons and bodies of
persons mentioned in the statutory list and for references to the dates
of the said proclamation and the outbreak of war there were substituted references to the date of this proclamation or in respect of any
person or body of persons hereafter added to the statutory list the
actual proclamation of the trust with the enemy, shall, subject to such
exceptions and adaptations as are prescribed by order in council
hereafter to be issued, apply in respect of the persons

The following is a brief history of the British "trading with the enemy" proclamations referred to in the accompanying memorandum statement:

The first proclamation relating to trading with the enemy during the present hostilities was issued by the British Government on August 5, 1914 (for reference see the London Gazette, No. 28862), but made no

reference to China, in which country our trade is now most seriously menaced by the application of the proclamation. On September 9, 1914, the proclamation was amended and extended (see the London Gazette, No. 28896, p. 7178). On September 11, 1914, a new proclamation was issued, known as the "second" proclamation (for reference see the London Gazette, No. 28899), and the previous proclamation, with amendments, was canceled. The second proclamation, which follows, is still in force, but has been amended from time to time, as will be shown in the note (1):

[The London Gazette, Friday, Sept. 11, 1914.]

By the King: A proclamation relating to trading with the enemy.

Whereas a state of war has existed between us and the German Empire as from 11 p. m. on August 4, 1914, and a state of war has existed between us and the dual monarchy of Austria-Hungary as from midnight en August 12, 1914; and
Whereas it is contrary to law for any person resident, carrying on business. or being in our dominions to trade or have any commercial or financial transactions with any person resident or carrying on business in the German Empire or Austria-Hungary without our permission; and

in the German Empire or Austria-Hungary without our permission; and
Whereas by our proclamation of the 5th August, 1914, relating to trading with the enemy certain classes of transactions with the German Empire were prohibited; and
Whereas by paragraph 2 of our proclamation of the 12th August, 1914, the said proclamation of the 5th August, 1914, was declared to be applicable to Austria-Hungary; and
Whereas it is desirable to restate and extend the prohibitions contained in the former proclamations, and for that purpose to revoke the proclamation of the 5th August, 1914, and paragraph 2 of the proclamation of the 12th August, 1914, and to substitute this proclamation therefor: and

in the former proclamations, and for that purpose to revoke the proclamation of the 12th August, 1914, and to substitute this proclamation of the 12th August, 1914, and to substitute this proclamation therefor; and
Whereas it is expedient and necessary to warn all persons resident, carrying on business, or being in our dominions of their duties and obligations toward us, our crown, and government:

Now, therefore, we have thought fit, by and with the advice of our privy council, to issue this our royal proclamation declaring, and it is hereby declared, as follows:

1. The aforesaid proclamation of the 5th of August, 1914, relating to trading with the enemy, and paragraph 2 of the aforesaid proclamation of the 12th of August, 1914, together with any public announcement officially issued in explanation thereof, are hereby, as from the date hereof, revoked, and from and after the date hereof this present proclamation is substituted therefor.

2. The expression "enemy country" in this proclamation means the territories of the German Empire and of the dual monarchy of Austria-Hungary, together with all the colonies and dependencies thereof.

3. The expression "enemy" in this proclamation means any person or body of persons of whatever nationality resident or carrying on business in the enemy country, but does not include persons of enemy nationality who are neither resident nor carrying on business in the enemy country.

In the case of incorporated bodies, enemy character attaches only to those incorporated in an enemy country.

4. The expression "outbreak of war" in this proclamation means 11 p. m. on the 4th of August, 1914, in relation to the German Empire, its colonies and dependencies, and midnight on the 12th of August, 1914, in relation to Austria-Hungary, its colonies and dependencies.

5. From and after the date of this proclamation the following prohibitions shall have effect (save so far as licenses may be issued as hereinafter provided), and we do hereby accordingly warn all persons resident, carrying on

(6) Not to make or enter into any new marine, life, fire, or other policy or contract of insurance with or for the benefit of an enemy; nor to accept or give effect to any insurance of any risk arising under any policy or contract of insurance (including reinsurance) made or entered into with or for the benefit of an enemy before the outbreak of

any policy or contract of insurance (including reinsurance) made or entered into with or for the benefit of an enemy before the outbreak of war.

(7) Not directly or indirectly to supply to or for the use or benefit of, or obtain from, an enemy country or an enemy, any goods, wares, or merchandise, and directly or indirectly to supply to or for the use or benefit of, or obtain from any person any goods, wares, or merchandise, for or by way of transmission to or from an enemy country or an enemy, nor directly or indirectly to trade in or carry any goods, wares, or merchandise destined for or coming from an enemy country or an enemy.

(8) Not to permit any British ship to leave for, enter, or communicate with any porf or place in an enemy country.

(9) Not to enter into any commercial, financial, or other contract or obligation with or for the benefit of an enemy.

(10) Not to enter into any transactions with an enemy if and when they are prohibited by an order of council made and published on the recommendation of a secretary of state, even though they would otherwise be permitted by law or by this or any other proclamation.

And we do hereby further warn all persons that whoever in contravention of the law shall commit, ald, or abet any of the aforesaid acts is guilty of a crime and will be liable to punishment and penalties accordingly.

6. Provided always that where an enemy has a branch locally situated in British, allied, or neutral territory, not being neutral territory in Europe, transactions by or with such branch shall not be treated as transactions by or with an enemy.

7. Nothing in this proclamation shall be deemed to prohibit anything which shall be expressly permitted by our license, or by the license given on our behalf by a secretary of state, or the board of trade, whether such licenses be especially granted to individuals or be announced as applying to classes of persons.

9. This proclamation shall be called the trading with the enemy proclamation No. 2.

Given at our court at Buckingham Palace, this 9th day of September, in the year of our Lord 1914, and in the fifth year of our reign.

God save the King.

The most important amendment was issued on October 9, 1914 (for reference see the London Gazette, No. 28932), in which the prohibition of trading with the enemy was extended to enemy branch houses in either British, allied, or neutral territory. This proclamation follows:

[The London Gazette, Friday, Oct. 9, 1914.]

By the King: A proclamation relating to trading with the enemy. Whereas it is desirable to amend our proclamation of the 9th of September, 1914, called "The Trading with the Enemy Proclamation, No. 2": Now. therefore,

We have thought fit, by and with the advice of our Privy Council, to issue this our royal proclamation, declaring, and it is hereby declared,

as follows.

1. Paragraph 5, heading (6), of the Trading with the Enemy Proclamation, No. 2, is hereby revoked, and in lieu thereof the following heading shall be inserted in the said paragraph 5 as from the date hereof:

(6) "Not to make or enter into any new marine, life, fire, or other policy or contract of insurance (including reinsurance) with or for the benefit of an enemy; nor to accept, or give effect to any insurance of, any risk arising under any policy or contract of insurance (including reinsurance) made or entered into with or for the benefit of an enemy before the outbreak of war; and in particular as regards treaties or contracts of reinsurance current at the outbreak of war to which an enemy is a party or in which an enemy is interested not to cede to the enemy or to accept from the enemy under any such treaty or contract any risk arising under any policy or contract of insurance (including reinsurance) made or entered into after the outbreak of war, or any share in any such risk."

2. (1) The expression "order of council made and published on the recommendation of a secretary of state" in paragraph 5 heading

reinsurance) made or entered into after the outbreak of war, or any share in any such risk."

2. (1) The expression "order of council made and published on the recommendation of a secretary of state" in paragraph 5, heading (10), of the Trading with the Enemy Proclamation, No. 2, shall, as regards persons resident carrying on business or being in our dominions beyond the seas, be taken to mean an order of the governor in council published in the Official Gazette.

(2) The expression "governor in council" in this paragraph means as respects Canada the Governor General of Lonada in council; as respects Australia, the Governor General of India in council; as respects New Zealand, the Governor of New Zealand in council; as respects New Zealand, the Governor of New Zealand in council; as respects New Jealand, the Governor of New Zealand, the Governor of New Zealand, the Governor of New Jealand, the Governor

South Africa by the Governor General, and in any British possession not included within the limits of Canada, India, Australia, or South Africa by the governor.

4. In this proclamation the expression "governor general" includes any person who for the time being has the powers of the governor general, and the expression "governor" includes the officer for the time being administering the government.

5. Notwithstanding anything contained in paragraph 6 of the Trading with the Enemy Proclamation, No. 2, where an enemy has a branch locally situated in British, allied, or neutral territory, which carries on the business of insurance or reinsurance of whatever nature, transactions by or with such branch in respect of the business of insurance or reinsurance shall be considered as transactions by or with an enemy.

6. This proclamation shall be read as one with the Trading with the Enemy Proclamation, No. 2

Given at our court at Buckingham Palace, this 8th day of October, A. D. 1914, and in the fifth year of our reign.

God save the King.

On February 16, 1915, a further addition to the proclamation was issued for reference see the London Gazette, No. 29071), extending the provisions of the proclamation to trading with the enemy in occupied territory, including neutral occupied territory ("territory in friendly occupation"). It was not until June 25, 1915, that a proclamation was issued extending the second proclamation to persons of enemy nationality residing or carrying on business in China, Siam, Persia, or Morocco, in the same manner as applied to persons or boiles of persons residing or carrying on business in an enemy country. The above-mentioned proclamation follows:

THE LONDON GAZETTE, Friday, June 25, 1915.

By the King: A proclamation relating to trading with persons of enemy nationality resident or carrying on business in China, Siam, Persia, or Morocco.

Whereas it is expedient that transactions between British subjects and persons of enemy nationality resident or carrying on business in China, Siam, Persia, or Morocco should be restricted in manner provided by this proclamation:

Now, therefore, we have thought fit, by and with the advice of Our Privy Council, to issue this our royal proclamation declaring, and it is hereby declared, as tollows:

1. The proclamation for the time being in force relating to trading with the enemy shall, as from the 26th day of July, 1915, apply to any person or body of persons of enemy nationality resident or carrying on business in China, Siam, Persia, or Morocco in the same manner as they apply to persons or bodies of persons resident or carrying on business in an enemy country.

Provided that where an enemy has a branch locally situated in China, Siam, Persia, or Morocco, nothing in article 6 of the trading with the enemy proclamation No. 2 shall be construed so as to prevent transaction by or with that branch being treated as transaction by or with an enemy.

an enemy.

2. Nothing in this proclamation shall be taken to prohibit anything which may be specially permitted by our license or by a license given on our behalf by a secretary of state or the board of trade or the lords commissioners of our treasury.

3. This proclamation shall be called the Trading with the Enemy (China, Siam, Persia, and Morocco) Proclamation, 1915.

Given at our court at Buckingham Palace, this 25th day of June, in the year of our Lord 1915, and in the sixth year of our reign.

God save the King.

On December 23, 1915, by the following act, the restrictions were extended to prohibit trading to persons not alone residing or carrying on business in enemy territory, but to all persons of enemy nationality or enemy association. It is this proclamation which is used to compel Americans in China to submit to British consular control in all their commercial transactions abroad. Although Japan has not issued similar proclamations, the same control is applied in conjunction with the British officials. The act above mentioned is as follows:

Chapter 98.

An act to provide for the extension of the restrictions relating to trading with the enemy to persons to whom, though not resident or carrying on business in enemy territory, it is by reason of their enemy nationality or enemy associations expedient to extend such restrictions.—December 23, 1915.

ing on business in enemy territory, it is by reason of their enemy nationality or enemy associations expedient to extend such restrictions.—December 23, 1915.

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. (1) His Majesty may by proclamation prohibit all persons or bodies of persons, incorporated or unincorporated, resident, carrying on business, or being in the United Kingdom from trading with any persons or bodies of persons not resident or carrying on business in enemy territory or in territory in the occupation of the enemy (other than persons or bodies of persons, incorporated or unincorporated, residing or carrying on business solely within His Majesty's dominlons) wherever by reason of the enemy nationality or enemy association of such persons or bodies of persons, incorporated or unincorporated, it appears to His Majesty expedient so to do, and if any person acts in contravention of any such proclamation he shall be guilty of a misdemeanor triable and punishable in like manner as the offense of trading with the enemy.

(2) Any list of persons and bodies of persons, incorporated or unincorporated, with whom such trading is prohibited by a proclamation under this act may be varied or added to by an order made by the lords of the council on the recommendation of a secretary of state.

(3) The provisions of the trading with the enemy state, 1914 and 1915, and of the customs (war powers) (No. 2) act, 1915, and all other enactments relating to trading with the enemy shall, subject to such exceptions and adaptations as may be prescribed by order in council, apply in respect of such persons and bodies of persons as aforesaid as if for references to trading with the enemy shall, subject to such exceptions and bodies of persons as aforesaid and for references to enemies there were substituted references to such persons and bodies of pers

Date of issue of the amendment to the proclamation and the London

Gazette number for full reference.

January 8 1915	29035

The rules for applying the trading with the enemy proclamations were issued in the London Gazette of January 12, 1915, No. 29038, pages 374 and 376, and further rules were announced on February 16, 1915, in the London Gazette, No. 29070.

PRESENT CONDITIONS AFFECTING THE TRADE OF THE UNITED STATES WITH THE FAR EAST.

Prior to the outbreak of the present war, vessels engaged in the trans-Pacific trade between the United States and the Far East had a carrying capacity of almost 1,000,000 tons per annum. Of this amount approximately 25 per cent was under the American flag. Immediately after the outbreak of hos-tilities, and although every effort was made to increase the carrying capacity of the vessels in the trade, withdrawals for military purposes reduced the annual average to about 700,000 This was followed by the withdrawal of all but one American ship, further reducing the available tonnage by over 200,000 tons, or practically one-half of the tonnage available before the war. Of the remaining 500,000 tons almost all is under the Japanese flag, there being but few British boats remaining and the number of American and neutral ships being so small as not to be an important factor in the present trade,

Passenger traffic is even more restricted, the available passenger space being only about 50 per cent of the requirements despite every possible space being utilized, and passenger boats being greatly overcrowded. The Japanese Government has ordered all Japanese subsidized vessels to place their carrying space at the disposal of Japanese shippers from Japanese ports and return cargo space for Japanese ports, only such space as is not needed by Japanese shippers being available to others desiring to forward merchandise to far eastern ports and the United States. The result has been the accumulation of cargo at non-Japanese shipping ports.

The situation appears to be aggravated by discrimination by Japanese steamship companies against non-Japanese shippers to the Orient. Not alone is the freight rate higher when space is granted to non-Japanese shippers, but in cases where Japanese

firms learn of prospective business it is said that Japanese steamship companies refuse freight space to intending American shippers, reserving it for Japanese competitors who are enabled in this way to capture the business

Similar conditions apply to shipments by American firms from China to the United States, because at the present time Japanese ships are practically the only ones available. American firms in China have been forced in order to obtain cargo space to turn their freight over to Japanese firms, which will forward the goods to Japan on board local vessels and transship in a Japanese port to Japanese vessels bound for the United States.

American trade in the Far East is suffering in even a greater degree from the operation of the British so-called "enemy trading acts," in the enforcement of which, it is understood, that the British authorities enjoy the cooperation of their Japanese allies. Attached to this memorandum will be found a brief history of these "enemy trade proclamations," which will show the basis for the present control over and restrictions upon American commerce with China, made possible by the absence of ships flying American flags. From an examination of this memorandum it will be seen that the scope of these proclamations has been gradually extended, but they do not show prima facie the force and extent which is given to their application by the exercise of British jurisdiction in extraterritorial China.

Under the operation of these proclamations British and Japanese steamship companies will not accept freight from an American shipper in the United States for delivery at any trans-Pacific port, including the Philippine Islands, unless an affidavit be filed and proof submitted relative to the ultimate destination of the cargo and satisfactory evidence shown as to the ownership of the goods in order that the British authorities 'may determine whether or not there is any "enemy taint" in the transaction. The suspicion that Germans and Austrians may profit indirectly by the transaction is sufficient to debar the goods from Japanese or British boats and the firms concerned may be blacklisted unless they are willing to give a written guarantee that they will refrain from further dealings with the enemies of Great Britain.

Not only many of the shipping companies but most of the banks and insurance companies operating in the Far East are British, and any one of these which fails to comply fully with the regulations contained in the "enemy trade proclamations" or those issued by the British consular authorities is liable to summary

punishment in the British extraterritorial courts.

As the application of the "enemy trade proclamations" in China require that all shipping documents, invoices, corre-spondence, and other instruments connected with each transaction be submitted to the British consular authorities and to the steamship companies and banks, the trade secrets of American firms are revealed to their competitors. This is particularly detrimental to American interests because the agents of most of the steamship companies are firms engaged in the general importing and exporting business.

Aside from exposing American merchants to the above-de-scribed control, the withdrawal of American ships from the Pacific has greatly increased the general shortage of tonnage and has been an important factor in the continuous rise of freight rates, which are reaching a point where shipment to far eastern points will be prohibitive in the case of many commodi-

Recent information indicates that bulky and cheap cargo is being refused by steamers from the Far East to the United States, and that only valuable cargo requiring comparatively little space is being accepted. Cargo rated in the freight tariff at under \$20 per ton is being refused and the rate on certain special cargo has been advanced to \$100 per ton. Prior to the war and the present shipping shortage freight rates on certain lines were as low as \$2.50 per ton.

Reports from New Zealand indicate that although there is an increasing demand for American goods in that Dominion, the lack of shipping facilities from the United States and the efforts of Japanese subsidized shipping to increase their sailings to New Zealand ports is throwing this market open to the Japanese and the inability of American exporters to avail themselves of the present opportunity may mean the permanent loss of this valuable market.

The same conditions apply to Russia's vast far-eastern possessions bordering on the Pacific. Prior to the present war shipments across the Pacific intended for Vladivostok were shipped via Kobe, and the freight rates and charges were so high that it was found cheaper to ship many articles across the Atlantic to the Baltic ports of European Russia and thence by the long railway haul across the Continent to points only a short dis-tance from the Pacific seaboard. Direct shipments under the American flag to Vladivostok would mean an almost unlimited increase in our trade with Siberia.

Previous mention was made of the restrictions on American trade between the United States and the Philippine Islands. The shipping shortage in those islands is seriously menacing their trade, and in order to meet the demands for rice some interisland boats, as well as United States Government vessels, have been sent to Saigon, as ordinary commercial boats were not available, due to the general shortage.

The problems in regard to our trade with the Far East, though naturally differing from those affecting our trade with South and Central America, are in their effect the same, as we are

limited to the use of British or allied shipping.

Mr. John H. Fahey, of Boston, Mass., late president of the Chamber of Commerce of the United States, writes the chairman of the committee indorsing the shipping bill and expressing an earnest wish for its early passage:

BOSTON, June 2, 1916.

Hon. Joshua W. Alexander.

Chairman Committee on Merchant Marine and Fisherics,

House of Representatives, Washington, D. C.

Dear Mr. Alexander: Owing to the number of things which accumulated during my absence to South America, which required immediate attention on my return home, I have just had an opportunity to get a look at the shipping bill in its present form, and I want to congratulate you on the progress made and the present status of the measure. In the main I think it is in excellent shape, and I hope it is going to go through the Senate promptly.

As you know, I have never been enthusiastic over the question of Government ownership and operation if there was any other way out. My feeling about it has been exactly the same as your own, but I want to say that as a result of what I saw and heard in South America I am convinced that it will be long years before private interests will ever undertake the establishment especially of the fast lines which are needed in South American countries. These lines are vital to us if we are going to bold and develop our business, and we should have them at the earliest possible moment. I, therefore, hope that the bill is going to go through the Senate without delay. What do you consider the prospect is there?

By the way, I would like very much to have a complete set of the hearings before your committee on the bill. Can you have them sent to me?

With much appreciation of your personal work in advancing the cause of our merchant marine, and with best wishes, I am,

Sincerely, yours,

JOHN H. FAHEX.

The following letter to Mr. Albert Krell, president of the Krell Plano Co., of Cincinnati, Ohio, from Mr. R. Espinal Hannier, representative of the company in Buenos Aires, emphasizes the necessity for better transportation facilities between this country and South America:

BUENOS AIRES, REPUBLICA ARGENTINA, May 10, 1916.

KRELL PIANO CO., Cincinnati, Ohio, United States of America.

GENTLEMEN:

The freight rates are advancing so much that if it continues it will be impossible to import anything, especially bulky goods, and the United States ought to put on a line of freighters before looking for foreign trade, and we hope Mr. McAdoo's visit here will bring some results in this line.

Yours, very truly,

R. E. HANNIER.

SHOULD THE BUSINESS MEN OF THE UNITED STATES SUPPORT THE ALEXANDER SHIPPING BILL, AND WHY?

[By Benjamin J. Rosenthal, vice president the National Business League of America, North American Building, Chicago, United States of America, 1 America.]

of America.]

I have been asked this question by many business men who are desirous of obtaining light on this bill, designated as H. R. 10500, Sixty-fourth Congress, first session. In view of the fact that I have advocated a measure in some respects similar to the Alexander plan, and as the subject of an American merchant marine is one to which I have given years of thought, long before the present war, I hope that I may be considered qualified, in some slight respect at least, to throw light on this perhaps the most important subject that has been before the American Nation since the Civil War and one that most vitally affects every one of our citizens.

I might add, in passing, that my book, entitled "The Need of the Hour, An American Merchant Marine," will be sent free, upon request, to any of my readers who wish to pursue this subject further.

For many years I have advocated that our Government enter the shipping field in so far at least as to construct ships that could be readily converted into naval auxiliaries in time of war, but to be operated as merchant ships on the high seas in time of peace. I have had in mind that some would argue that this would drive private capital out of this interest. I have maintained, and still maintain, that it will do nothing of the kind, and shall explain how I arrive at this conclusion; but in the first place, how can it drive out anything that has not existed for 50 years? For since the Civil War the Investment of American capital in ships salling under the American flag has been practically nothing, and were it not for this condition, and for the fact that up to the present war the American merchant marine, which is sweeping the entire country, would not now be necessary.

Private capital has had many opportunities since the Civil War to enter this field, where the American merchant marine, which is sweeping the entire country, would not now be necessary.

Private capital preferred to invest in railroads and other important enterprises which tended to develop our Nat

attractive inducements, and we are satisfied that it did, for since the Civil War a tremendous development of the control of t

RESOLUTION ADOPTED.

"Resolved, That as an effective means for the creation of an American merchant marine, a law be enacted empowering the Government to construct or purchase transports for the ships of the United States

Navy, to be operated by naval seamen as merchant vessels in time of peace and as auxiliaries of the Navy in time of war." Attest:

General Secretary, National Business Congress

General Secretary, National Business Congress.

As this was in June, 1912, and Congress was not in session, the league awaited the convening of the Sixty-third Congress in 1913, and it then learned that a merchant-marine bill would be presented to Congress that, while not as far-reaching as the legislation the league proposed, still it would be an important step toward bringing about what the league had been working for, for so long a time, and it decided that it would not interfere with the administration, thereby perhaps jeopardizing their shipping bill, and up to the very last moment the league received every assurance that the legislation would be favorably acted upon in the upper House of Congress, the lower House having favorably voted upon it a long time before. The public no doubt will recall that in the last moments of Congress this bill was defeated by a close margin in the United States Senate.

Now, there is a new shipping bill by the same author [Mr. Alexander] before our present Congress, and it is this bill that I shall endeavor to explain to the business interests of this Nation, for I attribute their indifference in the past to this legislation that so vitally affects them, to the defeat of the previous bill, and I hope this sad experience will teach them this lesson, that good citizenship demands more than the mere conduct of a business enterprise upon houset lines. It demands that every business man shall take stock of the proposed laws presented to the Nation, and that it defeat such laws as are not for its best interests, and that it spare no effort to have enacted into law such measures as will upbuild the Nation's resources and preserve its nationalism; and so it becomes the urgent duty of every business man who calls himself a citizen to study this most important legislation for himself, and if after careful reflection he believes this bill will ald his country he lose not a moment, but write his Representatives in Congress, that as a citizen first and then as a business man, he urges th

The bill provides for an appropriation of \$50,000,000, to be repaid through the sale of Panama Canal bonds, and this amount will purchase about 500,000 tons of new merchant ships. These ships will be of the most approved designs, readily convertible into auxiliary naval ships, probably equipped with the Deisel engines, burning oil instead of coal, with hatchways so arranged that loading and unloading will be greatly expedited. Thus at one stroke the American ship-owner will be able in all probability to save whatever difference there may be between the cost of labor on an American ship as against a foreign one; at least that now appears to be the opinion of experts who have studied this new means of ship construction and operation. Of course it is contemplated that if the Government sells these ships that it will expend the proceeds upon more ships.

UNITED STATES SHIPPING BOARD.

All shipping will be under the direct jurisdiction of a shipping board selected by the President. A promise has already been given that no effort will be spared to secure men in whom the Nation will have explicit confidence as to their integrity and ability.

POWERS OF THE BOARD.

This board is permitted to purchase, charter, or construct vessels of a type, so far as commercial requirements of the marine trade may permit, suitable for use as naval auxiliaries and Army transports in time of war, and it can charter, lease, or sell such ships to be used in over-sea or coastwise commerce, if built in American shippards, and only in foreign commerce and our outlying possesions if built abroad. It is the intention that all the ships constructed under this act be American built, and the stipulation that if built abroad they can not be operated in coastwise shipping will probably result in the ships being constructed in American shippards. It is expected that when shipbuilders realize that the American people are now fully aroused, and the passage of this bill is only the initial step in the movement to make our merchant marine what it was before the Civil War, much capital will speedily come forth, especially while interest rates are so low, and large additions in shipbuilding facilities will be undertaken. This movement is even now started.

CONDITIONS TO PURCHASERS OR LESSEES.

It is expressly provided that purchaser or lessee shall not sell, lease, charter, or recharter any ship transferred by the board without the consent or approval of the board. This restriction will do away with any speculation in these ships, and those who purchase or lease them will do so only for the purpose of operating them.

RIGHT OF SEIZURE.

Of course the right is given to the Government to selze with or without notice any of these ships to be used for either naval or military purposes, and the Government will properly compensate those from whom these ships are taken. It was this law that permitted England to selze all the merchant ships that the exigency of war demanded, and which she has put to such excellent use in the prosecution of the war she is now engaged in. Without these ships, of course, she would have been practically helpless.

RIGHT OF GOVERNMENT TO ADD ITS PRESENT EQUIPMENT.

At this time the Government owns some ships that have been used to carry supplies to the Panama Canal district, and it also possesses same transports that are not required in time of peace, and it is intended to place these ships in the service of the merchant marine.

BULES AND REGULATIONS CONCERNING OPERATIONS.

The bill requires that all ships coming under this art shall be registered under American registry, and that these ships shall be subject to all the laws, regulations, and liabilities governing merchant vessels, irrespective of what interest the United States may have in them. This places the United States in the same situation that a private owner would be in in the event that the Government should operate any merchant ships.

SALE OF SHIPS NOW UNDER AMERICAN REGISTRY.

Since the recent act of Congress admitting all ships owned by American citizens to American registry, irrespective of their age, some 800,000 tons of merchant ships have been added to our registry. These ships formerly salled under foreign flags. Now, it is only natural that the Nation feels that inasmuch as these ships have voluntarily come under American registry, and have been the recipients of the benefits of such registry during these crucial times; have enjoyed the protection of the American flag which rendered them safe from attack; have availed themselves of the unquestioned advantage of obtaining Government insurance at a time when our Government alone was offering this protection, and at rates that enabled them to carry shipping profitably, and besides have been permitted to demand whatever rates they deemed proper for cargoes, and it is notoriously apparent that they have not been at all backward in charges, that they should not now or at any subsequent time be permitted to go back to a foreign flag; and I say this without reserve, that whether a ship bill is passed or not a law must be passed prohibiting these ships from leaving the American flag.

It must be borne in mind that most, if not all, of these ships have written off their original cost in profits since the war. A parallel case would be that of a foreign citizen coming to this country, accepting all of its benefits, and lastly applying and receiving naturalization papers, in order to assist him to make more money and to be under the protection of the American Nation, and after he has enjoyed all these benefits, going back to the country from which he came, taking all of his gain with him, and then renouncing this country—just whatever we would think of him is just what we must think of the ship company that attempts to do the same thing. Under the laws of Germany not a single share of stock in a German ship can be transferred to a non-German, and in Engiand practically the same law is in effect, and I doubt if any other nation would permit

BOARD MAY REGULATE.

This section gives the board the right to regulate the eperation of all engaged as common carriers by water, between either domestic ports not entirely within the limits of a single State, or between the United States and foreign countries, or the United States and its possessions; and it gives the board the right to prescribe reasonable and just rates. It has been claimed that the Shipping Trust has in the past discriminated very much against the American shipper by giving him poorer ships, more irregular communication with his customers, and by giving rebates to foreign competitors. It appears that this condition is quite generally admitted. If it is true it will be in the power of the board to see that these unfair practices are stopped and the American shipper receives equal advantages with the foreign shipper. This regulation will also accelerate American shipbuilding, for it has been loath to enter the field in competition with the Shipping Trust, not knowing Just what its fate might be if the trust should decide not to let it operate. The forcing out of business of the Pan American Steamship Co. in 1912 was an illustration of the practices of the Shipping Trust against American shipping companies. shipping companie

INVESTIGATION OF MARITIME LAWS.

It has been charged time and time again that the maritime laws of this Nation have been responsible for driving our ocean carrying commerce off the seas. If this is a fact, this board will be in a position to readily determine, for it will be clothed with full powers of investigation of this subject, and I am sure that if this condition exists it will be but a short time when such laws as are inimical to our foreign commerce will be repealed.

NAVAL RESERVE.

An excellent provision in this bill creates a volunteer naval reserve for our Navy, with but a slight expense to the Nation, for it permits seamen and officers engaged on merchant ships to become members of our Naval Reserve, for which they receive slight compensation. It is a well known fact that our present naval complement is much below the requirements to man our Navy, and it is expected that many who are engaged on the merchant ships will join the reserve. In this manner England has built up its splendid naval organization. This is certainly a better plan than building auxiliary ships and permitting them to lie idle, and it is estimated that the expense of maintaining a naval reserve of 10,000 men will not be greater than the maintenance of a single battleship.

REPORT TO CONGRESS.

nance of a single battleship.

REPORT TO CONGRESS.

It is required that an annual report of the work of the board be made to Congress, and in this way the Nation will be kept in close touch with the work of the board.

Now, to briefly sum up the entire subject, I predict that the moment it is assured that this bill will be enacted into law there will be many more applications for ships than the Nation will be wilting to supply, and that competition will be very keen in the bidding for these ships. Personally I would much prefer that the Government operate them as I have previously outlined, opening up new trade routes, for with the war tax that will necessarily be imposed on foreign shipping for many years, foreign shipowners will be so burdened that the American Nation has now the greatest opportunity that has been presented to it since the Napoleonic wars, when it took advantage of its chance and built up the splendid merchant shipping that it possessed up to the Civil War. Every good business man believes in insurance; he insists upon insurance on almost everything he possesses, but until this Nation has an adequate merchant marine to protect its Navy, neither the lives nor the property of a single individual are insured, and they will not be safe until the business man has become sufficiently aroused and until this Nation has an adequate fleet of merchant ships, built preferably by American labor in our own shipyards and manned by American seamen and salling under the Stars and Stripes. Now is our opportunity. Will we arise to it? The answer rests with you business men.

BENJAMIN J. ROSENTHAL, Chicago, III.

This plan has been indorsed by the board of directors of the National Business League of America.

PHILETUS W. GATES, President.

BENJAMIN J. ROSENTHAL, Vice President.

AUSTIN A. BURNHAM, General Secretary.

The following article by Mr. Charles Yates, United States Coast and Geodetic Survey, will be read with interest by all who are giving serious thought to the problems involved in the upbuilding of our merchant marine in the foreign trade:

THE AMERICAN MERCHANT MARINE—ITS BY-PRODUCTS AND RELATIVE VALUES,

It is three generations since we have "gone to sea" as a nation, and for that reason I believe it is a lack of true perspective of the by-products

and relative values involved which threatens failure to the present project of founding an American merchant marine; and that, too, at the time of times when any concrete action ending in the construction of real American ships is most likely to lead to ultimate success.

Under the present and prospective conditions of the world's shipping and commerce the crime of no action will be far greater than any conceivable error of principle or method which may be put into force by the passage of the Alexander shipping bill now pending in Congress.

Viewed from the standpoint of results as distinguished from methods, there are three dominant objects sought by the proposed congressional action for the establishment of an over-sea American merchant marine:

1. The construction of occan-going ships for the over-sea transportation of our foreign commerce.

2. The increase of our foreign trade essential to the economical development of the ever-growing productive capacity of our manufacturers.

3. The maintenance of an auxiliary naval merchant marine necessary to supply the needs of our Navy in the time of war.

Each one of these objects is not only vital to the social and commercial welfare of our country, but also an inseparable by-product of the other two. There is no difference of opinion as to their desirability. It is the methods which are questioned.

Speaking in round figures and rough approximation for the purpose of developing relative values only, the United States in normal times should have at least 6,000,000 tons of vessels to take care of her share of the over-sea commerce and transportation of the world. The British Empire has 20,000,000 tons.

Of the 6,000,000 tons which we should possess, we now have in over-sea commerce and transportation of the world. The British Empire has 20,000,000 tons.

Of the 6,000,000 tons of results to salt under the American flag. This new tonnage, with its approximate value of \$500,000,000, is the first relative value we should bear in mind.

Conservatively estimated, if our cu

customers pay us freight as owners of ships but what we may sell to them as a result of that ownership which will count most in the long run.

This last statement is no new proposition and will bear careful analysis. It is a truth which even a home-trading nation like ours recognizes in a small way each time an American merchant marine is discussed. But apparently we spend too much time in the contemplation of the more or less imaginary difficulties of building and operating ocean-going ships to gauge the true relative value of this factor. Very naturally a real American ship engaged in foreign trade looms large to our landlubber eyes.

England and Scotland own a 1,000 pounds weight of over sea for each man, woman, and child. The United States owns a corresponding 20 pounds. In fact, as has been well said, there is not enough deep-sea salt in the blood of an average American to make a thimble full of water taste brackish, and not enough experience in over-sea commerce to make a cent look proud. And therefore why should we be expected to understand as a Nation the relative value of a merchant marine as means of increasing our foreign trade.

The third object of establishing an American merchant marine is to provide efficient auxiliary vessels for our Navy. The relative value of this object needs little explanation, except that the \$50,000,000 provided by the shipping bill will build just about enough merchant ships to fill the requirements of our Navy. And on this basis alone it might be well worth while to pass the shipping bill.

As a by-product of a merchant marine, a fleet of naval auxiliarles may have an incalculable relative value in time of war. And even in time of peace it would have a full face value as a measure of preparedness.

So far we have dwelt on the larger phases of the relative values and by-products of a merchant marine as a whole, and it may now be value.

pareciness.

So far we have dwelt on the larger phases of the relative values and by-products of a merchant marine as a whole, and it may now be valuable to take up the relative values of the special cases concerning the construction and operation of a merchant marine engaged in foreign

commerce.

This phase of the subject is the one most talked about in ordinary discussions of a merchant marine, and here again our landlubber propensities have led us much astray in relative values and caused us to overlook by-products, which make shipping a most profitable investment for our rivals.

overlook by-products, which make shipping a most profitable investment for our rivals.

Suppose we take for an example an ocean-going vessel which is a part passenger ship, but mostly a freight carrier, which cost \$500,000 to build. How much do you think it will cost each year to operate that ship profitably if all charges of maintenance, profit, insurance, pay of crew, port dues, etc., are included? Or, stated another way, What must be the gross operating income received from freight charges and passenger fares to make such a ship a profitable investment? If you are like most people who have been asked that question, you have guessed wrong. Even seagoing folks have falled surprisingly in their answer. Well, to answer my own question, as I must, it can be stated that the gross operating income of a \$500,000 vessel should be about \$250,000 each year.

This is 50 per cent of first cost. And incidentally this 50 per cent rule holds very closely for almost any type of vessel. If it be a simple bulk-cargo ship requiring a small crew and little fuel, its original cost will have been correspondingly lower, and the 50 per cent rule holds. If it be a passenger vessel with a large personnel and great fuel consumption, its first cost will have been approximately larger, and the 50 per cent rule will hold still as a rough approximation.

The importance of this relative value of the first cost of a ship to its gross operating income lies in the fact that it shows that the first cost of a vessel spread over a normal life of 20 years is not such a relative value of the first cost of a ship to its gross operating income lies in the fact that it shows that the first cost of a vessel spread over a normal life of 20 years is not such a relative value of the first cost of a ship to its gross operating income lies in the fact that it shows that the first cost of a vessel spread over a normal life of 20 years is not such a relative value of the first cost of a ship to its gross operating income lies in the fact that it shows that th

tively important matter as it is likely to appear to the uninitiated. In 20 years the gross operating income will have amounted to 1,000 per cent of the first cost. Yet we hear very much about the greater cost of ship construction in the United States as being the chief reason why we do not have a merchant marine. Offhand, it would appear that the high operating expenses of an American vessel is the more likely reason for this fact.

Personally, I am prepared to argue and almost demonstrate that we can and will build ships in this country at less cost than abroad just so soon as we build enough vessels to enable us to standardize that business, just as we have standardized our other manufacturing operations. But for argument's sake, suppose we accept for a moment the statement that American shipbuilders are less efficient than other American manufacturers who do compete with foreign production, and also accept the very commonly stated measure of this deficiency as being 20 per cent. Then, if we take the life of a ship as being 20 years, the additional burden of this extra first cost would be 1 per cent only plus interest on the 20 per cent, as contrasted with the burden of 50 per cent for operation. Even if it were true, this would not be such a great matter, relatively speaking, that it might not be overcome quite reasonably by other circumstances, such as the lower cost of fuel oil in America as compared with the cost of coal in foreign countries.

The first item usually figured in making up the gross operating income required for the carrying on of a profitable business enterprise is the depreciation. In the case of vessels it usually is placed at 5 per cent. It is alike for all over-sea vessels of the world, and does not enter into our subject except as a part of the 50 per cent operating income.

The next item is marine insurance. It varies greatly under varying

is the depreciation. In the case of vessels it usually is placed at 5 per cent. It is allike for all over-sea vessels of the world, and does not enter into our subject except as a part of the 50 per cent operating income.

The next item is marine insurance. It varies greatly under varying circumstances of character of vessel, dangers of navigation, conditions of war or peace, etc., but competent authorities have stated that its broad average is 6 per cent per annum. Offand we might say, as we did of depreciation, that this item is alike for all vessels of the world and does not come into the problem of founding an American merchant marine. In a sense this is true, but when we recall that perhaps three companies it is reasonable to assume that marine insurance is a profitable by-product of a merchant marine which we might very well obtain for ourselves when we create a real shipping industry in this country. Incidentally we may add that a \$50,000,000 shipowning corporation such as the shipping bill may create would serve as its own insurance company and possibly—yes, probably—save as much as 2 per cent out of the 6 per cent which a smaller enterprise would pay.

Again, all unsurance is based in part on the reports of shipbuilding classification societies such as Lloyds, and here again there may be a profitable by-product which we would acquire along with an American merchant marine.

The items of fuel, repairs, ship chandlery, and the like, carry along with them suggestions of other profitable and legitimate by-products of a merchant marine. In truth, it is sometimes stated that these are supplied by companies subsidiary to the shipbuilding corporations and sometimes by enterprises privately owned by officials of the shipping corporations very much to the detriment of the size of the dividends paid to the stockholders. Shipping may be more profitable than it seems to the onlower. Certainly the great wealth of large shipowning countries would indicate that this is true.

One other item will be mentioned, and that

CHARLES YATES, United States Coast and Geodetic Survey.

WASHINGTON, D. C., May 8, 1916.

The Panama Railroad Steamship Line, Government owned and operated, has not increased its rates to the Isthmus of Panama since August 1, 1914, the date the war in Europe began, as shown by the following letter to the chairman of the Committee on the Merchant Marine by Mr. E. A. Drake, vice president of the Panama Railroad Co.:

PANAMA RAILROAD Co., New York, May 15, 1916.

Hon. J. W. Alexander,

Chairman Committee on Merchant Marine and Fisherics,

House of Representatives, Washington, D. C.

Sin: Reply to yours of the 11th, received late on the following day,
has been delayed by my absence from the city. I now beg to say
that—

Sin: Reply to yours to has been delayed by my absence from the city. I have that—
Outward rates to the Isthmus and points beyond by our line were maintained on the same basis "as prior to the war in Europe" until late in the spring of this year, except that in some instances they were reduced, notably those that applied to supplies for the Panama Canal that were granted a 10 per cent reduction from tariff, and as well to shipments of this company's commissary supplies; both reductions are still in effect.

There has been no change in rates from New York to Panama City since August 1, 1914.

Rates to Pacific coast ports of Colombia and Ecuador, exclusive of Guayaquil, were not increased until we received notice from the Pacific Steam Navigation Co., our only cocarrier to those points, that a surcharge of 20 per cent to cover war risks and taxes must be added to prevailing rates to accrue solely to them. As this company had no alternative, such a notice to the public, effective February 25 last,

prevailing rates to accrue solely to them. As this company had no alternative, such a notice to the public, effective February 25 last, was issued.

Similarly upon the demands of our three cocarriers to Guayaquil and ports south on the Pacific coast, rates to those points were increased by 25 per cent, effective March 9 last.

Subsequently the two increases just mentioned were rescinded, and there was substituted therefor, effective May 11, 1916, an increase of 50 per cent on rates in effect August 1, 1914.

No increase in rates to Central American and Mexican ports was contemplated until when early in April last our cocarriers in traffic to those destinations declined to continue to prorate existing rates and demanded that they be increased 30 per cent, with a purpose to insist upon arbitraries equivalent to their agreed proportion of such increased rates in the event of our refusal. This company having no alternative but to comply, the notice of such an increase became effective only on the 11th instant.

This company's reluctance to advance rates was met with unanswerable arguments by our Pacific cocarriers, based upon increases already made in outward rates from Europe to South Pacific ports, to increased cost of operation on account of war risks and taxes, to interruption of schedules caused by temporary closing of the canal, and congestion of freight attracted by our persistent maintenance of low rates as compared with world-wide advances to and from all destinations, varying from 50 per cent to 500 per cent.

Our unwillingness to initiate or to at first consider advances in rates was because of the satisfactory result of operating our steamship line under rates already in effect and further because of our policy to maintain by a Government-owned line only reasonably remunerative rates. That policy has all along been vigorously criticized by our cocarriers as inimical to their interests.

We finally consented to any of the above-mentioned advances only when assured that identical advances were already in

E. A. DRAKE, Vice President.

We let Great Britain beat us in changing from wooden to iron and steel construction of merchant vessels. Will we permit the maritime nations of Europe to beat us in changing from coal to oil-burning passenger and mail and package freight merchant vessels and from steam to motor engines for cargo vessels?

[From the London Times, Mar. 2, 1916.]

GREAT MOTOR SHIPS-BUILDING PROGRAM OF DANISH OWNERS.

Reports of an extraordinary development in motor-ship construction in Denmark, which were mentioned yesterday in a Reuter message from Copenhagen, are well founded.

The East Asiatic Co., a leading Danish company, for which the pioneer large motor ship Sclandia was built in 1912, is now pinning its faith entirely to motor ships. Last year the company owned 13 steamers; now it has none. In three of the vessels originally driven by steam the engines have been replaced by motor engines, while the others have been sold as new motor ships became available.

At the beginning of last year the company owned 10 large motor ships, representing a total of 75,000 tons dead-weight. During the year it took delivery of 5 ships of 47,400 tons dead-weight. In the summer of this year a motor ship of 10,400 tons dead-weight is to be delivered, and next spring an-ther of the same size. The company's program already provides for the following new motor ships; Six of 11,800 tons dead-weight between September, 1917, and January, 1920.

Six of 12.800 tons dead-weight between 1918 and 1920.
Six of 10,000 tons dead-weight between 1918 and 1920.
Two of the ships will have 3,300 horsepower, 12 will have 4,000 horsepower, and 6 ships 5,300 horsepower, 12 will have 4,000 horsepower, and 6 ships 5,300 horsepower.
Other Danish owners are also known to be ordering numbers of motor ships, and, according to the Copenhagen papers, one firm—presumably Messrs. Burmeister and Wain—have received orders for about 50 motor ships, and will this be fully occupied until the end of 1921.
Economy of fuel, labor, and space are points considered by Scandingvian countries to be in favor of motor engines. The large ships coll consume about 40 tons of oil a day, and therefore vessels trading with countries where oil is plentiful, as in the East and on the Pacific coast of North America, can ship enough oil fuel for a voyage round the world.

The National Business League of America indorsed the administration shipping bill, as shown by the following letter addressed to the chairman of the committee:

dressed to the chairman of the committee:

The National Business League of America, Chicago, June 9, 1916.

Dear Sie: The National Business League of America, an organization which has had 20 years of active and resultful work, and which numbers among its members many of America's best and most unselfish business men, submits to you its views on 'he bill known as H. R. 15455, recent y passed by the House of Representatives and now before your honorable body.

The league submits, fi st of all, the nonpartisan efforts of two decades to improve the condition of our 'ountry through national legislation, especially such as vitally affects general business interests. Its work in the reorganization of the Consular Service on the merit system, creation of the Department of Commerce, irrigation of the arid lands of the West, and the Federal reserve law are some of its important activities, which undoubtediy are familiar to many of the Members of the Senate. It has enjoyed the confidence of every national administration from President McKinley down to the present time, because its work has always been for the benefit of all the people.

One of the most important of its activities has been to impress the Congress, business men, and the public in general with the fact that our scant merchant marine has always lacked sufficient tonnage to adequately serve our Navy in time of war and to help carry the commerce of our mines, our factories, and our farms to distant parts of the world. It has, therefore, anded with satisfaction the work of the Committee on the Merchant Marine and Fisheries of the House of Representatives in connection with the introduction and passage of the above-mentioned bill as initiative in the right direction; and while it admits there are imperfections in the bill, it feels that its enactment would tend more toward a greater preparedness than any measure introduced in the Houses of Congress during the past 50 years.

As you gentlemen are no doubt aware, the bill provides first of all for the establishment of a United States shipping board. There is no difference of opinion, the league believes, on this point. It provides that in addition to the five commissioners to be appointed by the President, by and with the advice and consent of the Senate, the Secretary of the Navy and the Secretary of Commerce shall be ex-officio members. The league heartily favors this provision, for the reason that the executive duties of these officials will practically interlock with the work of the shippins, board; the Secretary of the Navy by reason of the fact that these merchant ships are to be auxiliaries of the Navy, that they are to be used also for the purpose of building up a naval reserve, and that some of the military transports not now used by the Navy will be transferred to the shipping board; the Secretary of Commerce, by reason of the fact that he is in charge of the Bureau of Navigation, the Coast and Geodetic Survey, the Lighthouse and Life-Saving Service, and probably many of his officials will be needed to advise with the approval of the President, is authorized to have constructed and embound in Ameri.

that some of the mintary transports not now used by the Nary with so transferred to the shipping board; the Secretary of Commerce, by reason and Geodetic Survey, the Lighthouse and Life-Saving Service, and probably many of his officials will be needed to advise with the shipping board.

The prevision, section 5, whereby "the board, with the approval of the President, is anthoused to have constructed and equipped in American shippards and navy yards or elsewhere, giving preference, other things being equal, to domestic yards; or to purchase, lease, or charter vessels suitable, as far as the commercial requirements of the marine trade of the United States may permit, for use as naval auxiliaries or the further provision of section 14 that "for the purpose of carrying out the provision of section 14 that "for the purpose of carrying out the provision of section 14 that "for the purpose of carrying out the provision of section 14 that "for the purpose of carrying out the provision of section 15 and 11 the Secretary of the Treasury, upon request of the board, approved by the President, shall from time to think the provision of the Panama Canal, to a total amount not to exceed \$50,000,000. "Will give the Nation the opportunity it has never had since the Civil give the Nation the opportunity it has never had since the Civil have a compared to the provision of the Panama Canal, to a total amount not to exceed \$50,000,000. In ships at this time, for the reason that prices are too high. No sharer advocate of preparedness from the standpoint of national defense and the safeguarding of our commercial prosperity could consistently urge any such argument, for the reason that these could consistently urge any such argument, for the reason that the construction of the purchase of the Navy. No one would vote against the Government building or purchasing battlebulps because prices are too high, and as these whips are in a sense of the purchase of the prices of ships will be high, and as these whips have not part of the propositi

and in foreign maritime countries, and the relative cost, advantages, and disadvantages of operating in the foreign trade vessels under United States registry and under foreign registry." It also states that the board "shall examine the navigation laws of the United States and the rules and regulations thereunder and make such recommendation to the Congress as it deems proper for the amendment, improvement, and revision of such laws, and for the development of the American merchant marine, and that it shall also "investigate the legal status of mortgage loans on vessel property, with a view to means of improving the security of such loans and of encouraging investment in American shipping." The league can not conceive of anything more important for the upbuilding of the merchant marine than this section. It has been claimed time and time again that our navigation laws injure our shipping. If that be a fact, this shipping board would be able to ascertain this condition in a nuch better manner than by the mere neceptance of the statement of any shipper who is interested. Should the found that there are laws infinical to American shipping, the board's recommendations would unquestionably have great weight with the Congress, and repeal would speedily follow. There are also from time to time statements made that there are disadvantages in the relative cost of operating and constructing ships. The board can easily make investigations and recommendations in this particular. The hoard could also formulate plans for the financing and securing of mortgage loans on vessel property, so that American capital would be encouraged to make investigation of the Congress in connection with shipping, in so far as it relates to discrimination against American shipping.

The league doubts that anyone who has made a study of the recent investigation of the Congress in connection with shipping, in so far as it relates to discrimination against American shipping, in so far as it relates to discrimination against American shipping, in s

PHILETUS W. GATES,
President,
BENJ. J. ROSENTHAL,
Vice President,
AUSTIN A. BURNHAM,
General Secretary.

The following is a letter that the writer, Thomas P. Ivy, forest engineer, Center Conway, N. H., requested the editor of one of the leading newspapers in Philadelphia to publish. It was not declined because of lack of merit, but for other reasons which the editor was not frank enough to state:

which the editor was not frank enough to state:

EDITOR: Owing to the fact that I have given study for some years to the problem of shipping in this country, I am asking space in the for a brief discussion of the bill now before the House Committee on the Merchant Marine, especially drawn for rebuilding and restoring our marchant marine to a size proportional to our requirements. How helpless our condition is and how insignificant is our over-seas shipping can be seen by a glance at the fact that of the total imports and exports of the United States but 8.6 per cent are carried in ships of American registry, and that we have ships of a total tonnage of only 1,066,280 tons registered for foreign trade against Germany's 5,459,290 tons, and Great Britain's 21,045,049 tons.

If any American citizen thinks the above showing is creditable and ought to be continued, he can only be one of those Americans who is so interlocked and entangled in foreign shipping corporations that he has lost his American identity through too intimate association with these foreign interests. That there are such Americans one is compelled to admit. In fact, he is the very man who is opposing this bill. For the International Mercantille Marine Co., a foreign-controlled corporation, sends a man disguised as an American to every public hearing of the House Committee on the Merchant Marine to see who appears for this bill and to take the necessary steps to discount and overthrow his testimony.

mony.

In my opinion, a representative of the International Mercantile Marine Co. should have no more standing before this committee, even when he comes disguised as a member of the New York Chamber of Commerce, than the Kaiser should have in saying who ought to be our next Secretary of War. The truth is, the whole opposition to this bill, as I have observed it here in Washington and elsewhere, is instigated and promoted by foreign shipowners. Not so long ago the writer, as he sat at breakfast in a hotel in one of our ports, heard a group of English sea captains at the next table taking an American to task

short this bill, saying he ought to oppose it as a dangerous undertaking and visionary sense. No doubt this experience is common to taking and visionary sense. No doubt this experience is common to taking and visionary sense of the shipper and not to the shipport—something to the interests of the shipper and not to the shipport—something the provides for a shipping beard on his and upper. In any form a corporation, the controlling stock to be owned by the United States, and accorporation, the controlling stock to be owned by the United States, and the shipping of the shipping of the shipping that the shipping to be operated under regulations by the outling or buy or leave ships to be operated under regulations by the outling or buy or leave ships to be operated under regulations by the outling or buy or leave ships to be operated under regulations by the outling of the shipping corporation for carrying mails and other services. The leave ships to be operated under resculations by the outline of the shipping of the shipping corporation for carrying mails and other services. The last shipping bill the shipping that it is only one of the devices for trying to destine the shipping bill the shipping of the shipping that is any one of the devices for trying to destroy the bill. However, the objection to subskiles may be classed under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (1) Inequitable; (2) Intexbile; (3) unstable; (4) under these heads: (4) Inequitable; (2) Intexbile; (3) unstable; (4) under the shipping the shipping the shipping of the core in the shipping that the shipping the shipping the shipping the shipping the shipping the shi
